Narrative

Purpose: To authorize and award a purchase order to provide professional services to update information in the (GIS) Geographical Information System for the Nassau County Department of Information Technology.

Discussion: This Purchase is based on GSA Contract No.: GS-35F-0594S to Geo-Comm, Inc. as an authorized reseller under this GSA contract, for additional professional services that can assist Nassau County in updating and adding to existing dataset. This is very complex data with variation in each dataset that determines relationships between GIS layers. There are complex address points, intersections, road segment, correcting incorrect address ranging attributes, centerlines, all need to be analyzed and updated. This supports many departments, i.e. Fire Marshall, Police Department, DPW, Etc.

Impact on Funding: The maximum amount authorized under this purchase order shall be Two Hundred Twenty-Four Thousand Three Hundred Nine Dollars and Twenty-Five Cents (\$224,309.25,) from General Fund, ITGEN1300/DE5A5.

Recommendation: Department of Shared Services, Office of Purchasing recommends awarding a purchase order to Geo-Comm, Inc. as the provider.

Heather,

Another thing, in the chain below we asked if any of the principals own 10% or more? You replied that they do not.

We should have asked does anyone, principals, or other individuals (non-Officers) own 10% or more.

Please advise.

Commonwealth of Kentucky | NG9-1-1 GIS Data Management

Summary of Relevant Accomplishments:

In 2021, GeoComm was selected by the Commonwealth of Kentucky for a multi-year statewide project, becoming GeoComm's 17th statewide NG9-1-1 GIS project.

This project will allow the Kentucky 911 Services Board to lay the GIS groundwork for the Commonwealth to transition to a future Next Generation 9-1-1 (NG9-1-1) environment.

GeoComm GIS Data Hub has been deployed and is being used by the local GIS authorities across the Commonwealth to receive quality control results generated from the comparison of their GIS data to the specific Kentucky NG9-1-1 GIS Data Standards.

The QC reports provide the local GIS authorities with direction and strategy for their GIS data improvement.

GeoComm GIS Data Hub is an on-demand, cloud-based data management and validation solution, which is used by local GIS data maintainers to conduct regular GIS data quality control checks. In addition, many local GIS authorities (29 counties to date) have engaged GeoComm via value added services pricing from the original RFP response to help them improve their data to speed up their compliance with Kentucky's NG9-1-1 GIS requirements.

Onboarding to GIS Data Hub began in June 2021 and was completed in May 2022. Ongoing GIS data assessment for onboarded PSAPs occurred throughout this period to provide feedback allowing the PSAP to continuously improve their data with the goal of meeting all requirements for i3 call routing. The final stages of the project are currently being completed for transition to maintenance in August 2022.

Other Information

GeoComm offered value-added services to the Kentucky 911 Service Board in the original RFP response which became a part of our contract. These services included GIS Data Improvement services for cities and counties. The Kentucky 911 Services Board conducted outreach to the cities and counties following the initial GIS data assessment and onboarding process to determine if any agencies wanted assistance with NG911 GIS data readiness. To date, GeoComm has received add-on services orders for data improvement services to 29 local agencies.

Douglas County, Missouri

Summary of Relevant Accomplishments:

GeoComm contracted with Douglas County, Missouri in 2021 to help with their GIS data development project including re-addressing and MSAG update services.

GeoComm specifically provided Geographic Information System (GIS) data including PSAP boundary layer development, emergency service boundaries layers development, provisioning boundary layer development and GIS Data Standardization. GeoComm also provided GIS data schema transformation to the MO State Standards and NENA NG9-1-1 model. The final GIS data was then utilized to generate a new Master Street Address Guide (MSAG) that was provided to the selected 9-1-1 service provider.

Other Information

GeoComm also provided addressing consulting services to evaluate the County's proposed addressing and assist with private drives naming/numbering solutions and strategies.

City of North Platte, Nebraska

Summary of Relevant Accomplishments:

GeoComm was hired by the City of North Platte/Lincoln County initially in 2004 to complete GIS base map development services and dispatch mapping software implementation. The GIS map data layers developed continue to be maintained by GeoComm today.

Other Information

Since our first project, GeoComm has continued to assist the City in advancing their public safety systems and dispatcher tools by adding further public safety software to enhance emergency response including automatic vehicle location (AVL) and mobile responder mapping capabilities. Most recently, GeoComm supported the City's transition to a new GIS centric computer aided dispatch (CAD) system.

Subject: Nassau County Office of Purchasing - Vendor References

Good Afternoon Steve,

We have received a bid from Geo-Comm, Inc., for Nassau County, NY, and they have listed you as a reference.

Please give me some insight on this vendor. Do you have any complaints? Are they easily reached and quick to respond? Do they have any outstanding issues?

