1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:
I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.
1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:
I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.
1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.
The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.
2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.
4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.
Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.
5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.
6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear esteemed community leaders,

I have lived in East Meadow for over 22 years and I love my community! I love that we live so close to Eisenhower. Park, 15 minutes from the beach. and only a 45 minute train ride to the biggest city in the world. Yes, the traffic on Hempstead turnpike can be frustrating at times, but feeling safe in my neighborhood even though I'm living 2 blocks away from a major turnpike is wonderful. Taxes and insurance are ridiculously high; however, I feel lucky and privileged that our family has been able to financially stay afloat so that we can continue to live here. But this will all change if a casino is built at the Nassau Hub. Traffic will enrage us, crime will engulf us, gambling addictions will destroy our families ,and depleting housing values may force us out.

I understand the need to fill the space of the Nassau Coliseum; however, a casino would destroy our community and so many of the wonderful things it has to offer.

First, it will put teenagers, young adults, people with gambling adductions as well as people with addictive personalities and adults who don't understand the complexities of gambling at risk. A casino will be physically, mentally, financially and emotionally dangerous. There are 2 colleges and a high school so close to the site! Its so embarrassingly irresponsible that it is even being considered to build a casino so close to these three well established schools. The students already have enough pressures (drugs, drinking, smoking, vaping, keeping up with social media) to deal with, and now you want to add the pressure of gambling on their doorstep. Yes you can gamble online, but the pressure on Friday, Saturday, summer, and vacation nights to get into/hang around the Casino and gamble will be difficult to avoid. This is true for all adults, young and old, who will fall victim to swiping their debit and credit cards, and financially crippling themselves (No more quarter slot machines.). Then the addiction will start just as it did with drugs, alcohol and smoking. Add the pressure on the parents and families to bail out the gamblers, even though they can't afford to pay off their children's/family members "mistakes" snd you have a recipe for disaster. As a student advocate for mental health since 2016, I find it to be appallingly irresponsible that this casino is even bring considered.

Second, do you want to build something in a community that most of the tax paying members of said community can't afford (and don't want)?. It was so ridiculous when, at a meeting last January, a representative from the Sands bragged in detail, about the luxury of the hotel rooms they were building with the casino- as if this matters to any of us. First, we can't afford to stay there Second, we live here- and don't need a room or a luxury hotel. The intent of this casino is to build a gambling, entertainment, and hotel facade to entertain people outside the community. How about, instead, building something that all the people who live in the community can afford and want to use- (maybe some type of family entertainment place).

Lastly, it was obvious from the meeting I attended in January 2024 that the people who want this casino are union workers (whom you can make happy by building something else) and people who live in Suffolk and places NOT near the Nassau Hub. Thats because they wont have to suffer all the downsides- the traffic, the pollution, the crime, the decrease of our home values, and the degradation of our wonderful community.

You can stop this. You can choose the value of community life over the dollar signs that you think you're getting Please say no to a casino at the Nassau Coliseum site and instead of bringing addictions and depletion of our community life, build something that brings joy and hope unites us.all.

Sincerely,

Kathy Worthman
East Meadow resident

Subject: Comments on Sands Casino DEIS

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Subject: Comments on Sands Casino DEIS

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:
I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.
1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.
The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.
2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.
3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.
4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.
Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.
5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County’s adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and

- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of

criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of

criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

Having lived in the area for my entire life and having seen the failed potential of the Lighthouse Project, the construction of the Sands Casino will blight the quality of life in an area I see with great potential to allieviate the housing situation. Real estate is unaffordable for people my age in this area, and affordable housing (whether in apartments or single to multi-family housing) should be prioritized rather than a casino whose sole purpose is to drain the wallets of their patrons by gambling.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is

inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and two high schools (one of which I graduated from in 2018) will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open

the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of

criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of

criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. Nassau County does not need such a destructive business in our community. Considering the vast number of resources consumed by such an enterprise and the vast potential for harm combined with the minimal benefits, this is something we do not need.

Inither you to vote against the Sands casino project.

