Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our

environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the

casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:
the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
the potential economic loss to homeowners near the casino from lower home values;
the economic losses to Hofstra University and other local businesses.
the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.
If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Sincerely,

Ray Bertolino
Garden City

Subject: Casino? Absolutely NOT. Hospital? YES !! + Draft Environmental Impact Study (DEIS)

Some people who received this message don't often get email from tomdeierlein@gmail.com. Learn why this is important

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:

This is such a bad idea I can't believe we are still considering it. When this fails and it will fail spectacularly that is when the lawyers and investigators will come to see who approved this and

who benefited. Don't be fooled and pulled into this. Stay above the fray and make this go away. **These charlatans are not your friends nor friends of Nassau County.**

Will there be default, eviction, and consequences when all their false promises don't come true? When crime jumps double digits, when pollution engulfs our town, when it kills our small businesses and takes 30 minutes to drive 2 miles? What then?

I am writing this note for my family and our children. This is a horrible, **horrible** idea - one that will be nearly impossible to undue. I beg you for my children and your children not to let this happen.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

I urge you to protect Nassau County's future and your legacy by voting to **stop this ill-conceived project**, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful. Will they give the casino complex back to the County if they fail in their efforts? **Will there be default, eviction, and consequences when all their false promises don't come true. When crime jumps double digits, when pollution engulfs our town, when it kills small businesses and takes 30 minutes to drive 2 miles?**

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

Expand the Meadowbrook? What? That will not happen - and if it did it would take decades not years. **This is a fairytale and total nonsense. Stop.**
The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. **Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.**

2) Nothing in the DEIS addresses the **increase in air pollution** that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub

have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) **Keep our children and citizens safe please.** Studies have shown an **increase in crime** in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day? This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino. **How long to build? Again - this is simply nonsense talk.**

5) **137,000 tons of carbon dioxide? Who thinks this is good idea?** LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

7) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling

addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

8) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

9) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

10) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

11) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

Sincerely
Tom Deierlein
Garden City

Subject: Casino? Absolutely NOT. Hospital? YES !! + Draft Environmental Impact Study (DEIS)

Some people who received this message don't often get email from tomdeierlein@gmail.com. Learn why this is important

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:

This is such a bad idea I can't believe we are still considering it. When this fails and it will fail spectacularly that is when the lawyers and investigators will come to see who approved this and who benefited. Don't be fooled and pulled into this. Stay above the fray and make this go away. **These charlatans are not your friends nor friends of Nassau County.**

Will there be default, eviction, and consequences when all their false promises don't come true? When crime jumps double digits, when pollution engulfs our town, when it kills our small businesses and takes 30 minutes to drive 2 miles? What then?

I am writing this note for my family and our children. This is a horrible, **horrible** idea - one that will be nearly impossible to undue. I beg you for my children and your children not to let this happen.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

I urge you to protect Nassau County's future and your legacy by voting to **stop this ill-conceived project**, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful. Will they give the casino complex back to the County if they fail in their efforts? **Will there be default, eviction, and consequences when all their false promises don't come true. When crime jumps double digits, when pollution engulfs our town, when it kills small businesses and takes 30 minutes to drive 2 miles?**

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries.

The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

Expand the Meadowbrook? What? That will not happen - and if it did it would take decades not years. **This is a fairytale and total nonsense. Stop.**
The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. **Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.**

2) Nothing in the DEIS addresses the **increase in air pollution** that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) **Keep our children and citizens safe please.** Studies have shown an **increase in crime** in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day? This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino. **How long to build? Again - this is simply nonsense talk.**

5) **137,000 tons of carbon dioxide? Who thinks this is good idea?** LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

7) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

8) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

9) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

10) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

11) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full

capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Subject: Sands Casino Project

You don't often get email from vmallozzi23@gmail.com. Learn why this is important

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and

- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. Subject: Sands Casino Project

You don't often get email from vmallozzi23@gmail.com. Learn why this is important

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and

- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Sincerely,
Veronica Mallozzi
Garden City, NY 11530

Be well,

Veronica

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. We DO NOT WANT THIS IN OUR COMMUNITY!!!

The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.
1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after ‘mitigating’ from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino’s many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands’ methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino’s profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Sincerely,
Anne Cavallaro
Local Educator and Resident

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. We DO NOT WANT THIS IN OUR COMMUNITY!!!

