Table 1: Base Proposal Form

TO BE COMPLETED BY CONTRACTORS SUBMITTING A BID ON CONTRACT S3C067-11G							
ITEM NO.	EST. QTY.	UNIT					
1.	1	Lump Sum	**BASE BID ITEM INCLUSIVE OF ALL CONTRACT WORK UNLESS LISTED SEPARATELY IN BID ITEMS 2 THROUGH 17 OR PROPOSAL ALTERNATE 1:** Lump sum base bid for furnishing all labor, equipment, materials, appurtenances, accessories, testing, startup, temporary construction, temporary facilities, demolition, restoration, coordination, or incidentals required for all construction work, as shown on the Contract Documents, for the Cedar Creek Water Pollution Control Plant Influent Pumping System Improvements project, complete and ready for operation, excluding the work included under Bid Items 2 through 17 and Proposal Alternate 1 as described in Section 012001. _____	N/A	N/A		
2.	8	WEEKS	**Weekly Maintenance of the Supplemental Bypass Pumping System while Operated by the Owner:** For furnishing all labor, equipment, materials, and incidentals required to maintain the Supplemental Bypass Pumping System while it is operated by the Owner as described in Sections 012001, 013513.24, and 015728. _____				

PROPOSAL

TO BE COMPLETED BY CONTRACTORS SUBMITTING A BID ON CONTRACT S3C067-11G							
ITEM NO.	EST. QTY.	UNIT					
3.	46	MONTHS	**Monthly Maintenance of the Supplemental Bypass Pumping System while in Standby:** For furnishing all labor, equipment, materials, and incidentals required to maintain the Supplemental Bypass Pumping System while on standby as described in Sections 012001, 013513.24, and 015728.				
4.	23	MONTHS	**Monthly Maintenance and Operation of the Plant Drain Bypass Pumping System:** For furnishing all labor, equipment, materials, and incidentals required to maintain and operate the Plant Drain Bypass Pumping System as described in Sections 012001, 013513.24, and 015728.				
5.	4	WEEKS	**Weekly Maintenance and Operation of the Plant Drain Bypass Pumping System:** For furnishing all labor, equipment, materials, and incidentals required to maintain and operate the Plant Drain Bypass Pumping System as described in Sections 012001, 013513.24, and 015728.				

PROPOSAL

TO BE COMPLETED BY CONTRACTORS SUBMITTING A BID ON CONTRACT S3C067-11G							
ITEM NO.	EST. QTY.	UNIT					
6.	80	CUBIC YARDS	**Removal of Solids from Wet Well:** For furnishing all labor, equipment, materials, and incidentals required to remove and dispose of grit and solid material in the wet wells as specified. The measured volume shall be on a cubic yard basis as described in Section 012200.				
7.	1,000	SQUARE FEET	**Partial Depth Concrete Slab Repair:** For furnishing all labor, equipment, materials, and incidentals required for partial depth slab repair of spalled/deteriorated concrete in the wet wells if and where directed by the Owner. The measure area shall be on a square foot basis as described in Section 012001 and Division 3.				
8.	1,200	SQUARE FEET	**Partial Depth Concrete Wall Repair:** For furnishing all labor, equipment, materials, and incidentals required for partial depth wall repair of spalled/deteriorated concrete in the wet well if and where directed by the Owner. The measure area shall be on a square foot basis as described in Section 012001 and Division 3.				

PROPOSAL

TO BE COMPLETED BY CONTRACTORS SUBMITTING A BID ON CONTRACT S3C067-11G							
ITEM NO.	EST. QTY.	UNIT					
9.	500	SQUARE FEET	**Concrete Beam Repair:** For furnishing all labor, equipment, materials, and incidentals required for beam repair of spalled/deteriorated concrete in the wet wells if and where directed by the Owner. The measure area shall be on a square foot basis as described in Section 012001 and Division 3. _____				
10.	100	SQUARE FEET	**Concrete Column Repair:** For furnishing all labor, equipment, materials, and incidentals required for column repair of spalled/deteriorated concrete in the wet wells if and where directed by the Owner. The measure area shall be on a square foot basis as described in Section 012001 and Division 3. _____				
11.	1,000	LINEAR FEET	**Concrete Crack Injection Repair:** For furnishing all labor, equipment, materials, and incidentals required for crack injection repair of cracked concrete in the wet wells if and where directed by the Owner. The measure area shall be on a linear foot basis as described in Section 012001 and Division 3. _____				

TO BE COMPLETED BY CONTRACTORS SUBMITTING A BID ON CONTRACT S3C067-11G							
ITEM NO.	EST. QTY.	UNIT					
12.	80	CUBIC YARDS	**Disposal of Hazardous Building Materials:** For disposal of hazardous waste as shown on Contract Drawings and as described in Spec. Sections 028200, 028300, 028310, and 028600.				
13.	1	Allowance	**Allowance for Laboratory Testing and Specialty Inspections:** Allowance for laboratory testing and specialty inspections and described in Section 012001 and 014000. Any unused allowance balance shall be returned to the Owner. *One Hundred Thousand* *Zero*				
14.	1	Allowance	**Allowance for Bridge Crane Repairs:** Allowance for repairs to existing owner-furnished bridge crane that may be authorized for Contractor use during construction. Any unused allowance balance shall be returned to the Owner. *Fifty Thousand* *Zero*	N/A	N/A	$ 50,000	00

FOR INFORMATIONAL PURPOSES ONLY - DO NOT USE TO SUBMIT A BID

TO BE COMPLETED BY CONTRACTORS SUBMITTING A BID ON CONTRACT S3C067-11G

ITEM NO.	EST. QTY.	UNIT					
15.	1	Allowance	**Allowance for Fueling of Temporary Systems:** Allowance for reimbursement of actual documented cost of fuel purchases associated with the operation of temporary systems as required under the Contract. Any unused allowance balance shall be returned to the Owner. *Two Hundred Thousand* *Zero*	N/A	N/A	$ 200,000	00
16.	1	Allowance	**Allowance for Miscellaneous Additional Work:** Allowance for furnishing all labor, materials, equipment and incidentals required for if and miscellaneous additional work. Any unused allowance balance shall be returned to the Owner. *4 Million* *Zero*	N/A	N/A	$ 4,000,000	00
17.	1	Lump Sum	**SIPP Lining of existing 48" force mains:** For furnishing all labor, equipment, materials, and incidentals required to install SIPP lining of the existing 48" diameter force mains as shown on the Contract Drawings and described in Section 330130.70.	N/A	N/A

TO BE COMPLETED BY CONTRACTORS SUBMITTING A BID ON S3C067-11G						
ITEM NO.	APPROX. QUANTITIES					
1.	Lump Sum	**Mobilization and Demobilization of the Supplemental Bypass Pumping System:** For furnishing all labor, equipment, materials, and incidentals required to mobilize, demobilize, test, start up, and turnover the Supplemental Bypass Pumping System for operation by the Owner as shown on the Contract Drawings and described in Sections 012001, 013513.24, and 015728	N/A	N/A		

FOR INFORMATIONAL PURPOSES ONLY - DO NOT USE TO SUBMIT A BID

ALLOWANCES

It is expressly understood and agreed that the total Bid presented in this Proposal is the basis for establishing the amount of the Bid Security and includes the following allowances:

- Item No. 13: Allowance for Laboratory Testing and Specialty Inspections
- Item No. 14: Allowance for Bridge Crane Repairs
- Item No. 15: Allowance for Fuel Price Escalation
- Item No. 16: Allowance for Miscellaneous Additional Work

All in accordance with the requirements of Division 01, General Requirements; Section 011000, Summary; Section 012100, Allowances; and Section 015000, Temporary Facilities and Controls.

Final Contract Payment for allowance items shall be based upon actual payments, and not on the approximate amounts cited herein.

DETERMINATION OF LOW BID

Determination of low Bid will be made by comparing the Total Base Bid which shall include the lump sum Bid prices and allowances.

MAJOR EQUIPMENT ITEMS

The Bidder shall fill the name and address of the one proposed manufacturer for each major equipment item tabulated hereinafter. It is expressly understood that the furnishing of this information will not relieve the Bidder of any requirements of the Contract Documents and failure to fill out properly is grounds for rejection.

Specification Number	Description	Manufacturer
432341	End Suction Solids Handling Pumps	
432341	Eddy Current Drives

ARTICLE GC1 - APPLICATION OF GENERAL CONDITIONS

The provisions of the General Conditions as hereinafter stipulated shall form a part of each Prime Contract and/or separate trade specification except insofar as any such provision or provisions may be manifestly not applicable to any such trade specification.

It shall be the duty of the Contractors to fully familiarize themselves with all of the provisions of the Contract Documents.

ARTICLE GC2 - CORRELATION AND INTENT OF DOCUMENTS

The Contract Documents are complementary, and what is called for by any one shall be as binding as if called for by all.

The intent of the Contract Documents is to include everything necessary for the proper execution of the complete finished Work.

ARTICLE GC3 - ORAL MODIFICATIONS

No oral statement of any person shall be allowed in any manner or degree to modify or otherwise affect the terms of the Contract.

ARTICLE GC4 - KNOWLEDGE OF CONDITIONS

(See Instructions to Bidders, Section B, Bidder's Obligations.)

ARTICLE GC5 - DRAWINGS AND SPECIFICATIONS

A. The Drawings and Specifications prepared by the Engineer are intended to agree and anything shown or called for on the Drawings and not mentioned in the Specifications, or vice versa, or any Work or materials necessary to, and usually included in, the complete finish of the Work and/or materials of the character to be furnished by the Contractors, shall be considered to be included herein and shall be performed and furnished by the Contractors without any extra charge, as though the same were both shown and specified.

   The Engineer will furnish in addition to the Drawings listed in the Contract Documents, such other and additional Drawings and such explanations in writing as may, in the Engineer's opinion, be necessary for the performance of the Work by the Contractors, and all such details and explanations shall be binding upon and shall be strictly followed and complied with by the Contractors. All such Drawings shall be consistent with the Contract Documents, true developments thereof, and reasonably inferential therefrom.

B. All Drawings, and such notes, interlineations, figures and details, as may be noted thereon, shall be considered as a part of and complementary to the Specifications. Full size Drawings and large-scale details shall, in general, govern and take precedence over the small scale Drawings which they are intended to amplify. Figure dimensions shall govern in laying out the Work, and no Work shall be executed from dimensions obtained by scaling the Drawings.

1525 of the New York State Environmental Conservation Law.

While the Specifications are subdivided into trades, (but only for the purpose of facilitating the Work) Contractors shall, nevertheless, furnish all labor and materials necessary to complete all the Work in accordance with the Contract despite the fact that it may not appear under the Work specified for the particular trade under which it would be normally classified.

C. The Contractors shall check all supplementary information furnished them immediately upon their receipt. The supplementary information shall not be altered by the Contractors, but should any error or inconsistency appear, or in the event of any doubt or question arising in respect to the true meaning and intent of the Drawings or Specifications, or should anything be omitted from the Drawings or Specifications which is necessary to a clear understanding of the Work, they shall report same in writing within five (5) days to the Engineer who will make any necessary rectification and decisions.

If, in the Contractor's opinion, any Work is shown on the Drawings or called for in the Specifications in such a manner to make it impossible for him to produce or guarantee a first-class piece of Work, he shall refer the same in writing to the Engineer before proceeding.

D. If, at any time, the County shall fail to supply sufficient or clear information to enable the Contractor to proceed with the Work, the Contractor shall immediately notify the Engineer in writing, and in no case, will the lack of such information, or failure to understand the Drawings or Specifications, or ignorance of the contents of either, be considered or received as an excuse for improper or inferior construction, workmanship or materials, or for any delay in performing the Work, or as a justification for any claim for Extra Work or materials.

Should any question or disagreement arise concerning the meaning of Drawings or Specifications, such question or disagreement shall be settled by the Engineer, whose decision in writing shall be final.

E. The Contractor(s) will be furnished by the County, without charge, the following:

CONTRACT	
General Construction	Portable digital media with Contract Documents (pdf)
	Portable digital media with Auto CADD Contract Documents

F. The Contractors shall keep at least one copy of all Drawings and Specifications at the Site in good order and available to the County, the Engineer, or their representatives. These Drawings and Specifications shall be kept up to date at all times and show all changes.

ARTICLE GC6 - OWNERSHIP OF DRAWINGS AND SPECIFICATIONS

All Drawings and Specifications are and shall remain the property of the County. These are furnished to the Contractors as instruments of service. They are not to be used on any other work.

1525 of the New York State Environmental Conservation Law.

ARTICLE GC7 - COORDINATION WITH OTHER CONTRACTORS

A. During the progress of the Work on this Contract, other contractors may be engaged in performing Work within the Contract area and in areas adjacent to this Contract area.

1. The Contractor's attention is specifically directed to the fact that because of the work on other contracts within and adjacent to the limits of this Contract he may not have exclusive occupancy of the territory within or adjacent to the limits of this Contract.

2. The Contractor will be required to cooperate with other Prime Contractors and the owners of the various utilities and to coordinate and arrange the sequence of his Work in such a manner that all work, proposed or in progress within or adjacent to the limits of the Contract, can be progressed with as little interference as possible.

3. In case of interference between the operations of a Contractor and/or utility owners and/or other Contractors, the Commissioner shall be the sole judge of the rights of each party and of the sequence for Work necessary to expedite the completion of all the work progressed or about to be progressed within or adjacent to the Contract limits.

B. The direction of the Commissioner on the order and sequence of the Work shall not in itself constitute a basis for extra compensation or an Extension of Time.

ARTICLE GC8 - MEETINGS

A. Pre-Award Meeting

During the Pre-Award meeting with the contractor(s), a County Official from the Office of Minority Affairs will discuss the Minority Business Enterprise/Women's Business Enterprise (M/WBE) "Best Effort" requirement discussed in Appendix EE of the Agreement Section of the project specifications.

B. Pre-Construction Meetings

1. After the Contract has been awarded, but prior to the start of actual construction, two separate and distinct Pre-Construction Meetings will be scheduled by the Engineer.

2. One conference will include representatives of the New York State Department of Environmental Conservation and the Nassau County Department of Public Works, Contractors, Subcontractors as requested, and the Engineer. The purpose of this Meeting will be generally administrative and will include but not necessarily be limited to discussion of State requirements, use of Subcontractors, submissions required from the Contractor prior to start of Work, major equipment deliveries and priorities, construction procedures, payment criteria, time for completion, and any specific or unique criteria to be followed.

3. The second Meeting will involve the Nassau County Department of Public Works, Local Municipalities, Police and Fire Department, New York State Department of Transportation, Utility Companies, the Contractors and the Engineer. The prime

purpose of this conference is to acquaint local officials, highway departments, and utilities with the proposed Contract limits, construction procedures, maintenance of traffic, and areas where utilities may be affected.

C. Progress Meetings

1. Regular Meetings will be held bi-monthly at the County Field Office during the performances of the Work of this Contract. Additional Meetings may be called as progress of the Work dictates.

2. Responsible representation from major equipment manufacturers will be the Contractors' responsibility at Progress Meetings on demand from the County. Refer to all Divisions of the Technical Specifications for other requirements.

3. Attendance:

   a. County

   b. Engineer

   c. Contractor

   d. Subcontractors, only with Engineer's approval or request, as pertinent to the agenda.

4. Minimum Agenda

   a. Review minutes of previous meetings.

   b. Review progress of Work since last meeting.

   c. Note and identify problems which impede planned progress.

   d. Develop corrective measures and procedures to regain planned Schedule.

   e. Revise construction Schedule as indicated and plan progress during next Work period.

   f. Maintaining of quality and work standards.

   g. Complete other current business.

ARTICLE GC9 - BID BREAKDOWN

(See Agreement, Article XXXIV, "Submission of Bid Breakdown".)

ARTICLE GC10 - SUPERINTENDENCE AND WORKERS

(See Agreement, Articles XXIX, "Character and Competency" and XXX, "Superintendence".)

ARTICLE GC11 - LAWS AND ORDINANCES

The Contractors accept the Drawings and Specifications and other Contract Documents, submitted by the Engineer, on the basis that such Drawings, Specifications and other Contract Documents do not constitute a release of responsibility on the part of the Contractors to know and supervise the actual construction in all its parts so that such construction complies with all legal regulations. The Contractors shall be held to be both responsible and accountable for any damage which the County may suffer as a result of non-compliance with any or all legal regulations.

The Work shall be performed by the Contractors, in all respects, in strict conformity to all laws, rules, regulations, requirements and ordinances of the federal, state, and local governments and all departments and bureaus thereof, and of the National Fire Protection Association. Should the Drawings or the Specifications conflict with the law, the Contractors shall immediately notify the Engineer in writing of such conflict, and shall thereafter follow the written instructions of the Engineer in respect thereto; or should the Drawings or Specifications require more than the law requires, the Drawings and Specifications shall be followed nevertheless.

The Prime Contractor shall obtain and pay for all permits and fees required by the Work performed under his Contract. Notwithstanding the requirements of the preceding paragraphs, all Contractors shall be additionally governed by OSHA requirements. All electrical Work shall comply with the N.E.C. and the respective Contractor will be required to furnish for his Work, Underwriters Certificates issued by Underwriters Laboratories for compliance.

Compliance with the foregoing requirements shall not relieve the Contractors of any other of their obligations under this Contract. (See Agreement, Articles III, "Contractor's Responsibility" and IV, "Compliance with Laws".)

ARTICLE GC12 - PERMITS

(See Agreement, Article IV, "Compliance with Laws".)

ARTICLE GC13 - ACCIDENTS

A. If death, serious injuries or serious damages are caused, the accident shall be reported immediately by telephone or messenger to both the Commissioner and the Engineer.

B. Contractor shall promptly report in writing to the Engineer all accidents whatsoever arising out of, or in connection with, the performance of the Work, which cause death, personal injury or property damage, giving full details and statements of witnesses.

C. If any claim is made by anyone against the Contractor or Subcontractor on account of any accidents, the Contractor shall promptly report the facts in writing to the Engineer, giving full details of the claim.

ARTICLE GC14 - CONTRACTOR SUBMISSIONS

In accordance with the requirements of the Contract Documents, the Contractor shall furnish all required submittals which shall include, but not be limited to, the following tabulation of Contractor submissions.

A. Materials and Equipment

1. Suppliers and Manufacturers

Within fifteen (15) days after Notice to Proceed, the Contractor shall submit to the Commissioner and the Engineer a list of materials and equipment suppliers and manufacturers for approval in accordance with the requirements of the General Conditions, Article GC-17. "Materials and Equipment Approvals, Substitutions, and Deviations".

2. Material and Equipment Orders Schedule

a. Within fifteen (15) days after Notice to Proceed, Contractor shall prepare and submit his tabulation of principal items of equipment and materials to be purchased to the Engineer for review and approval.

The schedule shall be revised as required prior to approval by the Engineer.

b. Ten (10) updated copies of the schedule shall be submitted to the Engineer with the application for partial payment.

c. The schedule shall be updated biweekly and one copy submitted to the Engineer.

d. Schedule shall be submitted until all of the data is incorporated into the CPM Scheduling for the project.

3. Form of Schedule

Schedule shall be in tabular form with appropriate spaces to insert the following information for principal items of equipment and materials:

a. Date on which shop drawings are requested and received from the manufacturer.

b. Dates on which certification is received from the manufacturer and transmitted to the Engineer.

c. Dates on which shop drawings are submitted to the Engineer and returned by the Engineer for revision.

d. Dates on which shop drawings are revised by manufacturer and resubmitted to the Engineer.

e. Date on which shop drawings are returned by Engineer annotated either "Approved" or "Approved as Noted".

f. Date on which accepted shop drawings are transmitted to manufacturer.

g. Date of manufacturer's scheduled delivery.

h. Date on which delivery is actually made.

B. Substitutions

1. Within a fifteen (15) day period from the Notice to Proceed, requests for substitutes may be proposed to the Commissioner. This period for submitting requests will be strictly enforced. Such requests shall conform to the requirements of General Conditions, Article GC-17, "Materials and Equipment, Approvals, Substitutions and Deviations".

2. Requests for substitutions will be received and considered from Prime Contractors only and not from manufacturers, suppliers, subcontractors, or other parties.

C. Shop Drawings

1. Within fifteen (15) days after the Notice to Proceed, the Contractor shall prepare and submit fifteen (15) copies of his schedule of shop drawings submissions of the Engineer for review and approval.

2. In order to maintain the construction schedule for this project the Contractor shall submit all shop drawings within sixty days after the Notice to Proceed as indicated in Division 1, General Requirements to the Technical Specifications and the Contractor's schedule of shop drawing submissions shall conform to these requirements.

3. Shop drawings shall be submitted without fail in time to permit correction, resubmission and final approval, as hereinafter specified, without causing any delay in the construction of any work. The Contractors may begin the preparation of shop drawings as soon as possible after signing of the Contract. Formal submission of shop drawings will begin after execution of the Contract by the County Executive.

D. Coordination Drawings

1. Coordination Drawings shall be completed by all Contractors within ninety (90) days from the Notice to Proceed.

2. Coordination Drawings shall be initiated, completed and submitted for distribution so as not to delay the construction.

E. Layout and Installation Drawings

1. Layout and installation drawings shall be completed by all Contractors within one hundred and twenty (120) days from the Notice to Proceed.

2. Layout and installation, drawings submitted for review by the Engineer shall include all pipes, valves, fittings, sewers, drains, heating and ventilation ducts, all electrical,

heating, ventilating and other conduits, plumbing lines, electrical cable trays, lighting fixture layouts, and circuiting, instrumentation, communications power supply, alarm circuits, etc., under this Contract.

F. Operations and Maintenance Manuals

1. For special requirements for Final Operations and Maintenance Manuals, see Division 1, General Requirements of the Technical Specifications.

G. Maintenance and Lubrication Schedules

1. A maintenance and lubrication schedule for each piece of equipment shall be submitted with the shop drawings. Submission shall be fifteen (15) copies.

2. The schedules shall provide the information and be in the form indicated in Division 1, General Requirements of the Technical Specifications.

H. Samples

1. Samples and Shop Drawings which are related to the same unit of work or Specification Section shall be submitted at the same time. If related shop drawings and samples are submitted at different times, they cannot be reviewed until both are furnished to the Engineer.

2. All samples are to be submitted in accordance with the requirements of General Conditions, Article GC-15, "Samples".

I. Shop Drawing Requirements

1. Where the nature of the work of the Contract makes it necessary, or where so required by the Engineer, Contractors shall submit scale and full size shop drawings of their work for the approval of the Engineer. The shop drawings shall be complete in every detail including provisions required of various trades, connections with other work, all cutting, fitting and drilling required and any and all other necessary information in accordance with usual trade practice as particularly required for any special purposes.

2. Shop drawings include, but are not limited to, shop drawings, layout and installation drawings in plan and elevation, certified wiring diagrams, interconnecting wiring diagrams, manufacturer's data, etc. Contractor shall be responsible for securing all of the information, details, dimensions, drawings, etc., necessary to prepare the Shop Drawings required and necessary under this Contract and to fulfill all other requirements of his Contract. Contractor shall secure such information, details, drawings etc. from all possible sources including the Contract Drawings, drawings prepared by subcontractors, suppliers, etc.

3. All shop drawings submitted by the Contractors which involve a change at variance with the Contract Drawings shall be noted by the Contractors by advising the Engineer in writing as to the recommended change and the reason therefor.

4. Contract Drawings are for engineering and general arrangement purposes only and are not to be used as shop drawings.

5. Shop drawings shall accurately and clearly present the following:

   a. All working and installation dimensions.

   b. Arrangement and sectional views.

   c. Units of equipment in the proposed positions for installation details of required attachments and connections and dimensioned locations between units and in relation to the structures.

   d. Necessary details and information for making connections between the various trades including, but not limited to, power supplies and interconnecting wiring between units, accessories appurtenances, etc.

6. Structural and all other layout drawings prepared specifically for the Project shall have a plan scale of not less than 1/4-inch equal to 1 foot and they shall be not larger than the size of the Contract Drawings.

7. Where manufacturer's publications in the form of catalogs, brochures, illustrations, compliance certificates, or other data sheets are submitted in lieu of prepared shop drawings, such submissions shall specifically indicate the item for which approval is requested. Identification of items shall be made in ink, and submissions showing only general information are not acceptable.

8. The Contractor shall provide all required copies for the use of the various trades and at the site, and one (1) copy of approved shop drawings shall be provided by the Contractor to the other Prime Contractors.

9. A submittal record form shall accompany each submittal. A facsimile copy of the record form will be provided by the County. This is the only form to be used by the Contractor for his submittals.

10. <u>Contractor Responsibilities</u>

   a. Before submitting shop drawings to the Engineer all submittals from subcontractors, manufacturers or suppliers shall be sent directly to the Contractor for preliminary review, coordination and checking. Contractor shall be responsible for their submission at the proper time so as to prevent delays in delivery of material or equipment. Contractor shall thoroughly check all drawings for accuracy and conformance to the intent of the Contract Documents. Drawings found to be inaccurate or otherwise in error shall be

returned to the subcontractors, manufacturers, or suppliers by the Contractor for correction.

b. All submittals, including shop prepared by or under the direction of the various Contractors, shall be thoroughly checked by the Contractor for accuracy and conformance to the intent of the Contract Documents before being submitted to the Engineer and shall bear the Contractor's signature of approval certifying that they have been so checked. Submittals without the Contractor's signature of approval will not be reviewed by the Engineer and will be returned to the Contractor stamped "Rejected". Before submitting them to the Engineer, all submittals shall be bound, properly labeled and consecutively numbered. In a clear space above the title block, or on the back, the Contractor shall hand stamp the following, and enter the required information:

"NASSAU COUNTY

NAME OF PROJECT

Date _____

Contract No. _____

Equipment Identification No. _____

Contract Drawings No. _____

Specification Section _____

This document has been reviewed, coordinated and checked in detail for accuracy of content and for compliance with the Contract Documents and is hereby approved. The information contained herein has been coordinated with all involved Contractors.

Contractor _____

Signed _____"

c. Shop Drawings shall be submitted as a single package including all associated drawings for any operating system and shall include all items of equipment and any mechanical units involved or necessary for the functioning of such system. Where applicable, the submittal shall include elementary wiring diagrams showing circuit functioning and necessary interconnection wiring diagrams for construction.

d. If the submittals contain any departures from the Contract Documents, specific mention thereof shall be made in the Contractor's letter of transmittal. Otherwise, the review of such submittals shall not constitute approval of the departure. The Contractor shall call the Engineer's attention to any changes by the use of large rubber stamp, or by larger letters on shop drawings. If this is not done, even if the work is incorporated in the construction, it will not be accepted by the Engineer even if shop drawings are "Approved".

e. No materials or equipment shall be ordered, fabricated or shipped or any work performed until the Engineer returns to the Contractor the submittals herein required, annotated "Approved".

f. Where errors, deviations, and/or omissions are discovered at a later date in any of the submittals, the Engineer's prior review of the submittals does not relive the Contractor of the responsibility for correcting all errors deviations and/or omissions.

11. Procedure for Review

a. Shop Drawings will be checked for design conformance with the Contract Documents and general arrangement only.

b. Submittals shall be transmitted in sufficient time to allow the Engineer adequate time for review and processing so as not to delay the Project.

c. Contractor shall transmit one (1) reproducible transparency and seven (7) prints of each submittal to the Engineer for review for all drawings greater than 8-1/2 inches by 11-inches in size. The Contractor shall submit fifteen (15) copies of all other submittals. Prints from the reproducible transparencies shall be legible with a sharp, clear definition of all line work and lettering. Reproducible transparencies and resultant prints which in the opinion of the Engineer are not legible will not be reviewed and will be returned to the Contractor annotated "Rejected".

d. Submittals shall be accompanied by a submittal record form hereinbefore specified and shall be accompanied with any notification of departures and any pertinent data to facilitate review. If data for more than one Section of the specifications is submitted, a separate transmittal letter shall accompany the data submitted for each Section. A number shall be assigned to each submittal by the Contractor starting with the Number 1 and thence numbered consecutively. Resubmittals shall be identified by the same number followed by the suffix "A" for the first Resubmittals and the suffix "B" for the second Resubmittals, etc.

e. Submittals will be annotated by the Engineer in one of the following ways:

"Approved" - no exceptions are taken.

"Approved as Noted" - minor corrections are noted and shall be made and a Resubmittals is required.

"Disapproved" - major corrections are noted and shall be made and a Resubmittals is required.

"Rejected" - Based on the information submitted, the submission is not in conformance with the Contract Documents. The deviations from the Contract Documents are too numerous to list and a completely revised submission of the proposed equipment or a submission of other equipment is required.

or

Reproducible transparencies and resultant prints are not legible and will not be reviewed and a Resubmittal is required.

f. If a submittal is satisfactory to the Engineer, the Engineer will annotate the submittal, "Approved" and return three (3) copies to the Contractor. If reproducible transparencies are submitted, the Engineer will retain the copies and return the reproducible transparencies to the Contractor, plus two prints.

g. If a Resubmittal is required, the Engineer will annotate the submittal "Approved as Noted" or "Disapproved" or "Rejected" and return three (3) copies to the Contractor for appropriate action. If reproducible transparencies are submitted, the Engineer will retain the copies and return the reproducible transparencies to the Contractor, plus two prints. The Contractor shall resubmit in accordance with paragraph D.3, hereof.

h. Contractor shall revise and resubmit submittals as required by the Engineer until submittals are "Approved" by the Engineer.

i. Approval of a Shop Drawing by the Engineer will constitute approval of the subject matter for which the Drawing was submitted and not for any other structure, material, equipment or appurtenances shown.

J. Coordination Drawings Requirements

1. The General Construction Contractor shall initiate coordinating the installations of all the Contract Work by means of Coordination Drawings, as specified herein. The Coordination Drawings may lack complete data in certain instances pending receipt of shop drawings, but sufficient space shall be allotted for the items affected. When final information is received, such data shall be promptly inserted on the Coordination Drawings.

2. The General Construction Contractor shall prepare a set of mylar transparencies, indicating equipment and appurtenances, at not less than 3/8-inches scale. The Drawings shall also show beams, ceiling heights, walls, floor to floor dimensions,

floors, partitions, columns, windows, door and other major architectural and structural features shown on the General Construction Drawings. Site coordination drawings shall be at not less than 1"-20' scale. Two sets of prints from the transparencies shall be furnished to the County's review for conformance with the intent of this Section. Corrections, if required, shall be made to the transparencies.

4. In the preparation of all the Coordination Drawings, composite drawings, large scale details as well as cross and longitudinal sections shall be made as required, or as directed by the Engineer, to fully delineate all conditions. Particular attention shall be given to the locations, size and clearance dimensions of equipment items, shafts and similar features. In preparing the Coordination Drawings, minor changes in duct, pipe or conduit routings that do not affect the intended function may be made as required to avoid space conflicts, when mutually agreed, but items may not be resized or exposed items relocated without the County's approval. No changes shall be made in any wall or chase locations, ceiling heights, door swings or locations, windows or other openings, or other features affecting the function or aesthetic effect of the building. During this period, the Contractors shall make a good faith effort to coordinate work among themselves. If conflicts or interferences cannot be satisfactorily resolved, the County shall be notified and its decision obtained.

5. No preference or advantage shall be given to any Contractor in considering resolution of conflicts, or grant priority to any one Contractor in the allocation of space. If the Contractors are unable to reach agreement on a matter of interference, the matter shall be submitted to the County for its binding decision. Should any problems of coordination require architectural or structural change of design, the change shall be submitted to the County for resolution. At the completion of this phase of the Coordination Drawings preparation, the County shall hold coordination meetings with the Prime Contractors to eliminate any interference among the trades that the Drawings indicate and to avoid any conflicts during installation of the work.

6. At the completion of these meetings, and after the General Construction Contractor's set of mylars has been coordinated and all necessary changes have been made, the County shall hold a final coordination meeting where these Drawings shall then be signed-off by each of the Contractors, indicating their awareness of, and agreement with, the indicated routings and layouts and their inter-relationship with the adjoining or contiguous work of all Contracts. Thereafter no unauthorized deviations will be permitted and if made without the knowledge or agreement of the County or other affected contractors, will be subject to removal and correction at no additional cost to the County.

7. After the final Coordination Drawings have been agreed upon and signed by all Contractors, the General Construction Contractor shall provide and distribute four (4) copies to each of the Contractors and fifteen (15) copies to the County, for reference and record purposes. Contractors desiring additional copies of such drawings, beyond the basic distribution indicated above, shall arrange and pay for cost of same.

8. The record copies of final Coordination Drawings shall be retained by each Contractor as a working reference. All shop drawings, prior to their submittal to the County, shall be compared with the Coordination Drawings and developed accordingly by the Contractor responsible. Any revisions to the Coordination Drawings which may become necessary during the progress of the work shall be noted by all Contractors and shall be neatly and accurately recorded on the recorded copies. Each Contractor shall be responsible for the up-to-date maintenance of his own record copies of the Coordination Drawings and to keep one copy available at the Site. The Coordination Drawings and any subsequent changes thereto, shall be utilized by each Contractor in the development of his as-built drawings.

9. No extra compensation will be paid by the County to any Contractor for relocating any duct, pipe, conduit or other material that has been installed without proper coordination among all the Contractors and the trades involved. If any improperly coordinated work, or work installed that is not in accordance with the approved Coordination Drawings, necessitates additional work by the other Contractors, the costs of such additional work shall be assessed to the Contractor responsible, as determined by the County.

10. All changes in the work on any Contract, whether a change in price is given or not, shall be shown on the Coordination Drawings.

11. All work on the Coordination Drawings shall be performed by competent draftsmen, in clear, legible manner. The County shall be the sole judge of the acceptability of the Coordination Drawings.

12. Coordination Drawings shall not be used for "as-built" drawings.

K. Layout and Installation Drawings Requirements

1. Layout and installation drawings are to be submitted in accordance with the requirements hereinbefore specified under Paragraph I, Shop Drawings Requirements.

2. Layout and installation drawings, are required for both interior and exterior piping, valves, fittings, sewers, drains, heating and ventilation ducts, conduits, plumbing lines, electrical cable trays, etc. The final dimensions, elevations, locations, etc. of the various items may depend upon the dimensions of equipment, valves, etc. to be furnished by the Contractor.

3. Layout and installation drawings shall show connections to structures, equipment, sleeves, valves, fittings, etc.

4. Drawings shall show the location and type of all supports, hangers, foundations, etc. and the required clearances to operate valves, equipment, etc.

5. The drawings for pipes, ducts, conduits, etc. shall show all electrical conduits and pressure piping, electrical cable trays, heating and ventilation ducts or pipes,

structures, manholes or any other feature within four (4) feet (measured as the clear dimension) from the pipe, duct, conduit, etc. for which the profile is drawn.

ARTICLE GC15 - SAMPLES

A. General

1. Where required in the specifications for the various trades or otherwise requested by the County or Engineer, samples of any material to be used and of the finish to be applied in the work, shall be submitted by the Contractor for approval in accordance with the General Conditions, Article GC-14, "Contractor Submissions". Samples shall be of such a nature to fully illustrate the character of the finished work or as may be more fully described in the trade specifications.

2. Samples shall be furnished so as not to delay fabrication, allowing the Engineer reasonable time for the consideration of the samples submitted.

3. Contractor shall store and protect large samples and mock-ups until the Project is complete or until a time approved by the Engineer.

4. Accepted samples will establish the standards by which the completed work will be judged.

B. Samples

1. Samples shall be of sufficient size or quantity to clearly illustrate the quality, type range of color, finish or texture and shall be properly identified.

2. Samples shall be checked by the Contractor for conformance to the Contract Documents before being submitted to the Engineer and shall bear the Contractor's stamp of approval certifying that they have been checked.

3. Samples shall be submitted in triplicate and each sample shall be identified with the name and number of the project, reference to Specification Section, Contract Drawings number, nature of the material, trade name of manufacturer and the location of its intended placement. Written approval shall be obtained, and the work furnished shall conform strictly to the samples approved by the Engineer. No approval of a sample shall be taken in itself to change or modify any of the requirements of the Contract.

4. Transportation charges or samples submitted to the Engineer shall be prepaid by the Contractor. Samples shall be delivered to the Engineer's field office. If the Contractor requires a sample for his use, he shall notify the Engineer in writing.

5. If samples are disapproved, the Contractor shall make all corrections required and shall resubmit the required number of new samples until approval is received.

C. Job Mock-Ups

1. Job mock-ups (sample panels) shall be constructed on Site by the Contractor and only one of each type will be required. Mock-ups shall be constructed only after the individual samples and components used in the mock-up have been approved by the Engineer. If a mock-up is not approved, Contractor shall construct additional ones until approval is received.

D. Samples for Tests

1. Contractor shall furnish such samples of material as may be required for examination and test. All samples of material for tests shall be taken according to standard methods and as required by the Contract Drawings.

ARTICLE GC16 - TEMPLATES AND PATTERNS

Templates and patterns shall be prepared and provided as required for the proper execution of the Work under the various Prime Contracts, by the various trades.

ARTICLE GC17 - MATERIALS AND EQUIPMENT, APPROVALS, SUBSTITUTIONS AND DEVIATIONS

A. Approval of Materials and Equipment Suppliers and Manufacturers

1. The Contractor shall submit to the Commissioner and the Engineer for approval a list of materials and equipment suppliers and manufacturers who are to furnish items of materials or equipment. This submission is to be made in accordance with the time conditions stipulated in General Conditions, Article GC-14, "Contractor Submissions".

2. Where the acceptability of any equipment or material specified herein is conditioned upon that item having a record of satisfactory operation for a specified period of time, such acceptability may be considered lacking such record, only if the manufacturer and/or supplier can provide a bond or cash deposit which will guarantee replacement at no cost to the County in the event of failure occurring prior to the expiration of the experience record term specified. The item proposed must meet all other technical requirements stipulated in the Specifications.

3. If the materials and equipment submitted are offered as substitutes to the Contract Documents the Contractor shall advise the County and the Engineer of the substitutions and comply with the requirements hereinafter specified in this Article.

B. Storage and Protection of Equipment and Materials

The Contractor shall make every effort to minimize extended storage periods for materials and equipment at the site by judiciously scheduling deliveries to coincide with construction needs. The Contractor shall store his material and equipment in accordance with the requirements of Division 1, General Requirements of the Technical Specifications. The Contractor shall not store unnecessary materials or equipment at the site and shall take care to prevent

any structure from being loaded with a weight which will endanger its integrity or the safety of persons. The Contractor shall follow the instructions of the Engineer, regarding the posting of regulatory signs for loading on structures and other safety precautions. The Contractor shall obtain from the equipment manufacturers a letter detailing the method of storage and the maintenance of the stored equipment for the Engineers review. All storage and methods of protection for material and equipment at the site shall be subject to the prior approval of the Engineer. Any costs associated with the storage and protection of materials and equipment shall be deemed to be included under the Contract and no additional payment will be made.

1. Materials

   a. Materials may be stored out of doors if supported on wood runners above ground surface and protected with approved, effective durable covers.

   b. Materials shall not be placed within ten (10) feet of fire hydrants.

   c. Avenues for personnel and vehicular movement, gutters, drainage channels and inlets shall be kept unobstructed at all times.

2. Major Equipment

   a. No Major Equipment Item shall be brought to the site until the following conditions are met:

      (1) The County must have received the manufacturer's recommendations for on site storage in writing.

      (2) The structure in which the equipment is to be installed is roofed (roofing must be watertight) and has such protection of doorways, windows and other openings that will provide reasonable protection from the weather.

   b. The manufacturer must certify to the County, in writing, that the equipment has been properly stored.

3. Special Equipment

   a. The storage of special equipment shall be in accordance with the requirements specified in Division 1 of the Technical Specifications.

4. Equipment other than Major Equipment

   a. The Contractor shall not ship any equipment to the site until approval is received from the County. Under no circumstances shall equipment be delivered to the Site more than one month prior to installation without written authorization from the County.

b. Storage of any mechanical or electrical equipment out of doors at any time is absolutely prohibited regardless of the protection furnished. Storage of mechanical and electrical equipment within structures at the Site will not be permitted until all structural work has been completed and the structure is made weathertight.

c. All mechanical and electrical equipment shall be coated, wrapped and otherwise protected from snow, rain, drippings of any sort, dust, dirt, condensed water vapor, etc. during shipment, storage, and subsequent to installation and until placed in service.

d. Should storage of mechanical and electrical equipment become necessary before it can be stored at the Site, the Contractor shall provide storage in a weatherproof warehouse.

e. All costs for equipment protection including warehousing or other work to meet the scheduled completion date shall be deemed to be included under the Contract and no additional payment will be made.

f. All equipment having moving parts such as gears, electric motors, etc. and/or instruments shall be stored in a temperature and humidity controlled building approved by the County, until such time as the equipment is be installed.

g. All equipment shall be stored fully lubricated with oil, grease, etc., unless otherwise instructed by the manufacturer.

h. Manufacturer's storage instructions shall be carefully studied by the Contractor and reviewed with the County by him. These instructions shall be carefully followed and a written record of this kept by the Contractor.

i. Moving parts shall be rotated a minimum once weekly to ensure proper lubrication and to avoid metal-to-metal "welding". Upon installation of the equipment, the Contractor shall start the equipment, at least half load, once weekly for an adequate period of time to ensure that the equipment does not deteriorate from lack of use.

j. Lubricants shall be changed upon completion of installation and as frequently as required thereafter during the period between installation and acceptance. New lubricants shall be put into the equipment at the time of acceptance.

k. Prior to acceptance of the equipment, the Contractor shall have the manufacturer inspect the equipment and certify that its conditions has not been detrimentally affected by the long storage period. Such certifications by the manufacturer shall be deemed to mean that the equipment is judged by the manufacturer to be in a condition equal to that of equipment that has been shipped, installed, tested and accepted in a minimum time period. As such, the manufacturer will guaranty the equipment equally in both instances. If

such a certification is not given, the equipment shall be judged to be defective. It shall be removed and replaced at the Contractor's expense.

l. Where equipment must be installed before the erection of adequate protective structures, the Contractor, without additional compensation shall provide approved, effective and durable covers and provide such other protection as required for fully protecting such equipment from damage from the elements or other causes.

C. Installation of Equipment

1. General

a. Contractor shall have on hand sufficient personnel, proper equipment, and machinery of ample capacity of facilitate the work.

b. Contractor shall be responsible for locating, aligning and leveling all equipment and shall employ a licensed surveyor to set all lines and levels of equipment to the accuracy required.

c. Complete manufacturer's installation instructions, including permissible tolerances, shall be furnished in duplicate with each unit of equipment or set of identical units before installation.

d. All equipment shall be installed in accordance with the approved shop drawings: inclusive of manufacturer's specifications, drawings and tolerances; under the direct supervision of the required manufacturer's engineer. In no instance shall the directions of the manufacturer's engineer contravene the Engineers direction.

e. Equipment shall be erected in a neat and workmanlike manner on the foundations at the locations and elevations shown on the drawings unless directed otherwise by the engineer during installation.

2. Installation

a. Special care shall be used in locating, aligning and leveling all equipment and parts thereof to ensure that each item is in the proper position relative to other equipment, and that all parts are aligned within allowable tolerances. The Contractor shall be responsible for this accuracy, and shall notify the Engineer of any conditions in prior work which would prevent this alignment before proceeding with the work. The Contractor shall employ a licensed surveyor to set all lines and levels of equipment to the accuracy required.

b. Concrete foundations for equipment shall be approved design and shall be adequate in size, suitable for the equipment erected thereon.

D. Nameplates

1. Each unit of equipment shall have the manufacturer's name or trademark on a corrosion-resistant nameplate securely affixed in a conspicuous place. The manufacturer's name or trademark may be cast integrally, stamped, or otherwise permanently marked upon the item of equipment.

2. Such other information as the manufacturer may consider necessary to complete identification, or as specified, shall be shown on the nameplate.

E. Painting

1. Except as otherwise specified or required, equipment shall be primed and finish painted at the factory, in accordance with the recommendations of the approved manufacturer.

2. Necessary field painting, as assigned to the individual Prime Contractors, shall be in accordance with the requirements of the painting specifications in the General Construction Contract. Any damage to shop coatings shall be corrected to the satisfaction of the Engineer.

F. Damage During Tests and Instruction Periods

Contractor shall be fully responsible for the proper operation of equipment during tests and instruction periods and he shall neither have nor make any claim for damage which may occur to equipment prior to the time when the County formally takes over the operation thereof.

G. Services of Manufacturer's Engineers

The contract price shall include the cost of furnishing competent engineers or superintendents from each company manufacturing equipment for the Project to:

1. Assist the Contractor to install, adjust and test the equipment in conformity with the Contract Documents.

2. Supervise start-up operations and adequately instruct designated employees of the County in the proper operation and maintenance procedures of equipment installed.

3. The manufacturer's engineers shall devote, as a minimum, the full time specified in the detailed equipment specifications. Any additional time required to achieve successful installation and operation shall be at the expense of the Contractor. The manufacturer's representatives shall sign in an out in a book kept by the Engineer on every occasion they are on the site and shall indicate time of arrival and departure.

4. Be available to check equipment operation and maintenance procedures, when required by the County, throughout the guarantee period of the equipment.

H. Equipment Manufacturers Certification

As a condition precedent to acceptance of equipment installed and operating, the Contractor will provide the County with written certification, obtained from each company manufacturing equipment for the Project, that the equipment is installed and does operate in accordance with the specifications and manufacturer's recommendations.

I. Substitutions

1. Unless otherwise specified, all materials and equipment incorporated in the work under these Contracts shall be new.

2. Whenever specific references are made in the Specifications, to manufacturer's or brand names, the intent is to establish a standard of type, quality and function of the required material or equipment. Where several of such specific references are given for any item of material or equipment, at least one will include a specific catalog number or other identifying designation. The products of the other listed manufacturers must in the opinion of the Commissioner, be equivalent to the product so identified. The fact that one or more of the other manufacturers listed does not provide material essentially meeting the standards of the referenced manufacturer or other Specifications requirements shall not relieve the Contractor of responsibility for providing materials complying with such requirements. The fact that manufacturer's names are specified for any item shall not be constructed as implying that such item need not comply with any additional performance, construction or other requirements specified for the item. In all cases, the Specifications requirements shall take precedence over the manufacturer's standard.

3. Requests for substitutions of equipment or materials shall be made in accordance with the time conditions stipulated in General Conditions, Article GC-14, "Contractor Submissions". This period for submitting requests will be strictly enforced. Such requests shall conform to the following requirements:

   a. Contractor shall submit for each proposed substitution sufficient details, complete descriptive literature and performance data together with samples of the materials, where feasible, to enable the Commissioner to determine if the proposed substitution is equal.

   b. Contractor shall submit certified tests, where applicable, by an independent laboratory attesting that the proposed substitution is equal.

   c. A list of installations where the proposed substitution is equal to the specified piece of equipment or materials.

   d. Requests for substitutions shall include full information concerning differences in cost, and any savings in cost resulting from such substitutions shall be passed on to the County.

4. Requests for substitutions after the period stipulated in General Conditions, Article GC-14, "Contractor Submissions", will not be accepted for evaluation except in case of strikes, discontinuance of manufacturer or other reason deemed valid by the Commissioner whereby the specified products or those approved are unobtainable. In such case the Contractor shall provide substantial proof that the acceptable products are unavailable.

5. Where the approval of a substitution requires revision or redesign of any part of work, including that of other Contracts, all such revision and redesign, and all new drawings and details required therefore, shall be provided by the Contractor at his own cost and expense, and shall be subject to the approval of the Commissioner.

6. In the event that the Engineer is required to provide additional engineering services, then the Engineer's charges for such additional services shall be charged to the Contractor by the County in accordance with the requirements of the General Conditions, Article GC-18, "Contractor Costs for Engineering Services".

7. Any modifications in the work required under other Contracts to accommodate the changed design will be incorporated in the appropriate Contracts and any resulting increases in Contract prices will be deducted by the County from payments otherwise due the Contractor who initiated the changed design.

8. In all cases the commissioner shall be the judge as to whether a proposed substitution is to be approved. The Contractor shall abide by his decision when proposed substitute items are judged to be unacceptable and shall in such instances furnish the item specified or indicated. No substitute items shall be used in the work without written approval of the Commissioner.

9. In making request for substitution, Contractor represents that:

    a. Contractor has investigated proposed substitution, and determined that is equal to or superior in all respects to the product, manufacturer or method specified.

    b. Contractor will provide the same or better warranties or bonds for proposed substitution as for product, manufacturer or method specified.

    c. Contractor waives all claims for additional costs or extension of time related to proposed substitution that subsequently may become apparent.

    d. Contractor shall have and made no claim for an extension of time or for damages by reason of the time taken by the County and Engineer in considering a substitution proposed by the Contractor or by reason of the failure of the County and Engineer to approve a substitution proposed by the Contractor. Any delays arising out of consideration for an approval of a substitution shall be the sole responsibility of the Contractor requesting that substitution and he shall arrange his operations to make up the time lost.

10. Proposed substitutions will not be accepted if:

    a. Acceptance will require substantial revision of Contract Documents.

    b. They will change design concepts or Technical Specifications.

    c. They will delay completion of the work, or the work of other Contractors.

    d. They are indicated or implied on a Shop Drawing and are not accompanied by a formal request for substitution from Contractor.

11. Only those products originally specified and/or added by approved requests for substitutions submitted in accordance with the preceding paragraphs may be used in the work. Whenever requests for substitutions are approved, it shall be understood that such approval is conditional upon strict conformance with all requirements of the Contract and further subject to the following:

    a. Any material or article submitted for approval in accordance with the above procedure must be equal, in the sole opinion of the Commissioner, to the material or article specified. It must be readily available in sufficient quantity to prevent delay of any work, inspection of tests; it must be available in a reasonably equivalent range of colors, textures, dimensions, gauges, types and finishes as the material or article specified; it must be equal to the specified item in strength, durability, efficiency, serviceability, compatibility with existing systems, ease and cost of maintenance; it must be compatible with the design and not necessitate design modifications by the Engineer; its use must not impose additional work, or require changes in, the work of any other Contractor without the written agreement of such Contractor. Availability of spare parts shall be assured for the useful life of the Project.

    b. Request for all substitutions shall be accompanied by all information needed for the Commissioner to make an evaluation, including manufacturer's brand to trade names, model numbers, description of specification of item, performance data, test reports, samples, history of service, and other data as applicable.

    c. The Commissioner reserves the right to disapprove, for aesthetic reasons, any material or equipment on the basis of design or color considerations alone, without prejudice to the quality of the material or equipment, if the manufacturer cannot meet the required colors or design.

    d. All requests for substitutions of materials or other changes from the Contract requirements, shall be accompanied by an itemized list of all other items affected by such substitution or change. The Commissioner shall have the right, if such is not done, to rescind any approvals for substitutes or changes and to order such work removed and replaced with work conforming to requirements of the Contract, all at the Contractor's expense, or to assess all additional costs resulting from the substitution to the Contractor.

12. Approval of a substitution will not relieve Contractor from the requirement for submission of Shop Drawings or any of the provisions of the Contract Documents.

J. Deviations

1. Within fifteen (15) days after the Notice to Proceed, requests for deviations from the Contract Documents and the reasons therefore, may be proposed to the Commissioner. This period for submitting requests will be strictly enforced. The Contractor waives all claims for additional costs or extension of time related to proposed deviations that subsequently may become apparent.

2. Deviations shall mean the departure by the Contractor from the performance of his work in accordance with the Contract Documents.

3. In all cases the Commissioner shall be the judge as to whether a proposed deviation is to be approved. The Contractor shall abide by his decision when proposed deviations are rejected and shall in such instances perform the work in accordance with the meaning and intent of the Contract Documents.

4. Any delays arising out of consideration for an approval of a deviation shall be the sole responsibility of the Contractor, and he shall arrange his operations to make up the time lost.

ARTICLE GC18 - CONTRACTOR COSTS FOR ENGINEERING SERVICES

A. In the event that the Engineer is required to provide additional engineering services as a result of substitution of materials or equipment which are not "or equal" by the Contractor, or changes by the Contractor in dimension, weight, power requirements, etc., of the equipment and accessories furnished, or as a result of Contractor's errors, omissions or failure to conform to the requirements of the Contract Documents, or if the Engineer is required to examine and evaluate any changes proposed by the Contractor solely for the convenience of the Contractor, then the Engineer's charges in connection with such additional services shall be charged to the Contractor by the County.

B. Structural design shown on the Drawings is based upon the configuration of and maximum loading for major items of equipment as indicated on the Drawings and specified. If the equipment furnished differs from said features, the Contractor shall assume the responsibility for all costs of redesign and for any construction changes required to accommodate the equipment furnished, including the Engineer's charges in connection therewith.

C. The Contractor shall respond to required submittals with complete information and accuracy to achieve required approvals within three (3) submissions. All costs to the Engineer involved with subsequent submissions of Shop Drawings, Samples or other items requiring approval, will be back charged to the Contractor, at the rate by deducting such costs from payments due for Work completed. In the event an approved item is requested by the Contractor to be changed or substituted for, all involved costs in the reviewing and approval process will likewise be back charged to the Contractor unless judged by the Engineer that

the need for such deviation from previously approved data is beyond the control of the Contractor.

ARTICLE GC19 - INSPECTION AND TESTING

Inspection shall be as specified in the Agreement, Article V, "Inspection", and as hereinafter stipulated.

A. Testing Laboratory Services

1. General

a. The County will perform the following tests; concrete slump, concrete cylinder, concrete materials, concrete air content, soils density tests, and paving materials. The Contractor shall plan and conduct his operations to permit taking of field samples and test specimens, as required, and to allow adequate time for laboratory tests by the County. The collection, field preparation and storage of field samples and test specimens shall be as directed by the County and Engineer, and shall be the responsibility of the Contractor.

b. The Contractor shall provide and pay for all other laboratory testing and checking required by the Technical Specifications, including the cost of transporting all Samples and test specimens. The Contractor shall submit the names of three experienced testing laboratories, one of which will be chosen by the County to conduct the testing specified.

c. Tests performed by the County shall not relieve the Contractor from the responsibility of supplying certificates from manufacturers or suppliers to demonstrate conformance with the Specifications.

d. The County reserves the right to test any and all materials being manufactured expressly for this Project, offered to be furnished or delivered at the Site, or installed in place.

2. Test Reports

a. During the progress of the Work, four copies of all test reports shall be submitted directly to the Engineer from the testing laboratory, as they are completed, with a copy sent to the Contractor.

b. Each test report shall be signed and certified by a responsible officer of the testing laboratory.

3. Significance of Tests

Test results shall be binding on both the Contractor and the County, and shall be considered irrefutable evidence of compliance or non-compliance with the Specification requirements, unless supplementary testing shall prove, to the

satisfaction of the County, that the initial Samples were not representative of actual conditions.

4. Supplementary and Other Testing

The Contractor may conduct additional tests as he may require. Should the Contractor at any time request the County to consider such test results, the test reports shall be certified by an independent testing laboratory acceptable to the County. Testing of this nature shall be conducted at the Contractor's expense.

B. Watertightness of Structures

1. General

a. It is the intent of these Specifications that all concrete Work, sealing Work around built-in items and penetrations be performed as required to ensure that:

(1) Groundwater, surface water, and water or liquids in liquid retainment structures will not intrude into any equipment rooms, pipe galleries, habitable areas or other generally dry areas.

(2) leakage in process tankage or other liquid retainment structures does not exfiltrate through to the exterior.

b. The required watertightness shall be achieved by quality construction, proper sealing of all joints and penetrations and repair of existing joints and penetrations.

c. Each unit shall be tested separately and the leakage tests shall be made prior to backfilling and before equipment is installed. Only potable water shall be used for the tests unless specified otherwise.

d. The General Construction Contractor shall provide at his own expense all labor, material, temporary bulkheads, pumps, water, measuring devices, etc. necessary to perform the required tests unless specified otherwise.

2. Built-in Items and Penetrations

a. All pipe sleeves, built-in items and penetrations shall be sealed as detailed and as required to ensure a continuous watertight seal.

b. Penetration through built-up roofing areas shall be made prior to application of the built-up roofing utilizing suitable sleeves and flashings as required. If roofing surfaces are penetrated after roofing has been applied, the waterproofing integrity shall be restored by the roofer and paid for by the Contractor responsible for the penetration.

3. Enclosing Structures

a. All underground structures enclosing operational and other dry areas to be constructed under this Contract shall be repaired by the General Construction Contractor where there are visible internal signs of leakage. Particular attention to this matter is required when dewatering activities are terminated and the groundwater table returns to natural levels.

b. If required, such Work shall be performed on exterior surfaces of the structures and shall include the necessary excavation, sheeting, dewatering, repair, backfill, etc., associated with the repair.

4. Leak Repair

The General Construction Contractor shall perform remedial work required to eliminate or reduce leaks to allowable amounts per the Specifications. If the General Construction Contractor fails to comply, the County shall have the authority to have these leaks repaired by others. The cost of repairs, by others, shall be deducted from monies due or to become due to the General Construction Contractor.

C. Field Testing of Equipment

1. General

All equipment shall be set, aligned, assembled and tested in conformance with the approved Shop Drawings, manufacturer's drawings and instructions, and as indicated in the Specifications.

2. Field Tests

a. Upon completion of the installation, and at a time approved by the Engineer, equipment will be tested by operating it as a unit with all related piping, ducting, electrical controls and mechanical operations.

b. All costs in connection with such tests including all materials, equipment, instruments, labor, etc. shall be borne by the Contractor.

D. Shop Witness Testing and Certification

1. Each item of equipment or material for which pressure, head, capacity, rating, efficiency, performance, function or special requirements are specified or implied shall be tested at the shop of the manufacturer in a manner which shall conclusively prove that its characteristics comply fully with the requirements of the Contract Documents and applicable test codes and standards.

2. a. When the Technical Specifications require witness shop tests at the point of manufacture, or other approved facility, the only tests which will be accepted are those made in the presence of the Engineer or his representative. The

Contractor shall give the Engineer written notice thirty (30) consecutive calendar days in advance of the time when the equipment will be ready for the witness shop tests or for required inspections. This notification shall include a diagram of testing set-up and a list of instruments the manufacturer proposes to use for the tests. All instruments shall be of ranges suitable for the quantities to be measured, with approved laboratory calibration. Seven (7) copies of witness shop test data and interpreted results thereof, accompanied by a certificate of authenticity sworn to by a responsible official of the manufacturing company, shall be forwarded to the Engineer for approval.

All equipment and material to be witness shop tested shall be identified with serial numbers and/or approved permanent type identification marks.

b. The Engineer shall be available Tuesday, Wednesday and Thursday to witness shop testing during normal business hours which defined herein as an eight-hour period between 8:00 a.m. and 6:00 p.m. with a one hour break for lunch. In the event dangerous or hazardous conditions exist at the test facility or if adequate lighting has not been provided, the test will be terminated until the conditions are corrected. Witness shall be provided with protection from the element and sanitary facilities and drinking water shall be available for their use.

Testing shall be conducted in an expeditious manner and it is expected that each day's testing shall start as scheduled. Excessive or repetitious delays will be considered cause for the witnesses to terminate and reschedule the witnessing of the tests.

All costs, including travel and subsistence expenses, incurred by the Engineer or his representative because of termination of the tests, will be back charged to the Contractor by deducting such costs from payment due for work completed.

3. When the Technical Specifications do not require witness shop tests of such equipment at the point of manufacture, or other approved facility, or when witness shop tests specified in the Technical Specifications are waived by the Engineer, seven (7) copies of the manufacturer's actual test data and the interpreted results thereof, accompanied by a certificate of authenticity sworn to be a responsible official of the manufacturing company, shall be forwarded to the Engineer for approval.

4. In the event any equipment or material fails to meet the test requirements, the manufacturer shall make all necessary changes, adjustments and replacements and the tests shall be repeated, at no additional cost to the County, until the equipment or material test requirements are acceptable to the County.

5. No equipment or material shall be shipped to the Project until the Engineer notifies the Contractor, in writing, that the shop test reports are acceptable.

E. Inspection of Manufacturer's Facilities

In accordance with the terms of Article V of the Agreement, the Engineer may inspect the manufacture or fabrication of any material or equipment that will be utilized in the Work. The Contractor shall advise the Engineer on the status of the progress of the manufacture or fabrication of such material or equipment. Sufficient advance notice shall be given of various stages in the manufacturing or fabrication process so that the Engineer may schedule inspections of the facility engaged in the performance of the work.

ARTICLE GC20 - NOT USED

ARTICLE GC21 - PROTECTION REQUIREMENTS

The Contractor shall be responsible for protection against vandalism, theft or malicious mischief of all of his Work, materials and equipment at all times from the start to Final Acceptance of the Work.

A. Protection of Property

1. Contractor shall be responsible for the preservation and protection of property on or adjacent to the Work Site against damage or injury as a result of his operations under this Contract. Any damage or injury occurring on account of any act, omission or neglect on the part of the Contractor shall be restored in a proper and satisfactory manner or replaced by and at the expense of the Contractor to an equal or superior condition than previously existed.