Thank you

Regards,

Kimberly Stanton

Kentucky awarded GeoComm a three-year contract, with the ability to renew for two additional three-year terms, to perform statewide GIS integration services for Kentucky's 117 certified PSAPs. GeoComm performs QA/QC on locally-acquired GIS data layers to include: Road centerlines, site/structure address points, PSAP boundary, Emergency service boundaries for law, fire, rescue to ensure NG911 readiness. We also built into the state contract the ability for GeoComm to perform one-time data remediation on behalf of PSAPs as a value-added service. We highly recommend others do the same as we have had almost one-third of Kentucky PSAPs seek out that remediation service.

GeoComm has been a wonderful company to work with. They have a deep bench that allows them to handle a statewide project and we receive excellent customer service from our project manager and others on the GeoComm team. We highly recommend them.

Scope of Work

GeoComm, Inc. (GeoComm) will provide the following Geographic Information System (GIS) professional services to the Department of Information Technology of Nassau County hereinafter referred to as Nassau County.

GeoComm will utilize a custom set of Conflation Tools to update the Nassau County Road Centerlines (RCL) address ranges with the attribution from the NYITS RCL's. Specific variables within each dataset will determine relationships classes between the two RCL layers. These relationships will be used to conflate NYITS RCL address ranges onto the Nassau County RCL address ranges. Depending on the various relationship classes GeoComm may need to split or merge various NYITS RCL segments to achieve good match rates. The following relationship classes are typical for this type of work:

- One-to-One
- One-to-Many
- Many-to-one
- Many-to-Many
- No Matches

The one-to-one relationships will be an automated process where all other relationships will require manual review and conflation of the given attributes. This could be address range adjustments, geometry adjustments, or other types of attribute modifications to create a clean relationship. GeoComm will make every effort to maintain the spatial integrity of the Nassau County RCL layer in this process. The resulting product will be a Nassau County RCL layer containing modified NYITS RCL address ranges.

The project plan, timeline and phase durations will be discussed during the project initiation meeting. The following Phases will be executed during the duration of this project:

Phase One: Project Initiation

- Internal Kickoff Meeting
- Create a detailed Project Plan
 - Schedule
 - List of Stakeholders and Roles
 - Communication Plan
 - Quality Management Plan
 - Risk Management Plan
- Client Kickoff meeting and presentation

Phase Two: Project Execution (Conflation Process)

- Nassau County will obtain the latest Nassau County RCL's and NYITS RCL's for conflation work to begin. These layers will be provided to GeoComm via a sharefile link sent to Nassau County by GeoComm
- Nassau County will obtain the latest Nassau County Address Points for comparison of RCL ranges to the existing Address Points
- GeoComm Setup of SDE with versioned editing
 - Before importing source data GeoComm to validate UniqueID's exist in both RCL layers
 - GeoComm to confirm with Nassau County UniqueID's are static
 - GeoComm to confirm with Nassau County formula for new RCL's created UniqueID's
- Development of updated schema for Nassau County RCL's (hybrid between county and state)
 - Virtual meetings with Nassau County
- Use of GeoComm conflation tools to identify the different types of relationships between the two RCL layers
- RCL modifications will be executed to clean up the initial match rates for the various relationships
 - Merge RCL's where unnecessary segmentation exists (adjust ranges)
 - Split RCL's at all intersections (adjust ranges)
- Reclassification of RCL relationships with improved match rates
- Bring over NYITS address range attributes onto existing county records
 - Use scripting for the best automated conflation results, covers about 75% if the centerlines
 - One-to-one relationship is used in this process
 - Manual work required for the remaining 25% of centerlines (about 20,000 segments)
 - One-to-Many | Many-to-One | Many-to-Many
 - No matches
 - Dual Carriage ways
- NYITS RCL's not contained within the Nassau County RCL will be appended into the Nassau County RCL
 - These records will be flagged for Nassau County Review and acceptance
- QC of conflation process
- Data Delivery to Nassau County for review of flagged records
 - These records need to be accepted or rejected prior to data clean-up efforts listed in Phase 3
- Phase 2 closeout virtual meeting with Nassau County

Phase Three: Project Execution (Data Clean Up)

