Eisenhower Park Dog Run 'Synthetic Turf Field' project is an improvement of the existing, contained recreational space for use by canines and their owners. This work will include the replacement of the existing depleted lawn areas with a synthetic turf field designed for continual recreational use without creating muddy conditions due to traffic by dogs and their owners. The project will incorporate the existing concrete walkways, gazebo, benches and black polyolefin chain link fencing, along with the installation of an additional length of new 6 ft high black polyolefin chain link fencing to reduce the size of the larger dog area, and also the installation of an additional length of new 4 ft high black polyolefin chain link fencing to serve as a barrier between the dogs and a new planting bed of tall dense evergreen trees that will be installed to provide privacy and noise reduction for the adjacent multi-use trail and private homes along Salisbury Park Drive.