The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.
1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;

- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Thank you,
Kristy Chiafair
Garden City

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that

will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.
1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.
5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Dear Nassau County Legislators:

In 1968, as an East Meadow high school student, I took a class at Nassau Community College on "Ecology".
My project for the class was cataloging the wildflowers of the Hempstead plains, both with photographs and drawings. I have been a Nassau County resident and a local environmentalist all my life and have watched the Hempstead plains shrink every year.

I wish I had that project to share with you to show you the uniqueness of the area.

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.
1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. 4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already over utilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from

members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) **The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.**

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

In summary, I urge you to protect Nassau County’s future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Sincerely,

Joann & James Tonon

Dear Nassau County Legislators:

I have lived in East Meadow and have worked in Uniondale for almost 10 years. My shorter commute from East Meadow into Uniondale is already at times brimming with traffic and congestion on par with the Boroughs. I've chosen to live on Long Island for the quality of life

it provides, without the constant bustle of traffic and chaos that the busier cities bring. This is a selfish proposal without consideration for people who live and work in the area. I'm confident that if a casino was proposed in your immediate area that you would feel the same. I didn't choose to raise a family here so that we can be close to a dirty casino, and I would no longer consider Hofstra as a school my children would attend to be just feet away from significant traffic, drug use, prostitution and questionable clientele.

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County’s adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping

capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

-the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;

-the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;

-the potential economic loss to homeowners near the casino from lower home values;

-the economic losses to Hofstra University and other local businesses.

-the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;

-the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and

-the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Dear Nassau County Legislators:

I am the mother of two young sons and have lived in Garden City since 2009. I have deep concerns with the impact a casino will have on our community. I am concerned about the potential for an increased crime rate, including drug and alcohol offenses, declination in home prices and increased traffic.
I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The

Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well

on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after ‘mitigating’ from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino’s many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands’ methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:
I've lived in Nassau County for most of my life. I was born here, grew up in West Hempstead, and graduated from West Hempstead High School and Nassau Community

College. Nassau County is the **wrong place for a casino.** Unlike the other competing sites, we are dependent on well water, the site is not served by mass transit (air pollution), Uniondale is not a tourist destination, the site is next to 2 colleges and a high school, and next to a rare and protected habitat- - the last remaining piece of the Hempstead Plains. Let NYU Langone build their hospital and medical research facility here - - or we might lose that project to Melville. What kind of a community are we if we build a casino and turn away a hospital?

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is

already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County People Who Run this County

It is very obvious that our politicians want this casino while those constituents who know about it oppose it. The rest of the people have no idea about it because you have not communicated with the taxpayers of Nassau County. Meanwhile you certainly have communicated with all of the construction unions and have their backing.

I asked Tom McKevitt to hold a meeting in our East Meadow library to inform his neighbors and constituents and he would not. How is that for transparency?

The Sands has influenced all of you, except Delia Derigg-Whitton, as well as influencing every community they could think of. Shame on all of you!!!!!

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;

- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Subject: Comments on Sands Casino DEIS

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.
Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.
Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult

population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and

improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Sincerely,
Michael and Terry Petaja
Garden City NY

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I ***STRONGLY OPPOSE*** the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits. This project provides no tangible long-term benefit to Nassau County. It sucks the life out of Nassau County. This is not an investment in Nassau County that will yield positive financial & social benefits to the residents of Nassau County. The following highlights the major reasons why this project should not be allowed to move forward.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways. *Given the catastrophic fires in Los Angeles that were hugely compounded by the lack of water to fight the fires raises serious concerns about insuring there is sufficient water available to fight all sorts of fires. If the "Magothy" aquifer is compromised and can not provide the volume of water required for a huge fire, where then does the water come from?*

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our ***all-volunteer fire departments*** that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted. ***There is no fire department that is staffed, trained and equipped to fight a fire in a large multi-story high rise structure. That capability can only be found in the NYC Fire Department***

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that will provide long term value by being a magnet for businesses that will grow and strengthen our communities. That would be something our county residents would truly be proud of.