2. In the event of any claims for damage or alleged damage to property as a result of Work under this Contract, the Contractor shall be responsible for all costs in connection with the settlement of or defense against such claims. Prior to commencement of Work in the vicinity of property adjacent to the Work Site, the Contractor at his own expense shall take such surveys as may be necessary to establish the existing condition of the property. Before Final Payment can be made, the Contractor shall furnish satisfactory evidence that all claims for damage have been legally settled or sufficient funds to cover such claims to have been placed in escrow, or that an adequate bond to cover such claims has been obtained.

3. Contractor shall not, except after written consent from proper parties, enter or occupy with men, tools, materials or equipment, privately-owned land except on easements provided herein. In the event that the Contractor has trespassed upon private property in the prosecution of the Work of this Contract, the County may withhold payment for the value of the claim, but in any case no less than a sum of five hundred dollars ($500) for each incident, until the Contractor has secured a release from the property owner upon whose property the trespass was committed.

4. Contractor expressly undertakes to place upon the Work, or any part thereof, only such loads as are consistent with the safety of that portion of the Work.

B. Open Excavations

1. All open excavations shall be adequately safeguarded by providing temporary barricades, caution signs, lights and other means to prevent accidents to persons, and damage to property. The Contractor shall, at his own expense, provide suitable and safe bridges and other crossings for accommodating travel by pedestrians and workmen. Bridges provided for access during construction shall be removed when no longer required. The length or size of excavation will be controlled by the particular surrounding conditions, but shall always be confined to the limits prescribed by the County. If the excavation becomes a hazard, or if it excessively restricts traffic at any point, the County may require special construction procedures such as limiting the length of the open trench, prohibiting stacking excavated material in the street, and requiring that the trench shall not remain open overnight.

2. The Contractor shall take precautions to prevent injury to the public and County personnel due to open trenches. All trenches, excavated material, equipment or other obstacles which could be dangerous to the public and County personnel shall be well-lighted at night.

C. Fire Protection

1. Contractor shall take all necessary precautions to prevent fires at or adjacent to the Work, buildings, etc. and shall provide adequate facilities for extinguishing fires which do occur. No burning of trash or debris will be permitted.

2. When fire or explosion hazards are created in the vicinity of the Work as a result of the locations of fuel tanks, or similar hazardous utilities or devices, the Contractor shall immediately alert the Nassau County Fire Marshall and the Engineer of such hazards. The Contractor shall exercise all safety precautions and shall comply with all instructions issued by the Fire Marshall and the Engineer to prevent the occurrence of fire or explosion.

D. Chemicals

All chemicals used during Project construction or furnished for Project operation, whether herbicide, pesticide, disinfectant, polymer, or reactant of other classification, must show approval of the EPA and other recognized certifying Agencies. Use of all such chemicals and disposal of residues shall be in strict conformance with regulatory requirements.

E. Explosives

Use of explosives is prohibited unless approved by the County.

F. Protection of Persons

The Contractor shall take all necessary precautions for the safety of employees on the Work and shall comply with all applicable provisions of federal, state and municipal safety laws and building codes to prevent accidents or injury to persons on, about or adjacent to the

premises where the Work is being performed. He shall erect and properly maintain at all times, as required by the conditions and progress of the Work, all necessary safeguards for the protection of workers and the public and shall post danger signs warning against the hazards created by such features of construction as protruding nails, hoists, well holes, elevator hatchways, scaffolding, window openings, stairways, trenches, and other excavations, and falling materials and he shall designate a responsible member of his organization on the Work, whose duty shall be the prevention of accidents. The name and position of any person so designated shall be reported to the Engineer by the Contractor. The person so designated shall be available by phone during non-working hours.

G. Contractor's Right to Act

1. In case of an emergency which threatens loss or injury of property and/or safety of life, the Contractor will be allowed to act, without previous instructions from the County, in a diligent manner. He shall notify the County immediately thereafter.

2. The amount of reimbursement claimed by the Contractor on account of any emergency action shall be determined in the manner provided in the Agreement, Article XXII, "Extra Work."

ARTICLE GC22 - ACCESS ROADS AND PARKING AREAS

A. Access Roads

1. The General Construction Contractor shall construct and maintain such temporary access roads as required to perform his Work and that of all other Contractors on the Project. Access roads must be installed and continuously maintained in a condition that will allow passage of all vehicles under their own power. The General Construction Contractor will be responsible for all damages resulting from his failure to perform as herein required.

2. Access roads, where possible, shall be located over the areas of the future road system and relocated and replaced as necessary to accommodate the progress of the Work.

3. Access roads shall be located within the property lines of the plant unless the Contractor, with the approval of the County, independently secures easement for his use and convenience.

4. The Contractor shall keep the above roads clean and serviceable at all times. Use of mechanical sweeper at least once per week is required.

5. Dust resulting from construction operations shall be controlled by Contractor to prevent a nuisance on the Site or in adjacent areas. Use of water will not be permitted when it results in hazardous or objectionable conditions such as ice, mud, ponds and pollution.

B. Maintenance of Traffic

1. Unless permission to close a plant road is received in writing from the County, all excavated material shall be placed so that vehicular and pedestrian traffic may be maintained at all times. If the Contractor's operations cause traffic hazards, he shall repair the road surface, provide temporary ways, erect wheel guards or fences, or take other measures for safety satisfactory to the County.

2. Detours around construction will be subject to the approval of the County. Periods when traffic is being detoured will be subject to approval of the County.

3. Requests for road closings or detours shall be submitted to the County for approval a minimum of seven (7) days prior to the proposed closing or detour. Requests shall be accompanied by a schedule indicating the duration of closing or detour.

C. Parking Areas

See Division 1, General Requirements of the Technical Specifications, for provisions for suitable parking areas for each Contractor's use.

D. Restoration

At the completion of the Work, the surfaces of land used for access roads and parking areas shall be restored by the General Construction Contractor as per the requirements of the Contract Documents. In the absence of specific requirements, the General Construction Contractor shall restore the surfaces to their original condition.

ARTICLE GC23 - TRAFFIC REGULATIONS

A. Contractor shall obey all traffic laws and comply with all the requirements, rules and regulations of the New York Department of Transportation and local authorities having jurisdiction to maintain adequate warning signs, lights, barriers, etc. for the protection of traffic on public roadways.

B. The Contractor vehicles and mobile equipment shall adhere to the speed limits posted in the Project area. The General Construction Contractor shall post the necessary speed limit signs.

C. The Contractor shall provide flagmen at junctions of public traffic and Contractor vehicles and equipment.

ARTICLE GC24 - BARRICADES, WARNING SIGNS AND LIGHTS

A. Each Contractor shall provide, erect and maintain as necessary for his Work, strong and suitable barricades, danger signs and warning lights along all roads accessible to the public, as required by the authority having jurisdiction, to ensure safety to the public. All barricades and obstructions along public roads shall be illuminated at night and all lights for this purpose shall be kept burning from sunset to sunrise. Sufficient barricades shall be erected to keep vehicles from being driven on or into Work under construction. Contractor shall furnish watchmen in sufficient numbers to protect the Work. Contractor's responsibility for

the maintenance of barricades, signs, lights, and for providing watchmen shall continue until the Project is accepted by the County.

B. Each Contractor shall provide and maintain such other warning signs and barricades in other areas and around their respective Work as may be required for the safety of all those employed in the Work, plant operating personnel, or those visiting the Site or plant.

ARTICLE GC25 - DUST CONTROL AND SPILLAGE

A. Each Contractor shall take all necessary measures to control dust from his operations and to prevent spillage of excavated materials on roads.

B. Each Contractor shall remove all spillage of excavated materials, debris or dust from roads by methods as approved by the Engineer.

C. The General Construction Contractor shall sprinkle calcium chloride at locations and in such quantities and at such frequencies as may be required to control dust as directed by the Engineer.

ARTICLE GC26 - VERMIN CONTROL

All piping, ducts, conduit, etc. passing through walls, floors, ceiling and/or other solid construction, shall be sealed to prevent the passage of vermin.

Seals shall be made by means of rock wool or other approved inert materials, packed sleeves or other approved construction.

ARTICLE GC27 - FIRST AID FACILITIES

The Contractor shall provide at the Site such equipment and facilities as are necessary to supply first aid to any of his personnel who may be injured in connection with the Work.

ARTICLE GC28 - LAYOUT AND LEVELS

A. Buildings and Structures

The location of the buildings and structures is shown on the plot plan.

1. The Contractor for General Construction Work shall lay out the buildings and structures correctly and shall be responsible for any damage caused the County due to incorrect laying out of the Work.

2. The Contractor for General Construction Work shall verify all grades, lines levels and dimensions as shown on the Drawings and he shall report any errors or inconsistencies in them to the Engineer before commencing Work.

3. The Contractor for General Construction Work shall establish bench marks in not less than two widely separated places. As the Work progresses he shall establish bench marks at each floor, giving the exact levels of the floors.

4. The Contractor for General Construction Work shall employ a licensed surveyor to lay out the building or structure, establish bench marks and give levels of floors to which all measurements shall be referred.

5. The Contractor for General Construction Work shall employ a licensed surveyor to scribe bench marks on all columns, where they exist, and on all exterior walls, exactly 4 feet above the finished floor.

6. Before starting construction Work the Contractor for General Construction Work shall submit to the Engineer for approval three (3) copies of a complete "Construction Stake Layout" of the building or structure at all corners and angles.

7. Upon completion of foundation walls, the Contractor for General Construction Work shall prepare and deliver to the Engineer three (3) copies of a certified survey showing that all dimensions, elevations, and angles and the location of the building or structure is in accordance with the Plans.

8. Each Prime Contractor shall have the responsibility to carefully preserve the bench marks, reference points and stakes, and in the case of destruction thereof by the Contractor or resulting from his negligence the Contractor shall be charged with the expense and damage resulting therefrom and shall be responsible for any mistakes that may be caused by the unnecessary loss or disturbance of such bench marks, reference points and stakes.

9. Existing or new control points, property markers and monuments that will be or are destroyed during the normal course of construction shall be reestablished by the General Construction Contractor and all reference ties recorded therefore shall be furnished to the Engineer. All computations necessary to establish the exact position of the Work shall be made and preserved by the General Construction Contractor.

10. The Engineer may check all or any portion of the Work and the General Construction Contractor shall afford all necessary assistance to the Engineer in carrying out such checks. Any necessary corrections to the Work shall be immediately made by the General Construction Contractor. Such checking by the Engineer shall not relieve the General Construction Contractor of any responsibilities for the accuracy or completeness of his Work.

B. <u>All Other Work</u>

Each Contractor is responsible for layout of his Work including but not limited to, substructures foundations, manholes, utility lines, equipment pads based upon the reference lines and grades established herein.

1. Contractor shall keep neat legible notes of all measurements and calculations made by him while surveying and laying out the Work.

2. Two copies of all notes and other records shall be furnished to the County monthly. Furnish complete notes upon final completion.

ARTICLE GC29 - CUTTING AND PATCHING

A. Contractor Requirements

1. Contractors shall perform all cutting and patching necessary for the Work of the Contract in accordance with the requirements of the Drawings and Specifications. Work performed by another contractor shall not be cut or altered without the approval of the Engineer.

2. Before doing any cutting, the Contractor shall obtain the approval of the Engineer as to the location, size and method of making such openings.

3. All cutting and rough patching as defined by the Engineer will be performed by each respective Prime Contractor. All finish patching shall be performed by the General Construction Contractor.

4. All cutting shall be performed in such a manner as to limit the extent ofpatching.

5. All patching shall be done in a manner to match the surrounding existing surfaces as closely as possible.

6. All painted surfaces which are patched shall have the patch painted to match the existing wall surfaces as closely as possible. The Engineer shall be the sole judge of the color/texture match of finish.

7. All holes cut through concrete walls or slabs shall be core drilled unless otherwise specified or shown. Prior to core drilling, Contractor shall drill sufficient number of small exploratory holes to establish that the area to be core drilled is free of existing embedded conduits. No structural members shall be cut without approval of the Engineer and all such cutting shall be done in a manner directed by him. No holes, except for small screws, may be drilled in beams or other structural members without obtaining prior approval. All Work shall be done in a neat manner by mechanics skilled in their trades and as approved.

8. Contractors shall install sleeves for their Work for all pipes and conduits passing through any wall or floor slab.

B. Errors and Omissions

Details and procedures are as stipulated in Paragraph A of this Article. Contractor responsible for error or omission will be responsible for all costs associated with cutting and patching.

ARTICLE GC30 - OPENINGS AND CHASES

A. The General Construction Contractor shall provide all openings and chases in his Work to fit his own Work and that of any other Contractors. All such openings or chases shown on the Contract Drawings, or reasonably implied thereby, or as confirmed or modified by Shop

Drawings approved by the Engineer, shall be provided by the General Construction Contractor.

B. Where equipment frames or supports are to be installed as integral parts of an opening, the opening frames or supports shall be furnished and installed by the Contractors installing the equipment.

C. When required by the Progress Schedule or requested by the General Construction Contractor, the Contractor installing the equipment frames and supports and Contractors who require openings or chases in slabs and walls for passage of ducts, mounting of equipment, etc., shall furnish all necessary information and instruction of the required openings, chases, frames, etc. When such items are secured in position by the installing Contractor and just prior to construction of the surrounding slab or wall, the installing Contractor shall ascertain the proper number, locations and settings thereof; and the General Construction Contractor shall schedule his operations so as to provide a reasonable opportunity and time interval for such inspection.

D. Any cost resulting from correction and defective, ill-timed, or mislocated Work, or for subsequent Work which becomes necessary because of omitted openings, chases, frames, etc., shall be borne by the Contractor responsible therefor. To this end, no Contractor shall arbitrarily cut, drill, alter, damage, or otherwise endanger the Work of another Contractor. The nature and extent of any corrective or additional Work shall be subject to the approval of the Engineer following consultation with the Contractors involved.

ARTICLE GC31 - SLEEVES, INSERTS AND WALL CASTINGS

Each Contractor shall furnish and install in place, conduits, outlets, piping sleeves, boxes, inserts, other materials and equipment necessary to be built into Work to be performed by the Contractor for General Construction as soon as the requirements of the Progress Schedule require them.

All Contractors shall cooperate fully in connection with the performance of the above Work, as cutting into new Work is neither contemplated nor will it be tolerated.

In the event timely delivery of sleeves or other materials cannot be made, if approved by the Engineer, and to avoid delay, the affected Contractor shall arrange to have boxes or forms set at locations where piping or other material is to pass through or in slabs, walls or other Work. Upon subsequent installation of sleeves or other material, the General Construction Contractor shall fill around them with materials as required by Contract or by the Engineer. Necessary expenditure incurred for boxing out or filling shall be borne without extra costs to the County by Contractor or Contractors responsible therefor.

ARTICLE GC32 - SCAFFOLDING, RIGGING AND HOISTING

Each Contractor shall furnish all adequately designed scaffolding, rigging, hoisting and services necessary for erection and delivery or removal of any equipment and apparatus under his Contract. The Contractor shall remove same from Work involved when no longer required.

Each Contractor involved in this type of activity shall take all precautions to prevent accidents or damage to persons or property about the Work involved and shall erect and maintain proper warning

signs and guard rails, barricades, etc. In the event of the Contractor's negligence, he shall indemnify the County against all claims, suits, damages and judgements, including counsel fees and disbursements incurred in the defense of any action to which he may be subjected by reason of such negligence.

ARTICLE GC33 - CLEANING

A. Rubbish Removal and Cleaning

The General Construction Contractor shall remove from the Project, and dispose of, all debris and rubbish resulting from the Work of all Contractors, at least once a week and more often if same interferes with the Work under any contract, plant operations or presents a fire hazard. All debris and rubbish shall be removed from the County property and legally disposed of. Each Contractor shall be responsible for consolidating all debris and rubbish resulting from his Work to one location in his work area. During course of demolition or new construction, the General Construction Contractor shall maintain and keep free of debris or building material required egress in accord with Fire Safety Regulations and the Nassau County Fire Marshall.

B. County's Right to Clean

Should the Contractor fail, refuse or neglect to remove rubbish and waste materials and temporary Work or clean the building and premises as required herein, then the County may or shall, without obligation to do so, remove and dispose of the said rubbish, waste materials and temporary work, clean the building and premises and deduct the cost thereof from any money due, or to become due, the Contractor under this Contract.

ARTICLE GC34 - PIPING AND EQUIPMENTIDENTIFICATION

Each Prime Contractor shall furnish and install all components of the system for identification of piping and equipment as specified. The system shall include the placing of identification signs, direction-of-flow arrows, identification tags, etc. on plant piping, equipment and structures.

ARTICLE GC35 - OPERATION AND MAINTENANCE MANUALS

Federal regulations and County requirements stipulate time limitations for submittal and approval of operations and maintenance manuals. See Division 1, General Requirements of the Technical Specifications, for specific requirements.

ARTICLE GC36 - RECORD DRAWINGS

The County shall furnish to each Prime Contractor a set of mylar reproducible of the Contract Drawings for his Contract.

Each Prime Contractor shall maintain in the construction office at the job a set of prints of the Contract Drawings. A daily record in red pencil, shall be kept on these prints of the Work installed and all modifications or changes therein. This set of prints shall be available at all times to the Engineer for inspection.

During the progress of the construction, each Contractor shall transfer once each month all information from field prints to the tracings and submit to the Engineer with his monthly payment request, two (2) prints of the tracings showing the Work completed and highlighting the changes made. When roughing is completed, it must be shown. The use of approved shop drawings for record drawings is not acceptable.

All Work installed shall be shown on Drawings to a scale of at least 1/4 inch equals 1 foot. Where the Contract Drawings are to a smaller scale, or do not show the area of Work involved, the Contractor shall prepare Drawings, as required, to that larger scale showing the outline of the structure. These additional Drawings shall be on mylar reproducible and shall be referenced on the smaller scale Drawings to show the area covered. The Contractor shall submit a print of the outline on the additional Drawings for approval before entering any of the installed Work thereon. The sheet size of the additional Drawings shall be the exact same size as that of the Contract Drawings.

All details on Drawings must also be corrected for changes and/or modifications.

Upon completion of all Work each Contractor shall complete the mylar reproducible and sign them indicating that the Work was installed as shown. One set of paper prints shall be submitted to the Engineer for review and acceptance. Upon receipt of the Engineer's acceptance, the Contractor shall submit the mylar reproducible and two sets of paper prints stamped "Record Drawings of Work as Built", stamped and certified.

The submittal of Record Drawing acceptable to the Engineer as specified herein, shall be a condition precedent to payments to the Contractor that may otherwise be then due.

ARTICLE GC37 - PHOTOGRAPHS

A. The Contractor for General Construction shall engage the services of an experienced photographer, approved by the Commissioner, to take job photographs. The photographer will be required to take preliminary photographs of the Site prior to the commencement of Work as directed by the Engineer. Subsequent photographs as determined by the Engineer shall be taken during the construction phase. The price bid shall be based on the following:

1. The photographer visiting the Site twenty-five (25) times as directed by the engineer. As the work progresses, additional visits may be required.

2. Taking a total of five hundred (500) color photographs for the purpose of this section, a photograph shall be defined as one exposure. The Commissioner shall reserve the right to reject any photograph that is not clear or definitive. Any photograph so rejected shall be subtracted from the total exposure before computations for payment or credit under this section.

3. Supplying three (3) 8-inch by 10-inch prints and one (1) digital file of each photograph.

4. Included shall be photographs of electrical installations underneath or in floor slabs prior to backfilling or placing concrete. Photographs shall be labeled to identify:

a. Conduit size

b. Conduit Identification: Number, label, etc. conforming to record drawing identification.

c. Service(s).

d. Locations: Referenced to structures, roadways, etc.

B. In the event that less than five hundred photographs are required, the Contractor shall credit the County fifteen ($15.00) dollars for each photograph under five hundred photographs. Should more than five hundred photographs be required, the Contractor will be paid twenty ($20.00) dollars for each photograph over five hundred photographs.

C. Three 8-inch by 10-inch matte finish prints and digital file of each photograph shall be submitted to the Engineer with the Contractor's monthly estimate. The prints shall be mounted on a cloth with a flap for binding and shall have indelibly printed on their reverse side the following:

Project Name

Photo Number

View and description, indicating location of camera, general description of what photograph represents and whether this is a preliminary or construction photograph.

The Contractor shall also furnish a sufficient number of hard-back binders for each of the three sets of prints and the negatives.

D. No separate payment will be made for job photographs; payment shall be included in the lump sum bid for the General Construction Contract.

E. Digital photo files can be submitted in lieu of negatives.

ARTICLE GC38 - PROJECT CLOSEOUT

Division 1, General Requirements, and the other provisions of the Technical Specifications stipulate requirements for Project closeout. Items such as final cleaning, lubrication survey, spare parts and special tools, equipment start-up services and other items specified are included. Final Payment will be contingent on each Contractor complying with these requirements.

ARTICLE GC39 - DEWATERING

A. Any proposed dewatering operation must be carried out by only licensed well drillers in accordance with Section 15-1525 of the New York State Environmental Conservation Law.

The Contractor is responsible for notifying the New York State Department of Environment Conservation prior to the proposed starting date of the dewatering operation and obtaining the necessary permits, giving the following details in full: the name of the licensed well

driller, the details of the dewatering system to be installed, including the size, the number and the spacing of the well points, the pump capacity, the pumping rate and the expected volume of water to be withdrawn.

Also to be included, will be the amount of water table drawdown, the final disposition of the water, and the expected duration of the operation.

B. Before any dewatering operation is to begin, approval of all the aforementioned items is required. If any unforeseen emergency construction arises, the Contractor must notify the New York State Department of Environmental Conservation as soon as possible that dewatering under such circumstances has been started.

Notification shall be made to the following:

New York State Department of Environmental Conservation (NYSDEC)
SUNY at Stony Brook, 50 Circle Road
Stony Brook, NY 11790
516-444-0405

The entire dewatering operation and the apparatus connected therewith must, at all reasonable hours, be open to inspection and test by duly accredited representatives of the New York State Department of Environmental Conservation.

C. Where private wells, used for water supply, have become dry or cease to produce potable water due to the dewatering operation, the Contractor will be responsible for providing the necessary water at no cost to the County.

D. When dewatering systems utilizing central pumping stations are used, these stations will be acoustically shielded from neighboring residences. Styrofoam or other sound absorbing material will be used on the inside of the enclosure surrounding the pump. In addition, an exhaust stack extension will be provided when required by the Engineer. The use of old pumps generating excessive emissions and/or noise will not be permitted by the Engineer. The noise level twenty-five (25) feet from the pump shall not exceed sixty (60)decibels.

E. The contractor will not be allowed to discharge water containing sediments directly to storm sewers or streams without treating it with filtration or sediment trapping devices.

The Contractor shall not discharge groundwater directly into creeks, ponds, lakes or waterways without first obtaining the proper permit from the New York State Department of Environmental Conservation. Every effort shall be made to discharge groundwater into existing recharge basins. The use of dewatering systems utilizing central pumping stations header or discharge lines which remain in place at one location for more than six (6) weeks will not be permitted unless approved in writing by the Engineer. All well point header and discharge lines must not remain in place beyond the period for which they are required to perform Work in their immediate vicinity, nor shall they be placed far in advance of their use. All dewatering systems shall be subject to the approval of the Engineer who shall be the sole judge as to the conformance with the above requirements, and any additional requirements which may be specified in Division 2 of the Technical Specifications.

ARTICLE GC40 - PRESERVATION OF WETLANDS AND WATERWAYS

No Contractor is permitted to dump spoil onto those areas designated as wetlands or waterways. Further, the Contractor shall not stockpile or store spoil, materials, tools or equipment on wetlands. Surplus excavated material, either unsatisfactory for or over and above that require for backfilling, shall be disposed of by the Contractor at his own expense, off the Site of Work in a lawful manner. The Contractor must contact Alfred T. Keller, NYS Department of Environmental Conservation at (516) 751-7900 for approval of any proposed disposal site.

ARTICLE GC41 - NOTIFICATION OF SUBCONTRACTOR

Each Prime Contractor and Subcontractor shall include by reference the EEO clause and applicable Bid Conditions in all advertisements or other solicitations for bids, and shall include the EEO clause and applicable Bid Conditions in all contracts.

Each Prime Contractor and Subcontractor must provide written notice to each Subcontractor of the specific reporting and record keeping requirements under the EEO clause and applicable Bid Conditions. Upon award of a Subcontract, each Contractor shall immediately notify the Compliance Agency of the Contract number, the Subcontractor's name, dollar amount of Contract estimated start and completion dates and the crafts which will perform Work under the Subcontract.

ARTICLE GC42 - JURISDICTIONAL DISPUTES

It shall be the responsibility of the Contractor to pay all costs that may be required to perform any of the Work shown on the Drawings or specified herein in order to avoid any Work stoppages due to jurisdictional disputes. The basis for subletting Work in question, if any, shall conform with precedent agreements and decisions on record with the Building and Construction Trades Department, AFL-CIO, date June, 1973, including any amendments thereto.

COUNTY OF NASSAU

STATE OF NEW YORK

DEPARTMENT OF PUBLIC WORKS

SUPPLEMENTARY CONDITIONS

GC 20

Change this title of GC 20 from "Not Used" to "Value Engineering Change Orders."

Include the following after the new title:

A. The term "proposal" as used in this Article is construed to mean a Value Engineering Construction Proposal submitted by the Contractor for changing the Plans, Specifications, or other requirements of the Contract. This Section conforms to the provisions of N.J.S.A. 40A:11-16.6 and is only applicable to Contracts greater than or equal to $5,000,000. Value Engineering Construction Proposals shall conform to the provisions of this Article.

1. Purpose and Scope. The intent of Value Engineering is to share with the Contractors any cost savings generated on the Contract as a result of a proposal or proposals offered by the Contractor and approved by the Owner. The purpose is to encourage the use of Contractor's ingenuity and experience in arriving at alternative, lower cost or time-saving construction methods other than those reflected in the Contract Documents, by the sharing of savings resulting therefrom. The proposals contemplated are those that could produce a savings to the Owner without, in the judgment of the Owner's Engineer and approved by the Owners, impairing essential functions and characteristics of the Project or a portion of the Work involved. They include but are not limited to safety, service life, stage construction, economy of operation, ease of maintenance, and desired appearance.

2. Submittal of Initial Proposal. An initial submission is required to use the Value Engineering process. The initial proposal shall outline the general technical concepts associated with the proposal and the estimated savings that will result.

The initial proposal will be reviewed by the Owner and, if found to be conceptually acceptable, approval to submit a final proposal will be granted by the Owner. A finding of conceptual acceptability of the initial proposal in no way obligates the Owner to approve the final proposal. The Contractor shall have no claim against the Owner as a result of the rejection of any such final proposal.

3. Submittal of Final Proposal. Final proposals will be considered only after Owner approval of the initial proposal according to Subheading 2 above. As a minimum, the following materials

and information shall be submitted with each final proposal plus any additional information requested by the Owner:

a) A statement that the final proposal is submitted as a Value Engineering proposal.

b) A description of the difference between the existing Contract requirements and the proposed change, and the comparative advantages and disadvantages of each, including considerations of safety, service life, economy of operations, stage construction, ease of maintenance, and desired appearance.

c) Complete plans, specifications, and calculations showing the proposed revisions relative to the original Contract features and requirements. All plans and engineering calculations shall bear the signature of a Professional Engineer licensed to practice in the State.

d) A complete cost analysis indicating the final estimated costs and quantities to be replaced by the proposal, the new costs and quantities generated by the final proposal, and the cost effects of the proposed changes on operational, maintenance, and other considerations.

e) A specific date by which a Change Order adopting the final proposal must be executed so as to obtain the maximum cost reduction during the remainder of the Contract. This date must be selected to allow the Owner ample time, usually a minimum of 45 days, for review and processing a Change Order. Should the Owner fund the insufficient time is available for review and processing, it may reject the final proposal solely on such basis.

f) A statement as to the effect the final proposal has on the Contract Time.

g) A description of any previous use or testing of the final proposal on another Owner project or elsewhere and the conditions and results therewith. If the final proposal was previously submitted on another Owner project, indicate the date, the project, and the action taken by the Owner.

4. Conditions for Consideration. Proposals will be considered only after Award of Contract and only when all of the following conditions are met:

a) The Contractor is cautioned not to base any bid prices on the anticipated approval of a proposal and to recognize that such proposal may be rejected. In the event of rejection, the Contractor is required to complete the Contract according to the original Plans and Specifications and the prices initially bid and accepted by the Governing Body.

b) All proposals, approved or not approved by the Owner for use in the Contract, apply only to the ongoing Contract or Contracts referenced in the proposal. The proposals shall become the property of the Owner and shall contain no restrictions imposed by the Contractor on their use or disclosure. The Owner will have the right to use, duplicate, and disclosure in whole or in part any data

necessary for the utilization of the proposal. The Owner retains the right to use any accepted proposal or part thereof on any other or subsequent project without any obligation to the Contractor. This provision is not intended to deny rights provided by law with respect to patented materials or processes.

c) If the Owner already has under consideration certain revisions to the Contracts that are subsequently incorporated in a proposal, the Owner will reject the Contractor's proposal and may proceed with such revisions without any value engineering obligation to the Contractor.

d) The Contractor shall make no claim against the Owner or Owner's agents for any costs or delays due to the Owner's rejection of a proposal, including but not limited to development costs, anticipated profits, or increased materials or labor costs resulting from delays in the review of such proposal.

e) The Engineer will determine whether a proposal qualifies for consideration and evaluation. The Owner may reject any proposal which is not consistent with the basic design criteria for the Project.

f) The Engineer may reject all or any portion of Work performed pursuant to an approved proposal if the Engineer determines that unsatisfactory results are being obtained. The Engineer may direct the removal of such rejected Work and require the Contractor to proceed according to the original Contract requirements without reimbursement of any Work performed under the proposal, or for its removal. Where modifications to the proposal are approved to adjust to field or other conditions, reimbursement is limited to the total amount payable for the Work at the Contract prices as if it were constructed according to the original Contract requirement. Such rejection or limitation of reimbursement does not constitute the basis of any claim against the Owner for delay or for any other costs.

g) Proposals will be considered only if equivalent options are not already provided in the Contract Documents.

h) The proposed shall be made based on items of work schedule to be done by the Contractor. Anticipated cost savings based on revisions of utility relocations or other similar items to be done by others will not be considered. Proposals that may increase the cost of Work done by others may be considered.

i) If additional information is needed to evaluate proposals, this information must be provided in a timely manner. Such additional information could include, where design changes are proposed, result of field investigations and surveys, design computations, and field change sheets.

5. Approval of Final Proposal

a) The proposal shall not be approved unless the Engineer reports to the Owner's governing body that the proposal appears consistent with the required performance, quality, reliability, and safety of the project and odes not impair any of the essential functions, or characteristics of the project, or any portion of the work involved.

b) The Owner shall have the sole direction to approve or disapprove a value engineering construction proposal.

6. Payment. If the proposal is accepted, the changes will be authorized by Change Order. Payment will be made as follows:

a) The changes will be incorporated into the Contract by adjustments in the quantities of Pay Items, agreed upon Extra Work Items or by Force Account, as appropriate, according to the Specifications.

b) Once the project is completed, the contractor unit's engineer shall verify the cost savings to reflect the actual cost of work. Such verified cost saving shall be the basis of the savings shared equally with the contractor. The costs of such verification shall be borne equally by both parties.

c) The Owner's costs for review and processing of the proposal will be deducted from the savings. The cost of the Engineer to verify the savings shall be apportioned equally between the parties.

d) A Contractor's costs for development, design, and implementation of the proposal are not eligible for reimbursement.

e) The Contractor may submit proposals for the approved Subcontractor, provided that reimbursement is made by the Owner to the Contractor and that the terms of the remuneration to the Subcontractor are satisfactorily negotiated and accepted before the proposal is submitted to the Owner. Subcontractors may not submit a proposal except through the Contractor.

GC_32

Immediately following the last paragraph, insert the following:

The Contractor may only use the Owner's monorails and hoists located at the facility for the loading of equipment and materials or use any other Owner owned equipment at the facility, with the express written approval of the Owner and Engineer and upon execution of the Release and Waiver form attached to this section. If authorized to use any monorails, hoists or other Owner owned equipment, the Contractor shall be fully responsible for confirming its load capacity and/or operability. Such confirmation shall be performed by an experienced hoist and monorail service and inspection firm, who shall provide written certification for the operability and capacity of the hoist. The cost for such inspection and certification shall be borne by the Contractor. Should the inspection firm determine that repairs are required to the hoist to make it operable, the Contractor shall have such repairs made prior to

utilizing the hoist. The Contractor shall bare all costs for such repairs. The Contractor shall assume full responsibility as it relates to the use of the monorails, hoists or other Owner owned equipment and any subsequent damage to materials, equipment and/or injury to personnel thereto.

See County of Nassau Release and Waiver attachment.

Addendum #63 - June 2026

Project Specific Addendum to the Project Labor Agreement Dated May 2011
Between Nassau County and the Nassau Suffolk Building and Construction Trades Council and their Affiliated Local Construction Trade Unions

This Addendum relates to the Cedar Creek WPCP Influent Pumping System Improvements project under the conditions and requirements of the PLA referenced above.

1. **Project Description: Cedar Creek WPCP Influent Pumping System Improvements (Project No. S3C067-11G)**

   The Cedar Creek WPCP Influent Pumping System Improvements project entails the following scope at the Cedar Creek WPCP:

   - Replace of all seven existing extended shaft centrifugal pumps and magnetic drives with six new centrifugal extended shaft influent pumps, motors and eddy current drives as well as replace suction and discharge piping and valves;
   - Rehabilitate force mains with non-structural internal liners and replace elbows, tees, and fittings;
   - Replace all system isolation and check valves, prioritizing suction gate valves, discharge knife gate isolation valves and cone check valves;
   - Install new medium and low-voltage power distribution equipment and motor control systems;
   - Preserve and modernize electrical system with new switches, starters, and dual feed arrangements;
   - Upgrade all instrumentation and controls to a state-of-the-art PLC-based platform, fully integrated with the plant's SCADA network for remote operation, monitoring, and troubleshooting;
   - Installation of instrumentation such as flow meters, level sensors, pressure transmitters, and vibration monitoring systems;
   - Full system integration, testing, and commissioning of controls and automation;
   - Install concrete baffle walls in wet wells;
   - Reroute plant drain piping through the dry well and provide new isolation knife gate valves;
   - Employ a multi-phase construction sequence to maintain plant operations (MOPO) throughout, including incremental pump and force main replacement and use of inflatable line stops for isolation;
   - Replace Main Equipment Building HVAC systems within mechanical rooms and on roof to restore ventilation systems and modify ventilation systems;
   - Replace the existing sump pump system with new sump pumps, piping and controls;
   - Structural modifications, concrete rehabilitation, and installation of new equipment and piping supports, framing, and foundations;
   - Installation of new access platforms, grating, and handrails;
   - Associated application of coatings and painting;

   Generally, the work under this project is typical for an upgrade to a wastewater treatment plant in that it requires both special labor skills for the project work force, as well as engineering sophistication in construction management for the successful contractors.

Based on the 36-month anticipated construction schedule from issuance of Notice to Proceed (NTP), the current overall Construction Cost Estimate for this project is estimated to be $78,370,200 of which labor is $8,615,300 or approximately 11%. It is estimated that approximately 64,000 man-hours will be expended on the project. The details of the work to be covered under this PLA will be detailed in the Contract Documents (i.e. Plans and Specifications), which will incorporate the Master PLA with the projects specific Addendum.

2. Feasibility Study

Nassau County has engaged Camp Dresser McKee and Smith (CDM Smith) to perform a PLA Feasibility Analysis Study (June 2026) to determine if the development and implementation of a PLA for this project will provide benefit to the County in terms of time, cost and quality. As detailed in the Study, a PLA would generate a potential cost savings of $4,789,500 (6.1% of the estimated Total Construction Cost).

In addition, the Study has determined that the utilization of the Master PLA will provide for labor harmony on the Projects sites, eliminate strikes, labor disruptions and job actions, standardize working conditions, expedite the resolutions of grievances and jurisdiction disputes, increase the competitive bidding process, and generally level the labor playing field for trade labor participating on these projects.

3. PLA Administrator

To our knowledge, Nassau County has not designated at PLA Administrator for the Project. Typically, the Construction Manager is designated to administer the PLA, but in certain circumstances, the firm that generated the feasibility study can perform this role.

4. Wicks Law

The project is subject to Wicks Law requirements but is anticipated to be a single prime contract under the Master PLA.

5. Project engineer and Construction Manager

The project Engineer is CDM Smith. The project Construction Manager is Gannett Fleming (GFT Inc).

6. Project Labor Agreement Adjustments

Add after Article XIII:

"Article XIV, WORKERS' COMPENSATION ADR

The parties may negotiate regarding the application of a Workers Compensation Alternate Dispute Resolution (ADR) program on a Project wide basis with the option of individual Union affiliates to opt out at their discretion. Notwithstanding the status of any of these negotiations, the remainder of this Agreement will remain in full force and effect."

7. Project PLA Letter of Assent

See attached below.

IN WITNESS WHEREOF, the parties have caused this Agreement to be executed and effective as of

The Second day of July 2026.

Michael Kwaschyn

Nassau County Department of Public Works

SECTION 011000 - SUMMARY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Project information.
2. Work covered by Contract Documents.
3. Phased construction.
4. Work performed by Owner.
5. Multiple Work Packages.
6. Work under Owner’s separate contracts.
7. Future work not part of this Project.
8. Owner’s product purchase contracts.
9. Owner-furnished/Contactor-installed (OFCI) product.
10. Owner-furnished/Owner-installed (OFOI) products.
11. Contractor-furnished/Owner-installed (CFOI) products.
12. Contractor’s use of site and premises.
13. Coordination with occupants.
14. Work restrictions.
15. Specification and Drawing conventions.
16. Miscellaneous provisions.

B. Related Requirements:

1. Section 015000 "Temporary Facilities and Controls" for limitations and procedures governing temporary use of Owner's facilities.
2. Section 017300 “Execution” for coordination of Owner-installed products.
3. Section 013513.24 “Special Procedures for MOPO and Construction Sequence” for details associated with the scope of work, suggested construction sequence, and limitations for maintenance of plant operations during construction.

1.3 DEFINITIONS

A. Work Package: A group of specifications, drawings, and schedules prepared by the design team to describe a portion of the Project Work for pricing, permitting, and construction.

1.4 PROJECT INFORMATION

A. Project Identification: Cedar Creek Water Pollution Control Plant (WPCP) Influent Pumping System Improvements, Contract No. S3C067-11G.

1. Project Location: 3340 Merrick Rd, Wantagh, NY 11793.

B. Owner: Nassau County Department of Public Works, Westbury, NY.

1. Owner's Representative: Karen A. Fay, P.E., 3340 Merrick Road, Building R, 3rd Floor, Wantagh, NY 11793; email: kfay@nassaucountyny.gov ; tel: 516.571.7534.

C. Engineer: CDM Smith, 324 S Service Rd Suite 204, Melville, NY 11747.

1. Engineer's Representative: Megan Messmann, PE; email: messmannmr@cdmsmith.com; tel: 516.697.8113.

D. Construction Manager (CM): GFT Infrastructure, Inc.

1. Construction Manager Representative: Lazarus Francino, PE.
2. Construction Manager has been engaged for this Project to serve as an advisor to Owner and to provide assistance in administering the Contract for construction between Owner and Contractor, according to a separate contract between Owner and Construction Manager.

E. Project Coordinator for Multiple Contracts: Jacobs has been engaged by Owner to serve as Project coordinator.

1. Graham Sharkey, PE, CCM, has been engaged by Owner to serve as Project coordinator.

F. Contract Operator: The Cedar Creek WPCP is operated by Veolia North America on behalf of the Owner.

1. Veolia North America Representative: David Crisdell, 3340 Merrick Road, Wantagh, NY 11793; email: david.crisdell@veolia.com; tel: 516.390.6426

G. Web-Based Project Software: Project software will be used for purposes of managing communication and documents during the construction stage.

1. See Section 013100 "Project Management and Coordination." for requirements for using web-based Project software.

1.5 WORK COVERED BY CONTRACT DOCUMENTS

A. The Work of Project is defined by the Contract Documents and includes, but is not limited to, the following. See Spec. Section 013513.24 “Special Procedures for MOPO and Construction Sequence” and Contract Drawings for more detail associated with the work.

1. Complete Replacement of Influent Pumping System

a. Replace all seven existing extended shaft centrifugal pumps and magnetic drives with six new centrifugal extended shaft influent pumps (each rated for 37.5 MGD and 75-ft head), providing N+1+1 redundancy and a total duty capacity of 150 MGD.
b. Reconfigure suction and discharge piping and valves for optimal hydraulics, construction sequencing, and redundancy.

2. Force Main Upgrades

a. Tie new pumping system into two existing 48-inch diameter force mains.
b. Rehabilitate force mains with non-structural internal liners and replace elbows, tees, and fittings most susceptible to corrosion.

3. Valve Replacement

a. Replace all system isolation and check valves, prioritizing suction gate valves, knife gate isolation valves and cone check valves for reliability and maintenance.

4. Pump Drives Replacement

a. Install eddy current drives for robust, reliable flow control over the life of the pumps.

5. Electrical System Modifications

a. Install new medium and low-voltage power distribution equipment and motor control systems.
b. Preserve and modernize electrical system redundancy; power new pumps via new switches, starters, and dual feed arrangements.
c. Elevate all vital electrical and control equipment above regulatory flood elevations for storm resilience.
d. Update plantwide power system study.

6. Instrumentation & Automation

a. Upgrade all instrumentation and controls to a state-of-the-art PLC-based platform, fully integrated with the plant’s SCADA network for remote operation, monitoring, and troubleshooting.
b. Installation of instrumentation such as flow meters, level sensors, pressure transmitters, and vibration monitoring systems.
c. Full system integration, testing, and commissioning of controls and automation.

7. Wet Well Improvements

a. Install concrete baffle walls to improve hydraulic performance.

8. Plant Drain Relocation

a. Reroute plant drain piping through the dry well and provide new isolation knife gate valves to allow discharge to both the east and west wet wells.

9. Constructability & Maintenance of Plant Operations (MoPO)

    a. Employ a multi-phase construction sequence to maintain plant operations throughout, including incremental pump and force main replacement, use of inflatable line stops for isolation, and reliance on both existing and new infrastructure.
    b. Schedule capacity-limiting steps during dry weather and overnight periods to minimize risk.
    c. Refer to Spec. Section 013513.24 “Special Procedures for Maintenance of Plant Operation and Sequence of Construction” for suggested sequence of construction, general criteria, existing plant operations, restrictions, and constraints during construction.

10. HVAC Improvements

    a. Replace Main Equipment Building HVAC systems within mechanical rooms and on roof to restore ventilation systems and modify ventilation systems that will be impacted by the new force main routing.

11. Plumbing Improvements

    a. Replace the existing sump pump system with new sump pumps, piping and controls.

12. General Structural and Architectural Improvements

    a. Structural modifications, concrete rehabilitation, and installation of new equipment and piping supports, framing, and foundations.
    b. Installation of new access platforms, grating, and handrail throughout Main Equipment Building B for safe operations and maintenance of major system components.

13. All other work necessary to complete the work under this contract including demolition, temporary facilities, bypass pumping system, masonry, roofing, painting, plumbing, HVAC, electrical, instrumentation and controls, commissioning services, and maintenance of plant operations.

B. Type of Contract:

1. Project will be constructed under a single prime contract.

1.6 WORK PERFORMED BY OWNER

A. Cooperate fully with Owner, so work may be carried out smoothly, without interfering with or delaying Work under this Contract or work by Owner. Coordinate the Work of this Contract with work performed by Owner.

1.7 WORK UNDER OWNER'S SEPARATE CONTRACTS

A. Work with Separate Contractors: Cooperate fully with Owner's separate contractors, so work on those contracts may be carried out smoothly, without interfering with or delaying Work under this Contract or other contracts. Coordinate the Work of this Contract with work performed under Owner's separate contracts.

1.8 OWNER-FURNISHED/CONTRACTOR-INSTALLED (OFCI) PRODUCTS

A. Pre-Purchase Contract: The Owner will pre-purchase a total of twenty-three (23) electrically actuated valves of various sizes for installation under this contract. Delivery of pre-purchased valves will occur with Work under this Contract. Acceptance, storage, maintenance, installation, testing, and commissioning of pre-purchased valves and actuators is included under this contract.

1. Specifications related equipment included in the pre-purchase contract are included within this contract for information and specifically called out as being part of the pre-purchase contract.
2. Pertinent pre-purchase contract details are included in Appendix A of these Specifications.
3. Pre-purchased valves to be installed as part of this contract are specifically denoted in Valve Schedule included on Contract Drawing MG-003 and MG-004.

B. Owner's Responsibilities: Owner will furnish products indicated and perform the following, as applicable:

1. Provide to Contractor Owner-reviewed Product Data, Shop Drawings, and Samples.
2. Provide for delivery of Owner-furnished products to Project site.
3. Upon delivery, inspect, with Contractor present, delivered items.

    a. If Owner-furnished products are damaged, defective, or missing, arrange for replacement.

4. Obtain manufacturer's inspections, service, and warranties.
5. Inform Contractor of earliest available delivery date for Owner-furnished products.

C. Contractor's Responsibilities: The Work includes the following, as applicable:

1. Designate delivery dates of Owner-furnished products in Contractor's construction schedule, utilizing Owner-furnished earliest available delivery dates.
2. Review Owner-reviewed Product Data, Shop Drawings, and Samples, noting discrepancies and other issues in providing for Owner-furnished products in the Work.
3. Receive, unload, handle, store, protect, and install Owner-furnished products.
4. Make building services connections for Owner-furnished products.
5. Protect Owner-furnished products from damage during storage, handling, and installation and prior to Substantial Completion.
6. Repair or replace Owner-furnished products damaged following receipt.

D. Owner-Furnished/Contractor-Installed (OFCI) Products:

1. Gate Valves
2. Knife Gate Valves
3. Temporary Knife Gate Valves

    a. Temporary OFCI Knife Gate Valves shall remain the property of the Owner after temporary use and will be delivered to the Owner per specified salvage requirements.

1.9 CONTRACTOR'S USE OF SITE AND PREMISES

A. Restricted Use of Site: Limited use of Project site for construction operations as indicated on Drawings by the Contract limits and as indicated by requirements of this Section.

B. Limits on Use of Site: Limit use of Project site to areas within the Contract limits indicated. Do not disturb portions of Project site beyond areas in which the Work is indicated.

1. Driveways, Walkways and Entrances: Keep driveways, loading areas, and entrances serving premises clear and available to Owner, Owner's employees, and emergency vehicles at all times.

    a. Schedule deliveries to minimize use of driveways and entrances by construction operations.
    b. Schedule deliveries to minimize space and time requirements for storage of materials and equipment on-site.

C. Condition of Existing Building: Maintain portions of existing building affected by construction operations in a weathertight condition throughout construction period. Repair damage caused by construction operations.

D. Condition of Existing Grounds: Maintain portions of existing grounds, landscaping, and hardscaping affected by construction operations throughout construction period. Repair damage caused by construction operations.

1.10 COORDINATION WITH OCCUPANTS

A. Full Owner Occupancy: Owner will occupy Project site and existing buildings during entire construction period. Cooperate with Owner during construction operations to minimize conflicts and facilitate Owner usage. Perform the Work so as not to interfere with Owner's day-to-day operations. Maintain existing exits unless otherwise indicated.

1. Maintain access to existing walkways, corridors, and other adjacent occupied or used facilities. Do not close or obstruct walkways, corridors, or other occupied or used facilities without written permission from Owner and approval of authorities having jurisdiction.
2. Notify Owner not less than 72 hours in advance of activities that will affect Owner's operations.

1.11 WORK RESTRICTIONS

A. Comply with restrictions on construction operations.

1. Comply with limitations on use of public streets, work on public streets, rights of way, and other requirements of authorities having jurisdiction.

B. On-Site Work Hours: Limit work to between 7:00 a.m. to 3:30 p.m., Monday through Friday, unless otherwise indicated. Work hours may be modified to meet Project requirements if approved by Owner and authorities having jurisdiction.

C. Existing Utility Interruptions: Do not interrupt utilities serving facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging for temporary utility services according to requirements indicated:

1. Notify Construction Manager and Owner not less than two days in advance of proposed utility interruptions.
2. Obtain Construction Manager's and Owner's written permission before proceeding with utility interruptions.

D. Noise, Vibration, Dust, and Odors: Coordinate operations that may result in high levels of noise and vibration, dust, odors, or other disruption to Owner occupancy with Owner.

1. Notify Construction Manager and Owner not less than two days in advance of proposed disruptive operations.
2. Obtain Construction Manager's and Owner's written permission before proceeding with disruptive operations.

E. Smoking and Controlled Substance Restrictions: Use of tobacco products, alcoholic beverages, and other controlled substances on Project site is not permitted.

F. Employee Identification: Owner will provide identification tags for Contractor personnel working on Project site. Require personnel to use identification tags at all times.

G. Employee Screening: Comply with Owner's requirements for drug and background screening of Contractor personnel working on Project site.

1. Maintain list of approved screened personnel with Owner's representative.

1.12 SPECIFICATION AND DRAWING CONVENTIONS

A. Specification Content: The Specifications use certain conventions for the style of language and the intended meaning of certain terms, words, and phrases when used in particular situations. These conventions are as follows:

1. Imperative mood and streamlined language are generally used in the Specifications. The words "shall," "shall be," or "shall comply with," depending on the context, are implied where a colon (:) is used within a sentence or phrase.

2. Text Color: Text used in the Specifications, including units of measure, manufacturer and product names, and other text may appear in multiple colors or underlined as part of a hyperlink; no emphasis is implied by text with these characteristics.
3. Hypertext: Text used in the Specifications may contain hyperlinks. Hyperlinks may allow for access to linked information that is not residing in the Specifications. Unless otherwise indicated, linked information is not part of the Contract Documents.
4. Specification requirements are to be performed by Contractor unless specifically stated otherwise.

B. Division 00 Contracting Requirements: General provisions of the Contract, including General and Supplementary Conditions, apply to all Sections of the Specifications.

C. Division 01 General Requirements: Requirements of Sections in Division 01 apply to the Work of all Sections in the Specifications.

D. Drawing Coordination: Requirements for materials and products identified on Drawings are described in detail in the Specifications. One or more of the following are used on Drawings to identify materials and products:

1. Terminology: Materials and products are identified by the typical generic terms used in the individual Specifications Sections.
2. Abbreviations: Materials and products are identified by abbreviations scheduled on Drawings and published as part of the U.S. National CAD Standard.
3. Keynoting: Materials and products are identified by reference keynotes referencing Specification Section numbers found in this Project Manual.

1.13 MISCELLANEOUS PROVISIONS (NOT USED)

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION (NOT USED)

END OF SECTION 011000

© 2026 CDM Smith
All Rights Reserved

SECTION 012001 - PRICE AND PAYMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

A. Lump sum prices.

B. Unit prices.

1.3 LUMP SUM PRICES

A. Base Bid Item Inclusive Of All Contract Work Not Listed Separately In Bid Items 2 Through 17 (Bid Item 1)

1. Payment:

a. Payment of the lump sum price bid for Item 1 shall constitute full compensation for performing and completing the Work required by the Contract Documents, excluding only those items specifically measured and paid for under Bid Items 2 through 13.
b. No separate payment will be made for work, materials, equipment, appurtenances, accessories, testing, startup, temporary construction, temporary facilities, demolition, restoration, coordination, or other requirements necessary for a complete and functional installation unless a separate Bid Item is expressly provided in the Bid Schedule. Any Work not specifically identified as a separate pay item shall be considered incidental to and included in the Base Bid Item
c. Payment shall fully compensate the Contractor for all incidental work which is not specified or shown but which is evidently required to complete the work of this item.

2. Measurement:

a. The measurement shall be the percentage of work performed and in place as of the date of payment and shall be determined for each item of the schedule of values. The measurement shall be documented by calculation of costs incurred, quantities in place, and invoices of materials and equipment supplied, as well as a certification of the Contractor as to the accuracy of the measurement.

1.4 SIPP LINING OF EXISTING 48” DIAMETER FORCE MAINS (Bid Item 17)

1. Payment:

a. Payment of the lump sum price bid for Alternate Bid Item 1 shall constitute full compensation for furnishing all labor, materials, tools, equipment, transportation, and incidentals required to install a complete SIPP liner system withing the existing 48” diameter force mains in accordance with the Contract Documents. Payment shall fully compensate the Contractor for all incidental work which is not specified or shown but which is evidently required to complete the work of this item.

2. Measurement:

a. The measurement shall be the percentage of work performed and in place as of the date of payment and shall be determined for each item of the schedule of values. The measurement shall be documented by calculation of costs incurred, quantities in place, and invoices of materials and equipment supplied, as well as a certification of the Contractor as to the accuracy of the measurement.

B. Mobilization and Demobilization of the Supplemental Bypass Pumping System (Proposal Alternate 1)

1. Payment:

a. Payment for the Mobilization and Demobilization of the Supplementary Bypass Pumping System shall constitute full compensation for furnishing, designing, permitting, installing, testing, commissioning, maintaining, repairing, replacing, removing, and restoring all temporary facilities required to provide a fully functional supplementary bypass pumping system in accordance with the Contract Documents. Payment shall include, but not be limited to:

1) Delegated design and preparation of calculations and drawings.
2) Furnishing all pumps, piping, fittings, valves, controls, instrumentation, power supplies, generators, appurtenances, supports, temporary structures, and ancillary equipment.
3) Mobilization, installation, startup testing, performance testing, and turnover to the Owner for operation.
4) All labor, materials, equipment, supervision, maintenance, preventive maintenance, exercising of standby equipment, monitoring, repairs, replacement parts, and emergency response services.
5) Temporary access provisions, excavation, restoration, traffic and pedestrian protection, and site restoration.
6) Removal of the bypass system and restoration of affected facilities upon completion of the Work.
7) All incidentals necessary to provide a complete and operational bypass pumping system.

b. Payment for fuel is identified elsewhere in the Bid Form as a separate allowance item and shall be made in accordance with the requirements of that allowance and shall not be included in this bid item.

2. Measurement:

a. The measurement shall be the percentage of work performed and in place as of the date of payment and shall be determined for each item of the schedule of values. The measurement shall be documented by calculation of costs incurred, quantities in place, and invoices of materials and equipment supplied, as well as a certification of the Contractor as to the accuracy of the measurement.

1.5 UNIT PRICES

A. Quantity and measurement estimates stated in the Bid Form are estimates for bidding purposes only. Actual payments to be based on actual quantities installed (or removed), in-place, as measured and/or verified by the Engineer.

B. Unless otherwise provided in the General Conditions, the bid unit prices to be in effect throughout the contract duration, regardless of variances between the estimated quantities and the actual installed quantities.

C. No claim for anticipated profits, loss of profit, damages or any extra payment due to any difference between the amounts of work actually completed, or materials or equipment furnished, and the estimated quantities will be accepted.

D. Unless otherwise approved by the Owner, any unit quantities exceeded may not be invoiced until the estimated quantity is increased by contract change order.

E. Assist Engineer by providing necessary equipment, workers, and survey personnel as required to measure quantities.

F. Round measured quantities to the nearest whole integer, unless value of the unit price exceeds $100, in which case measured quantities shall be rounded to the nearest half unit, or as defined further below.

G. Weekly Maintenance of the Supplemental Bypass Pumping System while Operated by the Owner (Bid Item 2)

1. Payment:

a. Payment for the actual measured quantity of Weekly Maintenance of the Supplemental Bypass Pumping System While Operated by the Owner shall be made at the Contract Unit Price per Week.
b. The unit price shall constitute full compensation for all labor, supervision, materials, tools, equipment, transportation, maintenance personnel, manufacturer support, replacement parts, lubricants, consumables, preventive maintenance, routine inspections, testing, exercising of standby pumps, emergency response, repair services, administrative costs, and incidentals required to maintain the supplemental bypass pumping system in a fully operational condition throughout the operating period.
c. The unit price shall also include maintaining required service personnel availability, providing 24-hour emergency response, furnishing replacement

equipment as necessary to prevent interruption of service, and performing all maintenance required by the equipment manufacturer.

d. No separate payment will be made for repairs, replacement of failed equipment, standby equipment, maintenance-related mobilization, demobilization, temporary facilities, monitoring required for maintenance activities, or other incidental work required to keep the supplemental bypass pumping system operational by the Owner.

e. Fuel reimbursement is provided as a separate allowance item and shall be paid in accordance with the requirements of that allowance and shall not be included in this bid item.

f. Payment shall be made only for actual measured weeks that the supplemental bypass pump system is operated by the Owner. Estimated quantities not utilized shall not be paid and shall be credited to the Owner.

2. Measurement:

a. Measurement for Weekly Maintenance of the Supplemental Bypass Pumping System While Operated by the Owner shall be based on the actual number of weeks that the supplemental bypass pumping system has been in operation after it has been installed, tested, accepted, placed under Owner control for operation, and maintained in a fully functional condition.

b. A week shall be measured as a consecutive seven-calendar-day period during which the Contractor remains responsible for maintenance, inspection, preventive maintenance, exercising of standby equipment, emergency repairs, replacement of defective equipment, provision of manufacturer's recommended maintenance services, and maintaining the system in compliance with the Contract Documents.

c. Partial weeks at the beginning or end of the operating period shall be measured on a prorated basis.

d. Weeks during which the supplemental bypass pumping system has not been operated, been removed from service permanently, has not been accepted by the Owner, or is unavailable due to deficiencies shall not be measured for payment.

H. Monthly Maintenance of the Supplemental Bypass Pumping System While in Standby (Bid Item 3)

1. Payment:

a. Payment for the actual measured quantity of Monthly Maintenance of the Supplemental Bypass Pumping System While in Standby shall be made at the Contract Unit Price per Month.

b. The unit price shall constitute full compensation for all labor, supervision, materials, tools, equipment, transportation, maintenance personnel, manufacturer support, replacement parts, lubricants, consumables, preventive maintenance, routine inspections, testing, exercising of standby pumps, emergency response, repair services, replacement equipment, administrative costs, and incidentals required to maintain the supplemental bypass pumping system in an immediately available condition throughout the standby period.

c. The unit price shall also include maintaining required service personnel availability, providing 24-hour emergency response, furnishing replacement equipment as necessary to maintain an immediately available service, and performing all maintenance required by the equipment manufacturer.

d. No separate payment will be made for repairs, replacement of failed equipment, standby equipment, maintenance-related mobilization, demobilization, temporary facilities, monitoring required for maintenance activities, or other incidental work required to keep the supplemental bypass pumping system available for Owner use.
e. Payment shall be made only for actual measured months that the supplemental bypass pumping system is in standby. Estimated quantities not utilized shall not be paid and shall be credited to the Owner.

2. Measurement:

a. Measurement for Monthly Maintenance of the Supplemental Bypass Pumping System While in Standby shall be based on the actual number of Months that the supplemental bypass pumping system has been installed, tested, accepted, placed under Owner control for operation, and maintained in a fully functional, ready-for-service condition.
b. A Month shall be measured as a calendar month during which the Contractor remains responsible for maintenance, inspection, preventive maintenance, exercising of standby equipment, emergency repairs, replacement of defective equipment, provision of manufacturer's recommended maintenance services, and maintaining the system in compliance with the Contract Documents.
c. Partial months at the beginning or end of the maintenance period shall be measured on a prorated basis.
d. Months during which the supplemental bypass pumping system has been in operation by the Owner, removed from service permanently, has not been accepted by the Owner, or is unavailable due to deficiencies shall not be measured for payment.

I. Monthly Maintenance and Operation Of The Plant Drain Bypass Pumping System (Bid Item 4)

1. Payment:

a. Payment for the actual measured quantity of Monthly Maintenance and Operation of the Plant Drain Bypass Pumping System shall be made at the Contract Unit Price per Month.
b. The Contract Unit Price shall constitute full compensation for furnishing all labor, supervision, materials, tools, equipment, maintenance personnel, operators, transportation, replacement parts, lubricants, consumables, temporary power, generators, fuel storage facilities, monitoring, inspections, testing, preventive maintenance, corrective maintenance, repairs, replacement of failed equipment, emergency response, manufacturer support, administrative costs, and all incidentals required for complete operation and maintenance of the plant drain bypass pumping system.
c. Payment shall include continuous operation of the plant drain bypass pumping system, routine monitoring, provision of qualified operating personnel, maintenance of required pumping capacity, furnishing and maintaining backup equipment, exercising standby pumps, and performing all manufacturer-recommended maintenance necessary to ensure reliable operation throughout the service period.
d. The Contract Unit Price shall further include all costs associated with emergency repairs, replacement pumps, replacement generators, bypass piping repairs, control

system repairs, mobilization of maintenance personnel, and any other work necessary to maintain uninterrupted plant drain flow conveyance.

e. No separate payment shall be made for maintenance activities, operating personnel, supervision, inspections, repair work, replacement equipment, preventive maintenance, emergency response services, standby equipment, temporary facilities, testing, or other incidental work required to operate and maintain the plant drain bypass pumping system.

f. Payment shall be made only for actual measured months of operation or partial months based on the percent number of days operating per month for more than 14 days per month. Unused estimated quantities shall not be paid and shall be credited to the Owner. This bid item is intended to compensate the Contractor for complete operation and maintenance of the plant drain bypass pumping system for the duration that the system is required to remain in service.

g. Fuel reimbursement is provided as a separate allowance item and shall be paid in accordance with the requirements of that allowance and shall not be included in this bid item.