- RCL Overlaps Clean up – To ensure proper functionality within the Tyler CAD system all overlapping ranges will be resolved. Any segment ranging that cannot be clearly resolved by GeoComm will be reported back to Nassau County for directions on a resolution.
 - Any overlaps remaining within the dataset without clear direction from Nassau County will be deemed acceptable by the county
- Site Structure Address Point Comparison with Road Centerlines ranges
 - This task is helpful to ensure RCL ranging is accurate based on the surrounding address points within the county
 - Slight shifting of RCL ranges is expected for this task near intersections
 - Address Points will not be updated within the scope of this contract
 - GeoComm will report Address Point anomalies back to Nassau County with the final delivery of the project
- RCL Topology Clean up
 - RCL segments shall not self-intersect, self-overlap, or intersect each other without an intersection
 - Road segments shall not overlap
 - Road segments shall not have gaps, except for those representing dead ends
 - No multipart geometry
 - No Disconnected Features
- Delivery of completed Nassau County RCL layer
 - Two week window for Nassau County review of updated RCL
- Nassau County Updates made during the duration of the project will be tracked and sent to GeoComm for inclusion for final delivery
- Rework
 - GeoComm to address any reported issues from Nassau County

Phase Four: Project Closeout

- Final RCL Layer Delivery
- Virtual project closeout meeting with Nassau County
- Delivery acceptance certificate sent to Nassau County for completion
- Nassau County return of delivery acceptance certificate

In addition, the following assumptions are considered:

- Nassau County RCL are being used in the Tyler CAD system today
 - RCL's have incomplete or inaccurate address ranging attributes
 - RCL's are spatially accurate and will represent the target geometry

- NYITS RCL contains accurate address ranges
 - NYITS ranges will be conflated to the Nassau County RCL's
- RCL's in the Nassau County dataset missing from state dataset will have 0-0 ranges
- RCL's in the NYITS dataset missing from Nassau County dataset will be brought over and flagged for county acceptance/rejection
- County provides the following data
 - Nassau County Road Centerlines
 - NYITS Road Centerlines
 - Nassau County Address Points
- Nassau County edits to the RCL's during the project will be tracked and communicated for inclusion into final data delivery
 - No major updates should occur during this time
 - Static UniqueID's are maintained by Nassau County for easy change detection between the starting point and end point of the project
- During the review cycle in Phase 3 Nassau County resources will be responsive and available for discussions.

GeoLynx Server System Administrator Training

Description: GeoComm has learned through experience the most effective way to train an administrator is to have them attend a user session first then build on that foundation with administrator content. Our training curriculum is designed to facilitate the acquisition of basic skills and concepts relating to the use of mapping software for public safety. GeoComm's system administration training is to provide a basic understanding of the functionality and ongoing maintenance of GeoLynx Server. In addition, we will train system administrators on how to make adjustments to better fit the needs of the individual PSAP. This is accomplished through a combination of background lectures with functionality and scenario based hands-on exercises. Training topics will include:

- System Architecture
- Installation
- Maintenance Procedures
- Configuration Options

Length of Course: 4 Hours

Desirable Prerequisites: No Prerequisites

Locations Class(es) Offered: On-site at client's location

Minimum/Maximum Learners: 1 Minimum, 4 Maximum

Class Schedule: Courses scheduled per client's request

Course Materials: GeoComm provides access to an online help guide for each software product which provides all the information you need for the operation, administrative set up, and configuration of the software.

GeoLynx DMS Training (12 Hours Web-based)

Description: The goal of GeoComm's GeoLynx DMS training is to provide a comprehensive understanding of GeoLynx DMS GIS toolset and how these tools can be applied to your public safety dispatch GIS system. Training will be accomplished through a web-based lecture and hands-on based training session. The lectures will provide a background on specific GeoLynx DMS tool concepts, while the hands on tutorials will demonstrate real world experience in applying the GeoLynx DMS toolset to GIS data maintenance. Training will cover all GeoLynx DMS tools as well as include a general overview of how these tools interact with the Esri ArcGIS software. It is designed for customers with an intermediate understanding of:

- GIS
- Maintaining GIS Data for Public Safety
- ArcGIS ArcMap

Length of Course: Up to 12 Hours

Prerequisites: Prerequisites for training include:

- The client must have an intermediate understanding of ArcGIS ArcMap functionality.
- The client must have an intermediate understanding of GIS principles.

GEO-COMM INC OTHER TERMS AND CONDITIONS

Notes:

All software pricing is per license pricing.

Maplex labeling is used in the GeoLynx Family of Products. If you maintain your GIS data you should not change the .mxd used by the GeoLynx Family of Products unless you use ArcInfo (which contains the Maplex labeling extension) or if you use ArcView or ArcEditor with the Maplex labeling extension. If you edit the .mxd and you do not have the Maplex labeling engine, labeling in the GeoLynx Family of Products may not work properly. Services can be provided to eliminate the need for Maplex labeling or editing your .mxd, if desired.

GeoLynx Desktop operation requires a computer act as the system server. The customer is responsible to provide this system server. GeoLynx Desktop Admin does not plot 9-1-1 calls or CAD incidents.