The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the

presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Subject: Comments on Sands Casino DEIS

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Subject: Comments on Sands Casino DEIS

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Subject: Comments on Sands Casino DEIS

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. Subject: Comments on Sands Casino DEIS

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:
My personal note: due to the fairly new Hofstra Medical School and MSK Cancer Center, the area is much better suited towards biomedical engineering and research, and possibly a convention center. Biomedical business would increase quality of life, provide STEM opportunities for local students, and high paying jobs, all supporting local businesses and raising quality of life.

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.
1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. 11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Subject: Comments on Sands Casino DEIS

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:

My personal note: due to the fairly new Hofstra Medical School and MSK Cancer Center, the area is much better suited towards biomedical engineering and research, and possibly a convention center. Biomedical business would increase quality of life, provide STEM opportunities for local students, and high paying jobs, all supporting local businesses and raising quality of life.

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is

inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators

personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult

population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS

does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Sincerely, [Janet Miller, Garden City

Subject: Comments on Sands Casino DEIS

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of

criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of

criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of

criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of

criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of

criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of

criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of

criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;

- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of

criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of

criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of

criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Subject: Comments on Sands Casino DEIS

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Subject: Comments on Sands Casino DEIS

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Subject: Comments on Sands Casino DEIS

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Subject: Comments on Sands Casino DEIS

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local

economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its

Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Sincerely,

Alexis Varano
Garden City

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Sincerely,

Yvonne Varano
Garden City

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of

criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County’s adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and

- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our

community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of

criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. 4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of

criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of

criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of

criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of

criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of

criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of

criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.

- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Sincerely,

Pennie Tirsch Azran

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;

- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Sincerely,

Gilbert Azran

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs which will be imposed on my community in exchange for insufficient benefits. A casino is the definition of

short-sighted planning. Do something truly helpful for the County and make plans to preserve and protect our rich and diverse ecology, history, and culture rather than further burden our County with more mess to clean up.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume which will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads is not realistically viable and will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad, if not worse. Our congested and historic roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and micro particulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into

the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination and salt water intrusion. The New York State DEC confirmed this just last year. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs. Therefore, there is no net gain for Nassau County.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values - not to mention the fact that this is adjacent to a Potential Environmental Justice Area;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;

- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County were to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits. This is what economists like Lucy Dadayan, Earl Grinols, and David Mustard are saying. This is what academics like Professor Jonathon Krutz and Professor John Kindt are saying. I urge you to view this video presentation by the two academics mentioned. They note that gambling operators offer no proof that host counties gain real revenue from their casinos: https://www.youtube.com/watch?v=1AaNCEy8Sok

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. This logic does not follow. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to

drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique and globally rare ecosystem, with known endangered species, vital to many species of birds, plants and animals. Efforts to enhance this ecosystem are already lacking in such a densely developed part of the county, so a neighboring casino would surely threaten its continued existence.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. Construction workers and our County Executive can get behind projects like this, which will be for the greater good. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Sincerely,

Anthony Becker

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of

criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. 2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of

criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.
9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.
10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.
11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.
12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. - the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.

- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

My children/family members attend Kellenberg Memorial High School and will be for years to come, and I do not want the casino anywhere near them! Please listen to us!!!

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Sincerely, Anna Trimarchi
Garden City, NY

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165

million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Dear Nassau County Legislators:

In Nassau County, we have enough headaches and problems and attacks on our quality of life. You have the power to hold the line, to stand for improving life in Nassau County, to not help deteriorate it. Why would we decimate our communities when not a single has ever improved any community. You must SAY NO TO THE CASINO!!! There are countless reasons I strongly oppose the Sands project at the site of Nassau Coliseum.

The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average *10 million* annual visitors or approx. *27,000 per day,* along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;

- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Sincerely, **David L. Meryash M.D., Manhasset NY**

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County.

3) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination.

4) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

5) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.
Sincerely, Patricia Costello, Floral Park

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose

an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;

- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Sincerely,

Brooke Hopkins

Subject: OPPOSE the Sands casino project

You don't often get email from jrioux1004@gmail.com. Learn why this is important
Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. NOT another one!! The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

As a strong supporter of the nearby fragile remaining Hempstead Plains and a graduate of Nassau Community College and Hofstra this issue is top of mind for me.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.
The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.
Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:
the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
the potential economic loss to homeowners near the casino from lower home values;
the economic losses to Hofstra University and other local businesses.
the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.
If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.
Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.
Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) ***** HERE The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to

our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.
A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.
In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Sincerely, Johanna Rioux Lindenhurst

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose

an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;

- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Sincerely,

GRACE HOPKINS
GARDEN CITY, NY 11530

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but

especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO_2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;

- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.

Sincerely,

John Collins
Kilburn Road
Garden City, NY 11530

Dear Nassau County Legislators:

I **strongly oppose** the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;

- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost.

Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local

communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of. Please put the welfare of our communities before the money in your pockets. Show the Sands that you and your vote can not be bought!

--
Best,

Regina Hendricks, DDS
Garden City, NY

Subject: Comments on Sands Casino DEIS

Attention: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Nassau County Legislators:

I strongly oppose the Sands casino project at the site of the Nassau Coliseum. The Draft Environmental Impact Study (DEIS) clearly demonstrates that there are overwhelmingly negative environmental, societal, economic, and financial impacts that will impose destructive costs on our environment, our local economy, and our social fabric – costs that will be imposed on my community in exchange for insufficient benefits.

1) The casino will average 10 million annual visitors or approx. 27,000 per day, along with the estimated 5,000 employees working on site. The lack of mass transportation to the site will impose an enormous increase in traffic volume that will negatively impact residents throughout Nassau County, but especially along the vital Meadowbrook Parkway and Hempstead Turnpike arteries. The number of casino visitors will peak during evening hours and weekends and most of them will arrive by car and by bus.

The proposal made by LVS to expand the Meadowbrook Parkway and other surrounding roads will not sufficiently accommodate the 10 million visitors they expect per year who will overwhelm our already inadequate traffic infrastructure. After years of inconvenience during road construction, traffic will remain just as bad if not worse. Our congested roads are simply not designed to handle an additional 20,000+ vehicles per day.

2) Nothing in the DEIS addresses the increase in air pollution that will be imposed on our communities from casino traffic, including carbon dioxide, carbon monoxide, smog-causing volatile organic compounds and nitrogen oxides, sulfur dioxides, formaldehyde, benzene, and microparticulates. Imposing more traffic generated pollution on communities with high asthma rates would be a social injustice. Several disadvantaged communities surrounding the Nassau Hub have already been designated by the NYS DEC as overburdened from the impacts of air pollution and climate change.

3) Studies have shown an increase in crime in counties that host casinos. In one study, 8.6% of property crime and 12.6% of violent crime in counties with casinos was due to the presence of the casino. This increase in crime rate translates into substantial increases in financial costs for Nassau County. Using the same method used in the source analysis and accounting for inflation and Nassau County's adult population, county costs—and our taxes—could potentially need to increase by $165 million to cover the additional costs of

criminal activity generated by a casino, to say nothing of the other social costs that come with an increase in crime.

4) The DEIS proposes the installation of a new groundwater supply well with a pumping capacity of up to 2 million gallons per day. This well would tap into the Magothy aquifer which is the sole source of drinking water for central Nassau County. This aquifer is already overutilized and under stress from contamination. We cannot spare another 760,000+ gallons per day for a massive casino.

Additional pumping of the Magothy aquifer risks pulling existing offsite contaminant plumes deeper into the aquifer, decreasing the flow of groundwater feeding Meadow Brook, and drawing water away from surrounding public supply wells. The DEIS is inadequate because it does not consider the impact of a new high-volume supply well on the local hydrologic system, risking negative impacts to existing community water supplies and surface waterways.