2. Measurement:

a. Measurement for Monthly Maintenance and Operation of the Plant Drain Bypass Pumping System shall be based on the actual number of Months that the plant drain bypass pumping system has been installed, tested, accepted, placed into operation, and maintained and operated in a fully functional, ready-for-service condition.

b. A Month shall be measured as a calendar month during which the Contractor remains responsible for maintenance, operation, inspection, preventive maintenance, exercising of standby equipment, emergency repairs, replacement of defective equipment, provision of manufacturer's recommended maintenance services, and maintaining the system in compliance with the Contract Documents.

c. Partial months at the beginning or end of the maintenance period shall be measured based on the percent number of days operating per month for more than 14 days per month.

d. Months during which the plant drain bypass pumping system operates for 14 days or, has been removed from service permanently, has not been accepted by the Owner, or is unavailable due to deficiencies shall not be measured for payment.

J. Weekly Maintenance and Operation of the Plant Drain Bypass Pumping System (Bid Item 5)

1. Payment:

a. Payment for the actual measured quantity of Weekly Maintenance and Operation of the Plant Drain Bypass Pumping System shall be made at the Contract Unit Price per Week.

b. The Contract Unit Price shall constitute full compensation for furnishing all labor, supervision, materials, tools, equipment, maintenance personnel, operators, transportation, replacement parts, lubricants, consumables, temporary power, generators, fuel storage facilities, monitoring, inspections, testing, preventive maintenance, corrective maintenance, repairs, replacement of failed equipment, emergency response, manufacturer support, administrative costs, and all incidentals required for complete operation and maintenance of the plant drain bypass pumping system.

c. Payment shall include continuous operation of the plant drain bypass pumping system, routine monitoring, provision of qualified operating personnel, maintenance of required pumping capacity, furnishing and maintaining backup equipment, exercising standby pumps, and performing all manufacturer-recommended maintenance necessary to ensure reliable operation throughout the service period.

d. The Contract Unit Price shall further include all costs associated with emergency repairs, replacement pumps, replacement generators, bypass piping repairs, control system repairs, mobilization of maintenance personnel, and any other work necessary to maintain uninterrupted plant drain flow conveyance.

e. No separate payment shall be made for maintenance activities, operating personnel, supervision, inspections, repair work, replacement equipment, preventive maintenance, emergency response services, standby equipment, temporary facilities, testing, or other incidental work required to operate and maintain the plant drain bypass pumping system.

f. Payment shall be made only for actual measured weeks of operation up to the 14 days of a month based on the number of weeks operating. Unused estimated quantities shall not be paid and shall be credited to the Owner. This bid item is intended to compensate the Contractor for complete operation and maintenance of the plant drain bypass pumping system for the duration that the system is required to remain in service.

g. Fuel reimbursement is provided as a separate allowance item and shall be paid in accordance with the requirements of that allowance and shall not be included in this bid item.

2. Measurement:

a. Measurement for Weekly Maintenance of the Plant Drain Bypass Pumping System While in Standby shall be based on the actual number of Weeks up to the first two weeks of a month that the plant drain bypass pumping system has been installed, tested, accepted, placed into operation, and maintained in a fully functional, ready-for-service condition.

b. A week shall be measured as a consecutive seven-calendar-day period up tot he first two weeks of a month during which the Contractor remains responsible for maintenance, operation, inspection, preventive maintenance, exercising of standby equipment, emergency repairs, replacement of defective equipment, provision of manufacturer's recommended maintenance services, and maintaining the system in compliance with the Contract Documents

c. Partial weeks at the beginning or end of the operating period shall be measured based on the percent number of days operating per week for 14 days or less.

d. Weeks during which the plant drain bypass pumping system has been operated n excess of 14 days, removed from service permanently, has not been accepted by the Owner, or is unavailable due to deficiencies shall not be measured for payment.

K. Removal of Solids From Wet Well (Bid Item 6)

1. Payment:

a. Bid Item 6 shall include furnishing all labor, supervision, equipment, materials, transportation, disposal, permits, testing, health and safety measures, dewatering, cleaning, and incidentals required to remove, handle, transport, and legally dispose

of grit, debris, sediment, sludge, and other accumulated solid materials from the influent pump station wet wells as specified and shown on the Contract Drawings.

b. The Work shall include, but not be limited to, wet well access, confined space entry procedures, collection and removal of deposited materials, loading, hauling, disposal at an approved facility, cleaning of affected surfaces, and restoration of the Work area upon completion. All removed material shall be disposed of in accordance with applicable federal, state, and local regulations.

c. Removal of solids may be required every time a wet well is shut down and emptied as part of the construction sequence.

d. Provisions for temporary bypassing or flow control as required should be included in the Lump Sum Base Bid item (Bid Item 1) described herein.

e. Payment for Bid Item 6 shall be made at the unit price bid per cubic yard for which price and payment shall be full compensation for furnishing all labor, equipment, materials, and incidentals required to remove and dispose of grit and solid materials in the wet wells as needed for construction sequencing.

2. Measurement:

a. Measurement for payment shall be based on the actual quantity of solids removed and disposed of, measured in cubic yards. Quantities shall be determined by field measurements, truck volume records, disposal receipts, or other documentation acceptable to the Owner. No measurement shall be made for water removed with the solids, and compensation for incidental dewatering, handling, transportation, and disposal operations shall be included in the unit price.

L. Partial Depth Concrete Slab Repair (Bid Item 7)

1. Payment: Payment for Bid Item 7 shall be made at the unit price bid per square foot for which price and payment shall be full compensation for furnishing all labor, materials, tools, equipment, transportation, and incidentals required for completing all work involved in partial depth slab repair of spalled/deteriorated concrete in the wet wells, complete in accordance with the Contract Documents and as directed by the Owner and the Engineer.
2. Measurement: Area of partial depth slab repair shall be based upon actual measured lengths in the field.

M. Partial Depth Concrete Wall Repair (Bid Item 8)

1. Payment: Payment for Bid Item 8 shall be made at the unit price bid per square foot for which price and payment shall be full compensation for furnishing all labor, materials, tools, equipment, transportation, and incidentals required for completing all work involved in partial depth wall repair of spalled/deteriorated concrete in the wet well, complete in accordance with the Contract Documents and as directed by the Owner and the Engineer.
2. Measurement: Area of partial depth wall repair shall be based upon actual measured lengths in the field.

N. Concrete Beam Repair (Bid Item 9)

1. Payment: Payment for Bid Item 9 shall be made at the unit price bid per square foot for which price and payment shall be full compensation for furnishing all labor, materials,

tools, equipment, transportation, and incidentals required for completing all work involved in beam repair of spalled/deteriorated concrete in the wet wells, complete in accordance with the Contract Documents and as directed by the Owner and the Engineer.

2. Measurement: Area of beam repair shall be based upon actual measured lengths in the field.

O. Concrete Column Repair (Bid Item 10)

1. Payment: Payment for Bid Item 10 shall be made at the unit price bid per square foot for which price and payment shall be full compensation for furnishing all labor, materials, tools, equipment, transportation, and incidentals required for completing all work involved in column repair of spalled/deteriorated concrete in the wet wells, complete in accordance with the Contract Documents and as directed by the Owner and the Engineer.
2. Measurement: Area of column repair shall be based upon actual measured lengths in the field.

P. Concrete Crack Injection Repair (Bid Item 11)

1. Payment: Payment for Bid Item 11 shall be made at the unit price bid per linear foot for which price and payment shall be full compensation for furnishing all labor, materials, tools, equipment, transportation, and incidentals required for completing all work involved in crack injection repair of cracked concrete in the wet wells, complete in accordance with the Contract Documents and as directed by the Owner and the Engineer.
2. Measurement: Length of crack repair shall be based upon actual measured lengths in the field.

Q. Disposal Of Hazardous Building Materials (Bid Item 12)

1. Payment:

a. Payment for Bid Item 12 shall consist of furnishing all labor, equipment, materials, transportation, permits, fees, manifests, testing coordination, and incidentals necessary for the off-site transportation and final disposal of hazardous building material (HBM) waste generated under the Contract, including but not limited to asbestos-containing materials, lead-contaminated waste, universal waste, and other regulated waste streams identified in the Contract Documents.

b. All hazardous building material abatement, removal, disturbance controls, containment, worker protection, packaging, labeling, stockpiling, temporary storage, waste characterization, and related requirements specified in Sections 028200, 028300, 028310, 028700, and other applicable Contract Documents shall be included in the Base Bid (Bid Item 1) and shall not be paid for under this Bid Item. This Bid Item is strictly limited to the transportation and disposal of HBM waste that has been generated and packaged as part of the Base Bid Work.

c. The Contractor shall dispose of all HBM waste at properly licensed and permitted facilities in accordance with all applicable Federal, State, and local regulations and shall furnish all required manifests, bills of lading, disposal receipts, certificates of disposal, and related documentation.

d. Payment for Disposal of Hazardous Building Materials shall be made at the Contract Unit Price per cubic yard. The Unit Price shall constitute full compensation for all labor, equipment, transportation, hauling, disposal facility fees, tipping fees, permits, manifests, certificates of disposal, regulatory

compliance, and all other incidentals required for the lawful off-site disposal of HBM waste.

2. Measurement:

a. Measurement for payment shall be based on the actual volume of hazardous building material waste transported off-site and accepted for disposal, measured in cubic yards (CY).
b. The measured quantity shall be the volume of HBM waste documented by disposal manifests, disposal facility tickets, transporter records, container measurements, or other records acceptable to the Engineer. No separate measurement shall be made for abatement activities, containment systems, worker protection, packaging materials, waste characterization, stockpiling, loading, handling, temporary storage, transportation to transfer stations, testing, permits, or administrative requirements associated with generating the waste, as these costs shall be included in the Base Bid.

1.6 TOTAL BID

A. A single total bid will be issued to the designated Contractor.

1.7 PAYMENT, PARTS I AND II

A. Payment of the total price bid in the Form for General Bid shall fully compensate the Contractor for furnishing all labor, materials, equipment and incidentals required to complete the work as outlined above and under Section 011000. Payment shall also include compensation for all other work required to complete the Project as described in the Contract Documents and not specifically mentioned under Lump Sum.

1.8 EXTRA WORK

A. Extra work, if any, will be performed in accordance with Article XXII of the Agreement.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION (NOT USED)

END OF SECTION 012001

© 2026 CDM Smith
All Rights Reserved

SECTION 012100 - ALLOWANCES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements governing allowances.

B. Types of allowances include the following:

1. Contingency allowances.
2. Testing and inspecting allowances.

C. Related Requirements:

1. Section 012600 “Contract Modification Procedures” for procedures for submitting and handling Change Orders.
2. Section 014000 "Quality Requirements" for procedures governing the use of allowances for field testing by an independent testing agency.

1.3 DEFINITIONS

A. Allowance: A quantity of work or dollar amount included in the Contract, established in lieu of additional requirements, used to defer selection of actual materials and equipment to a later date when direction will be provided to Contractor. If necessary, additional requirements will be issued by Change Order.

1.4 SELECTION AND PURCHASE

A. At the earliest practical date after award of the Contract, advise Engineer of the date when final selection, or purchase and delivery, of each product or system described by an allowance must be completed by the Owner to avoid delaying the Work.

B. At Engineer's request, obtain proposals for each allowance for use in making final selections. Include recommendations that are relevant to performing the Work.

C. Purchase products and systems selected by Engineer from the designated supplier.

© 2026 CDM Smith
All Rights Reserved

1.5 ACTION SUBMITTALS

A. Submit proposals for purchase of products or systems included in allowances in the form specified for Change Orders.

1.6 INFORMATIONAL SUBMITTALS

A. Submit invoices or delivery slips to show actual quantities of materials delivered to the site for use in fulfillment of each allowance.

B. Submit time sheets and other documentation to show labor time and cost for installation of allowance items that include installation as part of the allowance.

C. Coordinate and process submittals for allowance items in same manner as for other portions of the Work.

1.7 CONTINGENCY ALLOWANCES

A. Use the contingency allowance only as directed by Engineer for Owner's purposes and only by Change Orders that indicate amounts to be charged to the allowance.

B. Contractor's overhead, profit, and related costs for products and equipment ordered by Owner under the contingency allowance are included in the allowance and are not part of the Contract Sum. These costs include delivery, installation, insurance, equipment rental, and similar costs.

C. Change Orders authorizing use of funds from the contingency allowance will include Contractor's related costs and reasonable overhead and profit.

D. At Project closeout, credit unused amounts remaining in the contingency allowance to Owner by Change Order.

1.8 TESTING AND INSPECTING ALLOWANCES

A. Testing and inspecting allowances include the cost of engaging testing agencies, actual tests and inspections, and reporting results.

B. The allowance does not include incidental labor required to assist the testing agency or costs for retesting if previous tests and inspections result in failure. The cost for incidental labor to assist the testing agency shall be included in the Contract Sum.

C. Costs of testing and inspection services not specifically required by the Contract Documents are Contractor responsibilities and not included in the allowance.

D. At Project closeout, credit unused amounts remaining in the testing and inspecting allowance to Owner by Change Order.

© 2026 CDM Smith
All Rights Reserved

1.9 ADJUSTMENT OF ALLOWANCES

A. Allowance Adjustment: To adjust allowance amounts, prepare a Change Order proposal based on the difference between purchase amount and the allowance, multiplied by final measurement of work-in-place where applicable. If applicable, include reasonable allowances for cutting losses, tolerances, mixing wastes, normal product imperfections, required maintenance materials, and similar margins.

1. Include installation costs in purchase amount only where indicated as part of the allowance.
2. If requested, prepare explanation and documentation to substantiate distribution of overhead costs and other markups.
3. Submit substantiation of a change in scope of Work, if any, claimed in Change Orders related to unit-cost allowances.
4. Owner reserves the right to establish the quantity of work-in-place by independent quantity survey, measure, or count.

B. Submit claims for increased costs due to a change in the scope or nature of the allowance described in the Contract Documents, whether for the purchase order amount or Contractor's handling, labor, installation, overhead, and profit.

1. Do not include Contractor's or subcontractor's indirect expense in the Change Order cost amount unless it is clearly shown that the nature or extent of Work has changed from what could have been foreseen from information in the Contract Documents.
2. No change to Contractor's indirect expense is permitted for selection of higher- or lower-priced materials or systems of the same scope and nature as originally indicated.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine products covered by an allowance promptly on delivery for damage or defects. Return damaged or defective products to manufacturer for replacement.

3.2 PREPARATION

A. Coordinate materials and their installation for each allowance with related materials and installations to ensure that each allowance item is completely integrated and interfaced with related work.

3.3 SCHEDULE OF ALLOWANCES

A. Allowance for Laboratory Testing And Specialty Inspections (Bid Item 13): Testing and Inspection Allowance to be used only as authorized by the Owner for laboratory testing,

analytical services, environmental sampling, specialty inspections, and related professional services.

1. The Allowance may be utilized for services including, but not limited to:

    a. Hazardous building material waste characterization and disposal-related testing.
    b. TCLP and other waste classification analyses required for transportation and disposal of regulated materials.
    c. Environmental sampling, monitoring, and analytical laboratory services associated with hazardous building materials, asbestos-containing materials, lead-containing materials, universal waste, or other regulated waste streams.
    d. Specialty inspection and testing services required to verify compliance with Contract requirements.
    e. Structural, concrete, welding, coatings, electrical, mechanical, or other specialty inspections.
    f. Third-party inspections, evaluations, reports, and testing necessary to document construction quality, regulatory compliance, or acceptance of the Work.
    g. Retesting or additional investigation directed by the Owner where existing conditions differ from those anticipated in the Contract Documents

2. Payments from the Allowance shall be based upon the actual cost of approved laboratory testing, analytical services, specialty inspections, and related professional services. Any portion of the Allowance not utilized at the completion of the Work shall be credited to the Owner. Any work performed by the Contractor in support of testing and inspection activities, including scheduling, coordination, access, protection of work, and corrective work resulting from failed tests, shall be considered incidental to the Contract and shall not be paid from this Allowance unless specifically authorized by the Owner.
3. Any portion of the Allowance that is not utilized during the Contract shall remain the property of the Owner and shall be credited to the Owner through the final Contract adjustment.

B. Allowance for Bridge Crane Repairs **(**Bid Item 14): Contingency Allowance for Bridge Crane Repairs:

1. This Contingency Allowance shall be used only as directed and authorized by the Owner for bridge crane repairs, replacement parts, specialty services, and related work necessary to restore or maintain operation of the existing bridge crane systems. Payment shall be based on actual authorized costs for repairs, modifications, replacement parts, and related services associated with the existing bridge crane systems.
2. The Allowance may be utilized for work identified as necessary as a result of verifying its load capacity and operability in accordance with the supplemental conditions of the Contract and may include:

    a. Repair or replacement of worn, damaged, deteriorated, or non-functional bridge crane components.
    b. Repairs to crane bridge assemblies, trolleys, hoists, drives, motors, brakes, controls, electrical components, festoon systems, conductors, and associated equipment.
    c. Replacement of cables, hooks, sheaves, bearings, limit switches, contactors, control stations, and other crane appurtenances.

d. Electrical troubleshooting, testing, calibration, and corrective work required to return the crane to proper operation.
e. Structural repairs or modifications to crane support components, rails, connections, or related elements.
f. Manufacturer, supplier, or specialty contractor services required for repairs, adjustments, startup, operational testing, and certification.
g. Procurement of replacement parts, materials, equipment rentals, and incidental items necessary to complete authorized crane repairs.

3. Inspection, certification, load testing, and verification required by the Supplementary Conditions before the Contractor uses the crane are incidental to the Contract and not payable from the Allowance. The Bridge Crane Repair Allowance is reserved for Owner-directed repairs, replacement parts, specialty contractor services, or corrective work identified during those inspections that the Owner elects to fund through the allowance.
4. Any portion of the Allowance that is not utilized during the Contract shall remain the property of the Owner and shall be credited to the Owner through the final Contract adjustment.

C. Allowance for Fueling Of Temporary Systems (Bid Item 15): This Contingency Allowance is established to provide reimbursement to the Contractor for actual documented cost of eligible fuel purchases, as approved by the Owner.

1. Payment shall constitute reimbursement of the Contractor's actual invoiced fuel costs only. No overhead, profit, administrative costs, markup, handling charges, contingency, escalation factor, or other additions shall be applied to the reimbursable fuel cost.
2. The Contractor shall submit copies of all invoices, delivery tickets, receipts, and supporting documentation with each payment request. Reimbursement shall be limited to the actual quantities and costs shown on the supporting documentation and approved by the Owner.
3. The Allowance amount stated in the Bid Form is an estimated quantity established for bidding purposes only and does not guarantee the amount of fuel that will be required during the Work. Payment shall be based solely on actual documented fuel costs incurred. Any unused portion of the Allowance shall remain with the Owner and shall not be paid to the Contractor.
4. The Contractor shall include all costs associated with procurement, handling, storage, fueling operations, fuel management, recordkeeping, and administration of the fuel program within the bid prices for other Contract items. No separate payment shall be made for such activities.
5. Reimbursement shall be based on the actual quantity of fuel furnished and consumed for operation of temporary systems required under the Contract, including but not limited to temporary bypass pumping systems, standby pumping equipment, temporary generators, and other approved temporary equipment.
6. Measurement shall be based on actual documented fuel purchases supported by paid invoices, delivery tickets, receipts, and other records acceptable to the Owner. Documentation shall identify the date of purchase, fuel type, quantity, unit cost, total cost, and the temporary system for which the fuel was utilized.
7. Only fuel reasonably required for the operation of approved temporary systems and consumed during performance of the Work shall be eligible for reimbursement. Fuel purchases in excess of actual project requirements, fuel used for Contractor vehicles or construction equipment not identified as temporary systems, and undocumented fuel expenses shall not be measured for payment.

D. Allowance for Miscellaneous Additional Work (Bid Item 16): This Contingency Allowance is established to provide funding for additional work that may be required during construction and is not otherwise included in the Contract Documents or compensated under other Bid Items, Allowances, Unit Price Items, or provisions of the Contract. This Allowance is intended to address both Owner-directed additional work and work required to investigate, accommodate, mitigate, modify, repair, or otherwise address unforeseen conditions encountered during performance of the Work.

1. The Allowance may be utilized, upon written authorization by the Owner or Engineer, for furnishing all labor, materials, equipment, subcontractors, transportation, permits, temporary facilities, professional services, and incidentals necessary to perform additional work beyond that specifically identified in the Contract Documents.
2. Eligible work may include, but is not limited to:

    a. Modifications to the Work directed by the Owner or Engineer.
    b. Supplemental repairs or construction activities.
    c. Installation of additional materials or equipment.
    d. Changes required to accommodate field conditions.
    e. Investigation and remediation of concealed or unknown conditions.
    f. Unanticipated deterioration of existing facilities.
    g. Conflicts with existing utilities, structures, or site features.
    h. Undisclosed subsurface, structural, mechanical, electrical, operational, or site conditions.
    i. Other work determined by the Owner to be necessary and in the best interest of the Project.

3. No expenditures shall be made against this Allowance without prior written authorization from the Owner or Engineer.
4. The Allowance shall not be used for:

    a. Work otherwise required by the Contract Documents.
    b. Work reasonably inferable from the Contract Documents.
    c. Work necessary to complete the Work as specified.
    d. Work resulting from the Contractor's means and methods.
    e. Corrective work required due to defective workmanship or nonconforming work.
    f. Work resulting from the Contractor's failure to properly investigate, coordinate, schedule, or perform the Work.

5. Payments from this Allowance shall be based on the actual cost of Owner-authorized work and shall be processed in accordance with the Contract requirements.
6. The Contractor shall provide such documentation as the Owner may require to substantiate payment requests, including but not limited to labor records, equipment records, material invoices, subcontractor invoices, delivery tickets, quotations, and other supporting cost documentation.
7. Any portion of the Allowance not utilized during construction shall remain the property of the Owner and shall be credited to the Owner through the final Contract adjustment

SECTION 012600 - CONTRACT MODIFICATION PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for handling and processing Contract modifications.

1.3 MINOR CHANGES IN THE WORK

A. Engineer will issue through Construction Manager Field Orders authorizing minor changes in the Work, not involving adjustment to the Contract Price or the Contract Time, on EJCDC Form C-942 or other form acceptable to Owner.

1.4 PROPOSAL REQUESTS

A. Owner-Initiated Proposal Requests: Construction Manager will issue a detailed description of proposed changes in the Work that may require adjustment to the Contract Price or the Contract Time. If necessary, the description will include supplemental or revised Drawings and Specifications.

1. Requests For Proposal (RFP) issued by Construction Manager are not instructions either to stop work in progress or to execute the proposed change.
2. Within time specified in Proposal Request or 5 days after receipt of RFP, submit a quotation estimating adjustments to the Contract Price and the Contract Time necessary to execute the change.

    a. Include a list of quantities of products required or eliminated and unit costs, with total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.
    b. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.
    c. Include costs of labor and supervision directly attributable to the change.
    d. Include an updated Contractor's construction schedule that indicates the effect of the change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.
    e. Quotation Form: Use forms acceptable to Engineer.

B. Contractor-Initiated Proposals: If latent or changed conditions require modifications to the Contract, Contractor may initiate a claim by submitting a request for a change to Construction Manager.

1. Include a statement outlining reasons for the change and the effect of the change on the Work. Provide a complete description of the proposed change. Indicate the effect of the proposed change on the Contract Price and the Contract Time.
2. Include a list of quantities of products required or eliminated and unit costs, with total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.
3. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.
4. Include costs of labor and supervision directly attributable to the change.
5. Include an updated Contractor's construction schedule that indicates the effect of the change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.
6. Proposal Request Form: Use form acceptable to Engineer.

1.5 CHANGE ORDER PROCEDURES

A. On Owner's approval of a Change Order Request, Construction Manager will issue a Change Order for signatures of Owner and Contractor on EJCDC Form C-941 or other form acceptable to Owner.

1.6 WORK CHANGE DIRECTIVE

A. Work Change Directive: Construction Manager may issue a Work Change Directive on EJCDC Document C-940 or other form acceptable to Owner. Work Change Directive instructs Contractor to proceed with a change in the Work, for subsequent inclusion in a Change Order.

1. Work Change Directive contains a complete description of change in the Work. It also designates method to be followed to determine change in the Contract Price or the Contract Time.

B. Documentation: Maintain detailed records on a time and material basis of work required by the Work Change Directive.

1. After completion of change, submit an itemized account and supporting data necessary to substantiate cost and time adjustments to the Contract.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION (NOT USED)

END OF SECTION 012600

SECTION 012900 - PAYMENT PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements necessary to prepare and process Applications for Payment.

B. Related Requirements:

1. Section 012600 "Contract Modification Procedures" for administrative procedures for handling changes to the Contract.
2. Section 013200 "Construction Progress Documentation" for administrative requirements governing the preparation and submittal of the Contractor's construction schedule.

1.3 DEFINITIONS

A. Schedule of Values: A statement furnished by Contractor allocating portions of the Contract Sum to various portions of the Work and used as the basis for reviewing Contractor's Applications for Payment.

1.4 SCHEDULE OF VALUES

A. Coordination: Coordinate preparation of the schedule of values with preparation of Contractor's construction schedule.

1. Coordinate line items in the schedule of values with items required to be indicated as separate activities in Contractor's construction schedule.
2. Submit the schedule of values to Engineer through Construction Manager at earliest possible date, but no later than ten days before the date scheduled for submittal of initial Applications for Payment.

B. Format and Content: Use Project Manual table of contents as a guide to establish line items for the schedule of values. Provide at least one line item for each Specification Section.

1. Identification: Include the following Project identification on the schedule of values:

a. Project name and location.
b. Owner’s name.
c. Owner’s Project number.

d. Name of Engineer.
e. Engineer's Project number.
f. Contractor's name and address.
g. Date of submittal.

2. Arrange the schedule of values in tabular form, with separate columns to indicate the following for each item listed:

a. Related Specification Section or division.
b. Description of the Work.
c. Name of subcontractor.
d. Name of manufacturer or fabricator.
e. Name of supplier.
f. Change Orders (numbers) that affect value.
g. Dollar value of the following, as a percentage of the Contract Sum to nearest one-hundredth percent, adjusted to total 100 percent. Round dollar amounts to whole dollars, with total equal to Contract Sum.

1) Labor.
2) Materials.
3) Equipment.

3. Provide a breakdown of the Contract Sum in enough detail to facilitate continued evaluation of Applications for Payment and progress reports. Provide multiple line items for principal subcontract amounts in excess of five percent of the Contract Sum.
4. Provide a separate line item in the schedule of values for each part of the Work where Applications for Payment may include materials or equipment purchased or fabricated and stored, but not yet installed.
5. Allowances: Provide a separate line item in the schedule of values for each allowance. Show line-item value of unit-cost allowances, as a product of the unit cost, multiplied by measured quantity. Use information indicated in the Contract Documents to determine quantities.
6. Purchase Contracts: Provide a separate line item in the schedule of values for each Purchase contract. Show line-item value of Purchase contract. Indicate Owner payments or deposits, if any, and balance to be paid by Contractor.
7. Overhead Costs, Proportional Distribution: Include total cost and proportionate share of general overhead and profit for each line item.
8. Overhead Costs, Separate Line Items: Show cost of temporary facilities and other major cost items that are not direct coat of actual work-in-place as separate line items.
9. Temporary Facilities: Show cost of temporary facilities and other major cost items that are not direct cost of actual work-in-place as separate line items.
10. Closeout Costs. Include separate line items under Contractor and principal subcontracts for Project closeout requirements in an amount totaling five percent of the Contract Sum and subcontract amount.
11. Schedule of Values Revisions: Revise the schedule of values when Change Orders or Construction Change Directives result in a change in the Contract Sum. Include at least one separate line item for each Change Order and Construction Change Directive.

C. Include a breakdown of the following specific items in the Schedule of Values.

1. Total and monthly cost for General Conditions inclusive of project management and coordination, progress documentation, submittals, delegated design services, maintenance of general temporary facilities, and construction waste management.
2. Total and monthly cost associated with storage and maintenance of Owner pre-purchased valves and actuators.
3. Total and monthly cost associated with maintenance and storage of pumps, motors, and drives.
4. Total and monthly cost associated with rental of bypass pumping systems.
5. Cost associated with commissioning of the complete influent pumping system.
6. Cost associated with all delegated design items including but not limited to:

    a. Groundwater control for suction elbow demolition
    b. Temporary Bypass Pumping Systems
    c. Aluminum Handrails and Railings
    d. Hangers and Supports for Plumbing Piping and Equipment
    e. Hangers and Supports for HVAC Piping and Equipment
    f. Vibration Controls for HVAC
    g. Direct Digital Control (DDC) System for HVAC
    h. Control Valves
    i. Control Dampers
    j. Hydronic Piping
    k. Steam and Condensate Heating Piping
    l. Metal Ducts
    m. HVAC Power Ventilators
    n. Outdoor, Semi-Custom Air-Handling Units
    o. Hangers and Supports for Electrical Systems
    p. Addressable Fire-Alarm Systems
    q. Spray-in-Place Polymeric Pipe Lining
    r. Couplings, Adapters, and Specials for Process Piping
    s. Hangers and Supports for Process Piping
    t. Common Requirements for Process Valves
    u. Stainless Steel Slide Gates
    v. Hot-Tapping Valves and Line Stops
    w. End Suction Solids Handling Pumps – base anchorage.
    x. Forming, shoring and bracing
    y. Metal fabrications and anchorage
    z. Pre-engineered aluminum stairs
    aa. Roof specialties
    bb. Power System Studies
    cc. Temporary bulkheads
    dd. Mechanical Pipe Plugs
    ee. Inflatable Pipe Plugs
    ff. Any and all other temporary facilities.

7. Cost associated with dewatering of the East and West Wet Wells beyond a depth of 9-ft.

D. Should an item in the scope of work be deleted from the contract during construction it shall be credited to the Owner for the amount recorded in the Schedule of Values.

© 2026 CDM Smith
All Rights Reserved

1.5 APPLICATIONS FOR PAYMENT

A. Each Application for Payment following the initial Application for Payment shall be consistent with previous applications and payments as certified by Engineer and Construction Manager and paid for by Owner.

B. Payment Application Times: The date for each progress payment is indicated in the Owner/Contractor Agreement. The period of construction work covered by each Application for Payment is the period indicated in the Agreement.

C. Payment Application Times: Submit Application for Payment to Engineer monthly. The period covered by each Application for Payment is one month, ending on the last day of the month.

1. Submit draft copy of Application for Payment seven days prior to due date for review by Engineer.

D. Application Preparation: Complete every entry on form. Notarize and execute by a person authorized to sign legal documents on behalf of Contractor. Construction Manager will return incomplete applications without action.

1. Entries shall match data on the schedule of values and Contractor's construction schedule. Use updated schedules if revisions were made.
2. Include amounts for work completed following previous Application for Payment, whether or not payment has been received. Include only amounts for work completed at time of Application for Payment.
3. Include amounts of Change Orders and Construction Change Directives issued before last day of construction period covered by application.
4. Indicate separate amounts for work being carried out under Owner-requested project acceleration.

E. Stored Materials: Include in Application for Payment amounts applied for materials or equipment purchased or fabricated and stored, but not yet installed.

1. Provide certificate of insurance, evidence of transfer of title to Owner, and consent of surety to payment.
2. Provide supporting documentation that verifies amount requested, such as paid invoices. Match amount requested with amounts indicated on documentation; do not include overhead and profit on stored materials.
3. Provide summary documentation for stored materials indicating the following:

a. Value of materials previously stored and remaining stored as of date of previous Applications for Payment.
b. Value of previously stored materials put in place after date of previous Application for Payment and on or before date of current Application for Payment.
c. Value of materials stored since date of previous Application for Payment and remaining stored as of date of current Application for Payment.

F. Transmittal: Submit three signed and notarized original copies of each Application for Payment to Construction Manager by a method ensuring receipt within 24 hours. One copy shall include waivers of lien and similar attachments if required.

1. Transmit each copy with a transmittal form listing attachments and recording appropriate information about application.

G. Maintain an updated set of drawings to be used as record drawings in accordance with Section 017839 “Project Record Documents.” As a prerequisite for monthly progress payments, exhibit the updated record drawings for review by Owner and Engineer for completeness and accuracy.

H. Initial Application for Payment: Administrative actions and submittals that must precede or coincide with submittal of first Application for Payment include the following:

1. List of subcontractors.
2. Schedule of values.
3. Contractor's construction schedule.
4. Combined Contractor's construction schedule incorporating Work of multiple contracts, with indication of acceptance of schedule by each Contractor.
5. Products list (preliminary if not final).
6. Sustainable design action plans, including preliminary project materials cost data.
7. Schedule of unit prices.
8. Submittal schedule.
9. List of Contractor's staff assignments.
10. List of Contractor's principal consultants.
11. Copies of building permits.
12. Copies of authorizations and licenses from authorities having jurisdiction for performance of the Work.
13. Initial progress report.
14. Report of preconstruction conference.

I. Application for Payment at Substantial Completion: After Engineer issues the Certificate of Substantial Completion, submit an Application for Payment showing 100 percent completion for portion of the Work claimed as substantially complete.

1. Include documentation supporting claim that the Work is substantially complete and a statement showing an accounting of changes to the Contract Sum.

    a. Complete administrative actions, submittals, and Work proceeding this application, as described in Section 017700 “Closeout Procedures.”

2. Include initial submittal of closeout record drawings in accordance with Section 017839 “Project Record Documents.”
3. This application shall reflect Certificate(s) of Substantial Completion issued previously for Owner occupancy of designated portions of the Work.

J. Final Payment Application: After completing Project closeout requirements, submit final Application for Payment with releases and supporting documentation not previously submitted and accepted, including, but not limited, to the following:

1. Evidence of completion of Project closeout requirements.
2. Certification of completion of final punch list items.
3. Insurance certificates for products and completed operations where required and proof that taxes, fees, and similar obligations were paid.

4. Final submittal of closeout record drawings in accordance with Section 017839 “Project Record Documents.”
5. Updated final statement, accounting for final changes to the Contract Sum.
6. AIA Document G706.
7. AIA Document G706A.
8. AIA Document G707.
9. Evidence that claims have been settled.
10. Final meter readings for utilities, a measured record of stored fuel, and similar data as of date of Substantial Completion or when Owner took possession of and assumed responsibility for corresponding elements of the Work.
11. Final liquidated damages settlement statement.
12. Proof that taxes, fees, and similar obligations are paid.
13. Waivers and releases.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION (NOT USED)

END OF SECTION 012900

© 2026 CDM Smith

SECTION 013100 - PROJECT MANAGEMENT AND COORDINATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative provisions for coordinating construction operations on Project, including, but not limited to, the following:

1. General coordination procedures.
2. Coordination drawings.
3. RFIs.
4. Digital project management procedures.
5. Web-based Project management software package.
6. Project meetings.

B. Each contractor shall participate in coordination requirements. Certain areas of responsibility are assigned to a specific contractor.

C. Related Requirements:

1. Section 013200 "Construction Progress Documentation" for preparing and submitting Contractor's construction schedule.
2. Section 017300 "Execution" for procedures for coordinating general installation and field-engineering services, including establishment of benchmarks and control points.
3. Section 017700 "Closeout Procedures" for coordinating closeout of the Contract.

1.3 DEFINITIONS

A. BIM: Building Information Modeling.

B. RFI: Request for Information. Request from Owner, Construction Manager, Engineer, or Contractor seeking information required by or clarifications of the Contract Documents.

1.4 INFORMATIONAL SUBMITTALS

A. Subcontract List: Prepare a written summary identifying individuals or firms proposed for each portion of the Work, including those who are to furnish products or equipment fabricated to a special design. Include the following information in tabular form:

1. Name, address, telephone number, and email address of entity performing subcontract or supplying products.
2. Number and title of related Specification Section(s) covered by subcontract.
3. Drawing number and detail references, as appropriate, covered by subcontract.

B. Key Personnel Names: Within 15 days of starting construction operations, submit a list of key personnel assignments, including superintendent and other personnel in attendance at Project site. Identify individuals and their duties and responsibilities; list addresses, cellular telephone numbers, and e-mail addresses. Provide names, addresses, and telephone numbers of individuals assigned as alternates in the absence of individuals assigned to Project.

1. Post copies of list in Project meeting room, in temporary field office, in web-based Project software directory, and in prominent location in each built facility. Keep list current at all times.

1.5 GENERAL COORDINATION PROCEDURES

A. Coordination: Coordinate construction operations included in different Sections of the Specifications to ensure efficient and orderly installation of each part of the Work. Coordinate construction operations included in different Sections that depend on each other for proper installation, connection, and operation.

1. Schedule construction operations in sequence required to obtain the best results, where installation of one part of the Work depends on installation of other components, before or after its own installation.
2. Coordinate installation of different components to ensure maximum performance and accessibility for required maintenance, service, and repair.
3. Make adequate provisions to accommodate items scheduled for later installation.

B. Coordination of Multiple Contracts: Each contractor shall cooperate with Project coordinator, who shall coordinate its construction operations with those of other contractors and entities to ensure efficient and orderly installation of each part of the Work. Each contractor shall coordinate its own operations with operations included in different Sections that depend on each other for proper installation, connection, and operation.

1. Schedule construction operations in sequence required to obtain the best results, where installation of one part of the Work depends on installation of other components, before or after its own installation.
2. Coordinate installation of different components with other contractors to ensure maximum performance and accessibility for required maintenance, service, and repair.
3. Make adequate provisions to accommodate items scheduled for later installation.

C. Prepare memoranda for distribution to each party involved, outlining special procedures required for coordination. Include such items as required notices, reports, and list of attendees at meetings.

1. Prepare similar memoranda for Owner and separate contractors if coordination of their Work is required.

D. Administrative Procedures: Coordinate scheduling and timing of required administrative procedures with other construction activities and direction of Project coordinator to avoid conflicts and to ensure orderly progress of the Work. Such administrative activities include, but are not limited to, the following:

1. Preparation of Contractor's construction schedule.
2. Preparation of the schedule of values.
3. Installation and removal of temporary facilities and controls.
4. Delivery and processing of submittals.
5. Progress meetings.
6. Preinstallation conferences.
7. Project closeout activities.
8. Startup and adjustment of systems.

1.6 COORDINATION DRAWINGS

A. Coordination Drawings, General: Prepare coordination drawings according to requirements in individual Sections, and additionally where installation is not completely indicated on Shop Drawings, where limited space availability necessitates coordination, or if coordination is required to facilitate integration of products and materials fabricated or installed by more than one entity.

1. Content: Project-specific information, drawn accurately to a scale large enough to indicate and resolve conflicts. Do not base coordination drawings on standard printed data. Include the following information, as applicable:

a. Use applicable Drawings as a basis for preparation of coordination drawings. Prepare sections, elevations, and details as needed to describe relationship of various systems and components.
b. Coordinate the addition of trade-specific information to coordination drawings by multiple contractors in a sequence that best provides for coordination of the information and resolution of conflicts between installed components before submitting for review.
c. Indicate functional and spatial relationships of components of architectural, structural, civil, mechanical, and electrical systems.
d. Indicate space requirements for routine maintenance and for anticipated replacement of components during the life of the installation.
e. Show location and size of access doors required for access to concealed dampers, valves, and other controls.
f. Indicate required installation sequences.
g. Indicate dimensions shown on Drawings. Specifically note dimensions that appear to be in conflict with submitted equipment and minimum clearance requirements. Provide alternative sketches to Engineer indicating proposed resolution of such conflicts. Minor dimension changes and difficult installations will not be considered changes to the Contract.

B. Coordination Drawing Organization: Organize coordination drawings as follows:

1. Floor Plans and Reflected Ceiling Plans: Show architectural and structural elements, and mechanical, plumbing, fire-protection, fire-alarm, and electrical Work. Show locations of

visible ceiling-mounted devices relative to acoustical ceiling grid. Supplement plan drawings with section drawings where required to adequately represent the Work.

2. Plenum Space: Indicate subframing for support of ceiling and wall systems, mechanical and electrical equipment, and related Work. Locate components within plenums to accommodate layout of light fixtures and other components indicated on Drawings. Indicate areas of conflict between light fixtures and other components.
3. Mechanical Rooms: Provide coordination drawings for mechanical rooms, showing plans and elevations of mechanical, plumbing, fire-protection, fire-alarm, and electrical equipment.
4. Structural Penetrations: Indicate penetrations and openings required for all disciplines.
5. Slab Edge and Embedded Items: Indicate slab edge locations and sizes and locations of embedded items for metal fabrications, sleeves, anchor bolts, bearing plates, angles, door floor closers, slab depressions for floor finishes, curbs and housekeeping pads, and similar items.
6. Mechanical and Plumbing Work: Show the following:

    a. Sizes and bottom elevations of ductwork, piping, and conduit runs, including insulation, bracing, flanges, and support systems.
    b. Dimensions of major components, such as dampers, valves, diffusers, access doors, cleanouts and electrical distribution equipment.
    c. Fire-rated enclosures around ductwork.

7. Electrical Work: Show the following:

    a. Runs of vertical and horizontal conduit 1-1/4 inches in diameter and larger.
    b. Light fixture, exit light, emergency battery pack, smoke detector, and other fire-alarm locations.
    c. Panel board, switchboard, switchgear, transformer, busway, generator, and motor-control center locations.
    d. Location of pull boxes and junction boxes, dimensioned from column center lines.

8. Fire-Protection System: Show the following:

    a. Locations of standpipes, mains piping, branch lines, pipe drops, and sprinkler heads.

9. Review: Engineer will review coordination drawings to confirm that, in general, the Work is being coordinated, but not for the details of the coordination, which are Contractor's responsibility. If Engineer determines that coordination drawings are not being prepared in sufficient scope or detail, or are otherwise deficient, Engineer will so inform Contractor, who shall make suitable modifications and resubmit.
10. Coordination Drawing Prints: Prepare coordination drawing prints according to requirements in Section 013300 "Submittal Procedures."

C. Coordination Drawing Process: Prepare coordination drawings in the following manner:

1. Schedule submittal and review of Fire Sprinkler, Plumbing, HVAC, and Electrical Shop Drawings to make required changes prior to preparation of coordination drawings.
2. Commence routing of coordination drawing files with HVAC Installer, who will provide drawing plan files denoting approved ductwork. HVAC Installer will locate ductwork and piping on a single layer, using orange color. Forward drawings to Plumbing Installer.

3. Plumbing Installer will locate plumbing and equipment on a single layer, using blue color.
4. Fire Sprinkler Installer will locate piping and equipment, using red color. Fire Sprinkler Installer shall forward drawing files to Electrical Installer.
5. Electrical Installer will indicate service and feeder conduit runs and equipment in green color. Electrical Installer shall forward drawing files to Communications and Electronic Safety and Security Installer.
6. Communications and Electronic Safety and Security Installer will indicate cable trays and cabling runs and equipment in purple color. Communications and Electronic Safety and Security Installer shall forward completed drawing files to Contractor.
7. Contractor shall perform the final coordination review. As each coordination drawing is completed, Contractor will meet with Engineer to review and resolve conflicts on the coordination drawings.

D. Coordination Digital Data Files: Prepare coordination digital data files according to the following requirements:

1. File Preparation Format:

    a. DWG, Version AutoCAD 2023, operating in Microsoft Windows operating system.

2. File Submittal Format: Submit or post coordination drawing files using format same as file preparation format and PDF format.
3. BIM File Incorporation: Develop and incorporate coordination drawing files into BIM established for Project.

    a. Perform three-dimensional component conflict analysis as part of preparation of coordination drawings. Resolve component conflicts prior to submittal. Indicate where conflict resolution requires modification of design requirements by Engineer.

4. Engineer will furnish Contractor one set of digital data files of Drawings for use in preparing coordination digital data files.

    a. Engineer makes no representations as to the accuracy or completeness of digital data files as they relate to Drawings.
    b. Digital Data Software Program: Drawings are available in AutoCAD 2023.
    c. Contractor shall execute a data licensing agreement in the form of Agreement form acceptable to Owner and Engineer.

1.7 REQUEST FOR INFORMATION (RFI)

A. General: Immediately on discovery of the need for additional information, clarification, or interpretation of the Contract Documents, Contractor shall prepare and submit an RFI in the form specified.

1. Engineer will return without response those RFIs submitted to Engineer by other entities controlled by Contractor.

2. Coordinate and submit RFIs in a prompt manner to avoid delays in Contractor's work or work of subcontractors.

B. Content of the RFI: Include a detailed, legible description of item needing information or interpretation and the following:

1. Project name.
2. Owner name.
3. Owner's Project number.
4. Name of Engineer and Construction Manager.
5. Engineer's Project number.
6. Date.
7. Name of Contractor.
8. RFI number, numbered sequentially.
9. RFI subject.
10. Specification Section number and title and related paragraphs, as appropriate.
11. Drawing number and detail references, as appropriate.
12. Field dimensions and conditions, as appropriate.
13. Contractor's suggested resolution. If Contractor's suggested resolution impacts the Contract Time or the Contract Sum, Contractor shall state impact in the RFI.
14. Contractor's signature.
15. Attachments: Include sketches, descriptions, measurements, photos, Product Data, Shop Drawings, coordination drawings, and other information necessary to fully describe items needing interpretation.

    a. Include dimensions, thicknesses, structural grid references, and details of affected materials, assemblies, and attachments on attached sketches.

C. RFI Forms: Software-generated form with substantially the same content as indicated above, acceptable to Engineer.

1. Attachments shall be electronic files in PDF format.

D. Engineer's and Construction Manager's Action: Engineer and Construction Manager will review each RFI, determine action required, and respond. Allow fourteen days for Engineer's response for each RFI. RFIs received by Engineer or Construction Manager after 1:00 p.m. will be considered as received the following working day.

1. The following Contractor-generated RFIs will be returned without action:

    a. Requests for approval of submittals.
    b. Requests for approval of substitutions.
    c. Requests for approval of Contractor's means and methods.
    d. Requests for coordination information already indicated in the Contract Documents.
    e. Requests for adjustments in the Contract Time or the Contract Sum.
    f. Requests for interpretation of Engineer's actions on submittals.
    g. Incomplete RFIs or inaccurately prepared RFIs.

2. Engineer's action may include a request for additional information, in which case Engineer's time for response will date from time of receipt by Engineer or Construction Manager of additional information.
3. Engineer's action on RFIs that may result in a change to the Contract Time or the Contract Sum may be eligible for Contractor to submit Change Proposal according to Section 012600 "Contract Modification Procedures."

    a. If Contractor believes the RFI response warrants change in the Contract Time or the Contract Sum, notify Engineer and Construction Manager in writing within 5 days of receipt of the RFI response.

E. RFI Log: Prepare, maintain, and submit a tabular log of RFIs organized by the RFI number. Submit log weekly. Include the following:

1. Project name.
2. Name and address of Contractor.
3. Name and address of Engineer and Construction Manager.
4. RFI number, including RFIs that were returned without action or withdrawn.
5. RFI description.
6. Date the RFI was submitted.
7. Date Engineer's and Construction Manager's response was received.
8. Identification of related Minor Change in the Work, Construction Change Directive, and Proposal Request, as appropriate.
9. Identification of related Field Order, Work Change Directive, and Proposal Request, as appropriate.

F. On receipt of Engineer's and Construction Manager's action, update the RFI log and immediately distribute the RFI response to affected parties. Review response and notify Engineer and Construction Manager within three days if Contractor disagrees with response.

1.8 DIGITAL PROJECT MANAGEMENT PROCEDURES

A. Use of Engineer's Digital Data Files: Digital data files of Engineer's BIM model and CAD drawings will be provided by Engineer for Contractor's use during construction.

1. Digital data files may be used by Contractor in preparing coordination drawings, Shop Drawings, and Project Record Drawings.
2. Engineer makes no representations as to the accuracy or completeness of digital data files as they relate to Contract Drawings.
3. Digital Drawing Software Program: Contract Drawings are available in Autodesk Revit 2023 and AutoCAD 2023, operating in Microsoft Windows operating system.
4. Contractor shall execute a data licensing agreement in the form of Agreement form acceptable to Owner and Engineer.

    a. Subcontractors and other parties granted access by Contractor to Engineer's digital data files shall execute a data licensing agreement in the form of Agreement acceptable to Owner and Engineer.

B. Web-Based Project Management Software Package: Provide, administer, and useweb-based Project management software package for purposes of hosting and managing Project

communication and documentation until Final Completion. General Contractor shall be responsible for the full cost for the project team including costs for Owner, Engineer, Contractor, subcontractors and suppliers.

1. Web-based Project management software includes, at a minimum, the following features:

    a. Compilation of Project data, including Contractor, subcontractors, Engineer, Engineer's consultants, Owner, and other entities involved in Project. Include names of individuals and contact information.
    b. Access control for each entity for each workflow process, to determine entity's digital rights to create, modify, view, and print documents.
    c. Document workflow planning, allowing customization of workflow between project entities.
    d. Creation, logging, tracking, and notification for Project communications required in other Specification Sections, including, but not limited to, RFIs, submittals, Minor Changes in the Work, Construction Change Directives, and Change Orders.
    e. Track status of each Project communication in real time, and log time and date when responses are provided.
    f. Procedures for handling PDFs or similar file formats, allowing markups by each entity. Provide security features to lock markups against changes once submitted.
    g. Processing and tracking of payment applications.
    h. Processing and tracking of contract modifications.
    i. Creating and distributing meeting minutes.
    j. Document management for Drawings, Specifications, and coordination drawings, including revision control.
    k. Management of construction progress photographs.
    l. Mobile device compatibility, including smartphones and tablets.

2. Provide up to seven Project management software user licenses for use of Owner, Construction Manager, Engineer, and Engineer's consultants. Provide eight hours of software training at Engineer's office for web-based Project software users.
3. At completion of Project, provide digital archive in format that is readable by common desktop software applications in format acceptable to Engineer. Provide data in locked format to prevent further changes.
4. Provide one of the following web-based Project software packages under their current published licensing agreements:

    a. Autodesk; Construction Cloud.
    b. Corecon Technologies, Inc.
    c. Meridian Systems; Prolog.
    d. Newforma, Inc.
    e. Procore Technologies, Inc.
    f. Viewpoint, Inc.; Viewpoint for Project Collaboration.

C. PDF Document Preparation: Where PDFs are required to be submitted to Engineer, prepare as follows:

1. Assemble complete submittal package into a single indexed file, incorporating submittal requirements of a single Specification Section and transmittal form with links enabling navigation to each item.
2. Name file with submittal number or other unique identifier, including revision identifier.

3. Certifications: Where digitally submitted certificates and certifications are required, provide a digital signature with digital certificate on where indicated.

1.9 PROJECT MEETINGS

A. General: Construction Manager will schedule and conduct meetings and conferences at Project site unless otherwise indicated.

1. Attendees: Inform participants and others involved, and individuals whose presence is required, of date and time of each meeting. Notify Owner and Engineer of scheduled meeting dates and times a minimum of five days prior to meeting.
2. Agenda: Prepare the meeting agenda. Distribute the agenda to all invited attendees.
3. Minutes: Entity responsible for conducting meeting will record significant discussions and agreements achieved. Distribute the meeting minutes to everyone concerned, including Owner, Construction Manager, and Engineer, within three days of the meeting.

B. Preconstruction Conference: Construction Manager will schedule and conduct a preconstruction conference before starting construction, at a time convenient to Owner and Engineer, but no later than 15 days after execution of the Agreement.

1. Attendees: Authorized representatives of Owner, Construction Manager, Engineer, and their consultants; Contractor and its superintendent; major subcontractors; suppliers; and other concerned parties shall attend the conference. Participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.
2. Agenda: Discuss items of significance that could affect progress, including the following:

a. Responsibilities and personnel assignments.
b. Tentative construction schedule.
c. Phasing.
d. Critical work sequencing and long lead items.
e. Designation of key personnel and their duties.
f. Lines of communications.
g. Use of web-based Project software.
h. Procedures for processing field decisions and Change Orders.
i. Procedures for RFIs.
j. Procedures for testing and inspecting.
k. Procedures for processing Applications for Payment.
l. Distribution of the Contract Documents.
m. Submittal procedures.
n. Sustainable design requirements.
o. Preparation of Record Documents.
p. Use of the premises and existing building.
q. Work restrictions.
r. Working hours.
s. Owner's occupancy requirements.
t. Responsibility for temporary facilities and controls.
u. Procedures for moisture and mold control.
v. Procedures for disruptions and shutdowns.
w. Construction waste management and recycling.
x. Parking availability.

y. Office, work, and storage areas.
z. Equipment deliveries and priorities.
aa. First aid.
bb. Security.
cc. Progress cleaning.
dd. List of major subcontractors and suppliers.

3. Minutes: Entity responsible for conducting meeting will record and distribute meeting minutes.

C. Preinstallation Conferences: Conduct a preinstallation conference at Project site before each construction activity when required by other Sections and when required for coordination with other construction.

1. Attendees: Installer and representatives of manufacturers and fabricators involved in or affected by the installation and its coordination or integration with other materials and installations that have preceded or will follow, shall attend the meeting. Advise Engineer, Construction Manager of scheduled meeting dates.
2. Agenda: Review progress of other construction activities and preparations for the particular activity under consideration, including requirements for the following:

a. Contract Documents.
b. Options.
c. Related RFIs.
d. Related Change Orders.
e. Purchases.
f. Deliveries.
g. Submittals.
h. Sustainable design requirements.
i. Review of mockups.
j. Possible conflicts.
k. Compatibility requirements.
l. Time schedules.
m. Weather limitations.
n. Manufacturer's written instructions.
o. Warranty requirements.
p. Compatibility of materials.
q. Acceptability of substrates.
r. Temporary facilities and controls.
s. Space and access limitations.
t. Regulations of authorities having jurisdiction.
u. Testing and inspecting requirements.
v. Installation procedures.
w. Coordination with other work.
x. Required performance results.
y. Protection of adjacent work.
z. Protection of construction and personnel.

3. Record significant conference discussions, agreements, and disagreements, including required corrective measures and actions.

4. Reporting: Distribute minutes of the meeting to each party present and to other parties requiring information.
5. Do not proceed with installation if the conference cannot be successfully concluded. Initiate whatever actions are necessary to resolve impediments to performance of the Work and reconvene the conference at earliest feasible date.

D. Project Closeout Conference: Construction Manager will schedule and conduct a project closeout conference, at a time convenient to Owner and Engineer, but no later than 21 days prior to the scheduled date of Substantial Completion.

1. Conduct the conference to review requirements and responsibilities related to Project closeout.
2. Attendees: Authorized representatives of Owner, Construction Manager, Engineer, and their consultants; Contractor and its superintendent; major subcontractors; suppliers; and other concerned parties shall attend the meeting. Participants at the meeting shall be familiar with Project and authorized to conclude matters relating to the Work.
3. Agenda: Discuss items of significance that could affect or delay Project closeout, including the following:

    a. Preparation of Record Documents.
    b. Procedures required prior to inspection for Substantial Completion and for final inspection for acceptance.
    c. Procedures for completing and archiving web-based Project software site data files.
    d. Submittal of written warranties.
    e. Requirements for completing sustainable design documentation.
    f. Requirements for preparing operations and maintenance data.
    g. Requirements for delivery of material samples, attic stock, and spare parts.
    h. Requirements for demonstration and training.
    i. Preparation of Contractor's punch list.
    j. Procedures for processing Applications for Payment at Substantial Completion and for final payment.
    k. Submittal procedures.
    l. Coordination of separate contracts.
    m. Owner's partial occupancy requirements.
    n. Installation of Owner's furniture, fixtures, and equipment.
    o. Responsibility for removing temporary facilities and controls.
    p. Final cleaning.

4. Minutes: Entity conducting meeting will record and distribute meeting minutes.

E. Progress Meetings: Construction Manager will conduct progress meetings at biweekly intervals.

1. Coordinate dates of meetings with preparation of payment requests.
2. Attendees: In addition to representatives of Owner, Construction Manager, and Engineer, each contractor, subcontractor, supplier, and other entity concerned with current progress or involved in planning, coordination, or performance of future activities shall be represented at these meetings. All participants at the meeting shall be familiar with Project and authorized to conclude matters relating to the Work.

3. Agenda: Review and correct or approve minutes of previous progress meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to status of Project.

    a. Contractor's Construction Schedule: Review progress since the last meeting. Determine whether each activity is on time, ahead of schedule, or behind schedule, in relation to Contractor's construction schedule. Determine how construction behind schedule will be expedited; secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the Contract Time.

        1) Review schedule for next period.

    b. Review present and future needs of each entity present, including the following:

        1) Interface requirements.
        2) Sequence of operations.
        3) Resolution of BIM component conflicts.
        4) Status of submittals.
        5) Status of sustainable design documentation.
        6) Deliveries.
        7) Off-site fabrication.
        8) Access.
        9) Site use.
        10) Temporary facilities and controls.
        11) Progress cleaning.
        12) Quality and work standards.
        13) Status of correction of deficient items.
        14) Field observations.
        15) Status of RFIs.
        16) Status of Proposal Requests.
        17) Pending changes.
        18) Status of Change Orders.
        19) Pending claims and disputes.
        20) Documentation of information for payment requests.

4. Minutes: Entity responsible for conducting the meeting will record and distribute the meeting minutes to each party present and to parties requiring information.

    a. Schedule Updating: Revise Contractor's construction schedule after each progress meeting, where revisions to the schedule have been made or recognized. Issue revised schedule concurrently with the report of each meeting.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION (NOT USED)

END OF SECTION 013100

SECTION 013200 - CONSTRUCTION PROGRESS DOCUMENTATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for documenting the progress of construction during performance of the Work, including the following:

1. Startup construction schedule.
2. Contractor's Construction Schedule.
3. Construction schedule updating reports.
4. Daily construction reports.
5. Material location reports.
6. Site condition reports.
7. Unusual event reports.

B. Related Requirements:

1. Section 014000 “Quality Requirements” for schedule of tests and inspections.
2. Section 012900 “Payment Procedures” for schedule of values and requirements for use of cost-loaded schedule for Applications for Payment.

1.3 DEFINITIONS

A. Activity: A discrete part of a project that can be identified for planning, scheduling, monitoring, and controlling the construction Project. Activities included in a construction schedule consume time and resources.

1. Critical Activity: An activity on the critical path that must start and finish on the planned early start and finish times.
2. Predecessor Activity: An activity that precedes another activity in the network.
3. Successor Activity: An activity that follows another activity in the network.

B. Cost Loading: The allocation of the schedule of values for completing an activity as scheduled. The sum of costs for all activities must equal the total Contract Sum.

C. CPM: Critical path method, which is a method of planning and scheduling a construction project where activities are arranged based on activity relationships. Network calculations determine the critical path of Project and when activities can be performed.

D. Critical Path: The longest connected chain of interdependent activities through the network schedule that establishes the minimum overall Project duration and contains no float.

E. Event: The starting or ending point of an activity.

F. Float: The measure of leeway in starting and completing an activity.

1. Float time is not for the exclusive use or benefit of either Owner or Contractor, but is a jointly owned, expiring Project resource available to both parties as needed to meet schedule milestones and Contract completion date.
2. Free float is the amount of time an activity can be delayed without adversely affecting the early start of the successor activity.
3. Total float is the measure of leeway in starting or completing an activity without adversely affecting the planned Project completion date.

G. Resource Loading: The allocation of manpower and equipment necessary for completing an activity as scheduled.

1.4 INFORMATIONAL SUBMITTALS

A. Format for Submittals: Submit required submittals in the following format:

1. Working electronic copy of schedule file.
2. PDF file.
3. Two paper copies, of sufficient size to display entire period or schedule, as required.

B. Startup construction schedule.

1. Submittal of cost-loaded, startup construction schedule will not constitute approval of schedule of values for cost-loaded activities.

C. Startup Network Diagram: Of size required to display entire network for entire construction period. Show logic ties for activities.

D. Contractor's Construction Schedule: Initial schedule, of size required to display entire schedule for entire construction period.

1. Submit a working digital copy of schedule, using software indicated, and labeled to comply with requirements for submittals.

E. CPM Reports: Concurrent with CPM schedule, submit each of the following reports. Format for each activity in reports shall contain activity number, activity description, cost and resource loading, original duration, remaining duration, early start date, early finish date, latest allowable start date, latest allowable finish date, status (where critical) and total float and free float in calendar days.

1. Activity Report: List of activities sorted by activity number and then early start date, or actual start date if known.

2. Logic Report: List of preceding and succeeding activities for each activity, sorted in ascending order by activity number and then by early start date, or actual start date if known.
3. Total Float Report: List of activities sorted in ascending order of total float.
4. Earnings Report: Compilation of Contractor's total earnings from the Notice to Proceed until most recent Application for Payment.

F. Construction Schedule Updating Reports: Submit with Applications for Payment.

G. Daily Construction Reports: Submit at weekly intervals.

H. Material Location Reports: Submit at weekly intervals.

I. Site Condition Reports: Submit at time of discovery of differing conditions.

J. Unusual Event Reports: Submit at time of unusual event.

K. Qualification Data: For scheduling consultant.

1.5 QUALITY ASSURANCE

A. Scheduling Consultant Qualifications: An experienced specialist in CPM scheduling and reporting, with capability of producing CPM reports and diagrams within 24 hours of Engineer's request.