Respectfully,

Gregory D Schrubbe
Garden City, NY

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. Dear Nassau County Legislators:

As a resident of Garden City raising two young children, I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.
1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Dear Nassau County Legislators:
I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.
1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Sincerely,
Alexis Fallarino
Seaford, NY

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators, NYS Senators and Assembly members, local government officials, DEC officials, and gaming commission:

Having read the issues stated below. I urge you not to allow Sands to proceed. The only beneficiary is Sands, and all of us on Long Island will lose. We will lose our water, our suburban way of life, and our safety.
The Governor has already tried to ruin the Island with her attempts to override our zoning and turn the suburbs into an urban wasteland. Needing more money marijuana use has been legalized and promoted. Every week it seems there is a crash caused by someone driving high. Our roads are already dangerous, and this project will only make them more dangerous with increased impaired driving as people leave the casino. What amount of money that you make from this project is worth the death of one more person on our roads?. The communities around this location will suffer from more pollution, and increased crime right in their neighborhoods. This project should have been rejected and never given the dignity of consideration.
Please tell Sands to leave our Island. We can find a better way to use our land in ways that will benefit all of us while causing us no harm

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.
1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

Furthermore, I see what you are doing at Nassau Community College and we are going to put an end to it. Blakemann got booed off the stage at the NCC graduation for his comments on the Casino. He should be ASHAMED as an alumni. It is a MINORITY school and the civil rights organizations have had it. No one wants it and you are hurting a minority community. We have gotten the national medias attention and we will not allow you to infringe on a minority community. The people have spoken and no one, except you, wants the casino. How about fixing the basics first as nothing is working in the highest tax county in the country. How about doing your job and prosecuting crimes? How about fixing the roads? I have to get a human to unlock my laundry detergent to buy it? How about the criminals you have in positions you should not have them in? You all should be ashamed. Complete breach of fiduciary responsibility and we will not tolerate it anymore. We don't want your money laundering operation and have had enough. Your proposal is selfish and ridiculous and the citizens are not going to stand for your not listening anymore. We have had enough.

Facts (amongst many I won't mention here because that is for the National Media)

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Sincerely,
Kim Petry
Garden City, NY

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on the environment, local economy, and the social fabric of the community. And for what? Short term, insufficient benefits.

Before delving into DEIS specifics, I pose a simple question first. Why were NYC and Suffolk based firms recruited to compose the DEIS? This is a Nassau County issue. Why aren't Nassau County firms represented? I find this oddly peculiar that in a County of almost 2 million residents and an untold number of professionals, not one firm was picked to participate. And you all are supposed to represent the people and businesses of the County?

Now for the nuts and bolts.

1) The DEIS estimates 10 million annual resort visitors. Approx. 27,000 daily in addition to approximately 5,000 employees. The DEIS does not propose any mass transportation enhancements or upgrades.

The lack of destination mass transportation poses an enormous increase in traffic volume that ultimately negatively impacts residents throughout Nassau County, especially along the Meadowbrook Parkway, Hempstead Turnpike and Merrick Avenue arteries. The number of resort visits peak during evening hours and weekends and most of them arrive by car and bus.

The LVS proposal includes Meadowbrook Parkway and surrounding road expansion. However, these enhancements do not sufficiently accommodate the 10 million annual anticipated visitors. Without adequate mass transportation options, this enormous increase in local traffic will overwhelm the already inadequate traffic infrastructure. Even with the proposed road

enhancements, our roads were never intended to handle an additional 20,000+ daily vehicles. And that doesn't even reflect all the heavy construction vehicles and trucks driving on these roads all day, every day for the duration of the initial construction. The roads will not hold up to the wear and tear.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

2) Studies show increasing crime in counties that host casinos. One study depicts 8.6% of property crime and 12.6% of violent crime in counties with casinos is a direct result of the presence of a casino.

The increase in crime translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime. In addition, the added security burden shouldered by the NCPD and municipal PDs (overtime, personnel, resources) is not even addressed in the DEIS. Why not?

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this overwhelming scale, it would take over 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino draws from the available renewable energy pool, existing electric grid customers would be forced to revert to fossil fuel.

7) The DEIS socioeconomic analysis is lacking and biased because it does not analyze:

- The impact on locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- The lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- The potential economic loss to homeowners near the casino from lower home values;
- The economic losses to Hofstra University and other local businesses.
- The increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- The loss of potential economic activity from companies who will not expand in Nassau County due to the increase in traffic and other casino impacts; and
- The potential harm to local tourism from the increase in traffic that would discourage visits to current destinations like the Hamptons/North Fork.

If the County performs a more comprehensive economic analysis, it would be blatantly apparent that the casino's many harmful impacts heavily outweigh any potential benefits.