5) LVS expects to dump 120,000 tons of CO2 into our air each year, after 'mitigating' from 137,000 tons. At this enormous scale, it would take more than 5 million new trees to offset the impact of this dangerous, climate-change-causing pollutant.

6) The DEIS claims that off-site renewable energy sources will be used. However, Long Island has a limited amount of renewable energy resources and Nassau County is already at full capacity. If the casino was to draw from the available pool of renewable energy, current customers would be forced to revert to fossil fuel for their electricity needs.

7) The socioeconomic analysis in the DEIS is lacking and biased as it did not analyze:

- the impact on our locally owned restaurants and businesses from the diversion of $2 billion of disposable income into gambling losses and the resultant losses in local employment;
- the lost sales tax revenue from this diversion of dollars into gambling losses and the impact on the Roosevelt Field shopping district from increased traffic;
- the potential economic loss to homeowners near the casino from lower home values;
- the economic losses to Hofstra University and other local businesses.
- the increased social costs to our County, Town of Hempstead and local villages due to increases in traffic, crime and gambling addiction;
- the loss of potential economic activity from companies who will not want to expand in Nassau County due to the increase in traffic and other casino impacts; and
- the potential harm to our local tourism industry from the increase in traffic that will discourage visits to current destinations like the Hamptons/North Fork.

If the County was to perform a more comprehensive economic analysis, it would be clear that the casino's many harmful impacts heavily outweigh any potential benefits.

8) We have an epidemic of gambling addiction in our country due to existing casinos, lotteries and most recently, the explosion of online betting. Many are comparing this problem to the opioid crisis where for years the problem was ignored by our elected officials and only addressed after hundreds of thousands of lives were ruined or lost. Sands makes the case that because we have an explosion of online gambling, no one should object to a massive casino. Common sense tells you that placing a massive casino in the heart of our community will only serve to make our gambling addiction crisis even worse.

Sands has provided no evidence that any of its mitigation practices are effective, they are just words on paper with no supporting studies to demonstrate that any of Sands' methods have ever been successful.

Problem gamblers contribute to a large portion of gambling losses; one recent study suggested up to 33%. It is estimated that for every job created at a casino, three people will experience gambling addiction. Sands is marketing an addictive and highly profitable product in casino gambling. The DEIS does not address how much of the casino's profit will come directly from members of the surrounding communities with gambling addictions, nor how many new addicts the casino will create in our communities.

9) Placing a massive casino in the heart of a congested suburb, next to a community college, a major regional university, and a Catholic high school will inevitably lead to more citizens impacted by crime, including lives lost to drunk and impaired driving. It could be deemed gross negligence by the courts and could open the County and to its Legislators personally to endless litigation each and every time a life is lost in a traffic accident caused by one of the 10 million annual casino visitors.

10) The casino project as proposed will put the survival of adjacent last remains of the historic Hempstead Plains in grave risk - this will be a tremendous loss to our community and our history. The Plains are a unique ecosystem, vital to many species of birds, plants and animals.

11) The emergencies from this massive complex and its 27,000+ daily visitors will overwhelm our all-volunteer fire departments that are already challenged with meeting current community needs. A comprehensive assessment of the requirements and costs for police, fire, ambulance and health services must be conducted.

12) NYU Langone plans to build a $3 billion hospital and healthcare center on Nassau Community College land. Approving a massive casino that will consume so many resources (water, electricity, etc.) and impose so much traffic in the heart of our County, will no doubt put this proposal in serious jeopardy of ever getting approved.

A major hospital is a project that will save thousands of Nassau County lives, not destroy thousands of lives like the proposed casino will do. The Nassau Hub needs to be developed in a way that serves local communities and Long Island and improves, not diminishes, the quality of life of the residents and the businesses and institutions in the area.

Given the volume of materials that comprise the DEIS and the recent holidays, the County should extend the comment period for at least two additional weeks to allow the public and involved parties to have a reasonable time period to provide comments.

In summary, I urge you to protect Nassau County's future and your legacy by voting to stop this ill-conceived project, and to take a leadership role in bringing development to the Nassau Hub that you and county residents can truly be proud of.