B. Prescheduling Conference: Conduct conference at Project site to comply with requirements in Section 013100 "Project Management and Coordination." Review methods and procedures related to the preliminary construction schedule and Contractor's Construction Schedule, including, but not limited to, the following:

1. Review software limitations and content and format for reports.
2. Verify availability of qualified personnel needed to develop and update schedule.
3. Discuss constraints, including phasing work stages area separations interim milestones and partial Owner occupancy.
4. Review delivery dates for Owner-furnished products.
5. Review schedule for work of Owner's separate contracts.
6. Review submittal requirements and procedures.
7. Review time required for review of submittals and resubmittals.
8. Review requirements for tests and inspections by independent testing and inspecting agencies.
9. Review time required for Project closeout and Owner startup procedures, including commissioning activities.
10. Review and finalize list of construction activities to be included in schedule.
11. Review procedures for updating schedule.
12. Submit at this conference a preliminary network defining the planned operation during the first 60 calendar days after the Notice to Proceed.

© 2026 CDM Smith
All Rights Reserved

1.6 COORDINATION

A. Coordinate Contractor's Construction Schedule with the schedule of values, list of subcontracts, submittal schedule, progress reports, payment requests, and other required schedules and reports.

1. Secure time commitments for performing critical elements of the Work from entities involved.
2. Coordinate each construction activity in the network with other activities, and schedule them in proper sequence.

1.7 CONTRACTOR'S CONSTRUCTION SCHEDULE

A. Program Description

1. A Critical Path Method (CPM) construction schedule shall be used to control the Work and to provide a basis for determining job progress. The construction schedule shall be prepared and maintained by the Contractor. All work shall be done in accordance with the established CPM schedule. The Contractor and all subcontractors shall cooperate fully in developing the construction schedule and in executing the work in accordance with the CPM schedule.
2. The construction schedule shall consist of a computerized CPM network (diagram of activities) presented in a time-scaled graphic (print-out) with reports, as specified herein.

B. Computer Scheduling Software: Prepare schedules using current version of a program that has been developed specifically to manage construction schedules.

1. Use Primavera P6 software for current Windows operating system.

C. Qualifications:

1. The Contractor shall have the capability of preparing and utilizing the specified CPM schedule, or engage the services of a specialized scheduling professional to do so. Within seven days of the award of contract, provide a résumé or qualifications statement for the individual within the Contractor's organization, or the outside consultant, who is being proposed as the responsible party for development and maintenance of the CPM schedule. The résumé or qualifications statement shall demonstrate that the proposed responsible party has successfully developed and maintained CPM schedules for at least three construction projects of the same size or greater than this project. The proposed responsible party for the CPM schedule is subject to approval by the Construction Manager and Owner. If the proposed responsible party for the CPM schedule is not approved by the Construction Manager and/or Owner, Contractor shall resubmit a more-appropriate candidate for approval.

D. Time Frame: Extend schedule from date established for the Notice to Proceed to date of Final Completion.

1. Contract completion date shall not be changed by submission of a schedule that shows an early completion date, unless specifically authorized by Change Order.

E. Activities: Treat each floor or separate area as a separate numbered activity for each main element of the Work. Comply with the following:

1. Activity Duration: Define activities so no activity is longer than 20 days, unless specifically allowed by Engineer.
2. Activities to facilitate the Work: Indicate start and completion dates for the following as applicable:

    a. Securing of approvals and permits required for performance of the Work.
    b. Temporary facilities.
    c. Construction of mock-ups, prototypes and samples.
    d. Owner interfaces and furnishing of items.
    e. Interfaces with Separate Contracts.
    f. Regulatory agency approvals.
    g. Punch list.

3. Procurement Activities: Include procurement process activities for long lead-time items and major items, requiring a cycle of more than 60 days, as separate activities in schedule. Procurement cycle activities include, but are not limited to, submittals, approvals, purchasing, fabrication, and delivery.
4. Submittal Review Time: Include review and resubmittal times indicated in Section 013300 "Submittal Procedures" in schedule. Coordinate submittal review times in Contractor's Construction Schedule with submittal schedule.
5. Startup and Testing Time: Include no fewer than 15 days for startup and testing.
6. Commissioning Time: Include no fewer than 15 days for commissioning.
7. Substantial Completion: Indicate completion in advance of date established for Substantial Completion, and allow time for Engineer's and Construction Manager's administrative procedures necessary for certification of Substantial Completion.
8. Punch List and Final Completion: Include not more than 30 days for completion of punch list items and Final Completion.

F. Constraints: Include constraints and work restrictions indicated in the Contract Documents and as follows in schedule, and show how the sequence of the Work is affected.

1. Phasing: Arrange list of activities on schedule by phase.
2. Work under More Than One Contract: Include a separate activity for each contract.
3. Work by Owner: Include a separate activity for each portion of the Work performed by Owner.
4. Products Ordered in Advance: Include a separate activity for each product. Include delivery date indicated in Section 011000 "Summary." Delivery dates indicated stipulate the earliest possible delivery date.
5. Owner-Furnished Products: Include a separate activity for each product. Include delivery date indicated in Section 011000 "Summary." Delivery dates indicated stipulate the earliest possible delivery date.
6. Work Restrictions: Show the effect of the following items on the schedule:

    a. Coordination with existing construction.
    b. Limitations of continued occupancies.
    c. Uninterruptible services.
    d. Partial occupancy before Substantial Completion.
    e. Use-of-premises restrictions.

f. Provisions for future construction.
g. Seasonal variations.
h. Environmental control.

7. Work Stages: Indicate important stages of construction for each major portion of the Work, including, but not limited to, the following:

a. Subcontract awards.
b. Submittals.
c. Purchases.
d. Mockups.
e. Fabrication.
f. Sample testing.
g. Deliveries.
h. Installation.
i. Tests and inspections.
j. Adjusting.
k. Curing.
l. Building flush-out.
m. Startup and placement into final use and operation.
n. Commissioning.

8. Construction Areas: Identify each major area of construction for each major portion of the Work. Indicate where each construction activity within a major area must be sequenced or integrated with other construction activities to provide for the following:

a. Structural completion.
b. Temporary enclosure and space conditioning.
c. Permanent space enclosure.
d. Completion of mechanical installation.
e. Completion of electrical installation.
f. Substantial Completion.

G. Milestones: Include milestones indicated in the Contract Documents in schedule, including, but not limited to, the Notice to Proceed, Substantial Completion, and Final Completion.

H. Cost Correlation: Superimpose a cost correlation timeline, indicating planned and actual costs. On the line, show planned and actual dollar volume of the Work performed as of planned and actual dates used for preparation of payment requests.

1. See Section 012900 "Payment Procedures" for cost reporting and payment procedures.

I. Upcoming Work Summary: Prepare summary report indicating activities scheduled to occur or commence prior to submittal of next schedule update. Summarize the following issues:

1. Unresolved issues.
2. Unanswered Requests for Information.
3. Rejected or unreturned submittals.
4. Notations on returned submittals.
5. Pending modifications affecting the Work and the Contract Time.

J. Acceptability

1. Submit the CPM schedule submittals, as specified, and resubmit as needed, until they are in compliance with Contract requirements.
2. The Construction Manager's review of the Contractor's construction schedule submittals will only be for conformance with the Contract requirements – including but not limited to contract time and work sequences specified in the contract documents. The Construction Manager's review of the schedule shall not include the Contractor's means and methods of construction or safety. The Construction Manager's concurrence, acceptance, or approval of the Contractor's schedule submittals will not relieve the Contractor from responsibility for complying with the Contract Scope, Contract Time or any other contract requirement. Any indication of concurrence, acceptance, or approval of the Contractor's schedule will only indicate a general conformance with the Contract Requirements.
3. Construction Manager's review of the Contractor's construction schedule submittals shall not relieve the Contractor from responsibility for any deviations from the Contract Documents unless the Contractor has in writing called Construction Manager's attention to such deviations at the time of submission and Construction Manager has given written concurrence to the specific deviations, nor shall any concurrence by the Construction Manager relieve Contractor from responsibility for errors and omissions in the submittals. Concurrence of the CPM Activity Network by the Construction Manager is advisory only and shall not relieve the Contractor of responsibility for accomplishing the Work within the Contract completion date(s).
4. Concurrence, acceptance, or approval of the Contractor's CPM schedule by the Construction Manager in no way makes the Construction Manager an insurer of the CPM schedule's success, nor liable for time or cost overruns resulting therefrom.
5. Failure to include any element of work required for the performance of this Contract will not excuse the Contractor from completing all Work required within the Contract completion date(s), notwithstanding the review of the network by the Construction Manager.
6. CPM schedules that contain activities with negative float, or which extend beyond the contract completion date, will not be acceptable.
7. Except where earlier completions are specified, CPM schedules which show completion of all work prior to the contract completion date may be indicated; however, in no event shall they constitute a basis for claim for delay by the Contractor.

K. Contractor's Construction Schedule Updating: At monthly intervals, update schedule to reflect actual construction progress and activities. Issue schedule one week before each regularly scheduled progress meeting.

1. Revise schedule immediately after each meeting or other activity where revisions have been recognized or made. Issue updated schedule concurrently with the report of each such meeting.
2. Include a report with updated schedule that indicates every change, including, but not limited to, changes in logic, durations, actual starts and finishes, and activity durations.
3. As the Work progresses, indicate Final Completion percentage for each activity. Activities shall not be considered to be complete until they are in fact 100 percent complete.
4. Submit a narrative report based on the CPM schedule evaluation, in a format agreed upon by the Contractor and the Construction Manager. The report shall include a description of the progress during the previous period in terms of completed activities, an explanation of

each activity which is showing a delay, a description of problem areas, current and anticipated delaying factors and their estimated impact on performance of other activities and completion dates and an explanation of corrective action taken or proposed.

L. Recovery Schedule: When periodic update indicates the Work is 14 or more calendar days behind the current approved schedule, submit a separate recovery schedule indicating means by which Contractor intends to regain compliance with the schedule. Indicate changes to working hours, working days, crew sizes, equipment required to achieve compliance, and date by which recovery will be accomplished.

M. The contract completion time will be adjusted only for causes specified in this Contract. In the event the Contractor requests an extension of any contract completion date, the Contractor shall furnish such justification and supporting evidence as the Construction Manager may deem necessary to determine whether the Contractor is entitled to an extension of time under the provisions of this Contract. The Construction Manager will, after receipt of such justification and supporting evidence, make findings of fact and will advise the Contractor in writing thereof. If the Construction Manager finds that the Contractor is entitled to any extension of any contract completion date, the Construction Manager's determination as to the total number of days extension shall be based upon the currently approved CPM schedule and on all data relevant to the extension. Such data shall be included in the next updating of the schedule. Actual delays in activities which, according to the CPM schedule, do not affect any contract completion date shown by the critical path in the network will not be the basis for a change therein.

N. Distribution: Distribute copies of approved schedule to, Construction Manager, Owner, separate contractors, testing and inspecting agencies, and other parties identified by Contractor with a need-to-know schedule responsibility.

1. Post copies in Project meeting rooms and temporary field offices.
2. When revisions are made, distribute updated schedules to the same parties and post in the same locations. Delete parties from distribution when they have completed their assigned portion of the Work and are no longer involved in performance of construction activities.

1.8 STARTUP CONSTRUCTION SCHEDULE

A. Gantt-Chart Schedule: Submit startup, horizontal, Gantt-chart-type construction schedule within seven days of date established for the Notice to Proceed.

B. Preparation: Indicate each significant construction activity separately. Identify first workday of each week with a continuous vertical line. Outline significant construction activities for first 90 days of construction. Include skeleton diagram for the remainder of the Work and a cash requirement prediction based on indicated activities.

1.9 GANTT-CHART SCHEDULE REQUIREMENTS

A. Gantt-Chart Schedule: Submit a comprehensive, fully developed, horizontal, Gantt-chart-type, Contractor's Construction Schedule within 30 days of date established for the Notice to Proceed.

1. Base schedule on the startup construction schedule and additional information received since the start of Project.

B. Preparation: Indicate each significant construction activity separately. Identify first workday of each week with a continuous vertical line.

1. For construction activities that require three months or longer to complete, indicate an estimated completion percentage in 10 percent increments within time bar.

1.10 CPM SCHEDULE REQUIREMENTS

A. Prepare network diagrams using AON (activity-on-node) format.

B. Startup Network Diagram: Submit diagram within 14 days of date established for the Notice to Proceed. Outline significant construction activities for the first 90 days of construction. Include skeleton diagram for the remainder of the Work and a cash requirement prediction based on indicated activities.

C. CPM Schedule: Prepare Contractor's Construction Schedule using a cost- and resource-loaded, time-scaled CPM network analysis diagram for the Work.

1. Develop network diagram in sufficient time to submit CPM schedule, so it can be accepted for use no later than 60 days after date established for the Notice to Proceed.

a. Failure to include any work item required for performance of this Contract shall not excuse Contractor from completing all work within applicable completion dates.

2. Conduct educational workshops to train and inform key Project personnel, including subcontractors' personnel, in proper methods of providing data and using CPM schedule information.
3. Establish procedures for monitoring and updating CPM schedule and for reporting progress. Coordinate procedures with progress meeting and payment request dates.
4. Use "one workday" as the unit of time for individual activities. Indicate nonworking days and holidays incorporated into the schedule to coordinate with the Contract Time.

D. CPM Schedule Preparation: Prepare a list of all activities required to complete the Work. Using the startup network diagram, prepare a skeleton network to identify probable critical paths.

1. Activities: Indicate the estimated time duration, sequence requirements, and relationship of each activity in relation to other activities. Include estimated time frames for the following activities:

a. Preparation and processing of submittals.
b. Mobilization and demobilization.
c. Purchase of materials.
d. Delivery.
e. Fabrication.
f. Utility interruptions.
g. Installation.
h. Work by Owner that may affect or be affected by Contractor's activities.
i. Testing and inspection.
j. Commissioning.

k. Punch list and Final Completion.
l. Activities occurring following Final Completion.
m. Maintenance of existing facilities.
n. Contract milestones.

2. Critical Path Activities: Identify critical path activities, including those for interim completion dates. Scheduled start and completion dates shall be consistent with Contract milestone dates.
3. Processing: Process data to produce output data on a computer-drawn, time-scaled network. Revise data, reorganize activity sequences, and reproduce as often as necessary to produce the CPM schedule within the limitations of the Contract Time.
4. Format: Mark the critical path. Locate the critical path near center of network; locate paths with most float near the edges.

   a. Subnetworks on separate sheets are permissible for activities clearly off the critical path.

5. Cost- and Resource-Loading of CPM Schedule: Assign cost to construction activities on the CPM schedule. Do not assign costs to submittal activities. Obtain Engineer's approval prior to assigning costs to fabrication and delivery activities. Assign costs under main subcontracts for testing and commissioning activities, operation and maintenance manuals, punch list activities, Project record documents, and demonstration and training (if applicable), in the amount of 5 percent of the Contract Sum.

   a. Each activity cost shall reflect an appropriate value subject to approval by Engineer.
   b. Total cost assigned to activities shall equal the total Contract Sum and align with the Schedule of Values.

E. Contract Modifications: For each proposed contract modification and concurrent with its submission, prepare a time-impact analysis using a network fragment to demonstrate the effect of the proposed change on the overall Project schedule.

F. Initial Issue of Schedule: Prepare initial network diagram from a sorted activity list indicating straight "early start-total float." Identify critical activities. Prepare tabulated reports showing the following:

1. Contractor or subcontractor and the Work or activity.
2. Description of activity.
3. Main events of activity.
4. Immediate preceding and succeeding activities.
5. Early and late start dates.
6. Early and late finish dates.
7. Activity duration in workdays.
8. Total float or slack time.
9. Average size of workforce.
10. Dollar value of activity (coordinated with the schedule of values).

G. Schedule Updating: Concurrent with making revisions to schedule, prepare tabulated reports showing the following:

1. Identification of activities that have changed.
2. Changes in early and late start dates.
3. Changes in early and late finish dates.
4. Changes in activity durations in workdays.
5. Changes in the critical path.
6. Changes in total float or slack time.
7. Changes in the Contract Time.

H. Value Summaries: Prepare two cumulative value lists, sorted by finish dates.

1. In first list, tabulate activity number, early finish date, dollar value, and cumulative dollar value.
2. In second list, tabulate activity number, late finish date, dollar value, and cumulative dollar value.
3. In subsequent issues of both lists, substitute actual finish dates for activities completed as of list date.
4. Prepare list for ease of comparison with payment requests; coordinate timing with progress meetings.

    a. In both value summary lists, tabulate "actual percent complete" and "cumulative value completed" with total at bottom.
    b. Submit value summary printouts one week before each regularly scheduled progress meeting.

1.11 REPORTS

A. Daily Construction Reports: Prepare a daily construction report recording the following information concerning events at Project site:

1. List of subcontractors at Project site.
2. List of separate contractors at Project site.
3. Approximate count of personnel at Project site.
4. Equipment at Project site.
5. Material deliveries.
6. High and low temperatures and general weather conditions, including presence of rain or snow.
7. Testing and inspection.
8. Accidents.
9. Meetings and significant decisions.
10. Unusual events.
11. Stoppages, delays, shortages, and losses.
12. Meter readings and similar recordings.
13. Emergency procedures.
14. Orders and requests of authorities having jurisdiction.
15. Change Orders received and implemented.
16. Work Change Directives received and implemented.
17. Services connected and disconnected.
18. Equipment or system tests and startups.
19. Partial completions and occupancies.
20. Substantial Completions authorized.

B. Material Location Reports: At monthly intervals, prepare and submit a comprehensive list of materials delivered to and stored at Project site. List shall be cumulative, showing materials previously reported plus items recently delivered. Include with list a statement of progress on and delivery dates for materials or items of equipment fabricated or stored away from Project site. Indicate the following categories for stored materials:

1. Material stored prior to previous report and remaining in storage.
2. Material stored prior to previous report and since removed from storage and installed.
3. Material stored following previous report and remaining in storage.

C. Site Condition Reports: Immediately on discovery of a difference between site conditions and the Contract Documents, prepare and submit a detailed report. Submit with a Request for Information. Include a detailed description of the differing conditions, together with recommendations for changing the Contract Documents.

D. Unusual Event Reports: When an event of an unusual and significant nature occurs at Project site, whether or not related directly to the Work, prepare and submit a special report. List chain of events, persons participating, responses by Contractor's personnel, evaluation of results or effects, and similar pertinent information. Advise Owner in advance when these events are known or predictable.

1. Submit unusual event reports directly to Owner within one day(s) of an occurrence. Distribute copies of report to parties affected by the occurrence.

SECTION 013233 - PHOTOGRAPHIC DOCUMENTATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for the following:

1. Aerial and preconstruction photographs.
2. Concealed Work photographs.
3. Periodic construction photographs.
4. Final Completion construction photographs.
5. Preconstruction video recordings.
6. Periodic construction video recordings.
7. Construction webcam.

B. Related Requirements:

1. Section 017700 "Closeout Procedures" for submitting photographic documentation as Project Record Documents at Project closeout.
2. Section 017900 "Demonstration and Training" for submitting video recordings of demonstration of equipment and training of Owner's personnel.
3. Section 024116 "Structure Demolition" for photographic documentation before building demolition operations commence.
4. Section 024119 "Selective Demolition" for photographic documentation before selective demolition operations commence.
5. Section 311000 "Site Clearing" for photographic documentation before site clearing operations commence.

1.3 INFORMATIONAL SUBMITTALS

A. Key Plan: Submit key plan of Project site and building with notation of vantage points marked for location and direction of each photograph and video recording. Indicate elevation or story of construction. Include same information as corresponding photographic documentation.

B. Digital Photographs: Submit image files within three days of taking photographs.

1. Submit photos on CD-ROM or thumb-drive or by uploading to web-based Project management software site. Include copy of key plan indicating each photograph's location and direction.
2. Identification: Provide the following information with each image description in web-based Project management software site:

a. Name of Project.
b. Name and contact information for photographer.
c. Name of Engineer and Construction Manager.
d. Name of Contractor.
e. Date photograph was taken.
f. Description of location, vantage point, and direction.
g. Unique sequential identifier keyed to accompanying key plan.

C. Printed Photographs (Aerial and Land-based): Submit two sets of prints of each photographic view within seven days of taking photographs.

1. Format: 8-by-10-inchsmooth-surface matte prints on single-weight, paper; enclosed back to back in clear plastic sleeves punched for three-ring binder. Include copy of key plan indicating each photograph's location and direction. Provide one binder for each set of prints.
2. Identification: On back of each print, label with the following information:

a. Name of Project.
b. Name and contact information for photographer.
c. Name of Engineer and Construction Manager.
d. Name of Contractor.
e. Date photograph was taken if not date stamped by camera.
f. Description of vantage point, indicating location, direction (by compass point), and elevation or story of construction.
g. Unique sequential identifier keyed to accompanying key plan.

D. Video Recordings: Submit video recordings within seven days of recording.

1. Submit video recordings by uploading to web-based Project management software site. Include copy of key plan indicating each video's location and direction.
2. Identification: With each submittal, provide the following information in file metadata tag:

a. Name of Project.
b. Name and address of photographer.
c. Name of Engineer and Construction Manager.
d. Name of Contractor.
e. Date video recording was recorded.
f. Description of vantage point, indicating location, direction (by compass point), and elevation or story of construction.

3. Transcript: Prepared on 8-1/2-by-11-inch paper, punched and bound in heavy duty, three-ring vinyl covered binders. Provide label on front and spine. Include a cover sheet with label information. Include name of Project and date of video recording on each page.

E. Time-Lapse Video: Submit time-lapse sequence video recordings within 7 days of recording.

1. Submit time-lapse sequence video recordings monthly by uploading to web-based Project management software site.
2. Identification: For each recording, provide the following information in file metadata tag:

a. Name of Project.
b. Name and contact information for photographer.
c. Name of Engineer and Construction Manager.
d. Name of Contractor.
e. Date(s) and time(s) video recording was recorded.
f. Description of vantage point, indicating location, direction (by compass point), and elevation or story of construction.

1.4 QUALITY ASSURANCE

A. Photographer Qualifications: An individual who has been regularly engaged as a professional photographer of construction projects for not less than three years.

B. Construction Webcam Service Provider: A firm specializing in providing photographic equipment, web-based software, and related services for construction projects, with a record of providing satisfactory services similar to those required for Project.

1.5 FORMATS AND MEDIA

A. Digital Photographs: Provide color images in JPG format, produced by a digital camera with minimum sensor size of 12 megapixels, and at an image resolution of not less than 3200 by 2400 pixels, and with vibration-reduction technology. Use flash in low light levels or backlit conditions.

B. Digital Video Recordings: Provide high-resolution, digital video in MPEG format, produced by a digital camera with minimum sensor resolution of 12 megapixels and capable of recording in full high-definition mode with vibration-reduction technology. Provide supplemental lighting in low light levels or backlit conditions.

C. Digital Images: Submit digital media as originally recorded in the digital camera, without alteration, manipulation, editing, or modifications using image-editing software.

D. Metadata: Record accurate date and time and GPS location data from camera.

E. File Names: Name media files with date Project area and sequential numbering suffix.

F. Usage Rights

1. Obtain and transfer copyright usage rights from photographer and videographer to Owner for unlimited reproduction of photographic and videographic documentation.

1.6 CONSTRUCTION PHOTOGRAPHS

A. Photographer: Engage a qualified photographer to take construction photographs.

B. General: Take photographs with maximum depth of field and in focus.

1. Maintain key plan with each set of construction photographs that identifies each photographic location.

C. Preconstruction Photographs: Before commencement of the Work take photographs of Project site and surrounding properties, including existing items to remain during construction, from different vantage points, as directed by Construction Manager.

1. Flag construction limits before taking construction photographs.
2. Take 20 photographs to show existing conditions adjacent to property before starting the Work.
3. Take 20 photographs of existing buildings either on or adjoining property to accurately record physical conditions at start of construction.
4. Take additional photographs as required to record settlement or cracking of adjacent structures, pavements, and improvements.

D. Concealed Work Photographs: Before proceeding with installing work that will conceal other work, take photographs sufficient in number, with annotated descriptions, to record nature and location of concealed Work, including, but not limited to, the following:

1. Underground utilities.
2. Underslab services.
3. Piping.
4. Electrical conduit.
5. Waterproofing and weather-resistant barriers.

E. Periodic Construction Photographs: Take 20 photographs weekly coinciding with the cutoff date associated with each Application for Payment. Select vantage points to show status of construction and progress since last photographs were taken.

F. Time-Lapse Sequence Construction Photographs: Take 20 photographs as indicated, to show status of construction and progress since last photographs were taken.

1. Frequency: Take photographs monthly, on the same date each month.
2. Vantage Points: Following suggestions by Construction Manager and Contractor, photographer shall select vantage points. During each of the following construction phases, take not less than two of the required shots from same vantage point each time, to create a time-lapse sequence as follows:

    a. Commencement of the Work, through completion of subgrade construction.
    b. Above-grade structural framing.
    c. Exterior building enclosure.
    d. Interior Work, through date of Substantial Completion.

G. Final Completion Construction Photographs: Take at least 100 photographs after date of Substantial Completion for submission as Project Record Documents. Construction Manager will inform photographer of desired vantage points.

H. Additional Photographs: Engineer or Construction Manager may request photographs in addition to periodic photographs specified. Additional photographs will be paid for by Change Order and are not included in the Contract Sum.

1. Three days' notice will be given, where feasible.
2. In emergency situations, take additional photographs within 24 hours of request.

3. Circumstances that could require additional photographs include, but are not limited to, the following:

    a. Special events planned at Project site.
    b. Immediate follow-up when on-site events result in construction damage or losses.
    c. Photographs shall be taken at fabrication locations away from Project site. These photographs are not subject to unit prices or unit-cost allowances.
    d. Substantial Completion of a major phase or component of the Work.
    e. Extra record photographs at time of final acceptance.
    f. Owner's request for special publicity photographs.

1.7 CONSTRUCTION VIDEO RECORDINGS

A. Video Recording Photographer: Engage a qualified videographer with not less than three years' experience to record construction video recordings.

B. Narration: Describe scenes on video recording by audio narration by microphone while or dubbing audio narration off-site after video recording is recorded. Include description of items being viewed, recent events, and planned activities. At each change in location, describe vantage point, location, direction (by compass point), and elevation or story of construction.

1. Confirm date and time at beginning and end of recording.
2. Begin each video recording with name of Project, Contractor's name, videographer's name, and Project location.

C. Transcript: Provide a typewritten transcript of the narration. Display images and running time captured from video recording opposite the corresponding narration segment.

D. Preconstruction Video Recording: Before starting construction, record video recording of Project site and surrounding properties from different vantage points, as directed by Construction Manager.

1. Flag construction limits before recording construction video recordings.
2. Show existing conditions adjacent to Project site before starting the Work.
3. Show existing buildings either on or adjoining Project site to accurately record physical conditions at the start of construction.
4. Show protection efforts by Contractor.

E. Periodic Construction Video Recordings: Record video recording monthly coinciding with the cutoff date associated with each Application for Payment. Select vantage points to show status of construction and progress since last video recordings were recorded. Minimum recording time shall be 30 minutes(s).

1.8 CONSTRUCTION WEBCAM

A. Webcam: Provide two fixed-location camera(s) with weatherproof housing, mounted to provide unobstructed view of construction site from location approved by Engineer, with the following characteristics:

1. Static view.
2. Capable of producing minimum 12 megapixel images.
3. Provide mounting, power supply, active high-speed data connection to service provider's network, and static public IP address for each camera.

B. Live Streaming Images: Provide web-accessible image of current site image, updated at five-minute intervals when construction is underway.

C. Web-Based Interface: Provide online interface to allow viewing of each high-definition digital still image captured and stored during construction, from the Internet.

1. Access Control: Provide password-protected access for Project team administered by Contractor, providing current image access and archival image access by date and time, with images downloadable to viewer's device.
2. Software: Provide responsive software interface for use on computer, tablet, and mobile screen with accompanying iPhone/iPad app and Android apps.
3. Storage: Maintain images on the website for reference during entire construction period, and for not less than 30 days after Final Completion. Provide sufficient memory on remote server to store all Project images.
4. Online Interface: Provide website interface with Project and client information and logos, calendar-based navigation interface for selecting images, and pan and zoom capability within high-definition images.
5. Forward and Reverse: Provide capability to browse through images, moving forward and backward in time by individual image and by day.
6. Slideshow: Provide capability to automatically display current images from sites when there are three or more cameras used.
7. Time-Lapse: Provide capability for online display of project time-lapse.
8. Dashboard: Provide capability to view thumbnails of all cameras on one screen.
9. Weather: Provide corresponding weather data for each image captured.
10. Provide public viewer open access to most recent Project camera image.

D. Maintain cameras and web-based access in good working order, according to web-based construction photographic documentation service provider's written instructions until Final Completion. Provide for service of cameras and related networking devices and software.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION (NOT USED)

END OF SECTION 013233

All Rights Reserved

SECTION 013300 - SUBMITTAL PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Submittal schedule requirements.
2. Administrative and procedural requirements for submittals.

B. Related Requirements:

1. Section 012900 "Payment Procedures" for submitting Applications for Payment and the schedule of values.
2. Section 013100 "Project Management and Coordination" for submitting coordination drawings and subcontract list and for requirements for web-based Project software.
3. Section 013200 "Construction Progress Documentation" for submitting schedules and reports, including Contractor's construction schedule.
4. Section 013233 "Photographic Documentation" for submitting preconstruction photographs, periodic construction photographs, and Final Completion construction photographs.
5. Section 014000 "Quality Requirements" for submitting test and inspection reports, and schedule of tests and inspections.
6. Section 017700 "Closeout Procedures" for submitting closeout submittals and maintenance material submittals.
7. Section 017823 "Operation and Maintenance Data" for submitting operation and maintenance manuals.
8. Section 017839 "Project Record Documents" for submitting record Drawings, record Specifications, and record Product Data.
9. Section 017900 "Demonstration and Training" for submitting video recordings of demonstration of equipment and training of Owner's personnel.

1.3 DEFINITIONS

A. Action Submittals: Written and graphic information and physical samples that require Engineer's and Construction Manager's responsive action. Action submittals are those submittals indicated in individual Specification Sections as "action submittals."

B. Informational Submittals: Written and graphic information and physical samples that do not require Engineer's and Construction Manager's responsive action. Submittals may be rejected

for not complying with requirements. Informational submittals are those submittals indicated in individual Specification Sections as "informational submittals."

C. Mass Submittals: Six or more submittals or items in one day or 15 or more submittals or items in one week.

1.4 SUBMITTAL SCHEDULE

A. Submittal Schedule: Submit, as an action submittal, a list of submittals, arranged in chronological order by dates required by construction schedule. Include time required for review, ordering, manufacturing, fabrication, and delivery when establishing dates. Include additional time required for making corrections or revisions to submittals noted by Engineer and Construction Manager and additional time for handling and reviewing submittals required by those corrections.

1. Coordinate submittal schedule with list of subcontracts, the schedule of values, and Contractor's construction schedule.
2. Initial Submittal Schedule: Submit concurrently with startup construction schedule. Include submittals required during the first 60 days of construction. List those submittals required to maintain orderly progress of the Work and those required early because of long lead time for manufacture or fabrication.
3. Final Submittal Schedule: Submit concurrently with the first complete submittal of Contractor's construction schedule.

    a. Submit revised submittal schedule as required to reflect changes in current status and timing for submittals.

4. Format: Arrange the following information in a tabular format:

    a. Scheduled date for first submittal.
    b. Specification Section number and title.
    c. Submittal Category: Action; informational.
    d. Name of subcontractor.
    e. Description of the Work covered.
    f. Scheduled date for Engineer's and Construction Manager's final release or approval.
    g. Scheduled dates for purchasing.
    h. Scheduled date of fabrication.
    i. Scheduled dates for installation.
    j. Activity or event number.

5. Action and information submittals required of the Contractor as part of this contract include but are not limited to the items identified in the attached submittal list. Note that this list is not comprehensive and may not reflect all anticipated Contractor submittals. This list also does not reflect where subdivision or supplement of submittals may be necessary.

1.5 SUBMITTAL FORMATS

A. Numbering System: Utilize the following example submittal identification numbering system to identify submittals and as file names for PDF submissions:

1. First Identifier - Alphabet Character: D, S, M or I which represents Shop Drawing (including working drawings and product data), Sample, Manual (Operating & Maintenance) or Informational, respectively.
2. Second Identifier - Next 6 or 8 Digits: Applicable Specification Section Number. Do not mix submittals from different specification sections into a single submittal.
3. Third Identifier - Next Three Digits: Sequential number of each separate item or drawing submitted under each Specification Section, in chronological order submitted, starting at 001.
4. Fourth Identifier - Last Alphabet Character: A to Z, indicating the submission (or resubmission) of the same submittal, i.e., "A" = 1st submission, "B" = 2nd submission, "C" = 3rd submission, etc.
5. EXAMPLE: D-033000.13-008-B.

    a. D = Shop Drawing.
    b. 03 30 00.13 = Section; use only 6 digits for sections that do not include 8 digits.
    c. 008 = the eighth different submittal under this Section.
    d. B = the second submission (first resubmission) of that particular shop drawing.

B. Submittal Information: Include the following information in each submittal:

1. Project name.
2. Date.
3. Name of Engineer.
4. Name of Construction Manager.
5. Name of Contractor.
6. Name of firm or entity that prepared submittal.
7. Names of subcontractor, manufacturer, and supplier.
8. Unique submittal number, including revision identifier. Include Specification Section number with sequential alphanumeric identifier and alphanumeric suffix for resubmittals.
9. Category and type of submittal.
10. Submittal purpose and description.
11. Number and title of Specification Section, with paragraph number and generic name for each of multiple items.
12. Drawing number and detail references, as appropriate.
13. Indication of full or partial submittal.
14. Location(s) where product is to be installed, as appropriate.
15. Other necessary identification.
16. Remarks.
17. Signature of transmitter.

C. Options: Identify options requiring selection by Engineer.

D. Deviations and Additional Information: On each submittal, clearly indicate deviations from requirements in the Contract Documents, including minor variations and limitations; include relevant additional information and revisions, other than those requested by Engineer and

Construction Manager on previous submittals. Indicate by highlighting on each submittal or noting on attached separate sheet.

E. Paper Submittals:

1. Place a permanent label or title block on each submittal item for identification; include name of firm or entity that prepared submittal.
2. Provide a space approximately 6 by 8 inches on label or beside title block to record Contractor's review and approval markings and action taken by Engineer and Construction Manager.
3. Action Submittals: Submit three paper copies of each submittal unless otherwise indicated. Engineer, through Construction Manager, will return one copies.
4. Informational Submittals: Submit two paper copies of each submittal unless otherwise indicated. Engineer and Construction Manager will not return copies.
5. Additional Copies: Unless additional copies are required for final submittal, and unless Engineer or Construction Manager observes noncompliance with provisions in the Contract Documents, initial submittal may serve as final submittal.
6. Transmittal for Submittals: Assemble each submittal individually and appropriately for transmittal and handling. Transmit each submittal using Contractor’s transmittal form.

F. Electronic Submittals: Prepare submittals as PDF package, incorporating complete information into each PDF file. Name PDF file with submittal number.

G. Submittals Utilizing Web-Based Project Software: Prepare submittals as PDF files or other format indicated by Project management software.

1.6 SUBMITTAL PROCEDURES

A. Prepare and submit submittals required by individual Specification Sections. Types of submittals are indicated in individual Specification Sections.

1. Email: Prepare submittals as PDF package and transmit to Engineer by sending via email. Include PDF transmittal form. Include information in email subject line as requested by Engineer.

    a. Engineer, through Construction Manager, will return annotated file. Annotate and retain one copy of file as a digital Project Record Document file.

2. Web-Based Project Management Software: Prepare submittals in PDF form, and upload to web-based Project management software website. Enter required data in web-based software site to fully identify submittal.
3. Paper: Prepare submittals in paper form and deliver to Engineer.

B. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.

1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
2. Submit all submittal items required for each Specification Section concurrently unless partial submittals for portions of the Work are indicated on approved submittal schedule.

3. Submit action submittals and informational submittals required by the same Specification Section as separate packages under separate transmittals.
4. Coordinate transmittal of submittals for related parts of the Work specified in different Sections, so processing will not be delayed because of need to review submittals concurrently for coordination.

    a. Engineer and Construction Manager reserve the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.

C. Processing Time: Allow time for submittal review, including time for resubmittals, as follows. Time for review shall commence on Construction Manager's receipt of submittal. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals. Further, no extension of the Contract Time will be authorized should more than a single resubmittal (excessive review cycles) be required due to Contractor’s failure to address comments or provide adequate information.

1. Initial Review: Allow 30 days for initial review of each submittal (and 45 days for multi-discipline reviews). Allow additional time if coordination with subsequent submittals is required. Construction Manager will advise Contractor when a submittal being processed must be delayed for coordination.
2. Intermediate Review: If intermediate submittal is necessary, process it in same manner as initial submittal.
3. Resubmittal Review: Allow 15 days for review of each resubmittal.
4. Sequential Review: Where sequential review of submittals by Engineer's consultants, Owner, or other parties is indicated, allow 21 days for initial review of each submittal.
5. Concurrent Consultant Review: Where the Contract Documents indicate that submittals may be transmitted simultaneously to Engineer and to Engineer's consultants, allow 30 days for review of each submittal. Submittal will be returned to Construction Manager, through Engineer, before being returned to Contractor.

    a. Submit one copy of submittal to concurrent reviewer in addition to specified number of copies to Engineer and Construction Manager.

D. Resubmittals: Make resubmittals in same form and number of copies as initial submittal.

1. Note date and content of previous submittal.
2. Note date and content of revision in label or title block and clearly indicate extent of revision.
3. Resubmit submittals until they are marked with approval notation from Engineer's and Construction Manager's action stamp.
4. Repetitive Reviews: Shop drawings, O&M manuals, and other submittals will be reviewed no more than twice at the Owner's expense. All subsequent reviews will be performed at the Contractor's expense. Reimburse the Owner for all costs invoiced by Engineer for the third and subsequent reviews.

E. Distribution: Furnish copies of final submittals to manufacturers, subcontractors, suppliers, fabricators, installers, authorities having jurisdiction, and others as necessary for performance of construction activities. Show distribution on transmittal forms.

F. Use for Construction: Retain complete copies of submittals on Project site. Use only final action submittals that are marked with approval notation from Engineer's and Construction Manager's action stamp.

G. Excessive Review Cycles: No extension of the Contract Time will be authorized should more than a single resubmittal (excessive review cycles) be required due to Contractor's failure to address comments or provide adequate information. The Contractor will be responsible to reimburse the Owner for additional Engineering review time, in excess of two review cycles, based on an Engineer's review rate of $200 per hour.

1.7 SUBMITTAL REQUIREMENTS

A. Product Data: Collect information into a single submittal for each element of construction and type of product or equipment.

1. If information must be specially prepared for submittal because standard published data are unsuitable for use, submit as Shop Drawings, not as Product Data.
2. Mark each copy of each submittal to show which products and options are applicable.
3. Include the following information, as applicable:

    a. Manufacturer's catalog cuts.
    b. Manufacturer's product specifications.
    c. Standard color charts.
    d. Statement of compliance with specified referenced standards.
    e. Testing by recognized testing agency.
    f. Application of testing agency labels and seals.
    g. Notation of coordination requirements.
    h. Availability and delivery time information.

4. For equipment, include the following in addition to the above, as applicable:

    a. Wiring diagrams that show factory-installed wiring.
    b. Printed performance curves.
    c. Operational range diagrams.
    d. Clearances required to other construction, if not indicated on accompanying Shop Drawings.
    e. Maintenance and lubrication schedules.
    f. Storage requirements.

5. Submit Product Data before Shop Drawings, and before or concurrently with Samples.

B. Shop Drawings: Prepare Project-specific information, drawn accurately to scale. Do not base Shop Drawings on reproductions of the Contract Documents or standard printed data unless submittal based on Engineer's digital data drawing files is otherwise permitted.

1. Preparation: Fully illustrate requirements in the Contract Documents. Include the following information, as applicable:

    a. Identification of products.
    b. Schedules.

c. Compliance with specified standards.
d. Notation of coordination requirements.
e. Notation of dimensions established by field measurement.
f. Relationship and attachment to adjoining construction clearly indicated.
g. Seal and signature of professional engineer if specified.

2. Paper Sheet Size: Except for templates, patterns, and similar full-size Drawings, submit Shop Drawings on sheets at least 8-1/2 by 11 inches but no larger than 30 by 42 inches .

a. Two opaque (bond) copies of each submittal. Engineer, through Construction Manager, will return one copy(ies).
b. Three opaque copies of each submittal. Engineer and Construction Manager will retain two copies; remainder will be returned.

3. BIM Incorporation: Develop and incorporate Shop Drawing files into BIM established for Project.

C. Samples: Submit Samples for review of type, color, pattern, and texture for a check of these characteristics with other materials.

1. Transmit Samples that contain multiple, related components such as accessories together in one submittal package.
2. Identification: Permanently attach label on unexposed side of Samples that includes the following:

a. Project name and submittal number.
b. Generic description of Sample.
c. Product name and name of manufacturer.
d. Sample source.
e. Number and title of applicable Specification Section.
f. Specification paragraph number and generic name of each item.

3. Email Transmittal: Provide PDF transmittal. Include digital image file illustrating Sample characteristics and identification information for record.
4. Web-Based Project Management Software: Prepare submittals in PDF form, and upload to web-based Project software website. Enter required data in web-based software site to fully identify submittal.
5. Paper Transmittal: Include paper transmittal, including complete submittal information indicated.
6. Disposition: Maintain sets of approved Samples at Project site, available for quality-control comparisons throughout the course of construction activity. Sample sets may be used to determine final acceptance of construction associated with each set.

a. Samples that may be incorporated into the Work are indicated in individual Specification Sections. Such Samples must be in an undamaged condition at time of use.
b. Samples not incorporated into the Work, or otherwise designated as Owner's property, are the property of Contractor.

7. Samples for Initial Selection: Submit manufacturer's color charts consisting of units or sections of units, showing the full range of colors, textures, and patterns available.

a. Number of Samples: Submit one full set(s) of available choices where color, pattern, texture, or similar characteristics are required to be selected from manufacturer's product line. Engineer, through Construction Manager, will return submittal with options selected.

8. Samples for Verification: Submit full-size units or Samples of size indicated, prepared from same material to be used for the Work, cured and finished in manner specified, and physically identical with material or product proposed for use, and that show full range of color and texture variations expected. Samples include, but are not limited to, the following: partial sections of manufactured or fabricated components; small cuts or containers of materials; complete units of repetitively used materials; swatches showing color, texture, and pattern; color range sets; and components used for independent testing and inspection.

a. Number of Samples: Submit three sets of Samples. Engineer and Construction Manager will retain two Sample sets; remainder will be returned. Mark up and retain one returned Sample set as a project record Sample.

1) Submit a single Sample where assembly details, workmanship, fabrication techniques, connections, operation, and other similar characteristics are to be demonstrated.
2) If variation in color, pattern, texture, or other characteristic is inherent in material or product represented by a Sample, submit at least three sets of paired units that show approximate limits of variations.

D. Product Schedule: As required in individual Specification Sections, prepare a written summary indicating types of products required for the Work and their intended location. Include the following information in tabular form:

1. Type of product. Include unique identifier for each product indicated in the Contract Documents or assigned by Contractor if none is indicated.
2. Manufacturer and product name, and model number if applicable.
3. Number and name of room or space.
4. Location within room or space.

E. Qualification Data: Prepare written information that demonstrates capabilities and experience of firm or person. Include lists of completed projects with project names and addresses, contact information of architects and owners, and other information specified.

F. Design Data: Prepare and submit written and graphic information indicating compliance with indicated performance and design criteria in individual Specification Sections. Include list of assumptions and summary of loads. Include load diagrams if applicable. Provide name and version of software, if any, used for calculations. Number each page of submittal.

G. Certificates:

1. Certificates and Certifications Submittals: Submit a statement that includes signature of entity responsible for preparing certification. Certificates and certifications shall be signed by an officer or other individual authorized to sign documents on behalf of that entity. Provide a notarized signature where indicated.

2. Contractor’s Certification: Each shop drawing, working drawing, product data, and sample shall have affixed to it the following Certification Statement:

    a. "Certification Statement: by this submittal, I hereby represent that I have determined and verified all field measurements, field construction criteria, materials, dimensions, catalog numbers and similar data and I have checked and coordinated each item with other applicable approved shop drawings and all Contract requirements. "

3. Installer Certificates: Submit written statements on manufacturer's letterhead, certifying that Installer complies with requirements in the Contract Documents and, where required, is authorized by manufacturer for this specific Project.
4. Manufacturer Certificates: Submit written statements on manufacturer's letterhead, certifying that manufacturer complies with requirements in the Contract Documents. Include evidence of manufacturing experience where required.
5. Material Certificates: Submit written statements on manufacturer's letterhead certifying that material complies with requirements in the Contract Documents.
6. Product Certificates: Submit written statements on manufacturer's letterhead certifying that product complies with requirements in the Contract Documents.
7. Welding Certificates: Prepare written certification that welding procedures and personnel comply with requirements in the Contract Documents. Submit record of AWS B2.1/B2.1M on AWS forms. Include names of firms and personnel certified.

H. Test and Research Reports:

1. Compatibility Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of compatibility tests performed before installation of product. Include written recommendations for substrate preparation and primers required.
2. Field Test Reports: Submit written reports indicating and interpreting results of field tests performed either during installation of product or after product is installed in its final location, for compliance with requirements in the Contract Documents.
3. Material Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting test results of material for compliance with requirements in the Contract Documents.
4. Preconstruction Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of tests performed before installation of product, for compliance with performance requirements in the Contract Documents.
5. Product Test Reports: Submit written reports indicating that current product produced by manufacturer complies with requirements in the Contract Documents. Base reports on evaluation of tests performed by manufacturer and witnessed by a qualified testing agency, or on comprehensive tests performed by a qualified testing agency.
6. Research Reports: Submit written evidence, from a model code organization acceptable to authorities having jurisdiction, that product complies with building code in effect for Project. Include the following information:

    a. Name of evaluation organization.
    b. Date of evaluation.
    c. Time period when report is in effect.
    d. Product and manufacturers' names.

e. Description of product.
f. Test procedures and results.
g. Limitations of use.

1.8 DELEGATED-DESIGN SERVICES

A. Performance and Design Criteria: Where professional design services or certifications by a design professional are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.

1. If criteria indicated are insufficient to perform services or certification required, submit a written request for additional information to Engineer.

B. Delegated-Design Services Certification: In addition to Shop Drawings, Product Data, and other required submittals, submit digitally signed PDF file and three paper copies of certificate, signed and sealed by the responsible design professional, for each product and system specifically assigned to Contractor to be designed or certified by a design professional.

1. Indicate that products and systems comply with performance and design criteria in the Contract Documents. Include list of codes, loads, and other factors used in performing these services.

C. BIM Incorporation: Incorporate delegated-design drawing and data files into BIM established for Project.

1. Prepare delegated-design drawings in the following format: Same digital data software program, version, and operating system as original Drawings.

D. Professional design services or certifications by a design professional required of the Contractor as part of this contract include but are not limited to the following. Note that this list is not comprehensive and may not reflect all delegated design services required as part of the Contract Documents.

1. Groundwater control design and procedures
2. Temporary Bypass Pumping Systems
3. Aluminum Handrails and Railings
4. Hangers and Supports for Plumbing Piping and Equipment
5. Hangers and Support for HVAC Piping and Equipment
6. Vibration Controls for HVAC
7. Direct Digital Control (DDC) System for HVAC
8. Control Valves
9. Control Dampers
10. Hydronic Piping
11. Steam and Condensate Heating Piping
12. Metal Ducts
13. HVAC Power Ventilators
14. Outdoor, Semi-Custom Air-Handling Units
15. Hangers and Supports for Electrical Systems
16. Addressable Fire-Alarm Systems
17. Spray-in-Place Polymeric Pipe Lining

18. Couplings, Adapters, and Specials for Process Piping
19. Hangers and Supports for Process Piping
20. Common Requirements for Process Valves
21. Stainless Steel Slide Gates
22. Hot-Tapping Valves and Line Stops
23. End Suction Solids Handling Pumps – base anchorage.
24. Forming, shoring and bracing
25. Metal fabrications and anchorage
26. Pre-engineered aluminum stairs
27. Roof specialties
28. Power System Studies
29. Temporary bulkheads
30. Mechanical Pipe Plugs
31. Inflatable Pipe Plugs
32. Other temporary facilities.

1.9 PROPOSED PRODUCT LIST

A. Within 15 days after date of Owner-Contractor Agreement, submit list of major products proposed for use, with name of manufacturer, trade name, and model number of each product.

B. For products specified only by reference standards, indicate manufacturer, trade name, model or catalog designation, and reference standards.

1.10 CONTRACTOR'S REVIEW

A. Action Submittals and Informational Submittals: Review each submittal and check for coordination with other Work of the Contract and for compliance with the Contract Documents. Note corrections and field dimensions. Mark with approval stamp before submitting to Engineer and Construction Manager.

B. Contractor Responsible for:

1. Determination and verification of materials including manufacturer’s catalog numbers.
2. Determination and verification of field measurements and field construction criteria.
3. Checking and coordinating information in submittal with requirements of Work and of Contract Documents.
4. Determination of accuracy and completeness of dimensions and quantities.
5. Confirmation and coordination of dimensions and field conditions at Site.
6. Construction means, techniques, sequences, and procedures.
7. Safety precautions.
8. Coordination and performance of Work of all trades.
9. Other requirements enumerated in Contract Documents.

C. Contractor's Approval: Indicate Contractor's approval for each submittal with a uniform approval stamp. Include name of reviewer, date of Contractor's approval, and statement certifying that submittal has been reviewed, checked, and approved for compliance with the Contract Documents.

1. Engineer and Construction Manager will not review submittals received from Contractor that do not have Contractor's review and approval.

1.11 ENGINEER'S AND CONSTRUCTION MANAGER'S REVIEW

A. Do not make mass submittals to Engineer. If mass submittals are received, Engineer's review time stated above will be extended as necessary to perform proper review. Engineer will review mass submittals based on priority determined by Engineer after consultation with Owner and Construction Manager.

B. Action Submittals: Engineer and Construction Manager will review each submittal, indicate corrections or revisions required, and return.

1. PDF Submittals: Engineer and Construction Manager will indicate, via markup on each submittal, the appropriate action.

C. Informational Submittals: Engineer and Construction Manager will review each submittal and will not return it, or will return it if it does not comply with requirements. Engineer and Construction Manager will forward each submittal to appropriate party.

D. Partial submittals prepared for a portion of the Work will be reviewed when use of partial submittals has received prior approval from Engineer and Construction Manager.

E. Incomplete submittals are unacceptable, will be considered nonresponsive, and will be returned for resubmittal without review.

F. Engineer and Construction Manager will return without review submittals received from sources other than Contractor.

G. Submittals not required by the Contract Documents will be returned by Engineer without action.

H. Shop drawings will be returned to the Contractor with the codes listed in Section 007223 “General Conditions”

1.12 ELECTRONIC CAD FILES OF PROJECT DRAWINGS

A. Electronic CAD Files of Project Drawings: May only be used to expedite production of Shop Drawings for the Project. Use for other Projects or purposes is not allowed.

B. Electronic CAD Files of Project Drawings: Distributed only under the following conditions:

1. Use of files is solely at receiver's risk. Engineer does not warrant accuracy of files. Receiving files in electronic form does not relieve receiver of responsibilities for measurements, dimensions, and quantities set forth in Contract Documents. In the event of ambiguity, discrepancy, or conflict between information on electronic media and that in Contract Documents, notify Engineer of discrepancy and use information in hard-copy Drawings and Specifications.
2. CAD files do not necessarily represent the latest Contract Documents, existing conditions, and as-built conditions. Receiver is responsible for determining and complying with these conditions and for incorporating addenda and modifications.

3. User is responsible for removing information not normally provided on Shop Drawings and removing references to Contract Documents. Shop Drawings submitted with information associated with other trades or with references to Contract Documents will not be reviewed and will be immediately returned.
4. Receiver shall not hold Engineer responsible for data or file clean-up required to make files usable, nor for error or malfunction in translation, interpretation, or use of this electronic information.
5. Receiver shall understand that even though Engineer has computer virus scanning software to detect presence of computer viruses, there is no guarantee that computer viruses are not present in files or in electronic media.
6. Receiver shall not hold Engineer responsible for such viruses or their consequences, and shall hold Engineer harmless against costs, losses, or damage caused by presence of computer virus in files or media.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION (NOT USED)

Table 1: Submittal List

Spec Section	Spec Name	Description
005213	Agreement	1. Breakdown of Bid Price
007223	General Conditions	1. Tabulation of Contractor Submissions
		2. List of materials and equipment suppliers and manufacturers
		3. Material and equipment orders schedule
		4. Schedule of shop drawings
		5. Coordination drawings
		6. Layout and installation drawings
012100	Allowances	1. Proposals for purchase of products or systems included in allowances
		2. Invoices and delivery slips for material quantities
		3. Time sheets for labor/installation
		4. Documentation of market fluctuations for fuel price escalation
012900	Payment Procedures	1. Schedule of Values
013100	Project Management and Coordination	1. Subcontract List
		2. List of key personnel assignments and names
		3. RFI log
013200	Construction Progress Documentation	1. Startup Construction Schedule
		2. Startup Network Diagram
		3. Contractor's Construction Schedule
		4. CPM Reports: Activity Report, Logic Report, Total Float Report, Earnings Report.
		5. Construction Schedule Updating Reports
		6. Daily Construction Reports
		7. Material Location Reports
		8. Site Condition Reports
		9. Unusual Event Reports
		10. Qualification Data
013233	Photographic Documentation	1. Key Plan
		2. Digital Photographs
		3. Printed Photographs

© 2026 CDM Smith
All Rights Reserved

		4. Video Recordings
		5. Time-Lapse Video Recordings
013513.24	Special Procedures for Maintenance of Plant Operation and Sequence of Construction	1. Procedures for Maintenance of Plant Operation
		2. Procedures for Maintenance of Plant Operation Updates
		3. Plans of temporary systems.
		4. Flow Isolation Plans
		5. Temporary Support Systems
		6. Photographs of Wet Well Conditions
013526	Governmental Safety Requirements	1. Qualifications of the CIH and the SSHO
		2. Contractor's Project Specific Safety and Health Plan
		3. Training and safety certifications
		4. Weekly safety and health inspection reports
014000	Quality Requirements	1. Contractor's Quality Control Plan
		2. Qualification Data
		3. Contractor's Statement of Responsibility
		4. Testing Agency Qualifications
		5. Schedule of Tests and Inspections
		6. Permits, Licenses, and Certificates
015000	Temporary Facilities and Controls	1. Required Load Letter
		2. Site Utilization Plan
		3. Implementation and Termination Schedule
		4. Project Identification and Temporary Signs
		5. Fire-Safety Program
		6. Moisture- and Mold-Protection Plan
		7. Dust- and HVAC-Control Plan
		8. Noise and Vibration Control Plan
		9. Bypass Pumping Plan
		10. Influent Channel Isolation and Dewatering Drawings
		11. Temporary Bulkhead Drawings
		12. Stop Log Procedure
		13. Inflatable Pipe Plug Procedure

© 2026 CDM Smith

015728	Temporary Bypass Pumping Systems	1. Description of Proposed Temporary Bypass System
		2. Calculations of static lift, pipe size selection, friction losses, flow velocity, total dynamic head, and pump selection
		3. Pump performance curves and head capacity curves
		4. Detailed plans and sections of proposed pumping system layout
		5. Information of vendor staff capabilities and replacement parts inventory
		6. Description of system operation and controls
		7. Description and schedule for proposed start-up and testing procedures
		8. Plan of Operations for inclement weather
		9. Plan for 24-hour alarm monitoring
		10. Information on pump controller
		11. Proposed method of noise control for each pump/generator
		12. Installation and maintenance schedule
		13. Contact information for bypass pump service company
		14. Information of vendor staff capabilities and replacement parts inventory
		15. Description and schedule for dismantling the system
		16. Evidence that contractor is insured in event of flooding
		17. Evidence that bypass pipe material can withstand normal operations
		18. Denote conditions that cause pump to lose suction and describe rectifying procedures
		19. Show automatic emergency switchover from primary to backup pumping
		20. Show suction and discharge piping is protected from construction activities
		21. Signed and sealed final Shop Drawings
017300	Execution	1. Land surveyor qualification data
		2. Cutting and Patching Plan
		3. Landfill Receipts
		4. Final property survey
017419	Construction Waste Management and Disposal	1. Waste Management Plan (non-hazardous)
017700	Closeout Procedures	1. List of Incomplete Items
		2. Pest control field report
		3. Certificates of release

		4. Certificate of insurance for continuing coverage.
		5. Maintenance Materials
		6. Testing, adjusting and balancing records
017900	Demonstration and Training	1. Instruction Program
		2. Attendance Record
		3. Evaluations
019113	General Commissioning Requirements	1. Commissioning Plan Information
		2. Commissioning Schedule
		3. Two-week look-ahead schedules
		4. Commissioning Coordinator Letter of Authority
		5. Commissioning Coordinator Qualification Data
		6. List test instrumentation, equipment, and monitoring devices
		7. Test Reports
		8. Construction Checklists
024119	Selective Demolition	1. Engineering Survey
		2. Proposed Protection Measures
		3. Schedule of Selective Demolition Activities
		4. Pre-demolition Photographs or Video
		5. Statement of Refrigerant Recovery
		6. Warranties
030100	Maintenance of Concrete	1. Shop drawings
		2. Samples of Materials
		3. Material certifications and technical data sheets
		4. Information and qualifications of firm awarded work
030551	Concrete Bonding Agents	1. Product Data
		2. Safety Data Sheets
030555	Concrete Admixtures and Additives	1. Product Data
		2. Concrete Mix Designs
		3. Identify chloride content of admixtures
		4. Certification of Compatibility
		5. Laboratory Test Data

031113	Structural Cast-in-Place Concrete Forming	1. Formwork Shop Drawings
		2. Shoring and Reshoring
		3. Product Data
		4. Design Data
031500	Concrete Accessories	1. Manufacturer's Specifications
		2. Manufacturer's recommended instructions for installing accessories and splicing waterstops
		3. Shop drawing details of joints, accessories, insets, and embedded items
		4. Test results
		5. Furnish Manufacturer's certification
032100	Reinforcing Steel	1.Shop drawings
		2. Certificates
032200	Welded Wire Fabric Reinforcing	1. Shop drawings
		2. Certificates
033100	Structural Concrete	1. Product Data
		2. Concrete Mix Design Data
		3. Certification of Compatibility
		4. Laboratory Test Data
		5. Mill test certificates and reports
		6. Aggregate test results
		7. Concrete supplier
		8. Methods of placing concrete
		9. Working drawings
033500	Concrete Finishing	1. Manufacturer's specifications
		2. Manufacturer's recommended instructions on mixing handling
		3. Material Safety Data Sheets
		4. Manufacturer's certification or test results
		5. Test Panels
033900	Concrete Curing	1. Manufacturer's specifications
		2. Manufacturer's recommended instructions on curing compound application
		3. Material Safety Data Sheets

SECTION 013513.24 – SPECIAL PROCEDURES FOR MAINTENANCE OF PLANT OPERATION AND SEQUENCE OF CONSTRUCTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. The following index of this Section is presented for convenience:

1.2 SUMMARY 1
1.3 ACTION SUBMITTALS 2
1.4 EXISTING PLANT OPERATIONS 6
1.5 GENERAL CRITERIA AND RESTRICTIONS 9
1.6 WORK DURING DRY WEATHER AND LOW FLOW CONDITIONS 12
1.7 CONSTRAINTS DURING CONSTRUCTION 14
1.8 GENERAL SEQUENCE OF CONSTRUCTION NOTES 23
1.9 SUGGESTED SEQUENCE OF CONSTRUCTION 30

PART 2 - PRODUCTS (NOT USED) 58

PART 3 - EXECUTION (NOT USED) 58

B. The Cedar Creek Water Pollution Control Plant (WPCP) operates 24 hours a day, seven days a week. The existing facility must be maintained in continuous operation at all times during the entire construction period, except for periods specifically delineated within this Section.

C. The detailed sequence of construction shall be based upon the Contractor's Construction Schedule prepared pursuant to Section 01 32 00 "Construction Progress Documentation." However, as a guide for bidders in the preparation of their bid and for the Contractor in the preparation of their schedule, a suggested sequence of construction is provided herein in Part 1.9. A phased construction sequence is required to maintain continuous plant operations during construction. This Section outlines specific constraints and steps intended to guide development of the Contractor's detailed work plan and maintenance of plant operations procedures. The

sequence may be altered as approved by the Engineer provided that plant operations are maintained.

D. The proposed work has various impacts on the Owner's influent screening and influent pumping operations essential for maintaining compliance with the facility's NYSDEC State Pollutant Discharge Elimination System (SPDES) permit. Where construction impacts operations, support the Owner as needed to maintain compliance.