8) There is a gambling addiction epidemic in the country due to casinos, lotteries and the pervasiveness of online betting. Many experts compare this problem to the opioid crisis where for years the problem was ignored by elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands provides zero evidence that any proposed mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired

driving. It could be deemed gross negligence by the courts and would expose the Town of Hempstead, Nassau County, the Executive and Legislature branches personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed puts the survival of the adjacent remnants of historic Hempstead Plains in grave risk - this would be a catastrophic loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, flora and fauna.

11) Emergencies from this massive complex and its 27,000+ daily visitors would overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone is planning a $3 billion hospital and healthcare center on Nassau Community College land. A massive casino would consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, putting the healthcare center proposal in serious jeopardy of ever getting approved.

A major hospital is a project that saves thousands of Nassau County lives, not destroy thousands of lives like the proposed casino. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Sincerely,

Robert Nemeroff

Dear Nassau County Legislators:

On December 9th, I attended the public forum in Mineola regarding the newly released casino environmental study. After attending that evening, re-watching recorded testimonies of speakers, reading related articles, and exploring the copious DEIS data with the help of AI, I am confident of this: no greater good will come of a casino in Nassau County. I urge you, do not endorse it

Attached are my comments for the Casino DEIS comment period. Please see attached

Thanks you,

Scott D Daniels, CPA
Brookville NY

HRC Fund Associates, LLC, Member FINRA/SIPC, and HRC Portfolio Solutions, LLC (together "HRC") solicit business for investment advisers ("IAs") through financial professional intermediaries. HRC is compensated by the IAs. Investors are not charged by the IAs (or products) for the cost of obtaining their accounts through this process, nor is there any differential in the level of advisory fees attributable to the solicitation arrangements with HRC. Some mutual funds represented by HRC are advised by affiliate Liberty Street Advisors, Inc. BROOKVILLE NEW YORK 11545

January 14, 2025

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

• the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;

• the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;

• the potential economic loss to homeowners near the casino from lower home values;

• the economic losses to Hofstra University and other local businesses.

• the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;

• the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and

• the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Sincerely,

Scott D Daniels

We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after ‘mitigating’ from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino’s many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands’ methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino’s profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

In summary, I urge you to protect Nassau County’s future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Sincerely,
Chris Breslin Garden City

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;

- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;

- the potential economic loss to homeowners near the casino from lower home values;

- the economic losses to Hofstra University and other local businesses.

- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;

- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and

- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits. It is shameful that this proposal has gotten this far.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus. Right now, the area around the casino is full of traffic and congestion during the weekend. It cannot be a good idea to make this worse for the residents who live here.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime. Especially around an area where there are college students and families, this is a terrible idea. Casinos do not benefit the communities in which they are placed.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino. For anyone living on Long Island, this is a scary statistic. How are you ensuring the longevity of our island for future generations?

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) **Placing a massive casino in the heart of a congested suburb,** next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors. This is such a massive concern for many. Nassau County is already crowded. We do not want a casino.

9) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

10) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

11) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Sincerely,
Christina O'Malley
Concerned citizen from Garden City

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. - the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Subject: Comments on Sands Casino DEIS

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Subject: Comments on Sands Casino DEIS

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change. My super Preemie son, Benjamin, is born recently, he cannot get any Respiratory sickness, its very life threatening for him.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.

- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Sincerely,
John Zhu
East Meadow, NY

It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;

- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

We cannot spare another 760,000+ gallons per day for a massive casino.
Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.
5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.
6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.
7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.
8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:

I grew up in Nassau County, my parents still live there. I am very opposed to this casino. Instead of refunding Nassau Community college, discouraging public transit development, affordable housing, mixed use development, you've allowed the interests of a multimillion dollar corporation to takeover. Shame on you if you support the casino. Ask yourself if you would live next to Atlantic City.

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.
Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Subject: Comments on Sands Casino DEIS

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;

- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Sincerely,
Kimberly & Mark Reilly, Garden City NY

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.
The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.
2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.
3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.
4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.
Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.
6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.
7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.
8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.
Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.
Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:
I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.
1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.
The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.
4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.
Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.
5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.
6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.
Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.
5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.
6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.
5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.
6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.
8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.
Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.
Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Subject: Comments on Sands Casino DEIS

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:
I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.
1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.
The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.
2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.
3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.
4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.
Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.
5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.
6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. 12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Subject: Comments on Sands Casino DEIS

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:
I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.
1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.
The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.
2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.
3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.
4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.
Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.
5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.
6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.