For 9-1-1 calls to plot in GeoLynx Desktop or in Geolynx Server using the Dispatch Add-on Module GIS data meeting required map data specifications must be provided. This data must be synchronized to your MSAG and ALI Database to effectively plot wireline 9-1-1 calls.

GeoLynx AVL and GeoLynx Sync Server require either one full copy of GeoLynx Desktop or one GeoLynx Desktop Admin license.

A license of ArcGIS 10.0 or greater is a required component of GeoLynx DMS GIS Data Manager.

A GeoLynx DMS GIS Data Manager license is a required component for each GeoLynx DMS MSAG Manager license and one license of GeoLynx DMS GIS Data Manager is required with the purchase of the GeoLynx Server Web DMS and GIS Change Requests add-on modules.

GeoLynx DMS Mobile GIS Data Manager requires a license of Esri ArcPad and an approved GPS unit to be loaded on. This is either billed as an other direct cost or is a customer responsibility.

GeoLynx AVL costs do not include required GPS units or mobile data service plan to provide for data transport to and from the vehicles being tracked in GeoLynx AVL. The customer is responsible for providing these elements.

One Standard IP AVL Client Interface is required for each vehicle being tracked if the GeoLynx AVL - IP AVL Option is chosen.

GeoLynx Server requires a single quad core server meeting required specifications. This can be provided by GeoComm as an other direct cost or the customer can provide this element. The hardware specification capacity is recommended for <100 simultaneous users. Performance is impacted based on a number of things including network performance, map data configuration, and the number of users.

GeoComm may provide, if requested, a backup license of GeoLynx Server to be added to another single quad core server meeting required specifications for no license charge (software support and maintenance for this license would be provided at half price) provided it is used for backup only in the event your primary GeoLynx Server license is inoperable. You may not use this backup GeoLynx Server license at the same time. The backup license would provide redundancy and failover in instances where the primary

server is not available such as for routine maintenance. The backup license would require that you provide an additional dedicated single quad core server and load balancer (two load balancers would be required if the active and passive server will be in two separate locations).

If a backup GeoLynx Server license is desired and there are add-on modules to your GeoLynx Server system, these backup add-on modules would be provided for no license charge as well (software support and maintenance for the backup add-on modules would be provided at half price).

If additional GeoLynx Server primary licenses are desired for greater performance and capacity, they can be provided for half price (software support and maintenance for the additional primary licenses would be provided at full price). The additional primary licenses would require that you provide an additional dedicated single quad core server and a load balancer for each additional license.

If additional primary GeoLynx Server licenses are desired and there are add-on modules to your GeoLynx Server system, these additional add-on modules would be provided for half price as well (software support and maintenance for the additional primary add-on modules would be provided at full price).

The GeoLynx Server add-on modules and viewers require GeoLynx Server to be implemented.

An AVL system must be in place in prior to implementing the AVL Add-on Module or AVL Viewer. The GeoLynx Server AVL Add-on Module and AVL Viewer costs do not include required GPS units or mobile data service plan to provide for data transport to and from the vehicles being tracked in the AVL Add-on Module. The customer is responsible for providing these elements.

To plot or view 9-1-1 calls in GeoLynx Server the customer must provide RS2323 serial feeds from E9-1-1 ALI controller CAD ports to a GeoComm Message Switch Application. The ALI controller CAD ports must export fixed format space delimited NENA standard 9-1-1 ALI records for all answered 9-1-1 calls. The CAD ports should be configured as outlined in documentation that will be provided by GeoComm. To display CAD incidents in GeoLynx Server with the CAD Incident Viewer a CAD interface is required. For the GeoLynx Server Stats Add-on module to function, customer must provide an authenticated connection to the CAD or RMS database, preferably a SQL view, for user-initiated data display. Customer must purchase or own ArcGIS 10.0 or greater (ArcView, ArcEditor, or ArcInfo are all compatible) as a required component for each license of GeoLynx DMS. ArcGIS 10.0 or greater must be installed on the GeoLynx DMS user computer(s). Concerns or questions specifically related to GIS can be answered by a GeoComm GIS Consultant or GIS Specialist for the corresponding hourly rate.

Indoor Maps Pricing Notes:

- Pricing for floorplans is based on floorplan size and is calculated in 50,000 sq ft chunks. Examples below:
- All Pricing for a given floorplan will double if the floorplan size is greater than or equal to 50,001 sq ft and less than or equal to 100,000 sq ft.
- All Pricing for a given floorplan will triple if the floorplan size is greater than or equal to 100,001 sq ft. and less than or equal to 150,000 sq ft.
- All Pricing for individual floorplans greater or equal to 150,001 sq ft will require a custom quote.