E. Related Requirements:

1. Section 01 32 00 'Construction Progress Documentation'grondwat
2. Section 01 50 00 'Temporary Facilities and Controls'
3. Section 01 57 28 'Temporary Bypass Pumping Systems'
4. Section 01 91 13 'General Commissioning Requirements'

1.3 ACTION SUBMITTALS

A. Procedures for Maintenance of Plant Operation:

1. Within 30 calendar days of the Notice to Proceed, submit complete descriptions of procedures to maintain plant operation at all times including:

a. Step-by-step procedures, required durations, and specific procedures required to be performed by the Contractor; as well as assistance from the Owner's personnel that the Contractor will request.

1) Label each set of procedures with the corresponding construction schedule activity numbers.
2) Do not assume that requests for assistance from Owner's personnel will be granted.
3) A minimum of two weeks' advanced notification to the Owner is required for any operations or alterations that affect operation of the treatment facility.
4) Activities affecting operation of the treatment facility will only be permitted by Owner where there are no alternatives that avoid any effect on operations.
5) Clearly identify all interferences with the existing facilities and processes. Provide narratives explaining why interferences cannot be avoided. If interferences arise from proposed alternative sequences, provide narratives explaining why the alternative sequences cannot avoid interferences to the plant's operation.
6) Define the total available and backup influent screening and influent pumping capacities available in every construction sequence step. Where the total capacity of influent screening and influent pumping systems is less than 150 MGD with the largest screen and pump unavailable:

a) Provide confirmation that temporary systems deployed by the Contractor will incorporate redundancy so that no singular equipment failure such as loss of a pump, pipe leak, generator failure, power

distribution equipment failure, or damaged cable will compromise capacity of temporary systems.

b) Define the contingency plan to be implemented to promptly restore 150 MGD screening and pumping capacity if and where directed by the Owner. Include specific direction on where Owner assistance would be required, assumptions on Owner response times, and a worst-case estimate for the timeframe required to implement the plan.

b. Plans of temporary systems including but not limited to those specified in Section 01 50 00 "Temporary Facilities and Controls" required as part of this Contract to maintain plant operations. Clearly delineate the following on plans and supplement with narratives and data sheets as needed:

1) The intended location of temporary systems.
2) The proposed methods for phasing from existing to temporary to completed facilities.
3) Planned disruptions to Owner's normal access to process areas and proposed temporary measures to maintain uninterrupted access.
4) All connections to existing and relocated systems, including coordination activities performed by Contractor and Owner.
5) All methods of flow maintenance. Include the method of interruption of flow, anticipated duration of interruption of flow, and detailed procedure for accomplishing the work including the interruption of flow. If a bypass plan is required, prepare and submit a specific, detailed description of the proposed system, according to Section 01 57 28 "Temporary Bypass Pumping Systems".

c. Floor plans and site plans, as applicable, depicting proposed work areas, identifying any temporary measures proposed to maintain access within those work areas, and any other special access considerations such as impacts to emergency egress routes. Provide supplemental details or sections where necessary.

2. Submit these procedures simultaneously with the construction schedule developed in accordance with Section 01 32 00 "Construction Progress Documentation."
3. Coordinate development of this sequence with the Owner and the Engineer. Work cannot commence unless the procedures have been approved.

B. Procedures for Maintenance of Plant Operation Updates: If any revisions to procedures for Maintenance of Plant Operation are proposed, immediately notify the Owner, Engineer, and the Owner's Contract Operator (OCO), and submit revised Procedures for Maintenance of Plant Operation as soon as possible for review.

1. Content requirements are the same as the above Procedures for Maintenance of Plant Operation.
2. Provide a narrative and documents describing the proposed revisions in a format agreed upon by the Contractor and the OCO.
3. Work requiring revised procedures cannot commence unless the revised procedures are approved.

C. Flow Isolation Plans (FIP)

1. Submit a FIP for each instance of work requiring isolation or disruption of flows in wet wells, pipes, channels, conduits, or tanks. Include the following:

    a. General information:

        1) Type of flow impacted (e.g. screened sewage)
        2) Brief description of proposed flow isolation or disruption.
        3) Contact information for parties involved in implementation of the FIP.

    b. Schedule forecast:

        1) Start date
        2) End date
        3) Minimum duration
        4) Expected duration
        5) Maximum duration
        6) Dates on which other parties such as the Owner, Owner's Contract Operator, and Engineer are required to support proposed activities.

    c. Description:

        1) Sequence of proposed activities for implementation, removal, and restoration for the flow isolation or disruption activity. Itemize the sequence to delineate specific roles and responsibilities for all parties required to support the activities. Indicate where Owner support is required for activities such as operation of existing valves, gates, pumps, or other equipment; temporary shut-downs; and LOTO.
        2) Plans indicating location(s) of proposed isolation or disruption. Where plugs are proposed, indicate tie-off locations. Redundant tie-off locations are required.
        3) For each location requiring isolation of flow, description of the device or method of isolating flow including size, type, material, method of installation, staging, testing, and monitoring of the flow isolation device.
        4) Description of the impact of proposed isolation or disruption on operations.

    d. Inspection and Monitoring Plans:

        1) Checklists for inspection of installation, regular monitoring, and removal of proposed flow isolation or disruption systems. Incorporate recommendations from manufacturer representatives and designers.
        2) If and where plugs are proposed, plugs must be monitored continuously 24-hours per day during their use.
        3) Proposed frequency of inspection and monitoring activities. Frequency must be appropriate when considering the risk of failure and estimated duration required to implement emergency response plans.

    e. Emergency Response Plan

        1) Description of the nature, duration, and support required for the Contractor to implement corrective actions in the event of critical failures, such as loss of pressure for a plug.

2) Sequence of activities and estimated duration to promptly restore flow if and where directed by the Owner. Include specific direction on where Owner assistance would be required, assumptions on Owner response times, and a worst-case estimate for the timeframe required to implement the plan.

f. Calculations:

1) Provide calculations and design drawings for each location where isolation or disruption is proposed.
2) Calculations shall demonstrate suitability of proposed methods of flow isolation or disruption and may include information such as design pressures, flow depths, static and dynamic loads where applicable. Where plugs are proposed, at a minimum include:

a) Maximum anticipated pressure on the plug.
b) The tensile force required to restrain the plug prior to plug inflation and during plug removal.
c) Required inflation pressure of the plug.
d) Basis for selection of the plug and, where applicable, sleeve while considering installation conditions, pipe size, and pressure requirements.
e) Design for anchoring, support, and bracing of plugs.
f) Sizing of restraint (cable or chain) using a minimum safety factor of 4. Rope of any kind is not an acceptable material for plug restraint.

3) Calculations must clearly specify relevant assumptions such as flow depths, densities, pressures, and ratings of existing systems or elements.
4) Include written confirmation that any relevant dimensions have been field verified and coordinated with planned new work.
5) Calculations shall be sealed and signed by a professional engineer licensed in the state of New York.

g. Manufacturer's literature:

1) Provide manufacturer's literature, technical data sheets, manuals, and training information where applicable for all materials proposed to be used for the FIP.

D. Temporary Support Systems

1. Provide a design report signed and sealed by a Professional Engineer licensed in the State of New York for each temporary support system (e.g. shoring, bracing, bulkheads, excavation supports, and other temporary structural systems) proposed during construction. Include:

a. A written description of the system
b. Plans, drawings, and details for the system design
c. Design calculations
d. Other documentation necessary to document the basis of the system design

E. Photographs of Wet Well Conditions

1. In addition to periodic construction photographs required in Section 01 32 33 'Photographic Documentation', provide labeled digital photographs for each of the items listed below within the Main Equipment Building's East Wet Well and West Wet Well in sufficient quantity to comprehensively document the noted features. See Section 01 32 33 for digital photograph requirements.

    a. Existing conditions of the two 84-inch influent pipelines, their interior as viewed from the wet well, and their connections.
    b. Existing conditions of the entrance and interior of the influent pumps' suction pipes.
    c. Existing conditions of the wet well walls, slabs, and openings.
    d. Intermediate condition of the penetration for Pump P-3 after selective demolition has been completed.
    e. Final condition of the new work for the Pump P-3 suction piping and wall penetration.
    f. If observed, cracks, fractures, delamination, or other visible defects within the wet well.

1.4 EXISTING PLANT OPERATIONS

A. The Cedar Creek WPCP is under the jurisdiction of the Nassau County Department of Public Works and operated by Veolia North America on behalf of Nassau County. The Cedar Creek WPCP Contract Operator must have safe access to all areas that remain in operation at all times.

B. The existing treatment facility was designed with the capacity to handle a peak hour flow of 150 million gallons per day (MGD).

C. Influent Screening Building (Building E)

1. Influent Screening

    a. The Influent Screening Building has four mechanically cleaned bar screens each rated for a maximum flow of 52 MGD.
    b. The plant must have at least three influent screens in operation to screen the peak flow of 150 MGD.
    c. At least one of the downstream 84-inch pipelines connected to the Influent Pumping System must remain in service at all times.
    d. The Influent Pumping System's East and West wet wells cannot be isolated with existing equipment at the Influent Screening Building unless two influent screens are taken out of service. If two influent screens are taken out of service, work must be performed during low flow conditions as defined in Part 1.6. Alternatively, a wet well can be isolated by installing temporary plugs or bulkheads to stop flow through the 84-inch pipeline while maintaining 150 MGD screening capacity.
    e. Use of the Owner's slide gates and the Owner's stop logs with existing frames will be permitted with minimum 2 weeks advanced written notice; however, the Owner makes no guarantees to the condition or performance of its slide gates or stop logs.

2. Slide Gates

a. The Influent Screening Building (E) has nine total slide gates used for isolation of the four screen channels. There are two slide gates per screen channel and an additional common channel gate SG-5.
b. Seating the current slide gates for isolation of the channels is very difficult due to accumulated debris. Use of the existing slide gates for isolation and controlling flows into the wet wells must therefore be preceded by thorough channel cleaning. Plan to utilize a combination of sandbags, sump pumps, and other temporary bulkhead measures to isolate flow for replacement of SG-1 as leakage should be expected even after channel cleaning.
c. Slide Gate SG-1 is currently non-operational.
d. Assume that slide gates will leak when closed and that temporary dewatering and bulkheads or barriers will be required to maintain a dry working environment within isolated channels.
e. Following channel cleaning and slide gate SG-1 replacement, still plan to use a combination of sandbags and/or sump pumps to isolate flow to either wet well from its respective 84-in header. To facilitate wet well isolation, also plan to plug each wet well's 84-inch influent line as isolation may still not be achieved from the screen building channels following select slide gate replacement and cleaning of channels and slide gate inverts.

D. Main Equipment Building (Building B)

1. Influent flows are measured using two 42-inch diameter magnetic flow meters located on each of the existing influent pump discharge force mains. These flow meters are utilized to report plant flows as required by the plant's SPDES permit.
2. East and West Wet Wells

a. The influent pumping system East and West Wet Wells receive screened wastewater from the influent screen chamber via two 84-inch diameter pipes. The two 84-inch diameter influent pipes enter wet well influent channels at an invert elevation of El. -25.00 NGVD29.
b. The East and West Wet Wells are only hydraulically connected through the upstream influent screen chamber and the split suction line for Pump A-2.
c. Flow from each wet well's influent channel/84-inch pipe pairing enters each corresponding wet well via a series of 36-inch diameter ports spaced along the east and west influent channel walls.
d. Influent pump suction piping draws flow through concrete fillets at the base of the wet well at an invert elevation of El. -34.75 NGVD29. At the peak design flow of 150 MGD, the influent wet well level is operated at a water surface elevation (WSE) of El. -18.50' NGVD29 (16.25' deep).

3. Influent Pumping

a. The influent pumps convey flow via two manifolded 48-inch diameter force mains, through the basement of Building B and a below grade pipe gallery, to two grit tank influent boxes.

1) The east grit tank influent box contains a concrete weir wall with a weir crest elevation of El. 15.17' NGVD29 followed by two 84" x 84" sluice gates, which direct flow into Grit Tanks No. 1 and No. 2. The water surface elevation (WSE) in the east grit tank influent box at design peak flow is

El. 19.24’ NGVD29. Flow exits the south side of Grit Tanks No. 1 and No. 2 via an overflow weir with a weir crest elevation of El. 18.25’ NGVD29.

2) The west grit tank influent box contains a concrete weir wall with a weir crest elevation of 15.17’ followed by a single 84” x 84” sluice gate, which directs flow into Grit Tank No. 3. The WSE in the west grit tank influent box at design peak flow is El. 19.29’ NGVD 29. Flow exits the south side of Grit Tank No. 3 via an overflow weir with a weir crest elevation of El. 18.25’ NGVD29.

b. The influent pumping system's suction and discharge piping network includes a variety of valves—cone, gate, ball, swing check, and ball-type—ranging in diameter from 12 to 48 inches.

1) Each raw sewage pump features a suction isolation gate valve installed in a pit below the dry well floor. Due to their location beneath the discharge piping, these suction isolation gate valves are oriented with their bonnets parallel to the floor, which plant operators report makes full closure difficult. These valves are equipped with electric actuators, although they may not be operable, and can also be manually operated via handwheels, requiring personnel to enter the confined space of the valve pits.
2) Each raw sewage pump is equipped with a valve on the discharge side to prevent backflow from the discharge headers. These include cone valves with hydraulic actuators on Pumps A-1, A-2, and A-3; ball valves with hydraulic actuators on Pumps A-6 and A-7; and check valves on Pumps A-4 and A-5. The cone and ball valves are controlled by a centralized hydraulic system located at elevation -6.50’ NGVD29, which distributes hydraulic fluid through a network of supply and exhaust lines. Each raw sewage pump also has an isolation gate valve installed upstream of its connection to the discharge headers.
3) Both the upper and lower 48-inch discharge headers are equipped with 48-inch gate valves that allow isolation of the respective 48-inch force mains from the influent pumping system.
4) Existing influent pumping system valve components are in poor condition. It is reported that most of the pump suction isolation valves are unreliable, aside from GV-2E and GV-2W, and that nearly all the discharge isolation valves are unreliable. Due to their deteriorated state, most valves, aside from GV-2E and GV-2W cannot be relied upon to isolate pumps without first dewatering the wet well.
5) Suction gate valves GV-2E and GV-2W, upstream of pump A-2, are operable and reportedly used to isolate the west and east wet wells for maintenance. The construction sequence steps presented herein require operation of these isolation valves as part of Phase 1. All other system valves are assumed to be non-operational.

4. Hazardous Materials

a. Asbestos Containing Materials (ACM) were found throughout Building B on multiple levels.

1) In the basement of the building, gasket material at the flanges in the 48-in. force main, vibration dampening cloth on the exhaust units, and

cementitious pipe insulation above the plant drain piping are all assumed to contain ACM.

2) Cementitious pipe insulation is present throughout the entire building, with more being found at El. -6.50 and the main floor at El. 15.50.
3) The electrical cabinets behind the pump motors on the main floor are assumed to have ACM within the backer board.
4) See Section 028200 “Asbestos Removal” for more information and asbestos removal procedures.

b. Lead Based Paint/Lead Containing Paint (LBP/LCP)

1) LBP is ubiquitous at the basement level including paint on the pumps, discharge piping, suction piping, elevator door frame, and stairwell.
2) The staircases throughout the entire building use LBP in their handrail painting, with some walls and door frames at El. -6.5 containing LBP as well.
3) See Section 028300 “Removal and Disposal of Lead-Containing Paint” for more information and LBP/LCP removal procedures.

5. Existing Influent Pump Capacity

a. Construction sequencing relies on the performance of existing influent pumps to maintain plant operations. The suggested construction sequence, detailed herein, is contingent on maintaining operation of the three largest existing pumps throughout most of construction, with their replacement occurring in the final steps.
b. Confirm the capacity of the existing pumps in development of the construction work sequence and ahead of taking any existing, temporary, or proposed influent pumps out of service for any reason.
c. Design phase estimates of existing pump capacities under existing conditions are below for reference. However, the actual capacity of pumps will vary depending upon the specifics of their condition, operation, piping configuration, inlet hydraulics, and discharge conditions. These pump capacities were estimated during the design phase using field testing; however, capacity of the existing pumps will need to be confirmed ahead of active construction phasing and before any pumps are taken offline.

Existing Pump No.	Estimated Capacity
Pump A-1	60 MGD
Pump A-2	60 MGD
Pump A-3	30 MGD
Pump A-4	12 MGD
Pump A-5	4 MGD
Pump A-6	30 MGD
Pump A-7	40 MGD

1.5 GENERAL CRITERIA AND RESTRICTIONS

A. Obtain advanced approval from the Owner and the OCO for all disruptions to existing, temporary, or new equipment and systems that are in service.

B. Work sequencing

1. Coordinate and align the work as best as possible with the overall project plan, schedule, and the following construction sequence. Each phase shall be coordinated with other disciplines as appropriate to provide a finalized and properly operating system.
2. The sequence and shutdown of plant systems and process units that are to be taken out of service, modified, have temporary connections, or be demolished and/or rehabilitated are presented in this Section along with the construction of new facilities that connect into existing facilities.
3. Times noted in days herein are meant to be consecutive calendar days including Saturdays, Sundays, and holidays. For times noted in hours, the time is meant to be measured as consecutive hours and not in terms of normal daily working hours.
4. All equipment and materials required must be at the location of work ready for use, and preparation work completed before any construction begins.
5. New units may only be used after specified start-up, testing, and commissioning has been successfully completed, and the Owner has received required documents and accepted the units.
6. Schedule and conduct work such that it will not impede or upset any part of the treatment process, create hazards to operating equipment and/or personnel, nor reduce the quality of the plant finished water or liquid residuals hauling operations. The Contractor must ensure his working schedules and sequenced construction activities are completely compatible with the facility operations.

C. Access

1. Maintain access to and throughout the plant and work areas at all times.
2. Maintain means of egress throughout the facility at all times.
3. Maintain vehicular access to all treatment units and buildings at all times.

    a. It is critical to maintain access to the screening, grit, sludge, and dewatering facilities for the removal of materials or the discharge of materials.
    b. Stage work in these areas in such a manner so that normal operations can be maintained for those facilities.

4. The Owner must have safe access to all areas that remain in operation throughout the construction period. Provide temporary access for the Owner if the normal access is blocked or removed.

D. Facilities and Utilities

1. Keep existing potable water and fire protection systems in operation at all times.
2. Keep sanitary facilities in existing structures in operation until such time as their temporary or permanent replacements have been installed and are operational.
3. Maintain electrical power, lighting service, and communications systems in uninterrupted operation in all areas that remain in service.

    a. Provide temporary electrical and lighting installation where necessary, for the purpose of maintaining plant operations.
    b. Electrical and lighting installations shall conform to the National Electrical Code.

4. Maintain all existing sumps in operating condition with either the existing pumps or temporary pumps. If the Contract requires the temporary removal of a sump pump, provide a temporary system.
5. Redundancy

    a. Many of the phases presented in the suggested construction sequence herein meet capacity requirements of the influent pumping system with limited or no redundancy. Therefore, in the event that an existing pump required for the sequence is unexpectedly out of service, request that the Owner provide written direction on whether alternative sequencing or additional bypass pumping capacity is required.

E. Interruptions to systems and services

1. The work specified herein, and any other work required by the Engineer, which may interrupt normal plant operations, shall be accomplished at such times that are convenient to the Owner. Overtime, weekend and overnight work for the Contractor to conform to these requirements will be considered as normal procedure under this Contract, and the Contractor shall not be eligible for extra compensation as a result thereof.
2. When the connection of a new pipeline or channel to an existing structure or pipeline requires a shutdown of the existing structure or pipeline; complete and test the new pipeline or channel, except for the final connection, prior to proceeding with the shutdown unless otherwise noted. When the final connection is completed, test the entire pipeline or channel unless otherwise determined by the Engineer.
3. The Contractor shall follow the Owner's Lockout/Tagout (LOTO) procedures. A copy of these procedures will be made available by the Owner upon request.
4. Any modification to, connection to or shutdown of an existing asset such as a tank, wet well, conduit, channel, or pipe, cannot be scheduled or occur without written approval of the Owner.
5. At the Contractor's request and if all temporary measures to maintain plant/system operation/access have been provided and tested, the Owner shall shutdown existing systems.

    a. The Contractor must follow and implement the appropriate LOTO procedures for systems de-energized or shutdown by the Owner. This shall include checking of cables and wires to be sure that they are de-energized and releasing any stored energy in pipelines or mechanical systems including air, gas, steam, water pressure, springs, rotating flywheels and hydraulic systems. This may be accomplished by dissipating the energy through draining the lines or through restraining methods such as repositioning, blocking, bleeding, etc. before work begins.
    b. All equipment and piping to be worked on must be in a zero-energy state with all potentially hazardous stored or residual energy released.
    c. Upon completion of the work that necessitated the shutdown, remove Contractor locks and advise the Engineer that the facilities are available for use. Re-energizing the system shall be performed only by the Owner.

F. Safe work environment

1. In the event that piping or utilities are encountered that are not shown on the drawings, promptly notify the Owner and the Owner's representatives. Such piping and utilities shall not be disturbed without prior approval of the Owner.
2. Provide lighting such that construction areas, roadways, offices, shops, corridors, process areas, storage areas, etc. are illuminated in conformance with OSHA (Electrical, Construction Part 1926) to not less than the minimum illumination intensities (foot candles) listed in Table D.3 while any work is in progress.
3. Pipelines, conduits, channels, wet wells, and tanks may contain accumulations of putrescible materials which will remain on the walls and inverts. These materials may emit noxious, odorous, and hazardous gases such as hydrogen sulfide and methane. Ventilate and test the air of all confined spaces prior to entry in accordance with OSHA and the Site Safety Plan.
4. Flush and clean all process channels, conduits, wet wells, manholes, pipelines and tanks, etc. after they have been removed from service and dewatered. Provide a safe work environment for workers in compliance with OSHA and other site safety requirements. This may require disinfection of surfaces.

G. Noise control

1. Provide necessary sound attenuation devices around equipment necessary for maintenance of plant operations. Equipment requiring sound attenuation includes, but is not limited to, pumps, generators, and blowers. Sound attenuation shall be such that the noise level at the property line shall not exceed 50 dBA.

1.6 WORK DURING DRY WEATHER AND LOW FLOW CONDITIONS

A. Perform the work specified herein at such times that are acceptable or agreed to by the Owner and in accordance with the General Conditions. As explained below, additional timing restrictions apply where specified and where work reduces the capacity of either the Influent Screening Building and Influent Pumping System.

B. Coordinate with and obtain approval from the Owner and Engineer prior to scheduling and commencing work during dry weather, low flow, and very low flow conditions. A contingency plan must be submitted for restoring full 150 MGD pumping and screening capacity for each step of the work to be performed whenever there is reduced screening or conveyance capacity.

C. In the event that influent flows exceed the capacity of the influent pumping system at any time during construction, immediately implement contingency plans (e.g. remove plugs to return wet wells to service or reconnect piping) to restore influent pumping system capacity.

D. Dry Weather Conditions

1. Work must be performed during dry weather conditions where specified or else when any of the following are true:

a. The total capacity of all of the Influent Pumping System's existing and new pumps in service is less than 140 MGD, excluding the following:

1) The influent bypass pumping system.
2) New pumps that have not been started, tested, and commissioned.

3) New or existing pumps with suction or discharge piping that have not successfully completed testing.
4) If a wet well is out of service, the wet well's corresponding existing and new pumps. Pumps may still be considered in the total capacity calculation in this scenario if the wet well can be returned to service within 1 hour of notice from the OCO without compromising quality of work and without risking damage to pumps.

b. Only one of the Influent Pumping System's two force mains – East Force Main and West Force Main – is in service.
c. Only two of the Influent Screening Building's influent screens are in service. Further timing restrictions, below, apply in this condition.

2. Dry weather conditions must satisfy all of the following:

a. Average daily pumped influent flow rate over the previous 48 hours is less than 60 MGD.
b. Less than 1-inch cumulative rainfall is recorded in the facility's service area in the previous 72 hours.
c. No rain is forecast in the facility's service area for either the upcoming 72 hours or forecast duration of work to be performed during dry weather, whichever is longer.

E. Low Flow Conditions

1. Work is to be performed during low flow conditions where specified or else when any of the following are true:

a. The total capacity of all of the Influent Pumping System's existing and new pumps in service is less than 100 MGD. The same exclusions apply when determining total capacity as noted above for dry weather conditions.
b. Only two of the Influent Screening Building's influent screens are in service.

2. Schedule work to be performed during low flow conditions during dry weather and between the hours of 1:00 am and 9:00 am, excluding holidays. This corresponds to lowest influent flow periods at the facility which are early weekday and weekend mornings.

F. Very Low Flow Conditions

1. Work is to be performed during very low flow conditions where specified or else when the total capacity of all of the Influent Pumping System's existing and new pumps in service is less than 90 MGD. The same exclusions apply when determining total capacity as noted above for dry weather conditions.
2. Schedule work to be performed during very low flow conditions during dry weather and between the hours of 3:00 am and 9:00 am, excluding holidays.

G. Timing constraints for work performed during low flow and very low flow conditions shall not relieve the Contractor from compliance with local noise ordinances and project specific requirements. See Section 011000 "Summary".

H. If and where work during low flow conditions and very low flow conditions cannot be completed in a single day, phase work so that it can be completed across multiple days.

I. Anticipate wet-weather related project delays. Include at least 30 calendar days for wet-weather related project delays in the construction schedule.

1.7 CONSTRAINTS DURING CONSTRUCTION

A. Access for lower levels in Main Equipment Building (Building B)

1. The Contractor may request from the Owner, the use of the existing overhead Bridge Crane for installation and demolition purposes of the work within the Main Equipment Building. Availability of the Bridge Crane will be contingent on the condition of the crane at the time the work is being conducted and will need to be coordinated with the Owner a minimum of 30 days prior to the scheduled date of any work requiring use of the crane. The Owner does not make any guarantee as to the condition, availability or operability of the bridge crane. Should the bridge crane not be operable or available for use, the Contractor shall provide alternate means to perform the work for which the crane was requested at no additional cost.

    a. Use of the Owner's bridge crane will require confirmation of its load capacity and/or operability. See Supplementary Conditions. Inspection and certification of the bridge crane must be conducted at least six months in advance of use. A timeline for testing and potential repairs should be included in the construction schedule.

2. Engage the services of a licensed rigger and/or New York State licensed crane operator where necessary to perform the work.
3. A single access opening is available for lowering large equipment and materials down into the below grade levels of the Main Equipment Building via an existing bridge crane.

    a. The clear opening at El. 15.50 is approximately 12.7-ft x 21.9-ft.
    b. The clear opening is reduced to approximately 10.0-ft x 12.9-ft at El. 4.50 excluding obstruction by the existing low pressure steam pipe which is to be partially relocated.
    c. The clear opening is further reduced to approximately 10.0-ft x 11.5-ft at El. -6.50.

4. A bridge crane is not available in the pump dry well. Provide temporary materials and equipment for construction as necessary. If chain falls are required to lift, align, or hold heavy loads such as piping, valves, and pumps, the top hook can be attached to existing exposed beams.
5. Prior to picking large loads (e.g. use of bridge crane), placing heavy loads (e.g. pipes and pumps), or temporary connections to new or existing facilities (e.g. rigging with chain falls) within buildings, prepare and submit calculations signed and sealed by a Professional Engineer registered in the State of New York confirming the existing structure's or equipment's capacity for the proposed work. Any wear or damage to existing structures or equipment must be promptly restored to pre-existing condition at no additional cost.

B. Facilities Operations

1. The OCO will operate valves and equipment as necessary for diverting flow, draining tanks, etc. Provide a minimum 2 weeks notice where the OCO operation is required. However, it is emphasized that the operations of the existing facilities take precedence over all construction activities. Operational assistance given to the Contractor by the OCO will be provided when the OCO's schedule and manpower permit. Such assistance by the Owner may be limited on specific occasions because of process limitations, wet weather flows or unavailability of personnel. Delays caused by such limitations shall be expected and shall not be the basis for claim of extra costs by the Contractor.
2. All work connecting with, cutting into, and reconstructing existing pipes, duct, or structures shall be planned to minimize the impact on the operation of the existing facilities. Anticipate that these activities may need to be scheduled when the demands on the facilities best permit such interference, even though it may be necessary to work outside of normal working hours to meet these requirements.
3. Portions of some pipelines must be in service while alterations are being made on other portions. Provide blind flanges, plugs, caps, and other piping and fittings as necessary to seal all open ends of piping systems to be in service. Valve closure alone will not be considered sufficient for sealing open ends of piping systems. All temporary piping and supports required to keep piping systems in service shall be provided by the Contractor. The Contractor is responsible for the stability of all partial piping systems and shall provide temporary bracing as required, especially where modifications are required around unrestrained couplings.
4. All wastewater within pipes to be opened shall be collected and discharged into the plant influent system. Wastewater shall not be pumped to nor allowed to flow to any of the existing storm drainage system, overland to adjacent water bodies, or into the Owner's sump/collection systems.
5. Before starting work that will interfere with the operation of existing facilities, do all possible preparatory work and see that all labor, tools, materials, and equipment are made ready. Also assist in instructing operations and maintenance personnel in all new operating procedures.
6. Heating, ventilation, and, if needed, air conditioning shall be provided for and maintained in the existing buildings and temporary facilities. Temperatures to be maintained in any areas occupied by WPCP operating personnel shall be at least 65 degrees F in cold weather months and maximum of 78 degrees F in warm weather months unless otherwise noted. The temperatures to be maintained in all other interior WPCP areas, whether new, existing, or temporary, shall be a minimum of 55 degrees F and a maximum of 104 degrees F. Electrical Rooms shall be maintained at a maximum temperature of 85 degrees F.
7. New equipment and/or treatment units may not be used until specified testing and acceptance procedures are completed and written authorization for use is given by the Engineer, Owner, and OCO.

C. Disruptions to Facilities Operations

1. Conveyance and treatment of flows to and through the treatment facility shall not be interrupted in any capacity except as stipulated in this Contract or otherwise approved by the Owner. All shutdowns or limited capacity periods shall occur only upon written request and with prior written authorization from the Owner and the OCO. Such authorizations will be limited to times when the capacities of units remaining in service permit.

2. Execute the work in the most expeditious manner when work requires limiting influent pumping capacity or shutdown of a portion of the plant. Plan the work by taking into consideration all potential problems that may be encountered.
3. Maintain readily available spare pumps, pipe and fittings, and all other equipment appropriate for the work for use in an emergency. Be prepared to work continuously (24 hours per day, 7 days per week) during the time when any units or pipelines are out of service that affect the treatment or conveyance processes.
4. Provide, maintain, and operate all temporary facilities such as dams, pumping equipment, conduits, and all other labor and equipment necessary to intercept sewage flow before it reaches the points where it would interfere with work, carry it past the area of work, and return it to the system after the area of work.
5. Existing plumbing and ventilation systems shall be kept in operation at all times. Systems to be removed or replaced shall be kept in operation until temporary and/or new systems have been tested, accepted and authorized for use. If sewers or drains must be taken out of service to facilitate construction operations, alternative provisions shall be made to collect wastewater or drainage and dispose of them. Such wastewater shall be discharged within the treatment plant upstream of screening removal as approved by the Owner.
6. Unless specified differently, when open tanks and channels have to be taken offline to accommodate the construction, the Owner will operate the necessary gates and valves to accomplish this work. The Contract Operator is responsible for draining and refilling tanks and channels. The Contractor is responsible for removal and disposal of accumulated solids out of the bottom of the tanks and channels and cleaning and disinfecting tanks and channels prior to making modifications.
7. Electric power (i.e., both normal utility power and standby generator power), as well as lighting service shall be uninterrupted in all areas that remain in operation except as otherwise specified herein.
8. Existing instrumentation and controls shall remain fully functional except as otherwise specified herein.
9. Prior to every instance of removing an influent pump from service, test the total capacity of the influent pumps to remain in service. Obtain written acknowledgement of the test results and authorization for removal of the influent pump from service from the Engineer, Owner, and OCO.
10. All new pumps must be installed with piping, conduit and wire and controls to the fullest extent possible such that when the discharge piping connection, wet well connection or suction pipe connection are ready to be made, and are isolated by the Owner, there is minimal work to be completed to allow the wet well, discharge piping or suction piping to be put back into service within the time frames allowed under each activity and in accordance with the approved sequence of operation.

D. Normal Working Hours

1. The facility's normal working hours are Monday through Friday, 7:00 a.m. to 3:30 p.m. During this time, the plant is fully staffed. The plant is minimally staffed between 3:30 p.m. and 7:00 a.m. Contractor will plan and schedule their regular construction activities during normal working hours, to the extent practicable. Should it be necessary for the Contractor to perform work outside normal working hours, notify the Engineer at least 2 weeks prior to conducting such work to allow for any required coordination and/or effort from the OCO or modifications to the plant operations.

E. Staging and Temporary Facilities

1. All temporary systems and facilities provided by the Contractor shall be demonstrated to be operational to the satisfaction of the Engineer, Owner and OCO before any existing systems can be removed from use, see Section 01 50 00 “Temporary Facilities and Controls”. The temporary facilities are critical to the operation of the wastewater treatment facilities.
2. Availability of the facilities must be maintained at all times. Respond to requests from the Engineer for repair and maintenance of temporary facilities immediately within 60 minutes (7 days per week, 24 hours per day, including holidays). If the Contractor fails to immediately respond to requests for repair and maintenance within 60 minutes, such repair and maintenance may be performed by the OCO. All costs associated with such repair and maintenance performed by the OCO shall be the responsibility of the Contractor, including the costs of the Engineer and the Owner’s own staff.
3. Screened Influent Bypass Pumping System:

    a. The construction sequence is such that spare (e.g. N+1) influent pumping capacity will not be continuously available throughout the work.
    b. Install and maintain a supplementary bypass pump system to convey a minimum of 30 MGD of flow from the Influent Screening Building (E) to the Grit Tanks ahead of any step that does not meet 150 MGD capacity with the highest capacity active existing or new influent pump out of service. The OCO will operate the supplementary bypass pumping system. Promptly provide and fill equipment with fuel when requested by the OCO.
    c. See Section 01 57 28 “Temporary Bypass Pumping Systems” and Drawing G-005.

4. When existing heating, ventilation, and cooling systems are demolished, provide temporary heating, ventilation, and cooling systems as necessary to comply with above temperature requirements and to maintain a safe atmosphere for personnel to inspect, maintain, and operate existing facilities.
5. Any Contractor staging areas used on-site shall not disrupt current plant operations. All facility access roads shall remain unobstructed throughout construction for staff use, sludge hauling, septage truck deliveries, chemical deliveries, emergency vehicles, and any other purpose required by plant activities except as required for specific stages of the Work. Access to/from the site shall be maintained as specified in Section 011000 “Summary.”

F. Service interruptions for utility relocations:

1. The utilities listed in the following table will be rerouted as part of the project, requiring temporary interruption of service. The following paragraphs summarize limitations related to outages for each service including the maximum allowable shutdown duration.
2. The Contractor shall construct new service piping, supports and appurtenances as completely as possible prior to shutdown and tie in to minimize the duration of the service outage. Each service shall be placed back into service within the time frames indicated herein.
3. The Contractor shall coordinate with and obtain approval from the Engineer, Owner and OCO ahead of any service shutdown. The Contractor shall engage the OCO to isolate and/or remove any service from operation.
4. If interruption of any services not listed below is proposed, promptly notify the Owner and the OCO and request information on constraints for the service interruption. Except where otherwise specified, assume that services cannot be interrupted for more than 8 hours.

5. Sizes of services listed below are strictly for reference as the predominant size anticipated to be interrupted for proposed work. Impacts, allowable shutdown durations, construction actions, timing of actions, and special considerations are independent of sizes listed unless expressly noted otherwise.
6. 3" Sodium Hypochlorite piping

    a. Location: Main Equipment Building B
    b. Source: Generator Building
    c. Impacts: Screen Building influent channel odor control
    d. Maximum allowable shutdown duration: 2 days. Make temporary provisions and obtain approval from Owner, Engineer, and OCO for longer duration.
    e. Construction action: Reroute piping.
    f. Timing of action: Piping reroute to be completed prior to Phase G2 (see Section 1.9 below)
    g. Special Considerations:

        1) No special considerations.

7. 6" and 8" Hydraulic Oil supply and return piping

    a. Location: Main Equipment Building B
    b. Source: Hydraulic oil tank
    c. Impacts: Cone valve actuators
    d. Maximum allowable shutdown duration: The lesser of 6 hours or until an influent pump either has started or stopped. Make temporary provisions and obtain approval from Owner, Engineer, and OCO for longer duration.
    e. Construction action: Temporarily reroute piping and demolish.
    f. Timing of action: Piping reroute to be completed prior to Phase G2 (see Section 1.9 below). Demolition to be completed upon demolition of all existing cone valves.
    g. Special Considerations:

        1) Hydraulic Oil Supply: Relatively critical system. If there is a power loss or a need to change a raw sewage pump, the action cannot be performed.
        2) Hydraulic Oil Return: Relatively critical system. Provide multiple tie-in points for each pipe and provide auxiliary hydraulic units as needed to maintain operation with one hydraulic unit available in standby at all times.

8. 6" Low Pressure Air

    a. Location: Main Equipment Building B
    b. Source: Blowers
    c. Impacts: Influent screening chamber air (bubblers, air diffusers, gate seals, instrument air)
    d. Maximum allowable shutdown duration: 2-3 weeks. Make temporary provisions and obtain approval from Owner, Engineer, and OCO for longer duration.
    e. Construction action: Permanent reroute
    f. Timing of action: Piping reroute to be completed prior to Phase G1 (see Section 1.9 below).
    g. Special Considerations:

1) No special considerations.

9. 16” Low Pressure Steam

a. Location: Main Equipment Building B
b. Source: Engine Heat Recovery System
c. Impacts: Steam to Fuel Oil Heat Exchanger, Steam to Water Heat Exchanger, Absorption Chillers.
d. Maximum allowable shutdown duration: 2 weeks per year. Make temporary provisions and obtain approval from Owner, Engineer, and OCO for longer durations if needed.
e. Construction action: Permanent reroute
f. Timing of action: Piping reroute to be completed prior to Phase G2 (see Section 1.9 below).
g. Special Considerations:

1) Low pressure steam service cannot be disrupted when there is a likelihood of below-freezing outside air temperatures. The Owner prefers this work is performed during summer or spring in order to limit impacts.
2) Low pressure steam service cannot be disrupted simultaneously with the boiler feedwater line.
3) When this service is disrupted, there is a potential hazard since the steam relief goes out through the roof and may require the Owner to publish notice to the public several weeks in advance. For work requiring disruption of the low pressure steam service, submit a detailed procedure for proposed work, indicate the estimated durations of the disruption, and identify contingency plans for promptly reinstating service if requested by the Owner.

10. 8” Screened Effluent

a. Location: Main Equipment Building B
b. Source: Generator Building
c. Impacts: Hydrant and cooling water for blowers.
d. Maximum allowable shutdown duration: 30 min.
e. Construction action: Permanent reroute
f. Timing of action: Piping reroute to be completed prior to Phase G2 (see Section 1.9 below).
g. Special Considerations:

1) Extremely critical. Interrupting the blower cooling requires shutting down equipment that is extremely critical for the process.
2) Where longer shutdowns are required, obtain approval from Owner, Engineer, and OCO for the Contractor to make temporary provisions to supply hydrant and cooling water from an alternative source.

11. 3” Boiler Feedwater

a. Location: Main Equipment Building B
b. Source: Employee Building
c. Impacts: Engine Heat Recovery System

d. Maximum allowable shutdown duration: 24 hours. Make temporary provisions and obtain approval from Owner, Engineer, and OCO.
e. Construction action: Permanent reroute
f. Timing of action: Piping reroute to be completed prior to Phase G2 (see Section 1.9 below).
g. Special Considerations:

1) Critical system. A temporary water source (at least 100°F) is required.
2) Coordination with the OCO is needed to drain the line.
3) Cannot occur at the same time as the reroute of the low pressure steam line.

12. 3” Condensate Return

a. Location: Main Equipment Building B
b. Source: Steam to Fuel Oil Heat Exchanger, Steam to Water Heat Exchangers, and Steam Traps
c. Impacts: Engine Heat Recovery System
d. Maximum allowable shutdown duration: 2-3 weeks. Make temporary provisions and obtain approval from Owner, Engineer, and OCO for longer duration.
e. Construction action: Permanent reroute
f. Timing of action: Piping reroute to be completed prior to Phase G2 (see Section 1.9 below).
g. Special Considerations:

1) Coordination with the OCO is needed to drain the line.

13. 1.5” Protected Water

a. Location: Main Equipment Building B
b. Source: Main Equipment Building B
c. Impacts: Protected water heater
d. Maximum allowable shutdown duration: 1 week. Make temporary provisions and obtain approval from Owner, Engineer, and OCO for longer duration.
e. Construction action: Demolition.
f. Timing of action: Demolition to be completed prior to Phase G6 (see Section 1.9 below).
g. Special Consideration:

1) This should occur prior to any pump demolition. As long as the operating pumps can be swapped out, the shutdown should not be critical.

14. Pump Room Sump Pumps and Discharge Piping

a. Location: Main Equipment Building B
b. Source: Pump Room Sump Pits
c. Impacts: Pump Room dewatering
d. Maximum allowable shutdown duration: This system must operate continuously.

1) Remove at most one of two sump pump systems at a time. If both sump pump systems must be removed simultaneously, make temporary sump pump provisions and obtain approval from Owner, Engineer, and OCO.

Temporarily cap piping and coordinate with the Owner to close sump pump system valves as necessary for isolation.

2) Existing isolation valves are available on the piping system. If the valves do not seat watertight, provide supplemental plugs or caps as necessary so that the system can discharge into either the East Wet Well or West Wet Well at all times.

e. Construction action: Selective demolition and replacement
f. Timing of action: As required to maintain operation of existing facilities throughout construction of the work.

15. Influent Pumping System Seal Water

a. Location: Main Equipment Building B
b. Source: Main Equipment Building B
c. Impacts: Influent pumping system
d. Maximum allowable shutdown duration: Pump seal water can only be shutdown when the affected pumps can be taken offline in coordination with the Owner and the OCO. See Part 1.6 for timing restrictions when pumping capacity is reduced, make temporary provisions where necessary, and obtain approval from Owner, Engineer, and OCO.
e. Construction action: Demolition and construction.
f. Timing of action: Demolition of the existing system is to be completed after all existing influent pumps are removed from service. The new system must be in operation prior to new pumps going into service.

16. Influent Pumping Surge Relief

a. Location: Main Equipment Building B
b. Source: Main Equipment Building B
c. Impacts: Influent pumping system
d. Maximum allowable shutdown duration:

1) Surge relief protection is essential for normal operation of the existing and new influent pumping system and cannot be out of service except where strictly necessary to perform work during dry weather conditions as defined in Part 1.6.
2) Provide temporary piping if needed to reinstate surge relief piping as soon as possible. The surge relief system cannot be out of service for more than 8 hours under any circumstance.
3) The surge relief system cannot be taken offline if there are power source or power quality issues which increase the likelihood of pump shutdown due to loss of power.

e. Construction action: Demolition and construction.
f. Timing of action: The existing surge relief system is to be maintained throughout construction until the demolition of existing piping is completed. The new surge relief system is to be maintained in operation as soon as it is necessary for surge relief for new piping.

17. 4” Drain Piping

a. Location: Main Equipment Building B
b. Source: Tunnel Floor Drains, Mechanical Room Floor Drains
c. Impacts: Tunnel, Mechanical Room
d. Maximum allowable shutdown duration: 1 day. Provide temporary provisions for drainage for longer durations.
e. Construction action: Permanent reroute
f. Timing of action: Piping reroute to be completed prior to Phase G2 (see Section 1.9 below).

18. Chilled Water Return

a. Location: Main Equipment Building B
b. Source: HVAC Coils in Generator Building
c. Impacts: Employee Building Chilled Water System
d. Maximum allowable shutdown duration: 8 hours. Provide temporary provisions for chilled water return for longer durations.
e. Construction action: Permanent reroute
f. Timing of action: As required to maintain operation of existing facilities throughout construction of the work.

19. Heating Hot Water Supply

a. Location: Main Equipment Building B
b. Source: Steam to Water Heat Exchangers
c. Impacts: Plant Heating Hot Water System
d. Maximum allowable shutdown duration: 8 hours. Provide temporary provisions for hot water supply for longer durations.
e. Construction action: Permanent reroute
f. Timing of action: As required to maintain operation of existing facilities throughout construction of the work.

20. Heating Hot Water Return

a. Location: Main Equipment Building B
b. Source: HVAC Coils in Main Equipment Building B
c. Impacts: Steam to Water Heat Exchangers
d. Maximum allowable shutdown duration: 8 hours. Provide temporary provisions for heating hot water return for longer durations.
e. Construction action: Permanent reroute
f. Timing of action: As required to maintain operation of existing facilities throughout construction of the work.

21. Wet Well Exhaust Ductwork

a. Location: Main Equipment Building B
b. Source: East and West Wet Wells
c. Impacts: Exhaust to odor control system
d. Maximum allowable shutdown duration: 8 hours.
e. Construction action:

1) Permanent reroute for the West Wet Well exhaust.

2) Temporary reroute and replacement as needed for East Wet Well exhaust.

f. Timing of action: As required to maintain operation of existing facilities throughout construction of the work. Wet well exhaust ductwork can only be taken out of service when the corresponding wet well is isolated from influent flows.

1.8 GENERAL SEQUENCE OF CONSTRUCTION NOTES

A. In review of the proposed work sequence, see the following drawings which provide overviews of major elements of work:

1. Drawings G-006 and G-007 depict the influent pumping system's existing and proposed process flow diagrams.
2. Drawings ED-101 and E-101 depict the existing and proposed electrical 4160V plant distribution one-line diagrams.
3. Drawings HG-004, HG-005, HG-006, and HG-007 depict the existing and proposed HVAC general airflow diagrams.

B. General

1. The Owner and the OCO will continue operating the influent pumping system and its other facilities within the work area throughout construction. It is imperative to maintain accurate red-line as-built drawing markups at all times and regularly submit copies to the Owner, OCO, and Construction Manager.
2. Not all work is detailed within the suggested sequence of construction.
3. In advance of performing any work that reduces the capacity or redundancy of the influent screening or influent pumping system, coordinate with Owner, Engineer, and OCO to determine if the supplementary bypass pump system should be operated.
4. Assume that existing valves, gates, and other devices are inoperable and subject to leaking. The Contractor shall be responsible for designing, furnishing, installing, maintaining, monitoring, and removing all temporary devices, plugs or bulkheads necessary to isolate or dewater pipes, channels, wet wells, or conduits to perform their work.
5. Contractor is responsible for the proper sequencing of the various disciplines of work (e.g. structural pedestal supports must precede pipe installation). Coordinate disciplines' work.
6. The plant has experienced failures in at least one of the dresser couplings on the 48-inch discharge pipe to be demolished under this Contract. The dresser couplings are unrestrained and cannot be relied upon to transfer forces across the piping once the adjacent pipe or supports are removed. Design, furnish, install and remove all temporary supports, thrust blocks, and bracing required to prevent movement of the existing piping throughout construction sequencing and while the pumps are in operation.
7. Owner-Furnished/Contractor-Installed (OFCI) Products

a. The Owner will pre-purchase electrically actuated valves of various sizes which are to be installed under this contract. See Section 011000 "Summary" for Contractor's responsibilities. Coordinate earliest available Owner-furnished delivery dates with the Owner and designate delivery dates in construction schedule.

8. The sequence of construction relies upon operation of new influent pumps in interim configurations. Install new influent pumps and associated equipment such as pump starters, level instruments and control panels such that their operation in interim configurations by the OCO will not void any warranties or guarantees. Coordinate manufacturer inspection of temporary configurations, implement temporary measures, and modify the construction sequence as necessary to maintain warranties and guarantees.

    a. Construction of concrete baffle beams is proposed in Phases G9 and G13. If the new pump manufacturer indicates that proposed interim operation of the new pumps without baffles would void any warranties or guarantees, then construct concrete baffle beams after installation of the bypass pumping systems and before installation of new pumps.

9. Except where otherwise noted in the Contract Documents, the Owner will operate valves and equipment as necessary to support the Contractor's dewatering of existing tanks, wet wells, channels, and pipelines when requested in support of the Contractor's work.

    a. Scheduling of Owner dewatering operations is subject to Owner's availability and to the Owner's receipt of adequate notice from the Contractor.
    b. Assume that the Owner will be unable to fully dewater existing tanks, wet wells, channels, and pipelines. Any remaining water, sludge, grit, solids or other material in wet wells, channels, and pipelines must be tested, removed, hauled, and disposed by the Contractor.
    c. The existing pumps have historically been used to reduce the WSE of the existing wet wells to an approximate WSE of -25.75' (9.0' deep). Further dewatering requires other means.
    d. Provide all materials and equipment such as pumps, piping, controls, instruments, and valves necessary for dewatering, draining, venting, cleaning, and disinfection.
    e. The determination of where the contents of a tank, wet well, conduit, pipe or channel can be discharged is included in each specific MOPO activity or shall be defined by the Owner based on the plant conditions at the time of the work.
    f. If a drain connection is not available on the pipe to be drained, then a wet tap shall be made using a tapping saddle and valve by the Contractor. Wet taps shall be located on piping to be removed unless there is no feasible alternative.
    g. No uncontrolled spillage of contents being dewatered shall be allowed. Immediately wash down and corral any spillage to an appropriate location for dewatering, draining, handling, and disposal as necessary.
    h. If the Owner grants permission to use existing or proposed floor drains, sumps, or sump pumps for the Contractor's dewatering operations, promptly flush the drains, sumps, pumps, and pipelines to prevent clogging or septic conditions.
    i. The Contractor shall be responsible for draining and disposal of hydraulic oil where necessary.

10. Plan to perform dewatering, cleaning and disinfecting of conduits, tanks, pipelines, and channels as many times as necessary to construct systems in accordance with the approved construction schedule.
11. Pump and Equipment Installation

    a. Valve actuator control panels and control stations must be constructed ahead of installation of the corresponding new valves.

b. Cone valves and their respective electro-hydraulic actuator systems must be installed prior to placing the respective pump into operation.
c. Gate valves and their respective electric actuators and actuator control panel must be installed prior to placing the respective pump into operation.
d. Each phase of the Sequence of Work cannot be completed until all equipment is tested and accepted. Perform equipment testing in accordance with but not limited to the following sections:

1) Section 400557 “Actuators for Process Valves and Gates”
2) Section 400565.13 “Cone Valve”
3) Section 400593.13 “Medium-Voltage Motor Requirements for Process Equipment”
4) Section 432341 “End Suction Solids Handling Pumps”

e. All testing for pumps, motors, switches, starters, etc. are to be complete and approved before the pump is considered fully operational.
f. The installation of baffle walls, level monitoring equipment, etc. shall be fully completed in both wet wells, prior to the commissioning of the complete pump system.

12. Unless otherwise approved by the Owner and Engineer, all shutdowns shall be limited and shall be in accordance with this specification.
13. Field verify existing conditions prior to implementing any modifications. Verification shall confirm safe work conditions, minimize required shutdown durations, and ensure a controlled and seamless transition between phases. Immediately report any discrepancies or unforeseen conditions to the Engineer. Contractor shall also verify the condition of existing Controls and field signals to mitigate the disruption of operation of equipment scheduled to remain in service during each stage of construction.
14. Work includes removal of solids from the West Wet Well and East Wet Well. The volume of solids to remove may be substantial. Anticipate that removal of solids will need to be performed over a series of very low flow periods as defined in Part 1.6.
15. Full requirements to start-up, test, inspect, obtain approvals, commission, and submit documentation such as O&Ms as applicable for all temporary and new work prior to placing temporary and new work into service are not explicitly stated in the proposed work sequence for brevity.

C. Demolition

1. Perform all demolition activities in a safe manner and in accordance with governing codes and standards.
2. Prior to commencement of any demolition activity, the Contractor shall complete all preparatory work including installation of temporary supports, barriers, dust containment systems, dewatering or groundwater control systems, and protective measures required to maintain operation of existing facilities. All demolition work shall be performed such that there is no adverse impact to sensitive equipment such as motors, coupling, electrical equipment, etc.
3. Prior to demolishing the existing 48-inch discharge piping and its penetration in the east wall of the Main Equipment Building, drain the pipeline, observe, measure, and report to the Owner whether any other sources of water are infiltrating or leaking into the pipeline. Request Owner direction and support further investigations to determine source of the water if observed.

D. Process Mechanical

1. Where the construction sequence requires operation of existing, temporary, and new equipment, submit a request to the OCO a minimum of two weeks in advance. The OCO shall operate such equipment unless expressly permitted in writing by the OCO and Construction Manager.
2. Except for GV-2W and GV-2E, the existing gate valves on the influent pumping system's suction and discharge piping within the Main Equipment Building are unreliable:

    a. Assume that the unreliable gate valves cannot be used to isolate portions of the system during construction. However, subject to approval of the Owner, OCO, and Engineer, the Contractor may attempt to close valves and check whether they seat adequately watertight. Because of the potential for issues reopening a valve, attempts to close valves will only be permitted when valves no longer need to be open for the remainder of construction.
    b. Hot taps and line stops are proposed on the 48-inch discharge piping to isolate portions of the system in order to maintain pumping operations throughout construction. It is anticipated that line stop deployments will require approximately 20-ft of perpendicular clearance and 10-ft of straight 48-inch diameter to accommodate installation. Coordinate and provide adequate clearance for this work.

3. Initial solids removal from the West Wet Well, East Wet Well, and piping to be plugged may be substantial. Therefore, conduct solids removal over a series of low flow and very low flow periods, as defined in Part 1.6.
4. Maintain the existing seal water system until all pumps are removed from service. The new seal water system shall be constructed before the first pump is brought into service. Each new pump shall be connected into the new seal water system before they are brought into service.
5. Hydraulic oil systems and the necessary connections to existing valves shall be maintained at all times.
6. Service and seal water systems and the necessary connections to existing equipment shall be maintained at all times.
7. All new piping and valves are to be pressure tested in accordance with the Process Interconnection specifications and the pipe schedule prior to being placed in service.
8. Where the East and West force mains must be isolated from the Grit Tank:

    a. The knife gate valves on the grit tanks shall be LOTO when the force mains are taken out of service and dewatered.
    b. If any leakage is seen through these valves, plugs shall be installed in the grit tanks downstream of the valves when needed.
    c. To isolate the East Force Main, close respective valves beneath the grit tank influent boxes. Drain the pipe in the influent pumping system to the active influent wet well.
    d. To isolate the West Force Main, close respective valves beneath the grit tank influent boxes. Drain the pipe in the influent pumping system to the active influent wet well.
    e. Means and methods for safely draining and venting the pipe are to be provided by the Contractor. It is anticipated that the approach will vary depending on the phase of construction and piping configuration.

f. Prior to bringing either force main back into service with pumped flow, fill the force main with plant water and vent air from the piping in order to charge the pipeline and reduce the impact of surging from the grit tanks. The valves near the grit tanks should be opened before flow is pumped through the respective force main to avoid pumping against closed valves.

E. HVAC

1. Maintain operation of building heat and ventilating systems at all existing and new structures.

   a. Where necessary, make provisions to install temporary heating and ventilation systems for existing and new structures in which the operation of existing and new heating and/or ventilation systems must be interrupted.
   b. Maintain minimum and maximum temperatures indicated further above.
   c. Minimum ventilation rates for temporary systems shall be equal to the existing rates or in case of new structures, the permanent ventilation rate.

2. Test and balance new and existing airflow devices throughout construction.

F. Electrical

1. Where the construction sequence requires operation of existing, temporary, and new equipment, submit a request to the OCO a minimum of two weeks in advance. The OCO shall operate such equipment unless expressly permitted in writing by the OCO and Construction Manager.
2. Coordinate with Structural for installation of new equipment pads throughout all phases of work. It is critical that the sequence provides adequate time for new concrete to cure.
3. Implement and strictly enforce LOTO procedures prior to commencing any work. All energy sources shall be identified, isolated, locked and verified to achieve a zero-energy state in accordance with OSHA 29 CFR 1910.147 and project requirements.

G. Instrumentation

1. Influent pumping system's flow rates, including those of the temporary bypass pumping system, must be continuously accurately measured and reported. Provide temporary transit time flow meters and perform temporary integration of flow metering signals as needed to maintain continuous flow monitoring throughout construction.
2. Modifications of existing controls equipment (including but not limited to PLC-ECR control panel wiring, PLC logic, OIT software update and ancillaries) must account for the impact on equipment that will remain in service during construction. Any work that could affect operating equipment shall be approved by and coordinated with the Construction Manager and OCO.
3. Rewiring and modifications of PLC-ECR (E-stops, indicating lights, PLC program and OIT screen displays) shall be coordinated with the Construction Manager, the OCO, and subcontractors, so functionality of controlled equipment (Blowers, and remaining operating Influent Pumps) is not affected.
4. Complete rewiring of E-stops on existing PLC-ECR before installing each Pump Control Panel (PCP).

a. Request PLC-ECR wiring schematics, PLC logic, and OIT display configuration files through the Construction Manager and complete preparatory work before beginning PCP installation.
b. Control panel modifications, proposed activity sequencing, anticipated shutdowns, and potential interferences with other equipment, including blowers, shall be reviewed and approved by the Engineer before implementation.
c. Contractor and Integrator shall coordinate with the Owner's Operator and Construction Manager mitigation plans that minimize disruption of equipment controlled or monitored by PLC-ECR during its upgrades.

5. Installation of Pump Control Panels (PCP-0050-1 through 6) and their ancillary devices shall follow the installation of new pumps as they are installed and put in service, and in accordance with the construction sequences specified herein.
6. Installation of the main Influent Pumping System Control Panel (PLC-IPS) is required for the automatic level control of the wet wells as well as monitoring of multiple new devices (wet well radars, discharge header flowmeters and pressure transmitters) and multiple actuators and field devices. As such, installation of the PLC-IPS shall be coordinated to provide this functionality as shown. Monitoring of wet well levels during construction through the existing-to-remain ultrasonic level transducers via the existing PLC-ECR shall remain at all times of construction. Relocate these instruments and their accessories as required to prevent physical interference with the new radars, their stilling wells, and temporary construction.
7. Once each pump train (with all equipment and ancillaries between and including the isolation gates) is assembled, its components must be fully controllable from its own PCP and PLC-IPS, including complete starting and stopping sequencing logic.
8. Once all pumps are installed and independently tested, the SCADA tie in through PLC-IPS and all its specified control logic shall be tested as specified.
9. The influent pumping system will be operated in various interim configurations:

a. OIT displays and associated programming must be updated continuously throughout construction to reflect the interim configurations such that the Owner and the OCO can operate the influent pumping system at all times without placeholder values, nuisance errors, erroneous alerts, graphical anomalies, inactive buttons/functionality, or other disruptions that could cause confusion for operators. Statuses, values, alarms, notifications, and any relevant functionality must be implemented for any active equipment.
b. Once Logic and OIT Screens are successfully tested on OIT-IPS, these new displays shall be used to update the existing Influent Pump OIT screen displays on OIT-ECR.

H. Structural

1. Contractor shall provide all temporary shoring, bracing, supports, bulkheads, excavation support systems, and temporary structural systems required to complete the Work.
2. Structural activities shall not impair continuous operation of the influent pumping facilities. Structural demolition, concrete removal, drilling, coring, saw cutting, and support installation shall be coordinated with the applicable maintenance of plant operations requirements.
3. Existing structural elements supporting operating equipment, piping, valves, conduits, platforms, stairs, railings, or other systems required for plant operation shall remain in service until replacement systems have been installed, tested and accepted.

4. Concrete equipment pads shall be constructed in sequence with the necessary equipment to be installed in coordination with the sequence presented in this Specification. Contractor shall be responsible to provide temporary access stairs and platforms to the installed equipment as required until the final access stairs and platforms where required per the Contract Documents are installed.
5. All concrete work shall be cured to achieve the specified 28-day compressive strength prior to introducing any temporary or permanent live loads, verified by field prepared cylinders and testing.
6. Contractor is alerted that demolition and construction operations associated with each influent pump suction elbow replacement are below the groundwater table (finished grade approximately EL. +15.50 & bottom of demolition limits approximately EL. -35.75). Groundwater table elevation shall be assumed to be at finished grade and shall be field verified by the Contractor for the groundwater control design criteria. Prior to any demolition of concrete foundation elements, the Contractor shall submit a groundwater control design and procedure signed & sealed by a licensed New York State Professional Engineer, engaged by the Contractor, having experience in similar groundwater control applications. The groundwater control procedure shall be implemented after approval and before commencement of any foundation demolition.

    a. Include in the groundwater control procedure a mechanism for verifying that adequate groundwater control has been achieved prior to commencing demolition of the pump suction elbows, via pressure measurement or some other means. Include a procedure to obtain Owner and Engineer approval prior to starting pump suction elbow demolition work.
    b. If verification of adequate groundwater control cannot be achieved in accordance with the approved groundwater control design procedure, the Contractor shall stop work until the treatment or control approach is reassessed and procedures are revised and approved by the Owner and Engineer.
7. Wet Well Improvements

    a. Structural work within the East and West Wet Wells shall be performed only during the mechanical shutdown periods identified in this Specification. This includes, but is not limited to:

        1) Concrete fillet at suction pipe in East Wet Well,
        2) Concrete baffle beams,
        3) Wall pipe penetrations and sealing of existing openings,
        4) Miscellaneous concrete rehabilitation and repairs.

    b. For construction of the surge relief pipe penetration between West and East Wet Well:

        1) When one Wet Well is taken offline and dewatered, install temporary watertight bulkhead, designed by Professional Engineer registered in the State of New York, engaged by the Contractor, at location of wall penetration. Temporary bulkhead shall be designed to prevent wastewater from entering adjacent wet well based on maximum anticipated water surface elevation and to act as formwork for concrete placement around wall pipe penetration.

2) When opposite Wet Well is taken offline and dewatered, demolish existing concrete for new wall pipe penetration, install wall fitting, and restore concrete per Contract Drawings.
3) When Wet Well with temporary bulkhead is taken offline and dewatered, remove previously installed temporary bulkhead. Any anchors to be abandoned in place shall be type 316 stainless steel and cut flush with the wall surface upon completion of this work.

c. Stage work on the 36-inch suction piping for Pump A-3 / P-3 so that either the concrete opening within the wet well or the pipe running between the wet well and dry well, can be plugged at any time by inflatable plugs, blind flanges, watertight cover plates, or other approved method in the event that the East Wet Well is needed for additional pumping capacity.
d. Any new penetration or modification to the concrete wall of the wet well below the maximum wet well operating water level shall be tested for water tightness in accordance with the Specifications.

1.9 SUGGESTED SEQUENCE OF CONSTRUCTION

A. The order of construction shall be subject to the approval of the Engineer; such approval or direction, however, shall in no way relieve the Contractor's responsibility to perform the work in strict accordance with the Contract Documents. The Contractor shall note the requirements of this Section with regard to the operation of the facility and the phasing of construction when developing their work sequence. The Contractor's work sequence shall be specifically detailed in the schedule that is required under Section 01 32 00 "Construction Progress Documentation."

B. Some of the tasks below overlap one another in performance of the work. Numerical and alphabetical identification of the tasks does not necessarily conform with actual order of construction.

C. The work sequence presented herein is a partial outline only and does not purport to cover any sequences necessitated by the actual construction methods. Portions of the work not specifically itemized must be scheduled in accordance with the submittal requirements for the construction sequence. Account for all details in formulating a complete plan for implementation of the project.

D. An overview of the proposed work sequence is provided below. Although this work sequence is presented linearly in phases for clarity, work is to be performed concurrently whenever possible to expedite project completion and reduce downtime of facilities. Furthermore, work reducing the capacity of the influent screening or influent pumping system must be limited to dry weather, low flow conditions, and very low flow conditions as defined above in Part 1.6.

1. Field verify existing dimensions as necessary to support development of submittals.
2. Perform field testing on existing influent pumps in coordination with the OCO to confirm influent pumping capacity in the various configurations relevant to proposed sequence of construction. Document findings and incorporate field verified capacities into the Procedures for Maintenance of Plant Operation submittal.
3. Complete mobilization of the Contractor's workforce and temporary facilities and utilities such as the Engineer's Office and Contractor's Field Office(s).
4. Phase HBM:

a. Perform field sampling and testing for suspected hazardous materials (e.g. lead-based paint, asbestos-containing materials, PCBs, etc.) to supplement the findings included in Appendix D as necessary to classify materials, identify procedures for demolition and handling, and generally inform construction sequencing.
b. Throughout performance of the work, perform hazardous building materials mitigation as indicated on the HBM drawings. Perform this work as early as possible. Major components of mitigation work relate to the existing influent pumping piping, protected water piping, exhaust fans B-E-1 and B-E-2, Main Equipment Building stairwell, bearing access platforms, and all coated surfaces to be disturbed.
c. Not all work within the work areas designated on the HBM drawings can be performed simultaneously. Phase work in coordination with the overall sequence of construction as necessary.
d. The exhaust route indicated on Drawing HBM-103 leads to a hallway with window panels. Assume that these windows cannot be opened and plan to coordinate and perform removal of window assemblies with the Owner and Engineer as needed for installation of exhaust manifolds. Restore any disturbances in-kind to existing conditions upon completion of work.
e. This work must be closely coordinated with the Owner and the OCO since they will be unable to access the areas within the decontamination enclosure and Work Area during construction.
f. Before starting work that will interfere with the operation of existing facilities, do all possible preparatory work and see that all labor, tools, materials, and equipment are made ready. Assist in instructing operations and maintenance personnel in all new operating procedures.
g. Refer to Section 028200 “Asbestos Removal”, Subsection 3.05 for Work Area Preparation.

5. Phase S1:

a. Perform this Phase’s work incrementally throughout construction in coordination with other new and temporary work. For example, the shaft bearing access platforms for Pump A-2 must remain until Pump A-2 is demolished.
b. Reinforce the existing concrete beams. This must be completed prior to introducing any loads associated with the proposed new piping. See Drawings S-104, S-110, S-111, S-118, and S-122.
c. Demolish and install new railing, stairs, ladders, and grating in the Main Equipment Building. See Drawings AG-001, AD-010, AD-011, AD-012, AD-013, A-101, A-102, A-103, A-200, A-204, SG-004, SG-006, SD-102, SD-103, SD-104, SD-105, SD-107, S-102, S-104, S-110, and S-111.

    1) Perform selective structural demolition of concrete slabs, curbs, etc. where indicated. Protect existing structural elements to remain.
    2) Provide temporary platforms and fall protection for interim work when necessary for safety and to maintain access.

d. Perform crack injection repairs of existing cracks in the stairwell concrete wall. See Drawing SG-008.
e. Infill the 24” hole in the existing slab at elevation -6.50 ft. See Drawing S-104.

f. Demolish the wet well concrete walls and install new wall pipes for surge relief piping, venting piping, Plant Drain piping, and duct penetrations as well as piping within the wet well.

1) The Plant Drain piping work interior to the East and West Wet Wells must be completed by Phase G10 so that the new Plant Drain piping can be completed and the Plant Drain bypass pumping system can be demobilized.
2) Surge and force main vent piping interior to the wet well must be installed prior to use of those systems in subsequent steps.

g. Perform floor restoration where terrazzo finish is disturbed at elevation 15.50.
h. Install temporary pipe supports, bracing, thrust blocks, and restraints as needed to prevent movement of the existing and new piping systems while operating in interim configurations during construction. This is especially important when the influent pumping system's existing 48-inch discharge header is being demolished and the new 48-inch discharge header is being constructed.
i. Pipe support systems must be fully installed and, where applicable, tested prior to any corresponding pipelines being placed into service.
j. Demolish existing and construct new reinforced concrete equipment pads for electrical, HVAC, process mechanical, and other trades' equipment as shown on the drawings or otherwise required in the specifications.

1) Proposed new equipment pads, even when drawn continuously, often overlap with existing features – such as the existing pump starters and their pads – and may require incremental demolition and construction.

a) As noted further above, all concrete work must be allowed adequate time to cure. Timing of construction of new equipment pads must therefore be carefully coordinated to facilitate timely completion of the overall work.
b) If construction joints are proposed, submit descriptions to the Engineer for approval. See Section 03 11 13 'Structural Cast-In-Place Forming'.

6. Phase H1: Test existing ductwork.

a. Pretest and submit reports for all ductwork systems to be reused. See Section 230593 'Testing, Adjusting, and Balancing for HVAC' and refer to Drawings HG-004, HG-005, HG-006, and HG-007 for demolition and proposed schematic airflow diagrams.

7. Phase E1: Demolish Temp T3 substation, existing load break switch DT5, and install SWBD-RTU & downstream infrastructure.

a. At existing T1/T2 substation, provide two new circuit breakers (CBs). See Drawing E-104.
b. Demolish temporary substation T3 and MV load break switch DT5, including selective structural demolition and restoration. See Drawings EG-101, ED-101, ED-108, E-108, SD-106, and SD-107.

1) Shutdown Pump A-2 and apply Lock-Out/Tag-Out (LOTO) on DT5 feeder circuit breakers at switchgear S1 and S3.
2) Disconnect the existing motor starter for Pump A-2 from the existing MV load break switch DT5.

    a) Protect the existing motor starter for reuse in a subsequent phase.
    b) Protect all wiring and control circuits associated with operation of Pump A-2.

3) Disconnect Temp T3 Substation from the existing MV load break switch DT5.
4) Disconnect existing DT5 feeders at Switchgears S1 and S3.
5) Demolish existing feeders, MV load break switch DT5, and Temp Substation T3, including all associated conduit, wiring, pads, and ancillary equipment.

c. Remove existing shelving from the mezzanine at el. 34.50 and install the following new equipment including associated wires, cables, raceways, boxes, conduits, grounding, supports, and accessories. See Drawings E-127, E-105, E-101, E-104, and E-112.

1) SWBD-RTU
2) MTS-ECD
3) PP-ECD
4) MTS-GATES
5) PP-GATES
6) XFMR-DIST
7) XFMR-1
8) LP-230 DIST
9) LP-1

8. Phase E1A: Install new load break switch P2/P4 and restore service for Pump A-2. See Drawings EG-005, EG-101, E-108, E-112, E-113, E-126, E-129, E-132, I-005, I-006, I-007, I-008, I-009, and S-106.

a. Construct equipment pad and install new MV SWGR DT5. Install a temporary connection box/splice point to support multiple temporary connections to the new MV SWGR DT5 (P2/P4). See Drawing E-126, SG-003, and S-106, and S-110.
b. Install feeds and connections from existing switchgears S1 and S3 to the new MV SWGR DT5 including replacement of CTs and modification of relays pursuant to the Power System Analysis (PSA) study. See Drawing E-108.

1) Isolate Bus A – S1. Open/cold transitions will result in a full loss of power. Coordinate outages and affected loads with the Owner.

    a) Coordinate with the Owner to transfer loads from S1 Bus A to S3 Bus A. Affected DTs include DT1, DT4, DTT12, DT2, and DT7.
    b) Open S1 tie circuit breaker.
    c) Open S1 tie-to-S3 switchgear circuit breaker.

2) Replace current transformers (CTs) on S1.

a) Demolish existing load-side CTs in the DT5 cubicle.
b) Install new load-side CTs in the DT5 cubicle.

3) Install new feeders between the S1 DT5 cubicle and the new SWGR DT5 (P2/P4).
4) Reprogram protective relays at S1 per the Power System Analysis (PSA) study.
5) Isolate Bus A – S3. Open/cold transitions will result in a full loss of power. Coordinate outages and affected loads with the Owner.

a) Coordinate with the Owner to transfer loads from S3 Bus A to S1 Bus A. Affected DTs include DT1, DT4, DTT12, DT2, and DT7.
b) Close S1 tie circuit breaker to restore power to S1 Bus A.
c) Open S3 tie circuit breaker (CB-309).
d) Open S3 main circuit breaker (CB-301).
e) Open S3 tie-to-S1 switchgear circuit breaker (CB-308).

6) Remove and replace DT5 switchgear S3 circuit breaker (CB-305). Existing circuit breaker to be refurbished and handed over to Owner.
7) Replace CTs on S3.

a) Remove and demolish existing load-side CTs in DT5 cubicle (CB-305).
b) Install new load-side CTs in DT5 cubicle (CB-305).

8) Install a temporary feeder from the new SWGR DT5 (P2/P4) to the existing Pump A-2 motor starter.
9) Install new feeders between the S3 DT5 cubicle (CB-305) and the new SWGR DT5 (P2/P4).
10) Reconfigure electromechanical relays at S3 per the PSA study.

c. Restore power in switchgears S1 and S3 and commission existing Pump A-2.

1) Restore CB-308, CB-309 and CB-301 to normal operating positions.
2) Restore the S1 tie-to-S3 switchgear CB to normal operating position.
3) Remove LOTOs from S1 and S3 and energize the new SWGR DT5 (P2/P4).
4) Commission new CB-305.

d. Install new:

1) Influent Pumping System Control Panel (PLC-IPS)
2) Vibration and Temperature Monitoring Panel (VTMP)
3) Gate Valve Remote Control Station (GV-RCS)
4) Level Relay Panels LRP-0076-1 and LRP-0076-2

9. Phase H2: Demolish equipment in the mezzanine and reroute systems in conflict with proposed work.

a. Demolish an existing fan coil unit and associated condensate piping, refrigerant piping, supply air duct, grilles, and motorized louver. See Drawing HD-104.

b. Incrementally reroute each of the systems listed below including piping, hangers, and accessories. For each relocation, install new piping excluding connections to the existing piping system; schedule temporary shutdown of the system being rerouted; and, during the shutdown, demolish piping to be rerouted and complete new connections to the existing system. See Drawings HG-003, HD-203, HD-303, HD-304, H-101, H-203, H-303, H-304, and E-122.

1) West Wet Well Exhaust duct
2) 8-inch screened effluent
3) 3-inch boiler feedwater piping
4) 6-inch chilled water return piping
5) 16-inch low pressure steam piping with associated low point traps
6) condensate return system including condensate receiver B-CR-2A
7) 3-inch pumped condensate return piping

10. Phase PL1: Coordinate the following work with the demolition and relocation of sodium hypochlorite, low pressure air, and wet well exhaust systems as well as installation of the new influent pumps and their associated piping.

a. In the areaway mechanical rooms, demolish existing floor drains and piping, and cap existing wyes. See Drawings PD-201 and PD-202.
b. Under the pump room ceiling, demolish existing 6-inch drain and install new 6-inch drain relocated to avoid spatial conflict with proposed new 48-inch discharge header. Provide temporary piping for interim configurations as needed. See Drawings PD-101 and P-101.
c. Demolish and install two new sump pump systems connected to the 4” sump pump discharge piping. Interim sump pump systems may be necessary to accommodate installation of new influent pumps and associated piping systems under later phases.

1) Demolish sump pump B-SP-1A, sump pump B-SP-1B, and associated sump cover, piping, check valves, isolation valves and control panels. See Drawings PD-101, PD-301, and ED-103.
2) Install sump pump B-SP-1A, sump pump B-SP-1B and associated sump cover, piping, supports, check valves, isolation valves, and control panel. See Drawings P-101, P-301, E-106, E-122, and I-009.
3) Demolish sump pump B-SP-2A, sump pump B-SP-2B, and associated sump cover, piping, check valves, isolation valves and control panel. See Drawings PD-101, PD-301, and ED-103.

11. Phase H3

a. Demolish existing fans B-E-1 and B-E-2. See Drawings HG-004, HG-005, HD-101, HD-302, HD-303, ED-103, and ED-104.
b. Install new fans B-E-1 and B-E-2. Coordinate this work with the installation of new influent pumps and piping since these two fans constrain available space. Modify HVAC control wiring at MCC-P-10 and MCC-P-11. See Drawings H-101, H-302, H-303, E-106, E-107, E-111, and E-122.

12. Phase H4A

a. Install new hot glycol heat exchangers, pumps, piping, controls and appurtenances on the mezzanine. See Drawings HG-003, HG-010, H-104, H-203, H-204, H-303, S-107, and E-127.

13. Phase H4B

a. Demolish existing roof fans B-RF-5, B-RF-6, and B-RF-9. See Drawings HG-004, HG-005, and HD-105.
b. Install new roof fans B-RF-5 and B-RF-6 and controls. See Drawings AD-105, A-106, H-105 and E-107.
c. Demolish motorized louver B-LM-12 including any electrical connections, conduit, wiring, and disconnect switch. See Drawings A-105, HG-004, and HD-104.
d. Install new air handlers B-S-3, B-S-6, B-S-7, and B-S-11 on the roof and their associated heating coils, filters, dunnage frames, smoke detectors, controls, and ductwork. See Drawings AD-105, A-105, A-106, HG-002, HD-102, H-102, H-103, H-104, H-105, H-303, S-112, FA-001, and FA-002.
e. Install roof hood B-RV-3 using the existing roof curb on the intake for B-AHU-1. See Drawings HG-002, HG-006, and H-105.

14. Phase H4C

a. Demolish fans B-S-1, B-S-2, B-S-3, B-S-4, B-S-5, B-S-6, B-S-7, B-S-8 and associated heating coils, cooling coils, pumps and filters located in the north air handler rooms. See Drawings HG-004, HG-005, HD-102, HD-201, HD-202, HD-301, HD-302, HD-303, HD-304, SD-104, SD-105, and SG-004.
b. Dismantle and remove existing air supply floor grilles. Close and patch floor openings. See Drawing HD-103.
c. Install fans B-S-1, B-S-2, B-S-4, B-S-5, B-S-8 and associated heating coils, cooling coils, pumps, filters, smoke detectors, controls, and ductwork located in the north air handler rooms. Modify HVAC control wiring at MCC-P-10 and MCC-P-11. See Drawings HG-002, HG-003, H-102, H-103, H-201, H-202, H-301, S-104, S-105, S-113, S-114, S-115, S-116, E-106, E-107, E-111, and FA-002.
d. Install and configure managed ethernet switch and network control with B-ATC-51 to integrate new HVAC systems into the existing plant-wide SCADA. See Drawings HG-015, H-104, I-003, and I-004 as well as Section 230923 ‘Direct Digital Control Systems for HVAC’.
e. Complete comprehensive testing, balancing, and commissioning for all new HVAC equipment including coordination for testing and balancing with existing airflow devices.

15. Phase G1 (Drawing G-101): Prepare for isolation of wet wells, replace slide gate in the Influent Screening Building, install bypass pumping systems, replace two 48-inch gate valves and piping, and construct new 48-inch diameter force main upper header.

a. In the Influent Screening Building (Building E), clean the channels, and replace slide gate SG-1. See Drawings MD-200, M-200, E-300, and E-301.

1) Clean and prepare influent screen channels and frames and exercise slide gates to facilitate seating of slide gates and stop log systems for both replacement of SG-1 and isolation of wet wells in subsequent steps. Provide

sandbags, pumps, pipes, valves, plugs, bulkheads, and other temporary systems as necessary to dewater channels in support of cleaning. See Part 1.6 for timing restrictions when influent screens are taken out of service.

2) Owner will take Channel A out of service.

   a) This will limit influent screening capacity to approximately 156 MGD (three screens in operation).
   b) If taking additional channels out of service to complete this work, the plant will not have capacity to screen peak flow and work must comply with Part 1.6 restrictions.

3) Isolate and unwater Channel A.
4) Demolish existing slide gate SG-1, its electric actuator, wiring and conduits for connections to MCC P-12-2 and PMCP, and its framing, bolts, and grout along the channel walls and invert. Repair bolt holes.
5) Install, start-up, test, and commission new slide gate SG-1 with electric actuator and remote control station complete with electrical and control connections to MCC P-12-2 and PMCP.

b. Install Plant Drain temporary bypass pumping system to be able to stop Plant Drain flow into the East Wet Well. See Drawing G-005 and Section 01 57 28 “Temporary Bypass Pumping Systems”. The OCO will operate the Plant Drain Bypass system. Promptly provide and fill equipment with fuel when requested by the OCO. This bypass system must be in operation whenever work requires isolation of the East Wet Well.

c. Install the screened influent bypass pumping system described in Drawing G-005 and Section 01 57 28 “Temporary Bypass Pumping Systems”. The OCO will operate the Supplementary Bypass Pumping System.

d. Demolish existing and install new 48-inch motor-actuated gate valves GV-2E and GV-2W. As outlined below, this involves sequential isolation of wet wells and installation of plugs in the 48-inch suction piping upstream of GV-2E and GV-2W during very low flow conditions, demolition of the two gate valves and upstream piping, and installation of two new gate valves and piping. See Drawings MD-101, MD-110, M-101, M-111, M-113, SD-101, E-122, I-005, and I-010 and see Section 01 50 00 “Temporary Facilities and Controls” for inflatable and mechanical plugs requirements.

   1) Install a plug into the West Wet Well suction wall pipe for Pump A-2, upstream of GV-A2W. The estimated total available pumping capacity during this step is only 82 MGD so work must be performed during very low flow conditions, as defined in Part 1.6:

      a) Implement Pump A-2 LOTO.
      b) Close existing suction gate valves GV-A2E and GV-A2W to prevent interconnection of the East and West Wet Wells during initial dewatering of the West Wet Well. Request that the Owner operate pumps on the East Wet Well to maintain a low wet well level to reduce pressure on aging gate valves GV-A2E and GV-A2W.
      c) Isolate the West Wet Well. Despite replacement of SG-1 and cleaning and exercising of existing slide gates to facilitate seating, assume that a physical plug will need to be inserted into the 84-inch influent line

for isolation of the West Wet Well, and assume that a combination of stop logs, temporary pumping, sandbags, or other temporary bulkhead measures will be required to dewater the screen channels.

d) Once the West Wet Well is isolated, dewater, remove solids from, clean, and disinfect the West Wet Well and piping to be plugged as necessary for plug installation.

e) Visually inspect, photograph, and document the internal condition of the wall pipe upstream of GV-A2W. Verify dimensions and install the plug into the wall pipe upstream of GV-A2W. This pipe is original to the influent pumping system so anticipate substantial removal of solids.

f) Either install and integrate the new radar level indicating transmitter or install and integrate temporary level instrumentation for use operating new pumps with PLC-IPS until the new radar instrumentation is installed in a later phase. If temporary instrumentation is provided, remove the temporary instrumentation and perform in-kind restoration of disturbed areas once the new radar level instrumentation is installed.

g) Put the West Wet Well back into service. Remove Pump A-2 LOTO. Plug inserted into the West Wet Well suction line to Pump A-2, upstream of GV-A2W, to remain in service.

h) The estimated total available pumping capacity is restored to over 150 MGD.

2) Repeat the above procedure except modified for installation of a plug into the East Wet Well suction wall pipe for Pump A-2, upstream of GV-A2E, and do not remove existing Pump A-2 LOTO since both upstream suction pipes will be plugged. The estimated total available pumping capacity during this step is approximately 94 MGD so work must be performed during low flow conditions, as defined in Part 1.6.

3) With Pump A-2 suction lines plugged and the pump out of service, demolish existing gate valves GV-A2W and GV-A2E, the upstream portions of piping, and supports as shown on G-101. The upstream piping shall be demolished through the flange connections closest to the wet well wall. Install new motor-actuated gate valves GV-2W and GV-2E, new upstream piping to connect into the flanges at the wet well walls, pressure gauge and transmitter assemblies, and supports. Successfully pressure test new piping and closed valves before proceeding to the next step.

a) The estimated total available pumping capacity through this step is over 150 MGD.

4) During very low flow conditions, as defined in Part 1.6, shutdown and drain the West Wet Well. Unplug West Wet Well suction line to Pump A-2.

a) The estimated total available pumping capacity during this step is approximately 82 MGD.

b) Contractor to bring wet well back online if needed/if flow exceeds 82 MGD or the largest available pump is taken out of service.

5) Place the West Wet Well back into service. The estimated total available pumping capacity is restored to over 150 MGD.

6) During low flow conditions, as defined in Part 1.6, shutdown and drain the East Wet Well. Request the OCO close new GV-2E. Operate the Plant Drain bypass pumping system. Shutdown and dewater the East Wet Well. Unplug East Wet Well suction line to Pump A-2.

a) The estimated total available pumping capacity during this step is approximately 94 MGD.
b) Contractor to bring wet well back online if needed/if flow exceeds 94 MGD or the largest available pump is taken out of service.

7) Place the East Wet Well back into service and stop the Plant Drain bypass pumping system. The estimated total available pumping capacity is restored to over 150 MGD.

e. Construct a new 48-inch diameter force main header at El. -6.50 NGVD29, including installation and integration of a new 48-inch magnetic flow meter (FE-0065-2), branch lines up to and including new 36-inch motor-actuated knife gate valves KGV-12 and KGV-13, and piping down to the pump level. The new 48-inch pipe must be aligned for connection with the existing 48-inch header and force mains in subsequent steps. Perform pressure testing of the installed components. See Drawings S-109, S-110, S-111, S-120, S-122, M-104, M-105, and M-111.

1) This work can proceed in parallel with the preceding work in this phase.
2) This work must be coordinated with relocation of various utilities in conflict with the proposed new header.
3) The estimated total available pumping capacity through this step exceeds 150 MGD.
4) Verify successful integration of the new flow meter with the OCO and Construction Manager prior to introducing flow through the meter.

f. Construct the vent and drain piping for the influent pumping system's new surge relief and air valves into the East Wet Well and West Wet Well. Coordinate structural demolition in Phase S1. As the surge relief and air valves are installed in subsequent phases, complete connections to these piping systems. Connections must be completed prior to their corresponding valves and pipelines going into service. Work within the East Wet Well and West Wet Well is subject to aforementioned very low flow and low flow condition restrictions.

16. Phase G2 (Drawing G-102): Connect the new 48-inch diameter force main at El. -6.50 NGVD29 to the existing East force main vertical pipe. See Drawings MD-105, MD-113, M-105, M-110, M-115, and M-116 and also Section 400576 "Hot-Tapping Valves and Line Stop".

a. Phases E1 & E1A must be completed before progressing to Phase G2.
b. Install Line Stop 1 on the vertical section of the existing East Force Main. The two 48-inch gate valves downstream on the East Force Main, shown on Drawing M-117, may be temporarily closed during low flow conditions to stop flow through the spool being tapped if needed for installation and/or testing of the line stop.
c. Install and test additional valves, piping, fittings, pumps, and other equipment and instruments as necessary for draining the contents of the East Force Main directly

into one or both of the existing wet wells under subsequent steps. If new taps, saddles, or outlets are needed on the East Force Main for drains and vents, coordinate locations with the OCO. New connections for temporary drains and vents will only be permitted on existing pipes and fittings to be removed in subsequent phases. Comply with dry weather and flow timing restrictions as applicable.

d. Perform selective demolition of existing 48-inch piping downstream of Line Stop 1 and construct the new upper 48-inch header's connection to the East Force Main. Any work disrupting operation of the East Force Main must be performed during dry weather conditions as defined in Part 1.6.

    1) Confirm operability of the screened influent bypass pumping system.
    2) Within the tunnel, upstream of the grit tank influent boxes, close the two 48-inch gate valves on the East Force Main.
    3) Use Line Stop 1 to plug the existing 48-inch pipe.
    4) Drain isolated segment of the East Force Main.
    5) Selectively demolish the existing 48-inch vertical piping and 90-elbow downstream of Line Stop 1.
    6) Install new 48-inch piping, vacuum breaker and air relief assemblies, and temporary knife gate valve KGV-14 to connect the new 48-inch force main upper header to the existing East force main. Once the interconnection is complete, close KGV-12 and KGV-14 and successfully pressure test the new piping and valves before proceeding to the next step.
    7) Once pressure test is complete and successful, remove Line Stop 1, close KGV-12, and open KGV-14 to allow operation of the East Force Main.

17. Phase E2 (Drawing E-108): LOTO DT4 and provide temporary feed to Pump A-1.

    a. Complete prior to Phase G3.
    b. The estimated total available pumping capacity during this step is approximately 86 MGD so perform work during very low flow conditions as defined in Part 1.6.
    c. Shutdown Pumps A-1 and A-6 and apply LOTO to DT4 feeder circuit breakers at S1 and S3.
    d. Shutdown Pump A-2 and P2/P4 MV Switch and de-energize the temporary connection box installed in Phase E1A.
    e. Disconnect the existing motor starter for Pump A-1 from MV load break switch DT4.

        1) Protect the motor starter for reuse in a subsequent phase.
        2) Protect all wiring and control circuits associated with Pump A-1.

    f. Install a temporary feeder from the Pump A-1 motor starter to the temporary connection box.
    g. Energize the P2/P4 MV switch.
    h. Restore operation of Pump A-2.
    i. Restore operation of Pump A-1.
    j. The estimated total available pumping capacity is restored to over 150 MGD.

18. Phase E2A (Drawing E-108): Demolish Load Break Switch DT4 and Pump A-6

    a. Complete this phase in coordination with work under Phase G3.

b. Disconnect existing DT4 feeders at switchgear S1 and S3.
c. Demolish existing feeders, MV load break switch DT4, and the motor starter for Pump A-6, including all associated conduit, wiring, and ancillary equipment.

19. Phase G3 (Drawing G-103): Utilize hot tap and line stop to demolish Pump A-6, a portion of the 60 MGD Pump A-1 discharge piping, and Pump A-5 suction piping. See Drawings MD-101 and MD-102 and also Section 400576 “Hot-Tapping Valves and Line Stop”.

a. Confirm existing GV-B9 is open to equalize flow between the existing discharge headers and prevent over pressurization of headers during line stop installation.

1) The estimated total available pumping capacity through this step exceeds 150 MGD.

b. Close and LOTO GV-2W. Isolate, drain, clean, and disinfect the West Wet Well. Assume that a physical plug will need to be inserted into the 84-inch influent line for isolation of the West Wet Well. Drain Pump A-6 and A-5 suction piping, install a plug on the Pump A-6 and A-5 suction lines from inside the West Wet Well, and remove a portion of each line and install blind flanges on the dry-well side at the wall.

1) The estimated total available pumping capacity through this step is approximately 142 MGD.
2) If GV-2E is closed for redundant isolation of the West Wet Well, the estimated available pumping capacity will be reduced to approximately 82 MGD and work will be constrained to very low flow conditions as defined in Part 1.6.

c. Place the West Wet Well back into service.

1) The estimated total available pumping capacity is restored to exceed 150 MGD.

d. Remove existing Pumps A-1, A-5, and A-6 from service and deploy Line Stop 2, on the discharge header between Pumps A-1 and A-5.

1) The estimated total available pumping capacity is approximately 142 MGD.

e. Demolish isolated portions of the influent pumping system suction and discharge piping. To minimize risk of damage while the surge relief piping is temporarily disconnected, perform this work during dry weather as defined in Part 1.6 and when there is no increased likelihood of pump shutdowns. Reinstate the surge relief with new or temporary piping as soon as possible to minimize downtime.

1) The estimated total available pumping capacity is approximately 142 MGD.
2) Request that the OCO temporarily close both 10-inch isolation valves on the surge relief piping, and request that they operate the pumps to limit pressure fluctuations in the pipeline while the surge relief is out of service.
3) Drain the 48-inch piping west of Line Stop 2 through the 6-inch drain located at the west-most end of the header, at the Pump A-6 discharge tee.

4) Demolish the discharge tee downstream of Pump A-1 and the vertical 14-inch surge relief pipe connected to the 10-inch surge relief header.
5) Install a blind flange at the flange connection to the west of the Line Stop 2 tapping saddle, then remove Line Stop 2 plug and equipment, and close the tapping valve.
6) Install a new 10-inch surge relief pipe from the Line Stop 2 tapping valve to the existing 10" surge relief pipes into the West Wet Well. Successfully pressure test the new surge relief piping. Upon completion of successful pressure test, open the Line Stop 2 tapping valve to reinstate surge relief system.

f. Deenergize Pump A-6. Demolish existing Pump A-6 and all associated suction and discharge piping as indicated including valves GV-A6, and BCV-A6.
g. Demolish a portion of Pump A-1's discharge piping including GV-B1 and GV-B6, to facilitate connection of Pump A-1 to the new force main.
h. Demolish Pump A-5 suction piping as indicated including valve GV-A5.

1) The estimated total available pumping capacity is approximately 142 MGD.

20. Phase G4 (Drawing G-104): Extend the new 48-inch force main header to the dry well area to facilitate permanent installation of Pump P-6 and temporarily tie in Pump A-1. Pump A-1 will temporarily operate utilizing the new 48-inch force main until removal from service later in the construction sequence.

a. Confirm KGV-12 and KGV-13 are closed for isolation of the new 48-inch diameter force main header. Continue to operate all remaining pumps, besides A-1 and A-5, through the existing East and West Force Mains.
b. The estimated total available pumping capacity is approximately 142 MGD.
c. Continue construction of the new 48-inch force main header in the lower dry well up to KGV-15 and KGV-16.
d. Temporarily tie in existing Pump A-1 discharge piping to the new 48-inch force main header using two 36-inch diameter 45-degree elbows, a 36-inch x 48-inch reducer, spools, and other temporary piping and fittings as needed.
e. Install temporary pipe supports, bracing, thrust blocks as needed to restrain the existing header for operation.
f. Successfully pressure test the new piping from Pump A-1 through KGV-12 and KGV-13, including the surge relief system.
g. Upon completion of successful pressure test, open KGV-12 and start-up, test, and commission Pump A-1. Pump A-1 will be operated by the OCO through the new 48-inch force main and the East Force Main only while the remaining pumps continue to operate through existing piping.
h. The estimated total available pumping capacity is restored to exceed 150 MGD.

21. Phase E2B (Drawing E-108): Demolish existing Pump A-5; install new load break switch P5/P6 and new pump P6; and reconnect Pump A-1.

a. This work is to be performed in coordination with work under Phase G5.
b. Install new MV Load Break Switch P5/P6 at the former DT4 location.
c. Install new Pump P-6 motor starter.
d. Perform permanent termination of the P6 motor starter to the P5/P6 MV switch.
e. Apply LOTO to MCC-P1-1 motor starter for Pump A-5.

f. Demolish Pump A-5, including all conduit and wiring between the pump and the MCC motor starter bucket, as well as all associated ancillary equipment.

1) Repurpose and relabel the MCC bucket as a spare cubicle.

g. Isolate Bus A – S3. Coordinate with the OCO to verify that no loads shall be operating from this bus. Transfer loads in coordination with the OCO as necessary so that all loads are energized from Bus A – S1.

1) Open S3 Tie circuit breaker (CB-309).
2) Open S3 Main circuit breaker (CB-301).
3) Open S1 to S3 Tie circuit breaker (CB-308).

h. Replace DT4 switchgear S3 circuit breaker (CB-306)

1) Remove and replace with new circuit breaker (CB-306)
2) Refurbish existing circuit breaker and deliver it to the Owner.

i. Replace CTs on S3.

1) Remove and demolish existing load-side CTs in DT4 cubicle (CB-306).
2) Install new load-side CTs in DT4 cubicle (CB-306).

j. Install new feeders between the S3 DT4 cubicle (CB-306) and the new P5/P6 MV switch.
k. Reconfigure electromechanical relays at S3 per the PSA study.
l. Restore S3 circuit breakers CB-309, CB-301, and CB-308 to normal operating conditions.
m. Isolate Bus A – S1. Be advised that open/cold transitions will result in a full loss of power. Coordinate outages and affected loads with the OCO.

1) Coordinate with the OCO to transfer Bus A loads from S1 to Bus A on S3. Affected DTs include DT1, DT5, DTT12, DT2, and DT7.
2) Open S1 Tie circuit breaker.
3) Open S1 tie-to-S3 switchgear circuit breaker.

n. Replace CTs on S1.

1) Remove and demolish existing load-side CTs in the DT4 cubicle.
2) Install new load-side CTs in the DT4 cubicle.

o. Install new feeder from the new SWGR DT4 (P5/P6) to new Pump P-6 motor starter.
p. Perform permanent terminations for new Pump P-6 and at new P5/P6 MV switch.
q. Install new feeders between the S1 DT4 cubicle and the new P5/P6 MV switch.
r. Reprogram protective relays at S1 per the PSA study.
s. Return all S1 buses to normal operating conditions.

1) Close S1 Tie circuit breaker.
2) Close S1 tie-to-S3 switchgear circuit breaker.

t. Transfer Pump A-1 from P2/P4 to P5/P6.

1) The estimated total available pumping capacity through this step is approximately 82 MGD.
2) Shutdown Pump A-1 and A-2 and apply LOTO at SWGR S1 and S3 DT5 feeder CB.
3) Disconnect Pump A-1 from the P2/P4 MV switch.
4) Reuse the temporary feeder to temporarily terminate Pump A-1 at the P5/P6 MV switch.
5) Remove LOTOs from S1 and S3 and energize the new SWGR DT4 (P5/P6).
6) Restore power and return Pumps A-1 and A-2 to operation.
7) The estimated total available pumping capacity is restored to over 150 MGD.

u. Start-up, test, and commission new Pump P-6.

22. Phase G5 (Drawing G-105): Install Pump P-6 and all associated equipment, including motor/drive, shaft, pump controls, suction and discharge piping/valves, isolation valves, cone valves, valve controls, and seal water. Demolish pipe directly west of Pump A-2's discharge tee and install a temporary blind flange. Demolish Pump A-5 and a section of discharge header between Pumps A-1 and A-2.

a. Install new Pump P-6 and all associated structural supports and ancillary equipment including motor/drive, shaft, electrical systems and controls. Install all associated suction and discharge piping through KGV-15, new gate valve GV-6, new cone valve CONV-6, and all associated supports, electrical systems, and controls. Successfully pressure test the new piping between GV-6 and KGV-15.

1) The estimated total available pumping capacity exceeds 150 MGD.
2) Work under Electrical Phase E2B must be completed before start-up of Pump P-6.

b. Remove the plug from the Pump P-6 suction piping from within the Wet Well.

1) The estimated total available pumping capacity is approximately 142 MGD when the West Wet Well is out of service for the plug removal.

c. Place the West Wet Well back into service and temporarily close KGV-14 for initial start-up and testing of Pump P-6.

1) The estimated total available pumping capacity exceeds 150 MGD.

d. Upon completion of successful pressure testing, open GV-6 and KGV-15 and start up new Pump P-6 via the new 48-inch force main header. Complete start-up, testing, and commissioning of Pump P-6. The OCO will operate pumps A-1 and P-6 through the new 48-inch force main header and continue to operate the remaining pumps through the existing system as modified.

1) The estimated total available pumping capacity exceeds 150 MGD.
2) Phase E2B must be completed before start-up and testing of Pump P-6.

e. Demolish header and discharge piping upstream of the Pump A-2 tee during low flow conditions as defined in Part 1.6.

1) The estimated total available pumping capacity is approximately 97.5 MGD during this step. Prioritize work necessary for installation of the blind flange with surge relief system connection on Pump A-2's discharge tee so that Pumps A-2, A-3, A-4, and A-7 can be returned to service as soon as possible.
2) Close KGV-14 and have the OCO take pumps A-2, A-3, A-4, A-5, and A-7 out of service.
3) Drain the Lower/East Force Main header.
4) Demolish pipe directly west of Pump A-2's discharge tee.
5) Install a blind flange with a connection for the 10" surge relief system on the west end of Pump A-2's discharge tee.
6) Demolish the old discharge header from A-5, through the pipe tapping saddle for Line Stop 2. Demolish a portion of the 14-inch surge relief piping through its isolation valve as shown on the drawings.
7) Open KGV-14 and bring pumps A-2, A-3, A-4, and A-7 back into service.
8) The estimated total available pumping capacity exceeds 150 MGD.
9) Close KGV-16 and take Pump A-1 out of service. Drain and demolish the discharge piping of Pump A-1 up to flange downstream of its existing cone valve.

f. Demolish existing Pump A-5 and associated suction and discharge piping, fittings, check valve SCV-A5, GV-B5, shaft, motor, eddy current drive, and accessories.

1) Phase E2B must be completed before demolition of Pump A-5.

23. Phase E3 (Drawing E-108): Install New Pump P-4.

a. Complete in coordination with work under Phase G6.
b. Install new Pump P-4 and associated motor starter.
c. Terminate the Pump P-4 motor starter to the P2/P4 MV switch DT5.

1) The estimated total available pumping capacity is approximately 119.5 MGD during this step.
2) LOTO the P2/P4 MV switch DT5.
3) Perform termination of the P4 motor starter to the P2/P4 MV switch.
4) Remove LOTOs from the P2/P4 MV switch DT5.
5) Energize Pumps A-2 and P-4. The estimated total available pumping capacity exceeds 150 MGD.
6) Start-up, test, and commission new Pump P-4 under Phase G6.

24. Phase G6 (Drawing G-106): Continue with installation of new 36-inch and 48-inch piping, fittings, valves, and other equipment as well as installation of Pump P-4 and all associated piping, cone valve CONV-4, electrical, controls, and appurtenances.

a. Install new 48-inch diameter lower header from KGV-16 to the temporary blind flange upstream of KGV-18.

1) The estimated total available pumping capacity exceeds 150 MGD for most of this step. The pumping capacity will be reduced to approximately 142 MGD when Pump P-6 is taken out of service to connect new piping to KGV-16.

b. Install new 36-inch diameter piping including knife gate valves KGV-24 and KGV-17.
c. Successfully pressure test new piping.
d. Following successful pressure test of new piping, request the OCO close valve KGV-17, close valve KGV-18, open valve KGV-24, and return Pump A-1 into service. The OCO will operate the system with Pump P-6 and Pump A-1 discharging through the new upper header while Pumps A-2, A-3, A-4 & A-7 discharge to both existing force mains with KGV-14 open.

1) The estimated total available pumping capacity exceeds 150 MGD.

e. Install new Pump P-4 and all associated structural supports and ancillary equipment including motor/drive, shaft, electrical systems, and controls. Install all associated suction and discharge piping through KGV-17, new gate valve GV-4, new cone valve CONV-4, and all associated supports, electrical, and controls. Successfully pressure test the new piping between GV-4 and KGV-17.

1) The estimated total available pumping capacity exceeds 150 MGD.

f. Temporarily shutdown the West Wet Well. Remove plug from P-4 suction piping.

1) The estimated total available pumping capacity is approximately 142 MGD.
2) If GV-2E is closed for redundant isolation of the West Wet Well, the estimated available pumping capacity will be reduced to approximately 82 MGD and work will be constrained to very low flow conditions as defined in Part 1.6.

g. Place the West Wet Well back into service.

1) The estimated total available pumping capacity is restored to exceed 150 MGD.

h. Request the OCO open GV-4 and KGV-17.
i. Start-up, test, and commission new Pump P-4 via the new 48-inch force main header.
j. The OCO will operate pumps A-1, P-4, and P-6 through the new 48-inch force main header and continue operating Pumps A-2, A-3, A-4 & A-7 as previously noted.

1) Phase E3 work must be completed before start-up and testing of Pump P-4.

k. Construct temporary 36-inch diameter vertical piping, including temporary KGV-19, to the upper header.

1) The estimated total available pumping capacity is reduced to approximately 112 MGD when the temporary piping is connected to the upper header

assuming that KGV-12, KGV-14, and East Force Main valves at the grit tank are closed. Coordinate operation of valves with the OCO.

l. Construct temporary 36-inch diameter horizontal piping at El. -6.50 including temporary KGV-25 and temporary flow meter, to the West Force Main tee at KGV-13.

1) Use an analog spare point to connect the temporary flow meter's field signal to the existing PLC-ECR. Update the OIT-ECR main display to prominently display the measurement. Once the transit time flowmeter is removed under later steps, update the OIT-ECR display to delete the temporary signal.
2) Coordinate with the OCO and Construction Manager to record temporary flow meter's historical flow data into the SCADA Historian system and the HACH Water Information Management System (WIMS) for regulatory purposes.

m. Coordinate closure of both 36-inch valves on the temporary piping with the OCO. The OCO will operate Pumps A-1, A-2, A-3, A-4, A-7, P-6, and P-4 with both the East and West Force Mains. Use of KGV-14 to isolate mains will be at the OCO's discretion except where otherwise needed for construction sequencing.

25. Phase G7 (Drawing G-107): Demolish a portion of West Force Main piping and tie in upper header from KGV-13 to the West Force Main.

a. The estimated total available pumping capacity in this step is reduced to approximately 112 MGD when the West Force Main is taken out of service so work must be completed during dry weather conditions as defined in Part 1.6. Confirm that the bypass pumping system is operational prior to this work. It is critical that the West Force Main be returned to service as soon as possible to restore full capacity.
b. Install and test additional valves, piping, fittings, pumps, and other equipment and instruments as necessary for draining the contents of the West Force Main directly into one or both of the existing wet wells under subsequent steps. If new taps, saddles, or outlets are needed on the West Force Main for drains and vents, coordinate locations with the OCO. New connections for temporary drains and vents will only be permitted on existing pipes and fittings to be removed in subsequent phases. Comply with dry weather and flow timing restrictions as applicable.
c. Request the OCO take pumps A-2, A-3, A-4, and A-7 out of service, close valves KGV-13, KGV-14, KGV-25, and GV-B10, and close the West Force Main's two isolation valves at the grit tank while this phase's work is ongoing. The OCO will meanwhile operate Pumps P-6, A-1, and P-4 using the upper header and the East Force Main.

1) Be advised that KGV-14 is being closed since the condition of GV-B10 is unreliable and it may not seat watertight.

d. Drain the West Force Main.
e. Remove elbow and vertical pipe on West Force Main and interconnect the new tee downstream of KGV-13 on the header at El. -6.50' to the existing West Force

Main. Demolish remaining piping back to GV-B10 and install a blind flange at GV-B10.

1) Update the OIT-ECR main display to reflect the demolition of the existing flow meter.
2) Coordinate with the OCO and Construction Manager to update the SCADA Historian and the HACH WIMS as necessary for regulatory purposes.

f. Coordinate with the OCO to return pumps A-2, A-3, A-4, and A-7 to service and open valves KGV-13, KGV-14, and KGV-25.

1) The estimated total available pumping capacity exceeds 150 MGD.

26. Phase G8 (Drawing G-108): Connect existing Pump A-2 to the new discharge header and continue with demolition of the existing 48-inch and 36-inch discharge piping systems.

a. During dry weather conditions as defined in Part 1.6, request that the OCO take Pumps A-2, A-3, A-4, and A-7 out of service and close valves KGV-14, KGV-18, and KGV-19 while this phase's work is ongoing. The OCO will meanwhile operate the remaining Pumps A-1, P-4, and P-6 with the East and West Force Mains.

1) The estimated total available pumping capacity in this step is reduced to approximately 135 MGD.
2) Pumps A-3, A-4, and A-7 are to remain out of service and be demolished in the subsequent phase. However, be prepared to install blind flanges and temporarily reinstate one or more of these pumps if needed during either this phase or the subsequent phase as a contingency in the event of unanticipated wet weather.

b. Drain the existing upper and lower headers in the pump room that include GV-B10, KGV-14, Pump A-2, Pump A-3, Pump A-4 and Pump A-7.
c. Remove the two tees adjacent to GV-B9 and Pump A-2's discharge tee.
d. Install blind flange on the eastern side of the Pump A-2 discharge tee.
e. Remove the blind flange and associated surge relief piping from the west side of Pump A-2's discharge tee
f. Drain the 48-inch header at KGV-19 and remove the blind flange from the east side of KGV-19.
g. Install temporary 48-inch spool connecting the new 48-inch header and the Pump A-2 discharge tee. Construct temporary connection for the new eastern 10" surge relief piping.
h. Coordinate with the OCO to open valves KGV-18 and KGV-19 and to return Pump A-2 to service. Valve KGV-14 is to remain closed for isolation of piping under subsequent phases.

1) The estimated total available pumping capacity exceeds 150 MGD.

i. Complete demolition of existing 48-inch header piping between Pumps A-2 and A-3 as indicated on the Drawing G-108 including valves GV-B9 and GV-B3.

27. Phase E4 (Drawing E-109): Demolish Existing Pumps A-3, A-4, A-7 and Load Break Switch DT6.

    a. Complete work in coordination with Phase G9.
    b. Shutdown Pumps A-3 and A-7 and apply LOTO to DT6 feeder circuit breakers at S1 and S3.
    c. Disconnect existing DT6 feeders at switchgear S1 and S3.
    d. Demolish existing feeders, MV load break switch DT6, and motor starters for Pumps A-3 and A-7, including all associated conduit, wiring, and ancillary equipment.
    e. Apply LOTO to MCC-P1-2 motor starter for Pump A-4.
    f. Demolish Pump A-4, including all conduit and wiring between the pump and MCC motor starter bucket, as well as all ancillary equipment.

        1) Repurpose and relabel the MCC bucket as a spare cubicle.

28. Phase G9 (Drawing G-109):

    a. The estimated total available pumping capacity exceeds 150 MGD in this step assuming that Pumps A-1, A-2, P-4, and P-6 and both the East and West Force Mains remain in service.

        1) If any disruptions to those pumps or force mains are proposed, additional constraints may apply. See Part 1.6.
        2) The influent pumping system will not have redundancy to convey 150 MGD if the largest pump is out of service until new pumps are installed in Phase G12. In order to reduce operational risks, minimize the time between demolition of Pump A-7 in this phase and installation of new Pump P-1 in Phase G12.

            a) In this phase, sequence demolition to progress from the west to the east and upstream to downstream such that Pump A-7 can be returned to service with fewer modifications if needed in the event of a failure of one of the active pumps.
            b) Commence Phase G11 work as soon as the existing header is demolished up to valve KGV-14.
            c) Commence Phase G12 demolition of the Pump A-3 suction piping.

    b. Request the OCO close valve GV-2E.
    c. Operate the Plant Drain bypass pumping system.
    d. Isolate, drain, remove solids from, clean, and disinfect the East Wet Well and remove it from service. Isolate the East Wet Well. Assume that a physical plug will need to be inserted into the 84-inch influent line for isolation of the East Wet Well.
    e. Drain all suction and discharge piping supporting pumps A-3, A-4, and A-7 and their common header up to KGV-14. KGV-14 will remain closed, however it may be necessary to plug the existing 48-inch header at Line Stop 1 to improve isolation and safety for demolition of the upstream portions of the existing header.
    f. Deenergize Pump A-3. Demolish existing Pump A-3 and all associated suction and discharge piping through and including discharge GV-B8, suction GV-A3 and the 24” discharge cone valve CONV-A3.

g. Deenergize Pump A-4. Demolish existing Pump A-4 and all associated suction and discharge piping through and including discharge GV-B11, suction GV-A4, the 20" discharge check valve SCV-A4, the 20" discharge flow meter, and discharge gate valve GV-B4.
h. Construct wet well modifications in the East Wet Well including expansion of the future Pump P-3 suction fillet opening, interior baffles, any remaining wall penetrations for new piping, selective demolition and rerouting of the mechanical areaway room drain piping, and any identified concrete repairs as directed by the Engineer.
i. Deenergize Pump A-7. Demolish existing Pump A-7 and all associated suction and discharge piping through and including discharge GV-B10, suction GV-A7, discharge GV-B7, and the 36-inch discharge check valve BCV-A7.
j. Complete demolition of the existing 48-inch discharge header up to KGV-14 including the flow meter and Line Stop 1. Install temporary blind flange and other materials as needed to seal the open end of KGV-14.

    1) Update the OIT-ECR main display to reflect the demolition of the existing flow meter.
    2) Coordinate with the OCO and Construction Manager to update the SCADA Historian and the HACH WIMS as necessary for regulatory purposes.

29. Phase G10 (Drawing G-110): Construct 24" plant drain piping and all associated valves and supports.

    a. The estimated total available pumping capacity exceeds 150 MGD in this step assuming that Pumps A-1, A-2, P-4, and P-6 and both the East and West Force Mains remain in service.
    b. Continue operation of the Plant Drain bypass pumping system.
    c. Install blind flanges at the suction line connections associated with previous Pumps A-3, A-4, and A-7 in case the East Wet Well has to be put back into service.
    d. Construct new 24" diameter plant drain piping extension from the existing 24-inch pipe within the East Wet Well through the pump room and up to the new wall pipes for connections to the West Wet Well and East Wet Well as shown in Drawings M-103 and M-113. Successfully pressure test new 24" diameter plant drain piping.
    e. Once the 24" plant drain piping has been successfully pressure tested, demobilize the plant drain bypass system, place the new plant drain piping into service, and perform restoration of disturbed areas. Isolate wet wells as necessary using the plant drain isolation valves to support maintenance of plant operations.

30. Phase G11 (Drawing G-111): Install vertical piping from KGV-14 to base elbow. Construct lower header from flow meter FE-0065-1 through pump A-2 tee. Install future pump discharge valves KGV-23, KGV-21 and KGV-20.

    a. The following steps assume that the new discharge header for the eastern pumps is constructed while KGV-14 remains closed, and KGV-14 is then relocated to its final position as KGV-22 in Phase G12. However, it is also acceptable to relocate KGV-14 in this phase provided that work complies with constraints described in Phase G12 and the Contractor is prepared to install a blind flange on the open connection to the East Force Main when needed.

b. The estimated total available pumping capacity exceeds 150 MGD in this step assuming that Pumps A-1, A-2, P-4, and P-6 and both the East and West Force Mains remain in service.
c. In place of KGV-22, install temporary piping for alignment only (KGV-14 will be relocated to KGV-22 location after piping is in place).
d. With KGV-14 closed, install vertical piping from KGV-14 to base elbow.
e. Install new horizontal 48-inch piping and new 48-inch magnetic flow meter FE-0065-1 from the 48-inch base elbow up to but excluding the blind flange on the east side of Pump A-2's tee. Do not connect into Pump A-2's tee at this step.
f. Further extend the new 48-inch force main header through 36-inch diameter discharge valves KGV-23, KGV-21 and KGV-20 to support installation of new Pumps P-1, P-2 and P-3 in the next phase.
g. Successfully pressure test the new piping upstream of KGV-14.

31. Phase E5 (Drawing E-109): Install New MV Switch P1/P3 and Pumps P-1, P-2, and P-3.

a. Complete this work in coordination with work under Phase G12.
b. Install new MV Load Break Switch P1/P3 at the former DT6 location.
c. Install new Pump P-1 motor starter.
d. Install new Pump P-3 motor starter.
e. Perform permanent termination of the P1 and P3 motor starters to the P1/P3 MV switch.
f. Install new Pump P-2 motor starter.
g. Apply LOTO to DT5 feeder CB at S1 and S3.
h. Install new feeder between P2 motor starter and P2/P4 MV switch.
i. Perform permanent termination of the P2 motor starter to the P2/P4 MV switch.

    1) Electrically and mechanically interlock the P2/P4 MV switch such that no more than two motors may operate simultaneously.

j. Remove LOTO from DT5 feeder CB at S1 and S3.
k. Isolate Bus B – S3. Open/cold transitions will result in a full loss of power. Coordinate outages and affected loads with the Owner.

    1) Coordinate with the Owner to transfer Bus B loads from S3 to Bus B on S1. Affected DTs include: DTT1, DTT4, DTT11, DT3, and DTT13.
    2) Open S3 Tie circuit breaker (CB-309).
    3) Confirm Tie to S3 SWGR CB on S1 is closed.
    4) Confirm Tie to S1 SWGR CB on S3 is closed (CB-308).
    5) Open S3 Main circuit breaker that ties to S4.

l. Remove and replace existing DT6 switchgear S3 circuit breaker with new circuit breaker (CB-313). Existing circuit breaker to be refurbished and handed over to owner.
m. Replace CTs on S3.

    1) Remove and demolish existing load-side CTs in the DT6 cubicle.
    2) Install new load-side CTs in the DT6 cubicle.

n. Install new feeders between the S3 DT6 cubicle and the new P1/P3 MV switch.
o. Reconfigure electromechanical relays at S3 per the PSA study.

p. Restore non-isolation conditions.

1) Close S3 Tie circuit breaker (CB-309).
2) Close S3 Main circuit breaker tying to S4.
3) Confirm Tie to S3 SWGR CB on S1 is closed.
4) Confirm Tie to S1 SWGR CB on S3 is closed (CB-308).

q. Isolate Bus B – S1. Open/cold transitions will result in a full loss of power. Coordinate outages and affected loads with the Owner.

1) Coordinate with the Owner to transfer Bus B loads from S1 to Bus B on S3. Affected DTs include: DTT1, DTT4, DTT11, DT3, and DTT13.
2) Open S1 Tie circuit breaker.
3) Open S1 tie-to-S4 switchgear circuit breaker (generator feeders).
4) Confirm Tie to S3 SWGR CB on S1 is closed.
5) Confirm Tie to S1 SWGR CB on S3 is closed (CB-308).

r. Replace CTs on S1.

1) Remove and demolish existing load-side CTs in the DT6 cubicle.
2) Install new load-side CTs in the DT6 cubicle.

s. Install new feeders between the S1 DT6 cubicle and the new P1/P3 MV switch.
t. Perform permanent terminations at P1/P3 MV switch and S1 and S3.
u. Reprogram protective relays at S1 per the PSA study.
v. Restore all circuit breakers at S1, S3, and S4 to normal operating conditions.

1) Confirm final circuit breaker settings align with original operating conditions.

w. Remove LOTO from DT6 feeder CB at S1 and S3.
x. Re-energize the P1/P3 MV switch.
y. Start-up, test, and commission new Pumps P-1, P-2, and P-3.

32. Phase G12 (Drawing G-112): Relocate KGV-14 to the location of KGV-22; install new pumps P-1, P-2, and P-3; and demolish the temporary 36-inch force mains.

a. During dry weather conditions, defined in Part 1.6, close KGV-12 and drain the East Force Main. Relocate KGV-14 to a new position as KGV-22 and keep KGV-22 closed. Replace the relocated KGV-14 with a spool piece and a restrained dismantling joint. Close valve KGV-12 and the East Force Main's two valves at the grit tank and then successfully pressure test the East Force Main downstream of valve KGV-22.

1) The estimated total available pumping capacity in this step is reduced to approximately 112 MGD since the East Force Main is taken out of service so work must be completed during dry weather conditions as defined in Part 1.6. Confirm that the bypass pumping system is operational prior to this work. It is critical that the East Force Main be returned to service as soon as possible to restore full capacity.

b. Upon performing a successful pressure test of the East Force Main, open KGV-12 and bring the East Force Main back into service. Keep KGV-22 closed.

1) The estimated total available pumping capacity exceeds 150 MGD.

c. Install new Pump P-3 and all associated structural supports and ancillary equipment including motor/drive, shaft, electrical systems and controls. Install all associated suction and discharge piping up to KGV-20, new gate valve GV-3, new cone valve CONV-3, and all associated supports, electrical, and controls. Successfully pressure test the new piping between GV-3 and KGV-20.

1) The estimated total available pumping capacity exceeds 150 MGD.
2) Phase E5 installation of the P1/P3 switchgear and P3 motor starter must be completed to power new Pump P-3.

d. Install new Pump P-2 and all associated structural supports and ancillary equipment including motor/drive, shaft, electrical systems, and controls. Install all associated suction and discharge piping up to KGV-21, new gate valve GV-2, new cone valve CONV-2, and all associated supports, electrical systems, and controls. Successfully pressure test the new piping between GV-2 and KGV-21.

1) The estimated total available pumping capacity exceeds 150 MGD.
2) Phase E3 installation of the P2/P4 switchgear and Phase E5 installation of P2 motor starter must be completed to power new Pump P-2.
3) The P2/P4 switchgear will be temporarily feeding three pumps: A-2, P-2 and P-4. Only two pumps will be capable of operation at any time until Pump A-2 is demolished in Phase G14.

e. Install new Pump P-1 and all associated structural supports and ancillary equipment including motor/drive, shaft, electrical systems, and controls. Install all associated suction and discharge piping up to KGV-23, new gate valve GV-1, new cone valve CONV-1, and all associated supports, electrical systems, and controls. Successfully pressure test the new piping between GV-1 and KGV-23.

1) The estimated total available pumping capacity exceeds 150 MGD.
2) Phase E5 installation of the P1/P3 switchgear and P1 motor starter must be completed to power new Pump P-1.
3) The P2/P4 switchgear will be temporarily feeding three pumps: A-2, P-2 and P-4. Only two pumps will be capable of operation at a time until Pump A-2 is demolished in Phase G14.

f. Upon completion of successful pressure testing, remove all plugs, coordinate with the OCO to bring the East Wet Well back into service, and start up new Pumps P-1, P-2, and P-3.

1) The estimated total available pumping capacity exceeds 150 MGD.
2) Verify there is no leakage at or upstream of valves GV-1, GV-2, and GV-3.
3) Open valves GV-1, KGV-23 and KGV-22.
4) Start-up, test, and commission new Pump P-1.
5) Open valves GV-2 and KGV-21.
6) Start-up, test, and commission new Pump P-2.

7) Open valves GV-3 and KGV-20.
8) Start-up, test, and commission new Pump P-3.

g. During dry weather conditions, defined in Part 1.6, demolish temporary 48-inch piping on the lower and upper headers.

1) Confirm that the bypass pumping system is operational prior to this work. The estimated total available pumping capacity in this step is approximately 112 MGD with Pumps P-1, P-2, and P-3 and only the East Force Main in service.
2) Close valve KGV-12 and drain the West Force Main and the isolated discharge headers.
3) On the lower header, demolish KGV-19 and the adjacent spool and then install a blind flange on the open branch of the 48-inch tee.
4) On the upper header, demolish the two adjoining 48-inch tees used for the temporary header and metering connections, and install new 48-inch piping to reflect final conditions as shown on Drawing M-104.
5) On the upper header, demolish the temporary 36-inch piping connecting to the 48-inch tee immediately downstream of valve KGV-13, and then install a blind flange on the open branch of the tee.
6) Open valve KGV-12 and coordinate with the OCO to return Pumps A-1, P-4, and P-6 to service.
7) The estimated total available pumping capacity is restored to over 150 MGD.
8) Complete demolition of the remainder of the temporary force mains between the areas demolished above.

h. During dry weather conditions, defined in Part 1.6, close valves KGV-22 and KGV-18. Remove blind flanges at and adjacent to the Pump A-2 discharge tee and interconnect the two new lower headers. Successfully pressure test the pipe assembly from KGV-22 through Pump A-2's new tee fitting and KGV-18.

1) The estimated total available pumping capacity is approximately 135 MGD.

33. Phase E6 (Drawing E-109): Demolish existing Pump A-1.

a. Complete this work in coordination with work under Phase G13.
b. Shutdown Pumps A-1 and P-6 and apply LOTO at the P5/P6 MV switch.
c. Demolish Pump A-1 and its associated motor starter, including all conduit, wiring, and ancillary equipment.

34. Phase G13 (Drawing G-113): Construct West Wet Well baffles, demolish Pump A-1, and perform concrete repairs in the West Wet Well.

a. The estimated total available pumping capacity exceeds 150 MGD in this step assuming that Pumps A-2, P-1, P-2, and P-3 and both the East and West Force Mains remain in service.

1) The influent pumping system will not have redundancy to convey 150 MGD if the largest pump is out of service until the West Wet Well is returned to

service. In order to reduce operational risks, expedite the construction of the wet well baffles once the West Wet Well is taken offline.

b. Close GV-2W and temporarily drain the West Wet Well to remove it from service. Assume that it will be necessary to install a temporary plug upstream of GV-2W to maintain isolation of the West Wet Well.
c. Construct reinforced concrete baffle beams in the West Wet Well. See Drawing S-102.
d. Perform any identified concrete repairs in the West Wet Well as directed by the Engineer.
e. Deenergize Pump A-1. Install a temporary plug in the existing piping to remain upstream of GV-A1. Demolish existing Pump A-1 and all associated suction and discharge piping up to KGV-24 and including suction GV-A1 and discharge cone valve CONV-A1.

35. Phase E7 (Drawing E-109): Install new Pump P-5 and demolish Pump A-2.

a. Complete this work in coordination with work under Phase G14.
b. Install new Pump P-5.
c. Install new feeder between the Pump P-5 motor starter and P5/P6 MV switch.
d. Perform permanent termination of the P-5 motor starter to the P5/P6 MV switch.
e. Remove LOTOs from the P5/P6 MV switch.
f. Start-up, test, and commission new Pump P-5.
g. Shutdown Pumps P-2, P-4, and A-2.
h. Apply LOTO at the P2/P4 MV switch.
i. Demolish Pump A-2 and its associated motor starter, including all conduit, wiring, and ancillary equipment.
j. Remove electrical and mechanical interlocks that prevented operation of three motors on the P2/P4 MV switch.
k. Remove LOTOs from the P2/P4 MV switch.
l. Return Pumps P-2 and P-4 to normal operation.

36. Phase G14 (Drawing G-114): Install Pump P-5 and demolish Pump A-2.

a. Install new Pump P-5 and all associated structural supports and ancillary equipment including motor/drive, shaft, electrical systems, and controls. Install all associated suction and discharge piping up to KGV-24, new gate valve GV-5, new cone valve CONV-5, and all associated supports, electrical systems, and controls. Successfully pressure test the new piping between GV-5 and KGV-24.

1) The estimated total available pumping capacity exceeds 150 MGD.

b. Upon completion of a successful pressure test, temporarily shutdown the West Wet Well to remove the plug on the new Pump P-5 suction line and then return the West Wet Well to service. Open GV-5 and KGV-24, and start-up, test, and commission new Pump P-5.

1) The estimated total available pumping capacity exceeds 150 MGD provided that Pump A-2 is still in service and can be operated while GV-2W is closed. If Pump A-2 is already taken out of service, then the temporary shutdown of the West Wet Well must be performed during dry weather

conditions, defined in Part 1.6, since the total available pumping capacity is estimated to be approximately 112 MGD with only Pumps P-1, P-2, and P-3 in service.

c. Deenergize Pump A-2.
d. During dry weather conditions, defined in Part 1.6, close valves KGV-18, KGV-22, GV-2W, and GV-2E to facilitate demolition of Pump A-2. Install plugs in the piping upstream of GV-2W and GV-2E if needed.

    1) The estimated total available pumping capacity is approximately 112 MGD assuming Pumps P-4, P-5, and P-6 are in service.
    2) Drain the force main between KGV-18, KGV-22, GV-2E, and GV-2W.
    3) Demolish existing Pump A-2 and all associated suction and discharge piping including discharge gate valve GV-B2, discharge cone valve CONV-A2, and the tee on the discharge header. The Pump A-2 suction elbow is to be abandoned.
    4) Complete construction of the new 48-inch lower header to reflect final conditions depicted on Drawing M-102.
    5) Open valves KGV-18 and KGV-22.
    6) The estimated total available pumping capacity exceeds 150 MGD.

37. Phase G15 (Drawing G-115): Commission the complete influent pumping system.

    a. Install and test new elbows, tee, ancillary components, and accessories interconnecting GV-2W and GV-2E. See Drawing M-101.
    b. If plugs were installed upstream of GV-2W and GV-2E, incrementally shutdown the respective wet wells and remove the plugs during dry weather conditions, defined in Part 1.6.
    c. Open valves GV-2W and GV-2E.
    d. Complete any remaining modifications for the surge relief, air release, instrumentation, electrical, hydraulic, or other systems needed for the influent pumping system's commissioning.
    e. All six new Pumps P-1, P-2, P-3, P-4, P-5, and P-6 and their systems are now installed and individually commissioned.
    f. Commission the complete influent pumping system and perform process control system testing pursuant to Section 01 91 13 'General Commissioning Requirements' and Section 40 61 21.20 'Process Control System Testing'.
    g. Demobilize the screened influent bypass pumping system and perform restoration of disturbed areas.

38. Rehabilitate the East and West Force Mains with Spray-In-Place Pipe Lining (SIPPL). See Drawings MD-113, MD-114, MD-115, M-107, and M-108 as well as Specification Section 33 01 30.70 'Spray-in-Place Polymeric Pipe Lining'.

    a. The work in this step is to be performed during dry weather conditions, defined in Part 1.6, since one of the two influent pumping system force mains will be out of service.

        1) Although this sequence is presented linearly, anticipate that this work will need to be performed over non-continuous periods to accommodate dry weather timing restrictions.

2) It is assumed that new fittings will be removed temporarily as needed for internal access to either force main. When SIPPL construction activities for either force main cannot be completed within a single dry weather period, temporarily install the new fittings so that the force main can be returned to service. Permanent installation of the new fittings will not be deemed complete until their removal is no longer required for SIPPL construction.

b. Portions of this work may be performed in coordination with work under other earlier phases with approval of the Owner, OCO, and Engineer.
c. Provide temporary supports for piping systems and valves as needed.
d. Temporarily relocate existing piping and other systems as necessary for SIPPL operations and the replacement of insulated 48-inch fittings. Any interruptions to existing systems must comply with constraints identified above in Part 1.7.
e. Valves proposed for isolation of the force mains might not seat watertight. Seal open ends of the piping to prevent leakage and reduce risk of flooding the work area.
f. Incrementally perform SIPPL of the East Force Main:

1) For SIPPL between KGV-12 and the new 90-bend:

a) Close and LOTO valve KGV-12, valve KGV-22, and the two valves on the East Force Main upstream of the grit tanks.
b) Drain the isolated segment of the East Force Main.
c) Demolish the existing 48-inch 90-bend at the change of tunnel direction.
d) Prepare to install the new 48-inch 90-bend so that service can be promptly restored when needed.
e) Temporarily disassemble the new 48-inch piping downstream of KGV-12 as needed for working access.
f) Clean and prepare the substrate for the force main. Exercise caution to minimize risk of accidental damage to the force main. Anticipate significant accumulation of deposits throughout. Properly dispose of wastewater and solids.
g) Perform pre-rehabilitation internal inspection. Promptly notify the Construction Manager if any defects are observed. Submit pre-rehabilitation video and report to the Construction Manager.
h) After the Engineer's review and acceptance of the pre-rehabilitation internal inspection, perform SIPPL of the existing East Force Main in the segment between KGV-12 and the 90-bend.
i) After providing adequate time for curing, perform post-rehabilitation inspection and collect samples for testing as needed. Submit post-rehabilitation video and report to the Construction Manager.

2) For SIPPL between the new 90-bend and the valves immediately upstream of the grit tanks, repeat the procedure used for the previous segment's SIPPL except with demolition of two fittings near the grit tanks for access to that end of the force main. Be prepared to promptly install the new fittings to restore service when needed. See Drawings MD-113 and M-117.
3) Permanently install the new 90-bend and fittings with insulation system seamlessly tied into existing insulation on adjacent piping. Selectively replace insulation system on existing adjacent piping as needed.

g. Incrementally perform SIPPL of the West Force Main with the same procedure used for the East Force Main except that valve KGV-13 is used for isolating the upstream end of the piping instead of KGV-12 and KGV-22.

39. Commence closeout procedures, complete final cleaning, and demobilize the construction workforce. See Section 01 77 00 ‘Closeout Procedures’.

SECTION 013526 - GOVERNMENTAL SAFETY REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes:

1. Preparing and implementing a Health and Safety (H&S) Plan to establish in detail the protocols necessary for protecting workers from potential hazards during the work specified in the Contract Documents.

B. Related Requirements:

1. Section 011000 "Summary" for a description of work.

1.3 DEFINITIONS

A. CIH is a certified industrial hygienist.

B. SSHO is the site safety & health officer. The Contractor shall provide a responsible individual, competent through experience and training, to be able to identify hazards associated with the Contractor’s Work and has overall responsibility for the safety and health performance of contractor’s activities, including lower tier subcontractors. The person shall be present on-site during all contractor activities and shall ensure that the requirements of the Project Specific Safety and Health Plan are fully implemented. This person shall also:

1. Attend pre-work conferences and site safety and health orientations and briefings. The Contractor is expected to supplement the site orientation with information related to the Contractor's scope of work.
2. Document weekly tool box safety meetings for the Contractor’s employee’s onsite.
3. Submit weekly safety and health inspection reports of the construction site as it relates to the Contractor's scope of work. Record hazards identified, and corrective actions taken. The weekly inspection report shall be provided to the Site Manager.
4. Report all job-related accidents/illness related to the Contractor’s employees and lower tier subcontractors as soon as practical to the Site Manager and perform site accident and incident investigations associated with the Contractor's scope of work and fully cooperate with any other accident or incident investigations which may be required.
5. Maintain safety and health statistical information and provide monthly reports to the Site Manager. Reports shall include, employee hours worked, the number of first aid cases, the number of medical treatment cases, the number of restricted and lost workday cases as defined by the US Occupational Health and Safety Administration. These reports shall

include statistical information related to all of the Contractor's activities and the activities of lower tier subcontractors.

6. Provide Site Manager with the immediate notification of any regulatory inspection and a copy of all resulting citations or notice of deficiencies.

1.4 ACTION SUBMITTALS

A. Qualifications of the CIH and the SSHO.

B. Prior to commencing work at the jobsite, Contractors must file with the Site Manager all required documents, such as: A copy of the ***Contractor's Project Specific Safety and Health Plan*** and copies of employee training certificates, insurance certificates, construction permits, blasting permits, crane certifications and operator licenses, Steam Boiler Certifications, Elevator Certifications and any approved "OSHA Variances," or other approvals as required to safely and legally perform the Contractor's Scope of Work. The ***Contractor's Project Specific Safety and Health Plan*** shall as a minimum include the following:

1. Letter of corporate commitment to Safety and Health signed by CEO or President of the contractor's organization.
2. Brief description of the contractor's scope of work.
3. Project safety and health organization, responsibilities and accountability procedures.
4. Project safety and health goals and objectives.
5. Project hazard communication and safety training. (This section shall include a minimum requirement for a site hazard communication program and weekly safety meetings.)
6. Activity hazard analyses covering activities within the contractor's scope of work describing the steps of each principle activity, the hazards associated with each activity and procedures to be used to eliminate or control the hazards.
7. Personal protective equipment. (Note: Minimum site PPE requirements shall include hard hats, safety glasses with side shields and sturdy work boots.)
8. Specialized medical surveillance and/or air monitoring procedures, if required.
9. Safe work procedures. These may be incorporated by reference to the Contractor's Corporate Safety and Health Program.
10. Safety inspections and audits.
11. Project emergency response and preparedness procedures including provisions for providing first aid and notification of emergency services.
12. The Contractor (and any of its subcontractors), must submit, a Hazardous Waste Management Plan that addresses the handling, labeling, transpiration and disposal of hazardous waste. The Contractor shall be held solely responsible for compliance with the provisions of all applicable regulations associated with hazardous waste generated as a consequence of the Contractor's activities.
13. Owner's site safety training.
14. Owner's lockout/tagout procedures.
15. Procedures for onboarding and providing safety training new project personnel throughout the project.

1.5 INFORMATIONAL SUBMITTALS

A. Listed below are general conditions related to Safety and Health which the Contractor is required to comply with.

1. Should a specific interpretation be required concerning special and/or unusual safety, fire protection, or environmental concerns not covered by, the National Fire Protection Association Codes, and current OSHA/EPA or other local regulations the contractor shall contact the Site Manager's Safety and Health Representative or Corporate Safety and Health Office for guidance.
2. The practices, procedures, and requirements set forth in this Appendix shall apply equally to all Contractors, and it is mandatory that each Contractor inform and enforce the provisions of this Appendix in all contracts with its Subcontractors.
3. The Site Manager shall have the right to direct the removal from the jobsite any Contractor or Contractor personnel for violation of safety, health, fire protection, or environmental rules and regulations.
4. Fighting or horseplay is strictly prohibited and shall be considered grounds for removal from the project.
5. The illegal use, possession, purchase, sale or diversion of a drug or controlled substance is prohibited. The use or possession of alcoholic beverages at the jobsite is prohibited.
6. The Site Manager shall have the right to direct the removal from the jobsite any defective tools and equipment, the use of which may create a hazardous situation.
7. The Site Manager reserves the right to delete, modify, or supplement these procedures at any time without prior notice, but in such event, will notify all contractors affected by such change in procedures.
8. The Site Manager reserves the right to evaluate the Contractor's, and any of its subcontractor's, overall safety performance, compliance with these procedures, and any established supplements, at intervals the Site Manager deems appropriate.
9. Prior to starting work in any jobsite area, each Contractor must first obtain permission and instructions from the Site Manager, or designee

1.6 TRAINING

A. Certify that all Contractor personnel assigned for the purpose of performing or supervising work in accordance with the provisions of the H&S plan have received appropriate safety training in accordance with 29 CFR 1926.65. Training shall consist of a minimum of 40 hours of health and safety training and 8 hours refresher training annually. In addition, Contractor's supervisory personnel shall have a minimum of 8 hours additional specialized training for managing hazardous waste operations.

B. Additionally, the Contractor shall be responsible for, and shall guarantee that, only personnel successfully completing the required training are permitted to enter designated areas of the site where worker protection is required.

C. All personnel newly assigned to the project, including subcontractor employees, shall complete a project-specific site safety orientation before performing any work on site. The Contractor shall maintain records of all orientations and training provided and shall ensure that newly assigned personnel are informed of current site hazards, emergency procedures, applicable health and safety requirements, and task-specific controls

D. All personnel assigned to the project must also complete the Owner’s site safety training. Incorporate Owner Site Safety training into

1.7 MEDICAL SURVEILLANCE

A. Certify that the services of an occupational physician will be provided and utilized to provide the minimum medical examinations and surveillance specified herein for all workers performing or supervising work in accordance with the provisions of the H&S plan.

B. The entire medical surveillance program shall meet the requirements of OSHA standard 29 CFR 1926.65(f) including the provision requiring the Contractor to obtain a physician's written medical opinion based on site specific information furnished by the Contractor.

C. Maintain all medical surveillance records in accordance with 29 CFR 1926.65 and make these records available to the Engineer or other regulatory agencies as required.

1.8 DESCRIPTION OF REQUIREMENTS

A. This Section describes the minimum health and safety requirements for this project. Develop a detailed H&S Plan using this Section as a basis and delineating additional details and requirements as deemed necessary. The H&S plan shall establish in detail the protocols necessary for protecting workers from potential hazards encountered during demolition activities.

B. Utilize the services of a certified industrial hygienist (CIH) by the American Board of Industrial Hygienists (ABIH) to develop and implement the H&S plan, including any on-site air monitoring program, conducting initial site-specific training and provide continued support for all health and safety activities as needed, including the upgrading or downgrading of the level of personnel protection.

C. In addition, a Site Safety and Health Officer (SSHO) shall assist and represent the CIH in the continued implementation and enforcement of the H&S Plan. The SSHO shall be assigned to the site on a full-time basis during performance of activities covered by the H&S plan and shall be either the Contractor's employee or a subcontractor who reports to the Contractor and the CIH in matters pertaining to site safety and health.

D. The H&S Plan shall include but not necessarily be limited to, the following components as required by OSHA 29 CFR 1926.65(b)4 and 1926.65(p)(l)(2):

1. Site Description and Evaluation.
2. Names of key personnel and alternate responsible for site safety and health (responsibilities and chain of command).
3. Safety and health hazard assessment and risk analysis for each site task and operator (Accident Prevention Plan).
4. Education and Training.
5. Personnel Protective Equipment.
6. Medical Surveillance.
7. Air Monitoring (Environmental).
8. Standard Operating Procedures, Engineering Controls and Work Practices.
9. Site Control Measures (Work Zones, Communications and Security).
10. Personnel Hygiene and Decontamination.
11. Equipment Decontamination.
12. Logs, Reports and Record Keeping.

13. Heat/Cold Stress Monitoring.
14. Pre-emergency planning.
15. Personnel roles, lines of authority, training and communication.
16. Emergency recognition and prevention.
17. Safe distances and places of refuge.
18. Site security and control.
19. Evacuation routes and procedures.
20. Decontamination.
21. Emergency Medical treatment and first aid.
22. Emergency alerting and response procedures.
23. Critique of response and follow-up.
24. Personnel Protection Equipment and emergency equipment.

1.9 REGULATORY REQUIREMENTS

A. The Contractor is responsible for awareness, knowledge and full compliance with all applicable rules, regulations, laws and practices applicable to the Contractor's Scope of Work, including lower tier subcontractors, prescribed by the site owner, and any other government or agency governing the safety and health of employees, other site personnel, the general public and protection of the environment. Within the United States and its Territories these include, but are not limited to regulations promulgated by the following:

1. Occupational Safety and Health Administration (OSHA)
2. Environmental Protection Agency (EPA)
3. Department of Transportation (DOT)
4. Department of Energy, Nuclear Regulatory Commission (NRC)
5. Mine Safety and Health Administration (MSHA)

B. Additional rules required by the Site Manager include:

1. Each Contractor has the responsibility for instructing its employees in safe practices for the operation of tools and equipment and for the maintenance of safe conditions.
2. Contractors shall furnish for their employees' personal safety equipment such as, ANSI Z89.1 approved hard hats, ANSI Z87.1 approved eye protection with fixed side shields, ear protection, foot protection, NIOSH approved respiratory protection, fall protection and other equipment as required for safe performance of their particular work assignment. All personnel on the job site shall be required at a minimum to wear hard hats, safety glasses with side shields and proper and sturdy footwear.
3. Danger tags and locks shall be utilized to prevent personal injury and equipment damage in accordance with project electrical and mechanical tagging procedures.
4. Scaffolding and other structures utilized for elevated work platforms shall have the required decking, handrails, mid-rails, toe boards, proper access, and nets or screens.
5. Catwalks shall conform to a two-plank width minimum and, if elevated, shall have handrails and toe boards.
6. Areas in which "overhead" work is to be performed shall be blocked, decked, barricaded, netted, posted, or evacuated as instructed by project supervision.
7. Pits, trenches, and other excavations shall be shored/shielded or sloped to the proper angle of repose, barricaded, and provided with proper access.

8. When not in use, blades of bulldozers and buckets of front-end loaders shall be lowered to the ground. Also, beds of dump trucks shall be lowered when traveling or not in use. Project parking and traffic regulations shall be complied with.
9. Crane booms shall be lowered at the end of single shifts or secured against movement by attaching the hoist line to a fixed structure.
10. Specific air sampling shall be performed to determine the presence of toxic materials or dusts, flammable atmosphere and adequate oxygen content, in accordance with project procedures. Respirators, safety harnesses, lifelines, standby personnel, and permits shall be used when appropriate.
11. Personnel involved in activities which require the use of an Air Purifying Respirator (APR) shall not have facial hair which interferes with the respirator's face seal.
12. The Contractor shall provide to the Site Manager a copy of MSDSs for all hazardous materials prior to their use at the site.
13. Back-up alarms shall be provided on all construction vehicles and equipment and shall alarm continuously while the vehicle or equipment is in reverse motion. For equipment not equipped with a back-up alarm, a spotter shall be used.
14. All portable generators shall have frames externally grounded or other means to ensure there is no potential for circuit to frame conductivity.
15. All electrical services used in conjunction with field activities shall be equipped with Ground Fault Circuit Interrupters (GFCI).
16. Compliance with the following fire prevention measures is mandatory:

    a. Smoking is permitted only in specific areas as designated in project rules and procedures.
    b. Open fires are prohibited. Temporary gas-fired heaters shall not be used in enclosed areas. Only UL and NFPA approved petroleum and/or electrically fired heating devices will be authorized for use.
    c. Hot work permits shall be required for all flame and spark producing work tasks.
    d. Debris, scrap, and refuse shall be segregated and controlled in metal containers and removed at appropriate intervals. Any potential fire hazard shall be controlled.
    e. Each Contractor is responsible for maintaining and cleaning their work area. All walkways shall be kept clean and free of obstructions. Broken/spilled, scrap or other waste materials shall be placed in appropriate containers or waste areas as soon as practical after they are generated.
    f. Flammable liquids shall be kept in UL approved safety containers and properly labeled as to contents.
    g. Flammable and combustible materials shall be stored in designated locations that meet Federal, State and local regulations.
    h. All equipment such as cranes, trucks, bulldozers, graders, loaders and backhoes shall be equipped with proper fire extinguishers.
    i. The use of heavy equipment with internal combustion engines is prohibited within enclosed areas.

17. Only the number of persons provided with proper seats shall ride in a vehicle. No one shall ride on running boards, stand on moving equipment or ride on a vehicle other than in a proper seated position.
18. The swing radius of all heavy equipment such as cranes, back hoes, etc. shall be clearly barricaded.
19. The contractor shall provide 100% fall protection for fall exposures greater than 6 ft in accordance with project procedures.

SECTION 014000 - QUALITY REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for quality assurance and quality control.

B. Testing and inspection services are required to verify compliance with requirements specified or indicated. These services do not relieve Contractor of responsibility for compliance with the Contract Document requirements.

1. Specific quality-assurance and quality-control requirements for individual work results are specified in their respective Specification Sections. Requirements in individual Sections may also cover production of standard products.
2. Specified tests, inspections, and related actions do not limit Contractor's other quality-assurance and quality-control procedures that facilitate compliance with the Contract Document requirements.
3. Requirements for Contractor to provide quality-assurance and quality-control services required by Engineer, Owner, Construction Manager, or authorities having jurisdiction are not limited by provisions of this Section.

1.3 DEFINITIONS

A. Experienced: When used with an entity or individual, "experienced," unless otherwise further described, means having successfully completed a minimum of five previous projects similar in nature, size, and extent to this Project; being familiar with special requirements indicated; and having complied with requirements of authorities having jurisdiction.

B. Field Quality-Control Tests and Inspections: Tests and inspections that are performed on-site for installation of the Work and for completed Work.

C. Installer/Applicator/Erector: Contractor or another entity engaged by Contractor as an employee, subcontractor, or sub-subcontractor, to perform a particular construction operation, including installation, erection, application, assembly, and similar operations.

1. Use of trade-specific terminology in referring to a Work result does not require that certain construction activities specified apply exclusively to specific trade(s).

D. Mockups: Full-size physical assemblies that are constructed either as freestanding temporary built elements or as part of permanent construction. Mockups are constructed to verify

selections made under Sample submittals; to demonstrate aesthetic effects and qualities of materials and execution; to review coordination, testing, or operation; to show interface between dissimilar materials; and to demonstrate compliance with specified installation tolerances. Mockups are not Samples. Unless otherwise indicated, approved mockups establish the standard by which the Work will be judged.

1. Laboratory Mockups: Full-size physical assemblies constructed and tested at testing facility to verify performance characteristics.
2. Integrated Exterior Mockups: Mockups of the exterior envelope constructed on-site as as indicated in-place portion of permanent construction, consisting of multiple products, assemblies, and subassemblies, with cutaways enabling inspection of concealed portions of the Work.

    a. Include each system, assembly, component, and part of the exterior wall and roof to be constructed for the Project. Colors of components shall be those selected by the Engineer for use in the Project.

3. Room Mockups: Mockups of typical interior spaces complete with wall, floor, and ceiling finishes; doors; windows; millwork; casework; specialties; furnishings and equipment; and lighting.
4. Product Mockups: Mockups that may include multiple products, materials, or systems specified in a single Section.

E. Preconstruction Testing: Tests and inspections performed specifically for Project before products and materials are incorporated into the Work, to verify performance or compliance with specified criteria. Unless otherwise indicated, copies of reports of tests or inspections performed for other than the Project do not meet this definition.

F. Product Tests: Tests and inspections that are performed by a nationally recognized testing laboratory (NRTL) according to 29 CFR 1910.7, by a testing agency accredited according to NIST's National Voluntary Laboratory Accreditation Program (NVLAP), or by a testing agency qualified to conduct product testing and acceptable to authorities having jurisdiction, to establish product performance and compliance with specified requirements.

G. Source Quality-Control Tests and Inspections: Tests and inspections that are performed at the source (e.g., plant, mill, factory, or shop).

H. Testing Agency: An entity engaged to perform specific tests, inspections, or both. The term “testing laboratory” shall have the same meaning as the term “testing agency.”

I. Quality-Assurance Services: Activities, actions, and procedures performed before and during execution of the Work, to guard against defects and deficiencies and substantiate that proposed construction will comply with requirements.

J. Quality-Control Services: Tests, inspections, procedures, and related actions during and after execution of the Work, to evaluate that actual products incorporated into the Work and completed construction comply with requirements. Contractor's quality-control services do not include contract administration activities performed by Engineer or Construction Manager.

© 2026 CDM Smith
All Rights Reserved

1.4 DELEGATED-DESIGN SERVICES

A. Performance and Design Criteria: Where professional design services or certifications by a design professional are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.

1. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to Engineer.

B. Delegated-Design Services Statement: Submit a statement signed and sealed by the responsible design professional, for each product and system specifically assigned to Contractor to be designed or certified by a design professional, indicating that the products and systems are in compliance with performance and design criteria indicated. Include list of codes, loads, and other factors used in performing these services.

1.5 CONFLICTING REQUIREMENTS

A. Conflicting Standards and Other Requirements: If compliance with two or more standards or requirements is specified and the standards or requirements establish different or conflicting requirements for minimum quantities or quality levels, inform the Engineer regarding the conflict and obtain clarification prior to proceeding with the Work. Refer conflicting requirements that are different, but apparently equal, to Engineer for clarification before proceeding.

B. Minimum Quantity or Quality Levels: The quantity or quality level shown or specified shall be the minimum provided or performed. The actual installation may comply exactly with the minimum quantity or quality specified, or it may exceed the minimum within reasonable limits. To comply with these requirements, indicated numeric values are minimum or maximum, as appropriate, for the context of requirements. Refer uncertainties to Engineer for a decision before proceeding.

1.6 INFORMATIONAL SUBMITTALS

A. Contractor's Quality-Control Plan: For quality-assurance and quality-control activities and responsibilities.

B. Qualification Data: For Contractor's quality-control personnel and Delegated-Designer.

C. Contractor's Statement of Responsibility: When required by authorities having jurisdiction, submit copy of written statement of responsibility submitted to authorities having jurisdiction before starting work on the following systems:

1. Seismic-force-resisting system, designated seismic system, or component listed in the Statement of Special Inspections.
2. Primary wind-force-resisting system or a wind-resisting component listed in the Statement of Special Inspections.

D. Testing Agency Qualifications: For testing agencies specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include proof of qualifications in the form of a recent report on the inspection of the testing agency by a recognized authority.

E. Schedule of Tests and Inspections: Prepare in tabular form and include the following:

1. Specification Section number and title.
2. Entity responsible for performing tests and inspections.
3. Description of test and inspection.
4. Identification of applicable standards.
5. Identification of test and inspection methods.
6. Number of tests and inspections required.
7. Time schedule or time span for tests and inspections.
8. Requirements for obtaining samples.
9. Unique characteristics of each quality-control service.

F. Reports: Prepare and submit certified written reports and documents as specified.

G. Permits, Licenses, and Certificates: For Owner's record, submit copies of permits, licenses, certifications, inspection reports, releases, jurisdictional settlements, notices, receipts for fee payments, judgments, correspondence, records, and similar documents established for compliance with standards and regulations bearing on performance of the Work.

1.7 CONTRACTOR'S QUALITY-CONTROL PLAN

A. Quality-Control Plan, General: Submit quality-control plan within 10 days of Notice to Proceed, and not less than five days prior to preconstruction conference. Submit in format acceptable to Engineer. Identify personnel, procedures, controls, instructions, tests, records, and forms to be used to carry out Contractor's quality-assurance and quality-control responsibilities and to coordinate Owner’s quality-assurance and quality-control activities. Coordinate with Contractor's Construction Schedule.

B. Quality-Control Personnel Qualifications: Engage qualified personnel trained and experienced in managing and executing quality-assurance and quality-control procedures similar in nature and extent to those required for Project.

1. Project quality-control manager may also serve as Project superintendent.

C. Submittal Procedure: Describe procedures for ensuring compliance with requirements through review and management of submittal process. Indicate qualifications of personnel responsible for submittal review.

D. Testing and Inspection: In quality-control plan, include a comprehensive schedule of Work requiring testing or inspection, including the following:

1. Contractor-performed tests and inspections, including subcontractor-performed tests and inspections. Include required tests and inspections and Contractor-elected tests and inspections. Distinguish source quality-control tests and inspections from field quality-control tests and inspections.

2. Special inspections required by authorities having jurisdiction and indicated on the Statement of Special Inspections.
3. Owner-performed tests and inspections indicated in the Contract Documents, including tests and inspections indicated to be performed by Commissioning Authority.

E. Continuous Inspection of Workmanship: Describe process for continuous inspection during construction to identify and correct deficiencies in workmanship in addition to testing and inspection specified. Indicate types of corrective actions to be required to bring the Work into compliance with standards of workmanship established by Contract requirements and approved mockups.

F. Monitoring and Documentation: Maintain testing and inspection reports including log of approved and rejected results. Include Work Engineer has indicated as nonconforming or defective. Indicate corrective actions taken to bring nonconforming Work into compliance with requirements. Comply with requirements of authorities having jurisdiction.

1.8 REPORTS AND DOCUMENTS

A. Test and Inspection Reports: Prepare and submit certified written reports specified in other Sections. Include the following:

1. Date of issue.
2. Project title and number.
3. Name, address, telephone number, and email address of testing agency.
4. Dates and locations of samples and tests or inspections.
5. Names of individuals making tests and inspections.
6. Description of the Work and test and inspection method.
7. Identification of product and Specification Section.
8. Complete test or inspection data.
9. Test and inspection results and an interpretation of test results.
10. Record of temperature and weather conditions at time of sample-taking and testing and inspection.
11. Comments or professional opinion on whether tested or inspected Work complies with the Contract Document requirements.
12. Name and signature of laboratory inspector.
13. Recommendations on retesting and reinspecting.

B. Manufacturer's Technical Representative's Field Reports: Prepare written information documenting manufacturer's technical representative's tests and inspections specified in other Sections. Include the following:

1. Name, address, telephone number, and email address of technical representative making report.
2. Statement on condition of substrates and their acceptability for installation of product.
3. Statement that products at Project site comply with requirements.
4. Summary of installation procedures being followed, whether they comply with requirements and, if not, what corrective action was taken.
5. Results of operational and other tests and a statement of whether observed performance complies with requirements.
6. Statement of whether conditions, products, and installation will affect warranty.

7. Other required items indicated in individual Specification Sections.

C. Factory-Authorized Service Representative's Reports: Prepare written information documenting manufacturer's factory-authorized service representative's tests and inspections specified in other Sections. Include the following:

1. Name, address, telephone number, and email address of factory-authorized service representative making report.
2. Statement that equipment complies with requirements.
3. Results of operational and other tests and a statement of whether observed performance complies with requirements.
4. Statement of whether conditions, products, and installation will affect warranty.
5. Other required items indicated in individual Specification Sections.

1.9 QUALITY ASSURANCE

A. Qualifications paragraphs in this article establish the minimum qualification levels required; individual Specification Sections specify additional requirements.

B. Manufacturer Qualifications: A firm experienced in manufacturing products or systems similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units. As applicable, procure products from manufacturers able to meet qualification requirements, warranty requirements, and technical or factory-authorized service representative requirements.

C. Fabricator Qualifications: A firm experienced in producing products similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

D. Installer Qualifications: A firm or individual experienced in installing, erecting, applying, or assembling work similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful in-service performance.

E. Design Professional Qualifications: A professional engineer/registered architect who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Design/engineering services are defined as those performed for installations of the system, assembly, or product that is similar in material, design, and extent to those indicated for this Project.

F. Specialists: Certain Specification Sections require that specific construction activities shall be performed by entities who are recognized experts in those operations. Specialists shall satisfy qualification requirements indicated and shall be engaged in the activities indicated.

1. Requirements of authorities having jurisdiction shall supersede requirements for specialists.

G. Testing and Inspecting Agency Qualifications: An NRTL, an NVLAP, or an independent agency with the experience and capability to conduct testing and inspection indicated, as documented in accordance with ASTM E329**,** and with additional qualifications specified in

individual Sections; and, where required by authorities having jurisdiction, that is acceptable to authorities.

H. Manufacturer's Technical Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to observe and inspect, demonstrate, repair and perform service on installations of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.

I. Factory-Authorized Service Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to inspect installation of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.

J. Preconstruction Testing: Where testing agency is indicated to perform preconstruction testing for compliance with specified requirements for performance and test methods. Contractor responsibilities include the following:

1. Provide test specimens representative of proposed products and construction.
2. Submit specimens in a timely manner with sufficient time for testing and analyzing results to prevent delaying the Work.
3. Provide sizes and configurations of test assemblies, mockups, and laboratory mockups to adequately demonstrate capability of products to comply with performance requirements.
4. Build site-assembled test assemblies and mockups, using installers who will perform same tasks for Project.
5. Build laboratory mockups at testing facility, using personnel, products, and methods of construction indicated for the completed Work.
6. When testing is complete, remove test specimens and test assemblies,mockups, and laboratory mockups; do not reuse products on Project.
7. Testing Agency Responsibilities: Submit a certified written report of each test, inspection, and similar quality-assurance service to Engineer, through Construction Manager, with copy to Contractor. Interpret tests and inspections and state in each report whether tested and inspected Work complies with or deviates from the Contract Documents.

K. Mockups: Before installing portions of the Work requiring mockups, build mockups for each form of construction and finish required to comply with the following requirements, using materials indicated for the completed Work:

1. Build mockups of size indicated.
2. Build mockups in location indicated or, if not indicated, as directed by Engineer or Construction Manager.
3. Notify Engineer and Construction Manager seven days in advance of dates and times when mockups will be constructed.
4. Employ supervisory personnel who will oversee same tasks during construction. Employ workers who will be employed to perform same tasks during the construction at Project.
5. Demonstrate the proposed range of aesthetic effects and workmanship.
6. Obtain Engineer's and Construction Manager's approval of mockups before starting corresponding Work, fabrication, or construction.

    a. Allow seven days for initial review and each re-review of each mockup.

7. Promptly correct unsatisfactory conditions noted by Engineer's preliminary review, to the satisfaction of the Engineer, before completion of final mockup.
8. Approval of mockups by the Engineer does not constitute approval of deviations from the Contract Documents contained in mockups unless Engineer specifically approves such deviations in writing.
9. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
10. Demolish and remove mockups when directed unless otherwise indicated.

L. Integrated Exterior Mockups: Construct integrated exterior mockup according to approved Shop Drawings. Coordinate installation of exterior envelope materials and products for which mockups are required in individual Specification Sections, along with supporting materials. Comply with requirements in "Mockups" Paragraph.

1. Coordinate construction of the mockup to allow observation of air barrier installation, flashings, air barrier integration with fenestration systems, and other portions of the building air/moisture barrier and drainage assemblies, prior to installation of veneer, cladding elements, and other components that will obscure the Work.

M. Room Mockups: Construct room mockups according to approved Shop Drawings, incorporating required materials and assemblies, finished according to requirements. Provide required lighting and additional lighting where required to enable Engineer to evaluate quality of the Work. Comply with requirements in "Mockups" Paragraph.

N. Laboratory Mockups: Comply with requirements of preconstruction testing and those specified in individual Specification Sections.

1.10 QUALITY CONTROL

A. Owner Responsibilities: Where quality-control services are indicated as Owner's responsibility, Owner will engage a qualified testing agency to perform these services.

1. Owner will furnish Contractor with names, addresses, and telephone numbers of testing agencies engaged and a description of types of testing and inspection they are engaged to perform.
2. Payment for these services will be made from testing and inspection allowances specified in Section 012100 “Allowances,” as authorized by Change Orders.
3. Costs for retesting and reinspecting construction that replaces or is necessitated by Work that failed to comply with the Contract Documents will be charged to Contractor, and the Contract Sum will be adjusted by Change Order.

B. Contractor Responsibilities: Tests and inspections not explicitly assigned to Owner are Contractor's responsibility. Perform additional quality-control activities, whether specified or not, to verify and document that the Work complies with requirements.

1. Unless otherwise indicated, provide quality-control services specified and those required by authorities having jurisdiction. Perform quality-control services required of Contractor by authorities having jurisdiction, whether specified or not.
2. Engage a qualified testing agency to perform quality-control services.

a. Contractor shall not employ same entity engaged by Owner, unless agreed to in writing by Owner.

3. Notify testing agencies at least 24 hours in advance of time when Work that requires testing or inspection will be performed.
4. Where quality-control services are indicated as Contractor's responsibility, submit a certified written report, in duplicate, of each quality-control service.
5. Testing and inspection requested by Contractor and not required by the Contract Documents are Contractor's responsibility.
6. Submit additional copies of each written report directly to authorities having jurisdiction, when they so direct.

C. Retesting/Reinspecting: Regardless of whether original tests or inspections were Contractor's responsibility, provide quality-control services, including retesting and reinspecting, for construction that replaced Work that failed to comply with the Contract Documents.

D. Testing Agency Responsibilities: Cooperate with Engineer, Construction Manager, and Contractor in performance of duties. Provide qualified personnel to perform required tests and inspections.

1. Notify Engineer, Construction Manager, and Contractor promptly of irregularities or deficiencies observed in the Work during performance of its services.
2. Determine the locations from which test samples will be taken and in which in-situ tests are conducted.
3. Conduct and interpret tests and inspections and state in each report whether tested and inspected Work complies with or deviates from requirements.
4. Submit a certified written report, in duplicate, of each test, inspection, and similar quality-control service through Contractor.
5. Do not release, revoke, alter, or increase the Contract Document requirements or approve or accept any portion of the Work.
6. Do not perform duties of Contractor.

E. Manufacturer's Field Services: Where indicated, engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including service connections. Report results in writing as specified in Section 013300 "Submittal Procedures."

F. Manufacturer's Technical Services: Where indicated, engage a manufacturer's technical representative to observe and inspect the Work. Manufacturer's technical representative's services include participation in preinstallation conferences, examination of substrates and conditions, verification of materials, observation of Installer activities, inspection of completed portions of the Work, and submittal of written reports.

G. Contractor’s Associated Requirements and Services: Cooperate with agencies and representatives performing required tests, inspections, and similar quality-control services, and provide reasonable auxiliary services as requested. Notify agency sufficiently in advance of operations to permit assignment of personnel. Provide the following:

1. Access to the Work.
2. Incidental labor and facilities necessary to facilitate tests and inspections.

3. Adequate quantities of representative samples of materials that require testing and inspection. Assist agency in obtaining samples.
4. Facilities for storage and field curing of test samples.
5. Delivery of samples to testing agencies.
6. Preliminary design mix proposed for use for material mixes that require control by testing agency.
7. Security and protection for samples and for testing and inspection equipment at Project site.

H. Coordination: Coordinate sequence of activities to accommodate required quality-assurance and quality-control services with a minimum of delay and to avoid necessity of removing and replacing construction to accommodate testing and inspection.

1. Schedule times for tests, inspections, obtaining samples, and similar activities.

I. Schedule of Tests and Inspections: Prepare a schedule of tests, inspections, and similar quality-control services required by the Contract Documents as a component of Contractor's quality-control plan. Coordinate and submit concurrently with Contractor's Construction Schedule. Update and submit with each Application for Payments.

1. Schedule Contents: Include tests, inspections, and quality-control services, including Contractor- and Owner-retained services, commissioning activities, and other Project-required services paid for by other entities.
2. Distribution: Distribute schedule to Owner, Engineer, Construction Manager, testing agencies, and each party involved in performance of portions of the Work where tests and inspections are required.

1.11 SPECIAL TESTS AND INSPECTIONS

A. Special Tests and Inspections: Owner will engage a qualified testing agency special inspector to conduct special tests and inspections required by authorities having jurisdiction as the responsibility of Owner, and as follows:

1. Verifying that manufacturer maintains detailed fabrication and quality-control procedures, and reviewing the completeness and adequacy of those procedures to perform the Work.
2. Notifying Engineer, Construction Manager, and Contractor promptly of irregularities and deficiencies observed in the Work during performance of its services.
3. Submitting a certified written report of each test, inspection, and similar quality-control service to Engineer, through Construction Manager, with copy to Contractor and to authorities having jurisdiction.
4. Submitting a final report of special tests and inspections at Substantial Completion, which includes a list of unresolved deficiencies.
5. Interpreting tests and inspections, and stating in each report whether tested and inspected Work complies with or deviates from the Contract Documents.
6. Retesting and reinspecting corrected Work.

© 2026 CDM Smith
All Rights Reserved

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.1 TEST AND INSPECTION LOG

A. Test and Inspection Log: Prepare a record of tests and inspections. Include the following:

1. Date test or inspection was conducted.
2. Description of the Work tested or inspected.
3. Date test or inspection results were transmitted to Engineer.
4. Identification of testing agency or special inspector conducting test or inspection.

B. Maintain log at Project site. Post changes and revisions as they occur. Provide access to test and inspection log for Engineer's and Construction Manager's and authorities' having jurisdiction reference during normal working hours.

1. Submit log at Project closeout as part of Project Record Documents.

3.2 REPAIR AND PROTECTION

A. General: On completion of testing, inspection, sample taking, and similar services, repair damaged construction and restore substrates and finishes.

1. Provide materials and comply with installation requirements specified in other Specification Sections or matching existing substrates and finishes. Restore patched areas and extend restoration into adjoining areas with durable seams that are as invisible as possible. Comply with the Contract Document requirements for cutting and patching in Section 017300 "Execution."

B. Protect construction exposed by or for quality-control service activities.

C. Repair and protection are Contractor's responsibility, regardless of the assignment of responsibility for quality-control services.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 DEFINITIONS

A. General: Basic Contract definitions are included in the Conditions of the Contract.

B. "Approved": When used to convey Engineer's action on Contractor's submittals, applications, and requests, "approved" is limited to Engineer's duties and responsibilities as stated in the Conditions of the Contract.

C. "Directed": A command or instruction by Engineer. Other terms including "requested," "authorized," "selected," "required," and "permitted" have the same meaning as "directed."

D. "Indicated": Requirements expressed by graphic representations or in written form on Drawings, in Specifications, and in other Contract Documents. Other terms including "shown," "noted," "scheduled," and "specified" have the same meaning as "indicated."

E. "Regulations": Laws, ordinances, statutes, and lawful orders issued by authorities having jurisdiction, and rules, conventions, and agreements within the construction industry that control performance of the Work.

F. "Furnish": Supply and deliver to Project site, ready for unloading, unpacking, assembly, installation, and similar operations.

G. "Install": Unload, temporarily store, unpack, assemble, erect, place, anchor, apply, work to dimension, finish, cure, protect, clean, and similar operations at Project site.

H. "Provide": Furnish and install, complete and ready for the intended use.

I. "Project Site": Space available for performing construction activities. The extent of Project site is shown on Drawings and may or may not be identical with the description of the land on which Project is to be built.

1.3 INDUSTRY STANDARDS

A. Applicability of Standards: Unless the Contract Documents include more stringent requirements, applicable construction industry standards have the same force and effect as if bound or copied directly into the Contract Documents to the extent referenced. Such standards are made a part of the Contract Documents by reference.

B. Publication Dates: Comply with standards in effect as of date of the Contract Documents unless otherwise indicated.

C. Copies of Standards: Each entity engaged in construction on Project should be familiar with industry standards applicable to its construction activity. Copies of applicable standards are not bound with the Contract Documents.

1. Where copies of standards are needed to perform a required construction activity, obtain copies directly from publication source.

1.4 ABBREVIATIONS AND ACRONYMS

A. Industry Organizations: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities indicated in Gale's "Encyclopedia of Associations: National Organizations of the U.S." or in Columbia Books' "National Trade & Professional Associations of the United States."

B. Industry Organizations: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities in the following list. Abbreviations and acronyms not included in this list shall mean the recognized name of the entities indicated in Gale's "Encyclopedia of Associations: National Organizations of the U.S." or in Columbia Books' "National Trade & Professional Associations of the United States." The information in this list is subject to change and is believed to be accurate as of the date of the Contract Documents.

SECTION 015000 - TEMPORARY FACILITIES AND CONTROLS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes requirements for temporary utilities, support facilities, and security and protection facilities.

B. Related Requirements:

1. Section 013513.24 “Special Procedure for MOPO and Construction Sequence”.
2. Section 015000 “Temporary Bypass Pumping Systems”.

1.3 USE CHARGES

A. Installation, removal, and use charges for temporary facilities shall be included in the Contract Sum unless otherwise indicated. Allow other entities engaged in the Project to use temporary services and facilities without cost, including, but not limited to, Engineer, Construction Manager, Owner, testing agencies, and authorities having jurisdiction.

B. Sewer Service: Pay sewer-service use charges for sewer usage by all entities for construction operations.

C. Water Service: Pay water-service use charges for water used by all entities for construction operations.

D. Electric Power Service: Pay electric-power-service use charges for electricity used by all entities for construction operations. Cedar Creek WPCP has a limited power capacity for the temporary electrical service as noted in these specifications. Should the Contractor require additional power beyond what the plant can provide in their temporary service, the Contractor shall provide temporary generators for the additional power requirements to complete the work of this contract, Contractor shall coordinate with the Engineer, CM, and owner for all work and to obtain the temporary electrical service. The Contractor shall submit the required load letter upon Notice of Award of the Contract by the County to move the project forward.

E. Water and Sewer Service from Existing System: Potable water from Owner's existing water system is available for use with metering. Provide connections and extensions of services and metering as required for construction operations.

F. Sewer, Water, and Electric Power Service: Use charges are specified in Section 011200 "Multiple Contract Summary."

1.4 INFORMATIONAL SUBMITTALS

A. Site Utilization Plan: Show temporary facilities, temporary utility lines and connections, staging areas, temporary fencing, construction site entrances, vehicle circulation, and parking areas for construction personnel.

B. Implementation and Termination Schedule: Within 15 days of date established for commencement of the Work, submit schedule indicating implementation and termination dates of each temporary utility.

C. Project Identification and Temporary Signs: Show fabrication and installation details, including plans, elevations, details, layouts, typestyles, graphic elements, and message content.

D. Fire-Safety Program: Show compliance with requirements of NFPA 241 and authorities having jurisdiction. Indicate Contractor personnel responsible for management of fire-prevention program.

E. Moisture- and Mold-Protection Plan: Describe procedures and controls for protecting materials and construction from water absorption and damage and mold. Describe delivery, handling, storage, installation, and protection provisions for materials subject to water absorption or water damage.

1. Indicate procedures for discarding water-damaged materials, protocols for mitigating water intrusion into completed Work, and requirements for replacing water-damaged Work.
2. Indicate sequencing of work that requires water, such as sprayed fire-resistive materials, plastering, and terrazzo grinding, and describe plans for dealing with water from these operations. Show procedures for verifying that wet construction has dried sufficiently to permit installation of finish materials.
3. Indicate methods to be used to avoid trapping water in finished work.

F. Dust- and HVAC-Control Plan: Submit coordination drawing and narrative that indicates the dust- and HVAC-control measures proposed for use, proposed locations, and proposed time frame for their operation. Include the following:

1. Locations of dust-control partitions at each phase of work.
2. HVAC system isolation schematic drawing.
3. Location of proposed air-filtration system discharge.
4. Waste-handling procedures.
5. Other dust-control measures.

G. Noise and Vibration Control Plan: Identify construction activities that may impact the occupancy and use of existing spaces within the building or adjacent existing buildings, whether occupied by others, or occupied by the Owner. Include the following:

1. Methods used to meet the goals and requirements of the Owner.
2. Concrete cutting method(s) to be used.
3. Location of construction devices on the site.
4. Show compliance with the use and maintenance of quieted construction devices for the duration of the Project.

5. Indicate activities that may disturb building occupants and that are planned to be performed during non-standard working hours as coordinated with the Owner.
6. Indicate locations of sensitive equipment areas or other areas requiring special attention as identified by Owner. Indicate means for complying with Owner's requirements.

H. Bypass Pumping Plan: Submit site drawing and narrative indicating bypass measures for maintenance of plant operations in accordance with Section 015728.

I. Influent Channel Isolation and Dewatering Drawings: Submit drawings, calculations, and narrative indicating bulkhead plan to isolate piping.

J. Temporary Bulkhead Drawings: Submit drawings, calculations, and narrative indicating bulkhead plan to isolate piping.

K. Mechanical Pipe Plug Drawings: Submit drawings, calculations, and narrative indicating bulkhead plan to isolate piping.

L. Stop Log Procedure: Submit drawings and narrative indicating plan to install, use, and remove stop logs.

M. Inflatable Pipe Plug Procedure: Submit drawings and narrative indicating plan to install, use, and remove pipe plugs. Include the following:

1. Locations and sizing of pipe plugs to be utilized in the project, including maximum allowable backpressure, as well as required backpressure at each location. See Section 2.3 for performance requirements.
2. Expected duration of plug installation and maximum pressure that plug can withstand
3. Extraneous equipment including but not limited to:

    a. Air compressor capable of reaching required PSI
    b. Pressure monitoring and alarm system to ensure plugs stay at required PSI

1.5 QUALITY ASSURANCE

A. Temporary facilities shall comply with all applicable state and local ordinances, codes and regulations.

B. Electric Service: Comply with NECA, NEMA, and UL standards and regulations for temporary electric service. Install service to comply with NFPA 70.

C. Tests and Inspections: Arrange for authorities having jurisdiction to test and inspect each temporary utility before use. Obtain required certifications and permits.

D. Accessible Temporary Egress: Comply with applicable provisions in the United States Access Board's ADA-ABA Accessibility Guidelines and ICC/ANSI A117.1.

1.6 PROJECT CONDITIONS

A. Temporary Use of Permanent Facilities: Engage Installer of each permanent service to assume responsibility for operation, maintenance, and protection of each permanent service during its

use as a construction facility before Owner's acceptance, regardless of previously assigned responsibilities.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Chain-Link Fencing: Minimum 2-inch, 0.148-inch-thick, galvanized-steel, chain-link fabric fencing; minimum 6 feet high with galvanized-steel pipe posts; minimum 2-3/8-inch-OD line posts and 2-7/8-inch-OD corner and pull posts, with 1-5/8-inch-OD top rails.

B. Portable Chain-Link Fencing: Minimum 2-inch, 0.148-inch-thick, galvanized-steel, chain-link fabric fencing; minimum 6 feet high with galvanized-steel pipe posts; minimum 2-3/8-inch-OD line posts and 2-7/8-inch-OD corner and pull posts, with 1-5/8-inch-OD top and bottom rails. Provide concrete bases for supporting posts.

C. Fencing Windscreen Privacy Screen: Polyester fabric scrim with grommets for attachment to chain-link fence, sized to height of fence, in color selected by Engineer from manufacturer's standard colors.

D. Wood Enclosure Fence: Plywood, 6 feet high, framed with four 2-by-4-inch-rails, with preservative-treated wood posts spaced not more than 8 feet apart.

E. Polyethylene Sheet: Reinforced, fire-resistive sheet, 10-mil minimum thickness, with flame-spread rating of 15 or less in accordance with ASTM E84 and passing NFPA 701 Test Method 2.

F. Dust-Control Adhesive-Surface Walk-Off Mats: Provide mats, minimum 36-by-60-inches.

G. Insulation: Unfaced mineral-fiber blanket, manufactured from glass, slag wool, or rock wool; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.

2.2 TEMPORARY FACILITIES

A. Field Offices: Prefabricated or mobile units with serviceable finishes, temperature controls, and foundations adequate for normal loading.

B. Field Offices: Owner will provide conditioned interior space for field offices for duration of Project.

C. Construction Manager’s/Engineer’s/Owner’s Field Office: Of sufficient size, but minimum 12-feet by 50-feet, to accommodate needs of Owner, Engineer, and Construction Manager, and construction personnel office activities and to accommodate Project meetings specified in other Division 01 Sections for duration of project. Keep office clean and orderly. Furnish and equip offices as follows:

1. Field office trailer shall have at least one office, one conference room, one bathroom, one closet, and two exterior doors.

2. Bathroom shall include toilet, sink and faucet, and faucet, medicine cabinet, and exhaust fan.
3. Conference room shall include built-in plan table.
4. Engineer's field office shall be weather-tight construction with floor, walls, and ceiling completely insulated. Each room shall have at least one operating window. Each window shall have a venetian blind and full insect screen. Furnish two sets of keys for each exterior door. Provide fully insulated skirting on all sides of the field office trailer. Provide steps, platforms, handrails, and boot scrapers for each exterior door.
5. Field office trailer shall be Mobile Mini, ModSpace, Williams Scotsman, or equal. Converted storage or box containers will not be acceptable.
6. Furnishings:

    a. Provide the following furnishings for the Engineer's temporary field office for the duration of the project. All furnishings shall be new – or in very good condition – subject to approval of the Engineer.

        1) 60-inch by 30-inch desks with file drawer and 5 drawers, all lockable.
        2) Upholstered swivel type chair with arms for each desk.
        3) One 30-inch by 84-inch conference table.
        4) Eight armless side chairs (stacking type).
        5) Two 54-inch by 30-inch folding tables.
        6) Six file cabinet, 4 drawer, legal size, Hon No. HN-315C, or equal.
        7) Four wastebaskets.
        8) One rolling plan storage rack, 10-stick capacity.
        9) One lockable storage cabinet, 72-inch high, 36-inch wide, and 18-inch deep.
        10) Two steel bookcase units, 4 shelves high, Hon No. HN-S48 ABC, or equal.
        11) 24 painted steel coat hangers.
        12) One electric bottled water dispenser (5 gallon minimum) with hot and cold outlets and refrigerator unit. Adequate water bottles shall be provided (and paid for by the Contractor) until Final Completion.
        13) One wall-mounted first aid kit, McMaster-Carr 9501T1 or equal.
        14) Two smoke detectors, with batteries.
        15) Two dry erase boards, aluminum frame, 36-inch by 60-inch, markers and eraser, Quartet Model No. TS-S 535 or equal.
        16) One 1000-watt minimum 1.4-cu.ft. microwave oven.
        17) One 6-cf refrigerator.
        18) Commercial duty cross-cut shredder with basket, designed for 3 to 5 users, Fellowes Powershred SB-125i, or equal.
        19) One first aid kit, OSHA (1910.151.b) and ANSI (Z308.1-2003) compliant, suitable for ten people.

7. Equipment:

    a. Contractor shall provide the following equipment for each temporary field office for the duration of the project. All equipment shall be new.

        1) A multifunction Photocopier, printer, and scanner.

    b. With 50-sheet auto-feeder, capable of copying and printing
    c. Letter-sized, legal-sized, and 11-inch by 17-inch documents.

d. Contractor to provide paper and ink cartridges, as required, for the duration of the project.

1) Four 8-outlet surge protectors with six-foot cord and minimum 1800-joule energy rating or greater; as manufactured by Belkin, or equal.
2) One 12-cup coffeemaker with timer, by Krups, or equal.

8. Services:

a. Provide the following services for the duration of the project. Services shall include all costs for installation, use, maintenance, and removal of all products, services and equipment billed by each provider for each service specified herein.
b. Field office shall have complete and fully functional electrical, plumbing, and HVAC systems. Provide at least two smoke detectors hard-wired into the electrical system. Perform all scheduled and unscheduled maintenance for all systems and as directed by the Engineer.
c. Electrical System: Provide connection to temporary electric service. Comply with the electrical requirements of the furnished office trailer. Provide main circuit panel, sufficient GFCI outlets and lighting in each room, exterior lights at each exterior door, and proper grounding of entire electrical system.
d. Plumbing system: Connect to existing potable water supply. Provide hot water heater and hot and cold water to each fixture. Connect waste pipes to existing sanitary system or a waste holding tank. Heat trace and insulate exterior piping to prevent freezing. Where potable water service is not available, Contractor shall provide bottle water service with water chiller/dispenser.
e. HVAC System: Provide central heating and air conditioning system with programmable thermostat. System shall be capable of maintaining an interior temperature of 70 degrees F when the exterior temperature is 0 degrees F and an interior temperature of 75 degrees F when exterior temperature is 100 degrees F.
f. Bottled water service: Provide bottled water service complete with dispenser with hot- and cold-water taps and regular bottle and cup replenishment as directed by the Engineer.
g. Janitorial service: Provide janitorial services (at least weekly) that include dusting, sweeping, vacuuming, mopping, disinfection, and trash removal.
h. Sanitary service: Provide regular pumping of waste holding tank, if applicable, as needed.
i. Internet Access:

1) Provide high-speed internet access for the duration of the project.
2) Minimum Download Speed: 2 Gbps.
3) Minimum Upload Speed: 50 Mbps.
4) Provide password protected, high-speed WiFi router within the trailer.

j. Pay all costs for installation, maintenance, and removal of the telephone and internet service and instruments, including cellular phone service. The monthly cost of all calls made and received by the Engineer, including toll and long-distance calls, shall be paid for by the Contractor for the duration of the project.

9. Supplies: Provide the following supplies for the duration of the project: copy paper, toner, toilet paper, paper towels, soap, light bulbs, and other consumables as required by the Engineer.

D. Storage and Fabrication Sheds: Provide sheds sized, furnished, and equipped to accommodate materials and equipment for construction operations.

1. Store combustible materials apart from building.

E. Temporary Electrical Service

1. Temporary electrical service shall be coordinated with the owner.
2. Cedar Creek WPCP has a limited temporary power capacity for the temporary electrical service as noted in these specifications. Should the Contractor require additional power beyond what the plant can provide in their temporary service, the Contractor shall provide temporary generators for the additional power requirements to complete the work of this contract, Contractor shall coordinate with the Engineer, CM, and owner for all work and to obtain the temporary electrical service. The Contractor shall submit the required load letter upon Notice of Award of the Contract by the County to move the project forward.

F. Temporary Heat and HVAC

1. Provide temporary heat as may be necessary for thawing out and heating the ground or materials and for proper execution, protection and drying-out of the Work.
2. Provide all temporary heat for new structures until the permanent heat is operational and accepted by the Engineer Owner.
3. Provide all temporary heat for existing facilities when the heating system is removed from service and until the new permanent system is operational and accepted by the Engineer/Owner.
4. Provide all temporary ventilation in new structures when the existing ventilation system is taken out of service and until the new permanent ventilation system is operational and accepted by the Engineer/Owner.
5. Provide all temporary ventilation in existing structures when the existing ventilation system is taken out of service and until the new permanent system is operational and accepted by the Engineer/Owner.

2.3 EQUIPMENT

A. Fire Extinguishers: Portable, UL rated; with class and extinguishing agent as required by locations and classes of fire exposures.

B. HVAC Equipment: Unless Owner authorizes use of permanent HVAC system, provide vented, self-contained, liquid-propane-gas or fuel-oil heaters with individual space thermostatic control.

1. Use of gasoline-burning space heaters, open-flame heaters, or salamander-type heating units is prohibited.
2. Heating, Cooling, and Dehumidifying Units: Listed and labeled for type of fuel being consumed, by a qualified testing agency acceptable to authorities having jurisdiction and marked for intended location and application.

C. Air-Filtration Units: Primary and secondary HEPA-filter-equipped portable units with four-stage filtration. Provide single switch for emergency shutoff. Configure to run continuously.

© 2026 CDM Smith
All Rights Reserved

PART 3 - EXECUTION

3.1 TEMPORARY FACILITIES, GENERAL

A. Conservation: Coordinate construction and use of temporary facilities with consideration given to conservation of energy, water, and materials. Coordinate use of temporary utilities to minimize waste.

1. Salvage materials and equipment involved in performance of, but not actually incorporated into, the Work. See other Sections for disposition of salvaged materials that are designated as Owner's property.

3.2 INSTALLATION, GENERAL

A. Locate facilities where shown on the Drawings or where they will serve Project adequately and result in minimum interference with performance of the Work. Relocate and modify facilities as required by progress of the Work. Engineer’s trailer shall be set up and ready for occupancy within 30 days of the Notice to Proceed.

1. Locate facilities to limit site disturbance as specified in Section 011000 "Summary."

B. Provide each facility ready for use within 30 days of the Notice to Proceed and prior to Commencement of Work at the site. Do not remove until approved by Engineer or are replaced by authorized use of completed permanent facilities.

3.3 ENGINEER'S OFFICE

A. Engineer's trailer shall be set up and ready for occupancy within 30 days of the Notice to Proceed and prior to commencement of Work at the site. All systems, furnishings, equipment, and services specified herein shall be furnished, installed, and completely operational for the field office to be considered established.

1. Provide weekly office cleaning services for the duration of the project.
2. Provide weekly supplies including, but not limited to restroom supplies (toilet tissue paper, paper towel, and soap), as well as light bulbs, air conditioner filters, etc.
3. Provide monthly office supplies for printers and fax machines, etc.
4. Supply all fuel for heating and pay all utility bills.

B. Install field office plumb and level.

C. Trailer shall be removed, and the site shall be cleaned up and restored before Final Completion of the project.

3.4 CONTRACTOR'S FIELD OFFICE

A. Provide a temporary field office(s) for the Contractor's use for the duration of the project. An authorized representative of the Contractor shall be present at all times while the Work is in

progress. Instructions received at the Contractors field office from the Engineer shall be considered delivered to the Contractor.

B. Locate field office(s) in accordance with approved shop drawings and as directed by the Owner.

C. Establish and occupy field office within 30 days of the Notice to Proceed, unless otherwise approved by the Engineer or Owner.

3.5 TEMPORARY UTILITY INSTALLATION

A. General: Install temporary service or connect to existing service, if approved by Owner.

1. Arrange with utility company, Owner, and existing users for time when service can be interrupted, if necessary, to make connections for temporary services.

B. Water Service: Install water service and distribution piping in sizes and pressures adequate for construction.

C. Water Service: If approved, connect to Owner's existing water service facilities. Clean and maintain water service facilities in a condition acceptable to Owner. At Final Completion, restore these facilities to condition existing before initial use.

D. Sanitary Facilities: Provide temporary toilets, wash facilities, safety shower and eyewash facilities, and drinking water for use of construction personnel. Comply with requirements of authorities having jurisdiction for type, number, location, operation, and maintenance of fixtures and facilities.

1. Use of Permanent Toilets: Use of Owner's existing or new toilet facilities is not permitted.

E. Temporary Heating and Cooling: Provide temporary heating and cooling required by construction activities for curing or drying of completed installations or for protecting installed construction from adverse effects of low temperatures or high humidity. Select equipment that will not have a harmful effect on completed installations or elements being installed.

1. Provide temporary dehumidification systems when required to reduce ambient and substrate moisture levels to level required to allow installation or application of finishes and their proper curing or drying.

F. Provide all air, steam and water, including temporary piping and appurtenances required for cleaning and testing pipelines and equipment. Remove temporary piping and appurtenances upon approval of equipment being tested.

G. Isolation of Work Areas in Occupied Facilities: Prevent dust, fumes, and odors from entering occupied areas.

1. Prior to commencing work, isolate the HVAC system in area where work is to be performed.

a. Disconnect supply and return ductwork in work area from HVAC systems servicing occupied areas.

b. Maintain negative air pressure within work area, using HEPA-equipped air-filtration units, starting with commencement of temporary partition construction, and continuing until removal of temporary partitions is complete.

2. Maintain dust partitions during the Work. Use vacuum collection attachments on dust-producing equipment. Isolate limited work within occupied areas using portable dust-containment devices.
3. Perform daily construction cleanup and final cleanup using approved, HEPA-filter-equipped vacuum equipment.

H. Temporary Light and Power: Provide by Contractor, including 220 Volt service for welding, complete with wiring, lamps and similar equipment as required to adequately light all work areas and with sufficient power capacity to meet the project needs. Make all necessary arrangements with the local electric company for temporary electric service and pay all expenses in connection therewith.

I. Electric Power Service: Connect to Owner's existing electric power service. Maintain equipment in a condition acceptable to Owner.

J. Electric Power Service: Provide electric power service and distribution system of sufficient size, capacity, and power characteristics required for construction operations.

1. Install electric power service overhead unless otherwise indicated.
2. Connect temporary service to Owner's existing power source, as directed by Owner.

K. Lighting: Provide temporary lighting with local switching that provides adequate illumination for construction operations, observations, inspections, and traffic conditions.

1. Install and operate temporary lighting that fulfills security and protection requirements without operating entire system.

L. Comply with National Electrical Code for installation of temporary electric power and lighting. Remove temporary wiring at job completion, repair penetrations, and restore finishes.

M. Electronic Communication Service: Provide secure WiFi wireless connection to internet with provisions for access by Engineer and Owner.

3.6 SUPPORT FACILITIES INSTALLATION

A. Comply with the following:

1. Provide construction for temporary field offices, shops, and sheds located within construction area or within 30 feet of building lines that is noncombustible in accordance with ASTM E136. Comply with NFPA 241.

B. Temporary Roads and Paved Areas: Construct and maintain temporary roads and paved areas adequate for construction operations. Locate temporary roads and paved areas within construction limits indicated on Drawings.

1. Provide dust-control treatment that is nonpolluting and non-tracking. Reapply treatment as required to minimize dust.

C. Temporary Use of Planned Permanent Roads and Paved Areas: Locate temporary roads and paved areas in same location as permanent roads and paved areas. Construct and maintain temporary roads and paved areas adequate for construction operations. Extend temporary roads and paved areas, within construction limits indicated, as necessary for construction operations.

1. Coordinate elevations of temporary roads and paved areas with permanent roads and paved areas.
2. Prepare subgrade and install subbase and base for temporary roads and paved areas.
3. Recondition base after temporary use, including removing contaminated material, regrading, proof-rolling, compacting, and testing.
4. Delay installation of final course of permanent hot-mix asphalt pavement until immediately before Substantial Completion. Repair hot-mix asphalt base-course pavement before installation of final course in accordance with Section 321216 "Asphalt Paving."

D. Traffic Controls: Comply with requirements of authorities having jurisdiction.

1. Protect existing site improvements to remain including curbs, pavement, and utilities.
2. Maintain access for fire-fighting equipment and access to fire hydrants.

E. Parking: Use designated areas of Owner's existing parking areas for construction personnel.

F. Storage and Staging: Use designated areas of Project site for storage and staging needs.

G. Dewatering Facilities and Drains: Comply with requirements of authorities having jurisdiction. Maintain Project site, excavations, and construction free of water.

1. Dispose of rainwater in a lawful manner that will not result in flooding Project or adjoining properties or endanger permanent Work or temporary facilities.
2. Remove snow and ice as required to minimize accumulation.

H. Project Signs: Provide Project signs as indicated. Unauthorized signs are not permitted.

1. Identification Signs: Provide Project identification signs as indicated on Drawings. Signs shall be constructed of A-A Ext – APA grade plywood, 1-in thick. Posts and braces shall be of pressure treated lumber.
2. Temporary Signs: Provide other signs as indicated and as required to inform public and individuals seeking entrance to Project.

    a. Provide temporary, directional signs for construction personnel and visitors.

3. Maintain and touch up signs, so they are legible at all times.

I. Waste Disposal Facilities: Comply with requirements specified in Section 017419 "Construction Waste Management and Disposal."

J. Waste Disposal Facilities: Provide waste-collection containers in sizes adequate to handle waste from construction operations. Comply with requirements of authorities having jurisdiction. Comply with progress cleaning requirements in Section 017300 "Execution."

K. Lifts and Hoists: Provide facilities necessary for hoisting materials and personnel.

1. Truck cranes and similar devices used for hoisting materials are considered "tools and equipment" and not temporary facilities.

L. Temporary Elevator Use: Use of elevators is not permitted.

M. Existing Elevator Use: Use of Owner's existing elevators will be permitted, provided elevators are cleaned and maintained in a condition acceptable to Owner. At Substantial Completion, restore elevators to condition existing before initial use, including replacing worn cables, guide shoes, and similar items of limited life.

1. Do not load elevators beyond their rated weight capacity.
2. Provide protective coverings, barriers, devices, signs, or other procedures to protect elevator car and entrance doors and frame. If, despite such protection, elevators become damaged, engage elevator Installer to restore damaged work, so no evidence remains of correction work. Return items that cannot be refinished in field to the shop, make required repairs and refinish entire unit, or provide new units as required.

N. Temporary Stairs: Until permanent stairs are available, provide temporary stairs where ladders are not adequate.

O. Existing Stair Usage: Use of Owner's existing stairs will be permitted, provided stairs are cleaned and maintained in a condition acceptable to Owner. At Substantial Completion, restore stairs to condition existing before initial use.

1. Provide protective coverings, barriers, devices, signs, or other procedures to protect stairs and to maintain means of egress. If stairs become damaged, restore damaged areas, so no evidence remains of correction work.

P. Temporary Use of Permanent Stairs: Use of new stairs for construction traffic will be permitted, provided stairs are protected and finishes restored to new condition at time of Substantial Completion.

3.7 SECURITY AND PROTECTION FACILITIES INSTALLATION

A. Protection of Existing Facilities: Protect existing vegetation, equipment, structures, utilities, and other improvements at Project site and on adjacent properties, except those indicated to be removed or altered. Repair damage to existing facilities.

1. Where access to adjacent properties is required in order to affect protection of existing facilities, obtain written permission from adjacent property owner to access property for that purpose.

B. Environmental Protection: Provide protection, operate temporary facilities, and conduct construction as required to comply with environmental regulations and that minimize possible air, waterway, and subsoil contamination or pollution or other undesirable effects.

1. Comply with work restrictions specified in Section 011000 "Summary."

C. Stormwater Control: Comply with requirements of authorities having jurisdiction. Provide barriers in and around excavations and subgrade construction to prevent flooding by runoff of stormwater from heavy rains.

D. Tree and Plant Protection: Comply with requirements specified in Section 015639 "Temporary Tree and Plant Protection."

E. Tree and Plant Protection: Install temporary fencing located as indicated or outside the drip line of trees to protect vegetation from damage from construction operations. Protect tree root systems from damage, flooding, and erosion.

F. Pest Control: Engage pest-control service to recommend practices to minimize attraction and harboring of rodents, roaches, and other pests and to perform extermination and control procedures at regular intervals, so Project will be free of pests and their residues at Substantial Completion. Perform control operations lawfully, using materials approved by authorities having jurisdiction.

G. Site Enclosure Fence: Prior to commencing earthwork, furnish and install site enclosure fence in a manner that will prevent people from easily entering site except by entrance gates.

1. Extent of Fence: As required to enclose entire Project site or portion determined sufficient to accommodate construction operations.
2. Maintain security by limiting number of keys and restricting distribution to authorized personnel. Furnish one set of keys to Owner.

H. Security Enclosure and Lockup: Install temporary enclosure around partially completed areas of construction. Provide lockable entrances to prevent unauthorized entrance, vandalism, theft, and similar violations of security. Lock entrances at end of each workday.

I. Barricades, Warning Signs, and Lights: Comply with requirements of authorities having jurisdiction for erecting structurally adequate barricades, including warning signs and lighting.

J. Temporary Egress: Provide temporary egress from existing occupied facilities as indicated and as required by authorities having jurisdiction. Provide, install and maintain signage directing occupants to temporary egress.

K. Covered Walkway: Erect protective, covered walkway for passage of individuals through or adjacent to Project site. Coordinate with entrance gates, other facilities, and obstructions. Comply with regulations of authorities having jurisdiction.

1. Provide overhead decking, protective enclosure walls, handrails, barricades, warning signs, exit signs, lights, safe and well-drained walkways, and similar provisions for protection and safe passage.
2. Paint and maintain appearance of walkway for duration of the Work.

L. Temporary Enclosures: Provide temporary enclosures for protection of construction, in progress and completed, from exposure, foul weather, other construction operations, and similar activities. Provide temporary weathertight enclosure for building exterior.

1. Where heating or cooling is needed and permanent enclosure is incomplete, insulate temporary enclosures.

M. Temporary Partitions: Provide floor-to-ceiling dustproof partitions to limit dust and dirt migration and to separate areas occupied by Owner from fumes and noise.

1. Construct dustproof partitions with gypsum wallboard, with joints taped on occupied side, and fire-retardant-treated plywood on construction operations side.
2. Construct dustproof partitions with two layers of 6 mil polyethylene sheet on each side. Cover floor with two layers of 6 mil polyethylene sheet, extending sheets 18 inches up the sidewalls. Overlap and tape full length of joints. Cover floor with fire-retardant-treated plywood.

    a. Construct vestibule and airlock at each entrance through temporary partition with not less than 48 inches between doors. Maintain water-dampened foot mats in vestibule.

3. Where fire-resistance-rated temporary partitions are indicated or are required by authorities having jurisdiction, construct partitions according to the rated assemblies.
4. Insulate partitions to control noise transmission to occupied areas.
5. Seal joints and perimeter. Equip partitions with gasketed dustproof doors and security locks where openings are required.
6. Protect air-handling equipment.
7. Provide walk-off mats at each entrance through temporary partition.

N. Temporary Fire Protection: Install and maintain temporary fire-protection facilities of types needed to protect against reasonably predictable and controllable fire losses. Comply with NFPA 241; manage fire-prevention program.

1. Prohibit smoking in construction areas. Comply with additional limits on smoking specified in other Sections.
2. Supervise welding operations, combustion-type temporary heating units, and similar sources of fire ignition in accordance with requirements of authorities having jurisdiction.
3. Develop and supervise an overall fire-prevention and -protection program for personnel at Project site. Review needs with local fire department and establish procedures to be followed. Instruct personnel in methods and procedures. Post warnings and information.
4. Provide temporary standpipes and hoses for fire protection. Hang hoses with a warning sign, stating that hoses are for fire-protection purposes only and are not to be removed. Match hose size with outlet size and equip with suitable nozzles.

O. Weather protection shall comply with M.G.L. Chapter 149 Section 44G.

3.8 MOISTURE AND MOLD CONTROL

A. Moisture and Mold Protection: Protect stored materials and installed Work in accordance with Moisture and Mold Protection Plan.

B. Exposed Construction Period: Before installation of weather barriers, when materials are subject to wetting and exposure and to airborne mold spores, protect as follows:

1. Protect porous materials from water damage.
2. Protect stored and installed material from flowing or standing water.
3. Keep porous and organic materials from coming into prolonged contact with concrete.
4. Remove standing water from decks.
5. Keep deck openings covered or dammed.

C. Partially Enclosed Construction Period: After installation of weather barriers but before full enclosure and conditioning of building, when installed materials are still subject to infiltration of moisture and ambient mold spores, protect as follows:

1. Do not load or install drywall or other porous materials or components, or items with high organic content, into partially enclosed building.
2. Keep interior spaces reasonably clean and protected from water damage.
3. Periodically collect and remove waste containing cellulose or other organic matter.
4. Discard or replace water-damaged material.
5. Do not install material that is wet.
6. Discard and replace stored or installed material that begins to grow mold.
7. Perform work in a sequence that allows wet materials adequate time to dry before enclosing the material in gypsum board or other interior finishes.

D. Controlled Construction Period: After completing and sealing of the building enclosure but prior to the full operation of permanent HVAC systems, maintain as follows:

1. Control moisture and humidity inside building by maintaining effective dry-in conditions.
2. Use temporary or permanent HVAC system to control humidity within ranges specified for installed and stored materials.
3. Comply with manufacturer's written instructions for temperature, relative humidity, and exposure to water limits.

    a. Hygroscopic materials that may support mold growth, including wood and gypsum-based products, that become wet during the course of construction and remain wet for 48 hours are considered defective and require replacing.
    b. Measure moisture content of materials that have been exposed to moisture during construction operations or after installation. Record readings beginning at time of exposure and continuing daily for 48 hours. Identify materials containing moisture levels higher than allowed. Report findings in writing to Engineer.
    c. Remove and replace materials that cannot be completely restored to their manufactured moisture level within 48 hours.

3.9 VEHICLE ACCESS AND PARKING

A. Provide temporary access roads, parking areas, traffic control devices, and staging areas as required by the work and as approved by the Engineer.

B. Clear snow and ice from all drives, walks and stairs to maintain safe vehicle and pedestrian access to the site and facilities as directed by the Engineer.

© 2026 CDM Smith
All Rights Reserved

3.10 WASTE MANAGEMENT

A. Provide covered dumpster, minimum 4 cubic yards, dedicated to field office waste. Provide separate covered dumpster of adequate size for construction debris. Empty dumpsters on a regular basis and as directed by the Engineer. Dumpsters shall not exceed their capacities at any time.

3.11 OPERATION, TERMINATION, AND REMOVAL

A. Supervision: Enforce strict discipline in use of temporary facilities. To minimize waste and abuse, limit availability of temporary facilities to essential and intended uses.

B. Maintenance: Maintain facilities in good operating condition until removal.

1. Maintain operation of temporary enclosures, heating, cooling, humidity control, ventilation, and similar facilities on a 24-hour basis where required to achieve indicated results and to avoid possibility of damage.

C. Temporary Facility Changeover: Do not change over from using temporary security and protection facilities to permanent facilities until Final Completion.

D. Termination and Removal: Remove each temporary facility when need for its service has ended, when it has been replaced by authorized use of a permanent facility, or no later than Final Completion. Complete or, if necessary, restore permanent construction that may have been delayed because of interference with temporary facility. Repair damaged Work, clean exposed surfaces, and replace construction that cannot be satisfactorily repaired.

1. Materials and facilities that constitute temporary facilities are property of Contractor. Owner reserves right to take possession of Project identification signs.
2. Remove temporary roads and paved areas not intended for or acceptable for integration into permanent construction. Where area is intended for landscape development, remove soil and aggregate fill that do not comply with requirements for fill or subsoil. Remove materials contaminated with road oil, asphalt and other petrochemical compounds, and other substances that might impair growth of plant materials or lawns. Repair or replace street paving, curbs, and sidewalks at temporary entrances, as required by authorities having jurisdiction.
3. Just prior to Final Completion, repair, renovate, and clean permanent facilities used during construction period. Comply with final cleaning requirements specified in Section 017700 "Closeout Procedures."

SECTION 015728 - TEMPORARY BYPASS PUMPING SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Furnishing all labor, materials, equipment, and incidentals required and installing, field testing, and maintaining temporary bypass pumping systems for the purpose of diverting flow around work areas or supplementing flow as required for installation for the new influent pumping system.

B. Bypass systems must be of sufficient capacity to handle peak flows indicated herein.

C. Provide the necessary labor and supervision to set up the pumping and bypassing system. The Owner’s contract operator will operate the bypass pumping system.

D. Provide diesel fuel for operation of the bypass pumping systems.

E. Assume that each of the influent supplemental bypass pumps will need to be intermittently operated during periods when the Influent Pumping Station has total capacity less than 150 MGD.

F. Assume that primary service pump(s) will need to be operated continuously when the plant drain bypass system is active. Standby pumps will only be operated for routine exercising and when primary service pump(s) are taken out of service.

G. Provide all materials and labor as necessary to maintain flow conveyance under all weather conditions.

1. Interruption of flows will not be permitted.
2. Overflows from bypass operations will not be permitted to enter into any streams or bodies of water.

H. Contractor is solely responsible for any legal actions taken by the state regulatory agencies if such overflows occur during construction.

I. Bypass pumping equipment shall include pumps, conduits, engines, and related equipment necessary to divert the flow or sewage around the section in which work is to be performed.

1. Maintain at the same location and in operable condition, duplicate equipment to be used in case there is equipment failure.
2. In this event, promptly repair or replace the failed equipment to the satisfaction of Construction Manager.

J. Do not exceed 85 dBA at a distance of 5 feet from any part of the system. Do not exceed 69 dBA at a distance of 30 feet.

1. Engine driven equipment for bypass pumping equipment to have “critical grade mufflers.”
2. Provide equipment with sound attenuation enclosure integral to the pump.
3. These conditions are subject to any other additional stipulations that may be required by local sound ordinances.

K. The design, installation and operation of temporary bypass pumping systems is the Contractor's responsibility.

1. Provide the services of a professional bypass company who can demonstrate to Owner, Construction Manager and Engineer that the company specializes in the design and operation of temporary bypass pumping systems.
2. The bypass system must meet the requirements of all codes and regulatory agencies having jurisdiction.

L. Maintain temporary bypass pumping systems so that they are completely functional throughout the required period of service.

1. Maintain continuous operation of existing facilities throughout construction.

M. Discharge of sewage to the ground, creeks, and/or storm sewers shall be prohibited. Any violation shall be corrected immediately. If the OWNER is required to alleviate any prohibited discharges, the CONTRACTOR shall be charged the OWNER's cost times two. All costs shall be deducted from the Contract Amount.

N. Following the required period of service, remove temporary bypass pumping systems from site.

O. Provide all maintenance including manufacturer recommended preventive maintenance and on-call repair services.

1. Provide repair services and/or replacement equipment 24 hours per day, seven days per week within 4 hours of being called.

P. Provide and store enough diesel fuel on site to continually operate the primary pumps for at least 3 consecutive days. Contractor to provide all necessary diesel fuel required for operation.

Q. Provide a refueling service to maintain continuous 24-hours per day, seven days per week pumping system operation. Contractor to provided all necessary diesel fuel required for operation. Owner’s contract operator will operate the system.

R. Contractor shall handle all system maintenance.

S. Related Requirements:

1. Section 013513.24 “Special Procedure for MOPO and Construction Sequence”.
2. Section 015000 “Temporary Facilities and Controls.”

© 2026 CDM Smith
All Rights Reserved

1.3 DEFINITIONS

A. Bypass Pumping System:

1. The bypass pumping system consists of all equipment, pipe, valves, plugs, power supplies and other appurtenances required to divert sewer flow from sewer or sewer pumping stations.
2. The bypass pumping system to be comprised of pumping setups in addition to all bypass pipe necessary to complete the work.

B. Bypass Pipe:

1. The bypass pipe consists of the pipe, valves and other appurtenances including, but not limited to, air relief valves and dewatering connections.
2. The bypass pipe includes both the suction and discharge pipe for each bypass setup.

C. Firm Pumping Capacity: The capacity of the Primary Pump Setup with the largest pump out of service.

D. Average Daily Flow: The average of the daily influent flow volume for a continuous 12 month period.

E. Primary Pump Setup: The primary pump setup to be capable of pumping the Peak Flow, be connected to the bypass pipe, have an isolation valve, have a check valve, and be complete with power supplies.

F. Backup Pump Setup: The backup pump(s) is located at each Primary Pump Setup.

1. At setups where one Primary Pump conveys the Firm Pumping Capacity, the Backup Pump shall be identical to the Primary Pump.
2. When two or more pumps operate in parallel to convey the Firm Pumping Capacity, size the Backup Pump(s) to convey the Firm Pumping Capacity with the largest Primary Pump out-of-service.
3. Backup Pumps to be operational, be connected to the bypass pipe, have an isolation valve, have a check valve with visual indication of operation (e.g., external swing arm), and be complete with power supplies.

G. Standby Pump:

1. Locate the Standby Pump within 30 minutes of the project site and ready for installation at any setup in the event that a Primary Pump or Backup pump is out of service requiring repairs.
2. The Standby Pump to have the capacity of the largest pump at each setup.
3. The Standby Pump to be readily capable to be connected to the bypass pipe at each setup (i.e., given the nature of its potential emergency need, it should not require field fabrication/assembly of pipe to be connected to the header).

H. Discharge Connection: The discharge connection is where the pumped flow exits the bypass pipe and is introduced into a gravity sewer or force main.

I. Peak Flow or Peak Wet Weather Flow:

1. The peak flow that may occur in a sewer inclusive of wet weather flow produced by groundwater infiltration, precipitation and snow melt.
2. This value shall also include peak infiltration and inflow.
3. Peak flow may also mean the peak capacity necessary to drain a tank within a certain timeframe.

J. Operational Test:

1. The period of specified duration that the installed system is tested to verify operational integrity of a system prior to placing the system in service.
2. Operational testing requires that representatives of the equipment manufacturer be on site for timely identification and resolution of system issues.

K. Low Flow Period: The time of day when the wastewater system flow rate reaches the diurnal minimum.

1.4 SUBMITTALS

A. Submit the following:

1. Detailed description of each proposed temporary bypass pumping system, including pumps, pump drives, piping, hoses, valves, fittings, controls, wiring and any other related accessories required to provide a complete operating system in conformance with the requirements of this Section.
2. Calculations of static lift, pipe size selection, friction losses, flow velocity, total dynamic head, and pump selection.
3. Pump performance curves and head capacity curves showing pump operating range and capacity to meet all required flows.
4. Detailed plans and sections showing the proposed pumping system layout including dimensions and elevations. Include the following:

    a. Sewer plugging plan, including type, location, and manufacturer of plugs with emergency release procedures.
    b. Thrust and restraint block sizes and locations, if necessary.
    c. Temporary pipe supports, anchorage, cover material and other accessories as required to stabilize the piping system.
    d. Staging area and access requirements for all pumps.
    e. Number, size, material, location, and method of installation of suction piping.
    f. Number, size, material, location, and method of installation of discharge piping.
    g. Pump size, capacity, number of units, diesel engine specifications, fuel tank capacity, fuel consumption requirements, method of refueling, and location of all pumping equipment.
    h. Calculations of static lift, friction losses, and flow velocity (pump curves showing pump operating range shall be submitted).
    i. Standby power generator size and location.
    j. Proposed method of freeze protection.
    k. Proposed method of noise control for each pump.
    l. Temporary pipe supports, anchorage, cover material and other accessories as required to stabilize the piping system.
    m. Installation schedule and maintenance schedule.

n. List of personnel responsible for 24-hour on-site pump services and phone numbers.
o. A minimum of five reference installations of projects with similar size in wastewater pumping applications. Include contact names and phone numbers.
p. List of recommended spare parts to be stored on-site for emergency maintenance.

5. Information on vendor's service staff capabilities and replacement parts inventory to show that vendor has sufficient resources to provide emergency service and replacement equipment and/or parts to the work site prior to backup, surcharge, or overflow from the upstream system network.
6. Description of system operation and controls. Include a list of all alarm conditions and procedures for correcting problems including equipment replacement prior to backup, surcharge, or overflow from the upstream system network.
7. Description and schedule for the proposed procedures for start-up and testing of the facilities to demonstrate compliance with specified automatic operation and maintenance of a constant discharge pressure.
8. Plan of Operations for inclement weather including wet weather events and snowstorms, demonstrating the ability to maintain pumping system operations throughout inclement weather events.
9. Submittals for temporary bypass pumping systems shall be prepared and stamped by a professional engineer registered in the State of New York.
10. Detailed plan for 24-hour alarm monitoring.
11. Information on the pump controller to illustrate how each pump’s capacity will vary with varying flow rate.
12. Proposed method of noise control for each pump and generator, if provided.
13. Installation schedule and maintenance schedule.
14. Provide information on the vendor's service staff capabilities and replacement parts inventory to show that the vendor has sufficient resources to provide emergency service and replacement equipment and/or parts to the site within one hour of a service call.
15. A description and schedule for the proposed procedures for start-up and testing of the facilities to demonstrate compliance with specified automatic operation and maintenance of a constant discharge pressure.
16. A plan of operations for inclement weather including snowstorms and high flow events. The plan shall demonstrate the ability to maintain pumping system operations throughout inclement weather events.
17. A description and schedule for the proposed procedures for dismantling the system, and restoring normal operations at the facility.
18. Provide evidence that Contractor is insured in the event of flooding resulting in the damage or loss of bypass pump and equipment.
19. Provide evidence that the bypass pipe material and thickness can withstand all normal operating and surge pressures with a safety factor of 2.0.
20. Denote any conditions that will cause pumps to lose suction lift (prime) and describe procedures to rectify.
21. Show that the emergency switchover from primary to backup pumping will be automatic should Primary Pumps fail.
22. Show suction and discharge piping is protected from possible damage from construction activities.

1.5 DELEGATED DESIGN SUBMITTALS

A. Sign and seal Shop Drawings with design calculations and assumptions confirming performance requirements.

1. Include with Shop Drawings.
2. Professional Engineer Registration: State of New York

1.6 QUALITY ASSURANCE

A. Demonstrate experience to the Engineer or employ the services of a vendor who can demonstrate five years of recent and continuous specialization in the design, installation, operation, and removal of temporary bypass pumping systems in wastewater applications of similar size and complexity within the past three years.

B. Furnish the complete system from a single vendor who is capable of providing service staff, repair parts, and replacement of deficient system component within four hours of a service call, twenty-four hours per day, seven days per week.

C. Meet the requirements of all codes and regulatory agencies having jurisdiction. The Contractor is responsible for damage and any environmental fines/penalties due to backups or overflows onto streets, yards, and unpaved areas or into buildings, adjacent ditches, storm sewers, and waterways, including any subsequent remediation measures required or made necessary by such backups or overflows.

1.7 MANUFACTURER'S SERVICES

A. Provide the services of the manufacturer's representative for physical checkout field testing and operation and maintenance instruction for a minimum of one person day per pumping system. See requirements in Part 3.

B. Provide the services of the manufacturer's representative or designated alternative, who will be on site during all bypass pumping operations. Provide list of these designated personnel with telephone numbers prior to the start of bypass pumping.

PART 2 - PRODUCTS

2.1 INFLUENT PUMP BYPASS SYSTEM DESCRIPTION

A. Comply with design parameters specified herein.

1. Design and install temporary bypass pumping systems. The Owner’s contract operator will operate bypass pumping systems.
2. The Owner’s contract operator will provide on-site monitoring of bypass pumping while in operation.
3. Be capable of providing repair services and/or replacement equipment 24 hours per day, seven days per week.

B. Pumping System Control Panels: NEMA 4. Include flow indication, a flow totalizer, indicator lamps showing which pumps are operating, selector switch for auto or manual start and stop for each pump and visual and audible alarms for indication of operation failure and alarm conditions.

C. Bypass plant influent wet wells from Influent Screen Building channels to Grit Building with submersible pumps.

1. Refer to 013513.24 “Special Procedure for MOPO and Construction Sequence” for information on the existing plant operations and constraints during construction.
2. Refer to 015000 “Temporary Facilities and Controls” for requirements related to temporary electrical service, if needed.

D. Provide stop logs, temporary bulkheads, and/or plugs in the screening channels to isolate flow from the influent wet wells, if needed.

1. Portable compressor used for inflation of pipe plugs shall be classified as explosion proof if located within the influent screen building .

E. Provide a high level float system for the bypass pumping operation connected to an auto-dialer, which will provide notification to appropriate personnel in the event of an emergency situation.

1. Coordinate with owner on the setup of the auto-dialer system.

F. Maintain vehicle and pedestrian access on the plant roads and sidewalks at all times. Where pipes cross vehicular travel lanes, provide temporary road ramps to protect pipes while maintaining vehicle access.

G. Emergency egress and emergency response vehicle access routes must be maintained at all times. Coordinate and obtain approval from the Authority Having Jurisdiction for any proposed impediments to either.

H. Discharge Plant Drain bypass flow into distribution box.

1. Remove grating and secure/support piping as necessary.
2. Provide temporary railing/safety barrier around opening.
3. Provide seal as necessary to limit odors.
4. Connections shall be approved by the owner.

2.2 PLANT DRAIN BYPASS SYSTEM DESCRIPTION

A. Comply with design parameters specified herein.

1. Design and install temporary bypass pumping systems. The Owner’s contract operator will operate the bypass pumping systems.
2. The Owner will provide on-site monitoring of bypass pumping while in operation.
3. Be capable of providing repair services and/or replacement equipment 24 hours per day, seven days per week.

B. Pumping System Control Panels: NEMA 4. Include flow indication, a flow totalizer, indicator lamps showing which pumps are operating, selector switch for auto or manual start and stop for each pump and visual and audible alarms for indication of operation failure and alarm conditions.

C. Bypass plant drain flow from MH 3 to Grit Building with submersible pumps

1. Remove manhole frame and cover, chimney and cone section to accommodate installation of pumps.
2. Refer to 013513.24 “Special Procedure for MOPO and Construction Sequence” for information on the existing plant operations and constraints during construction. Refer to 015000 “Temporary Facilities and Controls” for requirements related to temporary electrical service, if needed.

D. Provide inflatable plugs at inlet and outlet of MH 2.

1. Portable compressor used for inflation of pipe plugs shall be classified as explosion proof if located within the building.

E. Provide a high level float system for the bypass pumping operation connected to an auto-dialer, which will provide notification to appropriate personnel in the event of an emergency situation.

1. Coordinate with owner on the setup of the auto-dialer system.

F. Discharge plant drain bypass flow into distribution box.

1. Remove grating and secure/support piping as necessary.
2. Provide temporary railing/safety barrier around opening.
3. Provide seal as necessary to limit odors.
4. Connections shall be approved by the owner.

2.3 GENERAL PUMPING EQUIPMENT

A. Furnish pumping units and accessories from a single vendor. For each temporary bypass pumping system, include pumps, drives, piping, piping headers, valves, flow meter, controls and appurtenances as required for a complete system.

B. Design and build pumps, drives, and controls for 24-hour continuous service at all points within the required range of operation, without overheating, without cavitation, and without excessive vibration or strain. Design and construct parts to have the strength, stability, and stiffness to meet specified requirements. Provide methods for inspection, repairs, and adjustment.

C. Furnish necessary foundation bolts, nuts, and washers.

D. Furnish each piece of equipment with a nameplate (with embossed data) securely mounted to body of the equipment.

1. Nameplate for Pumps: Include, as minimum, the manufacturer's name and model number, serial number, rated flow capacity, head, speed, and other pertinent data.

2. Nameplates for Drives: Include, as minimum, manufacturer's name and model number, serial number, horsepower, speed, input voltage, amps, number of cycles, and power and service factors.

E. Provide sound attenuation and comply with applicable noise ordinances for equipment.

F. Suitable for outdoor operation under adverse weather conditions. Provide protection from freezing as required to maintain system operation.

G. Pump Manufacturers:

1. Flygt, Godwin Pumps of America, Bridgeport NJ.
2. United Rentals
3. Thompson Pump and Manufacturing Co., Port Orange FL.
4. Or equal.

2.4 FLOW ISOLATION PLAN

A. Provide Flow Isolation Plan(s) for temporary flow isolation as required.

B. Temporary Flow Isolation:

1. Provide bulkhead(s) or other means of flow isolation to isolate the area(s) of work from receiving process flow and to divert flow as necessary for installation of the bypass pumping system(s) within the Influent Screen Building and/or the East and West Wet Wells, in accordance with Section 013513.24 “Special Procedures for Maintenance of Plant Operation and Sequence of Construction” and as shown on the Contract Drawings.
2. Provide Diving Services if necessary for installation and removal of bulkheads or other flow isolation devices.
3. Contractor is required to provide full flow capability at any given time as required by Section 013513.24 “Special Procedures for Maintenance of Plant Operation and Sequence of Construction”, If partial isolation is implemented by means of a cofferdam, bulkhead, or other infrastructure, such infrastructure shall be capable of being removed, opened, or modified at the direction of the Owner for anticipated high flow events. Any opening, such as a built-in sluice gate, shall be capable of allowing the flow requirements to be met.

C. Contractor may install submersible pumps, complete, in the Influent screening channels or the East and West Wet Wells; suggested sequence is presented in Section 013513.24 “Special Procedures for Maintenance of Plant Operation and Sequence of Construction” and shown on the Contract Drawings. Requirements for installation within this specification applies to complete installations within each wet well.

D. Interim Electrical System:

1. Provide an Electrical System to power the pumps as installed and associated equipment.

E. Interim Pump Controls:

1. Provide necessary level controls and measurement devices for the pumping system.

2. Provide Local Control Panels (LCPs) for each pump.

   a. Panels shall include: indicating lights, selector switches, control hardware, emergency Stop mushroom pushbuttons, and Unistrut®-style supports and anchorages.

F. Any other associated materials, equipment and apparatus including spare parts that are necessary for the successful operation and maintenance of the submersible or self priming pumps.

2.5 CONDITIONS OF OPERATION

A. Pumps for Each Site: Identical in every respect with all parts interchangeable.

B. Pump Design: For the conditions of service specified herein, with a rising head capacity curve for stable pump operation from the minimum head operating point to the shut-off head.

1. Service: Temporary Bypass Pumping.
2. Number of Pumps: As required for short-term temporary bypass of incoming drains and sewers at various manholes as needed during shutdown and rehabilitation of the influent pump station wet wells.
3. Liquid: Raw Wastewater, process drains, or stormwater.
4. Design capacity total peak (gpm): As required by the Application.
5. Drive: Diesel or electric.

C. Bypass operations during reduced pump capacity periods or wet well shutdowns lining or completing system connections should be attempted during dry weather conditions. Monitor the weather forecast prior to and during bypass operations. Be prepared to follow contractors submitted plan of operations for inclement weather events.

D. Dry weather flow rates have been approximated based on the Owner's records. The flows are estimated for the various locations that may require bypass flow during construction in the table below but not guaranteed. Contractor to coordinate with the Engineer once a timeline and bypass layout is established.

1. INFLUENT PUMP STATION BYPASS FLOWS
   Minimum of 30 MGD

2. PLANT DRAIN BYPASS FLOWS
   Maximum Daily Flows only:

Average	4.7 MGD
90th Percentile	7.5MGD
95th Percentile	8.9 MGD
98th Percentile	10.5 MGD
Maximum	14.2 MGD

© 2026 CDM Smith
All Rights Reserved

2.6 PUMPING SYSTEM COMPONENTS

A. General: Centrifugal, submersible or end suction, fully automatic, self-priming units that do not require the use of foot-valves, vacuum pumps, diaphragm pumps, or isolation valves or float apparatus in the priming system. Capable of running dry, with no damage for extended periods of time.

B. Pump Seals: High pressure, mechanical self-adjusting type with solid carbide faces capable of withstanding suction pressures to 100 psi.

1. Mechanical Seal: Cooled and lubricated in an oil bath reservoir, requiring no maintenance or adjustment. Keep oil bath reservoir from coming in contact with pumped water.
2. Pump Seal Metal Parts: Stainless steel.
3. Elastomers: Viton.

C. Pump Drive: Diesel engine or electric motor.

1. For Diesel engine drives:

a. Diesel Engine: Water cooled.
b. Pump and Diesel Engine: Skid mounted with integral fuel tank and skid lifting bracket.
c. Total Storage Quantity of fuel Allowable at Site: Not more than the sum of the individual fuel tank capacities furnished with each pump's diesel engine drive.
d. Provide a refueling service to maintain continuous 24-hours per day, 7 days per week pumping system operation.

2. For electrical motor driven pumps: Assume power costs.
3. If electrically-driven pumps are used, backup pumps shall be diesel-driven. All pumps shall be variable speed.

D. Pump System Controls:

1. Automatic start/stop controls for the pumping system to automatically maintain system flow at each location.
2. Contained in a local control panel with provision to manually operate each pump. Provide indication of pump operation and indicate total flow being pumped.

E. Provide required suction and discharge pipe and fittings, discharge manifold pipe and fittings, shutoff valves, check valves, flow meter, pressure regulating valves, insulation, freeze protection, and required accessories.

1. Pipe and Fittings: Steel with flanged or quick connect coupling connections, or high-density polyethylene pipe with fused joints.
2. Joints: 100 percent restrained.
3. Suction Piping: Rated for 25-inch Hg vacuum.
4. Discharge Piping, Fittings, Connections, Valves, and Piping Accessories: Rated for a minimum working pressure of 150 psi.

F. PIPE

1. Provide required suction and discharge pipe and fittings, discharge manifold pipe and fittings, shutoff valves, check valves, flow meter, pressure regulating valves, insulation, freeze protection, and all required accessories.
2. Pipe and fittings shall be steel with flanged or quick connect coupling connections, or high-density polyethylene (HDPE) pipe with fused joints.
3. Joints must be 100 percent restrained.
4. Suction piping shall be rated for 25-inch Hg vacuum.
5. Discharge piping, fittings, connections, valves, and other discharge piping accessories shall be rated for a minimum working pressure of 80 psi.
6. Minimum DR21 rating.
7. Layflat hose and quick-connect pipe are not permitted.
8. The bypass pump setup for the 54” East Trunk sewer shall be provided with at least two HDPE force-mains, each rated for no more than 50 percent of the firm capacity.

G. CHECK VALVES

1. Check valves shall be swing-arm type for external, visual inspection.

H. ISOLATION VALVES

1. Either gate or plug type valves shall be used to isolate each pump and header, as necessary.

I. TEMPORARY PLUGS

1. Provide temporary plugs, as required, for successful operation of the temporary pumping systems.
2. Plugs shall be designed for the specific purpose of providing temporary plugging of active pipes.
3. Plugs shall be firmly attached to a stationary object at ground level by a cable in order to prevent loss of plugs in pipelines.
4. Sewer plugs shall be capable of accommodating the maximum allowable surcharge heads within the sewer system that may be experienced during construction.
5. Plugs shall be readily removed from the system during emergency shutdowns.
6. Sewer plugs shall be pneumatic.

J. FLOW METERS

1. Provide magnetic flow meter on each system as follows:
2. EQ Basin Drainage bypass pump setup.
3. Flow meter shall be provided with digital display such that Owner can observe pumped rate.

K. ALARM MONITORING SYSTEM

1. Contractor shall coordinate with Owner for the bypass pump set up including suction water levels and bypass system alarms.
2. Bypass pumping system's monitoring system shall be capable of providing the following alarms:

    a. Lag Pump 1 On.
    b. Lag Pump 2 On.
    c. Lead Pump Fail.
    d. Lag Pump 1 Fail.
    e. Lag Pump 2 Fail.
    f. High Water.
    g. Overflow.

L. Provide to the Owner a list of Contractor's personnel to be notified when an alarm is signaled.

1. The list must include names and corresponding cellular phone numbers and cellular phone service providers.
2. All cellular phones on the list must be capable of receiving text messages.

M. When alarms are activated, the system shall also notify the Owner. The Owner will provide names and phone numbers of Owner's staff to be notified.

Ensure the bypass pumping telemetry system is operational during all times when the bypass pumps are operational. Ensure all bypassing equipment is continuously monitored and shall immediately respond to any alarms.

PART 3 - EXECUTION

3.1 INSTALLATION AND PHYSICAL CHECKOUT

A. Install in accordance with the bypass pumping system supplier's recommendations and approved Shop Drawing submittals.

B. Use critically silenced packs on each diesel-driven pump sets. Reduce the sound of the diesel-driven engine to 69 dBA at a distance of 30 feet.

C. Install pumping units on a firm level surface.

D. Furnish the services of the bypass pump system supplier's representative for a minimum of one day per temporary bypass system to assist equipment installation and physical checkout.

3.2 FIELD TESTING

A. Provide field testing in accordance with the approved Shop Drawing submittal. Demonstrate conformance with system requirements.

B. Field testing be conducted by the pump system supplier's representative in the presence of the Engineer. Furnish the services of the bypass pump system supplier's representative for a minimum of one day per temporary bypass system to conduct required testing.

1. Demonstrate a minimum of 24 hours of continuous operation. During the 24 hours of continuous operation, demonstrate system’s ability to automatically start and stop pumps in response to changing flow conditions.

C. Remove and replace any system component that fails to perform in accordance with specified requirements.

3.3 SYSTEM OPERATION

A. Perform required maintenance on the equipment to maintain the system integrity and capacity as specified.

B. Provide maintenance including manufacturer-recommended preventive maintenance and on-call repair services.

C. Provide full-time on-site monitoring of bypass pumping while in operation. Provide repair services and/or replacement equipment 24 hours per day, seven days per week.

D. Provide clean-up and disposal of contaminated material and reporting for product spills.

3.4 EQUIPMENT REMOVAL

A. At the completion of the period of service, disconnect temporary piping and remove system components from Site. Restore the work site to its original condition.

END OF SECTION 015728

SECTION 016000 - PRODUCT REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for selection of products for use in Project; product delivery, storage, and handling; manufacturers' standard warranties on products; special warranties; and comparable products.

B. Related Requirements:

1. Section 011000 “Summary” for Contractor requirements related to Owner-furnished products.
2. Section 012100 "Allowances" for products selected under an allowance.
3. Section 012300 "Alternates" for products selected under an alternate.
4. Section 012500 "Substitution Procedures" for requests for substitutions.
5. Section 014200 "References" for applicable industry standards for products specified.
6. Section 017700 “Closeout Procedures” for submitting warranties.

1.3 DEFINITIONS

A. Products: Items obtained for incorporating into the Work, whether purchased for Project by contractor, pre-purchased by the Owner, or taken from previously purchased stock. The term "product" includes the terms "material," "equipment," "system," and terms of similar intent.

1. Named Products: Items identified by manufacturer's product name, including make or model number or other designation shown or listed in manufacturer's published product literature that is current as of date of the Contract Documents.
2. New Products: Items that have not previously been incorporated into another project or facility. Salvaged items or items reused from other projects are not considered new products. Items that are manufactured or fabricated to include recycle contract materials are considered new products, unless indicated otherwise.
3. Comparable Product: Product by named manufacturer that is demonstrated and approved through the comparable product submittal process described in PART 2 “Comparable Products” Article, to have the indicated qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics that equal or exceed those of specified product.

B. Basis-of-Design Product Specification: A specification in which a single manufacturer's product is named and accompanied by the words "basis-of-design product," including make or model

number or other designation. Published attributes and characteristics of basis-of-design product establish salient characteristics of products.

1. Evaluation of Comparable Products: In addition to the basis-of-design product description, product attributes and characteristics may be listed to establish the significant qualities related to type, function, in-service performance and physical properties, weight, dimension, durability, visual characteristics, and other special features and requirements for purposes of evaluating comparable products of additional manufacturers named in the specification. Manufacturer's published attributes and characteristics of basis-of-design product also establish salient characteristics of products for purposes of evaluating comparable products.

C. Subject to Compliance with Requirements: Where the phrase "Subject to compliance with requirements" introduces a product selection procedure in an individual Specification Section, provide products qualified under the specified product procedure. In the event that a named product or product by a named manufacturer does not meet the other requirements of the specifications, select another named product or product from another named manufacturer that does meet the requirements of the specifications; submit a comparable product request or substitution request, if applicable.

D. Comparable Product Request Submittal: An action submittal requesting consideration of a comparable product, including the following information:

1. Identification of basis-of-design product or fabrication or installation method to be replaced, including Specification Section number and title and Drawing numbers and titles.
2. Data indicating compliance with the requirements specified in PART 2 "Comparable Products" Article.

1.4 QUALITY ASSURANCE

A. Compatibility of Options: If Contractor is given option of selecting between two or more products for use on Project, select product compatible with products previously selected, even if previously selected products were also options.

1. Resolution of Compatibility Disputes between Multiple Contractors:

a. Contractors are responsible for providing products and construction methods compatible with products and construction methods of other contractors.
b. If a dispute arises between the multiple contractors over concurrently selectable but incompatible products, Engineer will determine which products shall be used.

B. Identification of Products: Except for required labels and operating data, do not attach or imprint manufacturer or product names or trademarks on exposed surfaces of products or equipment that will be exposed to view in occupied spaces or on the exterior.

1. Labels: Locate required product labels and stamps on a concealed surface, or, where required for observation following installation, on a visually accessible surface that is not conspicuous.

2. Equipment Nameplates: Provide a permanent nameplate on each item of service- or power-operated equipment. Locate on a visually accessible but inconspicuous surface. Include information essential for operation, including the following:

    a. Name of product and manufacturer.
    b. Model and serial number.
    c. Capacity.
    d. Speed.
    e. Ratings.

3. See individual identification Sections in Divisions 22, 23, and 26 for additional equipment identification requirements.

1.5 COORDINATION

A. Modify or adjust affected work as necessary to integrate work of approved comparable products and approved substitutions.

1.6 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle products, including Owner pre-purchased products, using means and methods that will prevent damage, deterioration, and loss, including theft and vandalism. Comply with manufacturer's written instructions.

B. Delivery and Handling:

1. Schedule delivery to minimize long-term storage at Project site and to prevent overcrowding of construction spaces.
2. Coordinate delivery with installation time to ensure minimum holding time for items that are flammable, hazardous, easily damaged, or sensitive to deterioration, theft, and other losses.
3. Deliver products to Project site in an undamaged condition in manufacturer's original sealed container or other packaging system, complete with labels and instructions for handling, storing, unpacking, protecting, and installing.
4. Inspect products on delivery to determine compliance with the Contract Documents and that products are undamaged and properly protected.
5. Inspect Owner pre-purchased products on delivery to determine compliance with Contract Documents and that products are undamaged and properly protected.

C. Storage:

1. Provide a secure location and enclosure at Project site for storage of materials and equipment.
2. Store products to allow for inspection and measurement of quantity or counting of units.
3. Store materials in a manner that will not endanger Project structure.
4. Store products that are subject to damage by the elements, under cover in a weathertight enclosure above ground, with ventilation adequate to prevent condensation and with adequate protection for wind.

5. Protect foam plastic from exposure to sunlight, except to extent necessary for period of installation and concealment.
6. Comply with product manufacturer's written instructions for temperature, humidity, ventilation, and weather-protection requirements for storage.
7. Protect stored products from damage and liquids from freezing.
8. Provide a secure location and enclosure at Project site for storage of materials and equipment by Owner's construction forces. Coordinate location with Owner.
9. Comply with product manufacturer’s requirements for maintenance and exercise of products during storage.

1.7 PRODUCT WARRANTIES

A. Warranties specified in other Sections shall be in addition to, and run concurrent with, other warranties required by the Contract Documents. Manufacturer's disclaimers and limitations on product warranties do not relieve Contractor of obligations under requirements of the Contract Documents.

1. Manufacturer's Warranty: Written standard warranty form furnished by individual manufacturer for a particular product and issued in the name of the Owner or endorsed by manufacturer to Owner.
2. Special Warranty: Written warranty required by the Contract Documents to provide specific rights for Owner and issued in the name of the Owner or endorsed by manufacturer to Owner.

B. Special Warranties: Prepare a written document that contains appropriate terms and identification, ready for execution.

1. Manufacturer's Standard Form: Modified to include Project-specific information and properly executed.
2. Specified Form: When specified forms are included in the Project Manual, prepare a written document, using indicated form properly executed.
3. See other Sections for specific content requirements and particular requirements for submitting special warranties.

C. Submittal Time: Comply with requirements in Section 017700 "Closeout Procedures."

PART 2 - PRODUCTS

2.1 PRODUCT SELECTION PROCEDURES

A. General Product Requirements: Provide products that comply with the Contract Documents, are undamaged and, unless otherwise indicated, are new at time of installation.

1. Provide products complete with accessories, trim, finish, fasteners, and other items needed for a complete installation and indicated use and effect.
2. Standard Products: If available, and unless custom products or nonstandard options are specified, provide standard products of types that have been produced and used successfully in similar situations on other projects.

3. Owner reserves the right to limit selection to products with warranties meeting requirements of the Contract Documents.
4. Where products are accompanied by the term "as selected," Engineer will make selection.
5. Descriptive, performance, and reference standard requirements in the Specifications establish salient characteristics of products.
6. Or Equal: For products specified by name and accompanied by the term "or equal," "or approved equal," or "or approved," comply with requirements in "Comparable Products" Article to obtain approval for use of an unnamed product.

    a. Submit additional documentation required by Engineer through Construction Manager in order to establish equivalency of proposed products. Unless otherwise indicated, evaluation of "or equal" product status is by the Engineer, whose determination is final.

B. Product Selection Procedures:

1. Sole Product: Where Specifications name a single manufacturer and product, provide the named product that complies with requirements. Comparable products or substitutions for Contractor's convenience will not be considered.

    a. Sole product may be indicated by the phrase "Subject to compliance with requirements, provide the following."

2. Sole Manufacturer/Source: Where Specifications name a single manufacturer or source, provide a product by the named manufacturer or source that complies with requirements. Comparable products or substitutions for Contractor's convenience will not be considered.

    a. Sole manufacturer/source may be indicated by the phrase "Subject to compliance with requirements, provide products by the following."

3. Limited List of Products: Where Specifications include a list of names of both manufacturers and products, provide one of the products listed that complies with requirements. Comparable products or substitutions for Contractor's convenience will not be considered unless otherwise indicated.

    a. Limited list of products may be indicated by the phrase "Subject to compliance with requirements, provide one of the following."

4. Non-Limited List of Products: Where Specifications include a list of names of both available manufacturers and products, provide one of the products listed, or an unnamed product that complies with requirements.

    a. Non-limited list of products is indicated by the phrase "Subject to compliance with requirements, available products that may be incorporated in the Work include, but are not limited to, the following."
    b. Provision of an unnamed product is not considered a substitution, if the product complies with requirements.

5. Limited List of Manufacturers: Where Specifications include a list of manufacturers' names, provide a product by one of the manufacturers listed that complies with

requirements. Comparable products or substitutions for Contractor's convenience will not be considered unless otherwise indicated.

a. Limited list of manufacturers is indicated by the phrase "Subject to compliance with requirements, provide products by one of the following."

6. Non-Limited List of Manufacturers: Where Specifications include a list of available manufacturers, provide a product by one of the manufacturers listed, or a product by an unnamed manufacturer that complies with requirements.

a. Non-limited list of manufacturers is indicated by the phrase "Subject to compliance with requirements, available manufacturers whose products may be incorporated in the Work include, but are not limited to, the following."
b. Provision of products of an unnamed manufacturer is not considered a substitution, if the product complies with requirements.

7. Basis-of-Design Product: Where Specifications name a product, or refer to a product indicated on Drawings, and include a list of manufacturers, provide the specified or indicated product or a comparable product by one of the other named manufacturers. Drawings and Specifications may additionally indicate sizes, profiles, dimensions, and other characteristics that are based on the product named. Comply with requirements in "Comparable Products" Article for consideration of an unnamed product by one of the other named manufacturers.

a. For approval of products by unnamed manufacturers, comply with requirements in Section 012500 "Substitution Procedures" for substitutions for convenience.

C. Visual Matching Specification: Where Specifications require the phrase "match Engineer's sample," provide a product that complies with requirements and matches Engineer's sample. Engineer's decision will be final on whether a proposed product matches.

1. If no product available within specified category matches and complies with other specified requirements, comply with requirements in Section 012500 "Substitution Procedures" for proposal of product.

D. Visual Selection Specification: Where Specifications include the phrase "as selected by Engineer from manufacturer's full range" or a similar phrase, select a product that complies with requirements. Engineer will select color, gloss, pattern, density, or texture from manufacturer's product line that includes both standard and premium items.

E. Sustainable Product Selection: Where Specifications require product to meet sustainable product characteristics, select products complying with indicated requirements. Comply with requirements in Division 01 sustainability requirements Section and individual Specification Sections.

1. Select products for which sustainable design documentation submittals are available from manufacturer.

© 2026 CDM Smith
All Rights Reserved

2.2 COMPARABLE PRODUCTS

A. Conditions for Consideration of Comparable Products: Engineer will consider Contractor's request for comparable product when the following conditions are satisfied. If the following conditions are not satisfied, Engineer may return requests without action, except to record noncompliance the following requirements:

1. Evidence that proposed product does not require revisions to the Contract Documents, is consistent with the Contract Documents, will produce the indicated results, and is compatible with other portions of the Work.
2. Detailed comparison of significant qualities of proposed product with those of the named basis-of-design product. Significant product qualities include attributes, such as type, function, in-service performance and physical properties, weight, dimension, durability, visual characteristics, and other specific features and requirements.
3. Evidence that proposed product provides specified warranty.
4. List of similar installations for completed projects, with project names and addresses and names and addresses of Engineers and owners, if requested.
5. Samples, if requested.

B. Engineer’s Action on Comparable Products Submittal: If necessary, Engineer will request additional information or documentation for evaluation, as specified in Section 013300 “Submittal Procedures.”

1. Form of Approval of Submittal: As specified in Section 013300 “Submittal Procedures.”
2. Use product specified if Engineer does not issue a decision on use of a comparable product request within time allocated.

C. Submittal Requirements, Two-Step Process: Approval by the Engineer of Contractor's request for use of comparable product is not intended to satisfy other submittal requirements. Comply with specified submittal requirements.

PART 3 - EXECUTION (NOT USED)

SECTION 017300 - EXECUTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes general administrative and procedural requirements governing execution of the Work, including, but not limited to, the following:

1. Construction layout.
2. Field engineering and surveying.
3. Installation of the Work.
4. Cutting and patching.
5. Coordination of Owner's portion of the Work.
6. Coordination of Owner-installed products.
7. Progress cleaning.
8. Starting and adjusting.
9. Protection of installed construction.

B. Related Requirements:

1. Section 011000 "Summary" for coordination of Owner-furnished products and limits on use of Project site.
2. Section 013300 "Submittal Procedures" for submitting surveys.
3. Section 017700 "Closeout Procedures" for submitting final property survey with Project Record Documents, recording of Owner-accepted deviations from indicated lines and levels, replacing defective work, and final cleaning.
4. Section 024119 "Selective Demolition" for demolition and removal of selected portions of the building.
5. Section 078413 "Penetration Firestopping" for patching penetrations in fire-rated construction.

1.3 DEFINITIONS

A. Cutting: Removal of in-place construction necessary to permit installation or performance of subsequent work.

B. Patching: Fitting and repair work required to restore construction to original conditions after installation of subsequent work.

© 2026 CDM Smith
All Rights Reserved

1.4 PREINSTALLATION MEETINGS

A. Cutting and Patching Conference: Conduct conference at Project site.

1. Prior to submitting cutting and patching plan, review extent of cutting and patching anticipated and examine procedures for ensuring satisfactory result from cutting and patching work. Inform Engineer and Construction Manager of scheduled meeting. Require representatives of each entity directly concerned with cutting and patching to attend, including the following:

a. Contractor's superintendent.
b. Trade supervisor responsible for cutting operations.
c. Trade supervisor(s) responsible for patching of each type of substrate.
d. Mechanical, electrical, and utilities subcontractors' supervisors, to the extent each trade is affected by cutting and patching operations.

2. Review areas of potential interference and conflict. Coordinate procedures and resolve potential conflicts before proceeding.

B. Layout Conference: Conduct conference at Project site.

1. Prior to establishing layout of new and existing perimeter and structural column grid(s), review building location requirements. Review benchmark, control point, and layout and dimension requirements. Inform Engineer and Construction Manager of scheduled meeting. Require representatives of each entity directly concerned with Project layout to attend, including the following:

a. Contractor's superintendent.
b. Professional surveyor responsible for performing Project surveying and layout.
c. Professional surveyor responsible for performing site survey serving as basis for Project design.

2. Review meanings and intent of dimensions, notes, terms, graphic symbols, and other layout information indicated on the Drawings.
3. Review requirements for including layouts on Shop Drawings and other submittals.
4. Review areas of potential interference and conflict. Coordinate procedures and resolve potential conflicts before proceeding.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For land surveyor.

B. Certified Surveys: Submit two copies signed by land surveyor.

C. Certificates: Submit certificate signed by land surveyor, certifying that location and elevation of improvements comply with requirements.

D. Cutting and Patching Plan: Submit plan describing procedures at least Insert number days prior to the time cutting and patching will be performed. Include the following information:

1. Extent: Describe reason for and extent of each occurrence of cutting and patching.
2. Changes to In-Place Construction: Describe anticipated results. Include changes to structural elements and operating components as well as changes in building appearance and other significant visual elements.
3. Products: List products to be used for patching and firms or entities that will perform patching work.
4. Dates: Indicate when cutting and patching will be performed.
5. Utilities and Mechanical and Electrical Systems: List services and systems that cutting and patching procedures will disturb or affect. List services and systems that will be relocated and those that will be temporarily out of service. Indicate length of time permanent services and systems will be disrupted.

    a. Include description of provisions for temporary services and systems during interruption of permanent services and systems.

E. Landfill Receipts: Submit copy of receipts issued by a landfill facility, licensed to accept hazardous materials, for hazardous waste disposal.

1.6 CLOSEOUT SUBMITTALS

A. Final Property Survey: Submit 10 copies showing the Work performed and record survey data.

1.7 QUALITY ASSURANCE

A. Land Surveyor Qualifications: A professional land surveyor who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing land-surveying services of the kind indicated.

B. Professional Engineer Qualifications: Refer to Section 014000 “Quality Requirements.”

C. Cutting and Patching: Comply with requirements for and limitations on cutting and patching of construction elements.

1. Structural Elements: When cutting and patching structural elements, or when encountering the need for cutting and patching of elements, whose structural function is not known, notify Engineer of locations and details of cutting and await directions from Engineer before proceeding. Shore, brace, and support structural elements during cutting and patching. Do not cut and patch structural elements in a manner that could change their load-carrying capacity or increase deflection.
2. Operational Elements: Do not cut and patch operating elements and related components in a manner that results in reducing their capacity to perform as intended or that results in increased maintenance or decreased operational life or safety. Operational elements include the following:

    a. Primary operational systems and equipment.
    b. Fire separation assemblies.
    c. Air or smoke barriers.
    d. Fire-suppression systems.
    e. Plumbing piping systems.

f. Mechanical systems piping and ducts.
g. Control systems.
h. Communication systems.
i. Fire-detection and -alarm systems.
j. Conveying systems.
k. Electrical wiring systems.
l. Operating systems of special construction.

3. Other Construction Elements: Do not cut and patch other construction elements or components in a manner that could change their load-carrying capacity, that results in reducing their capacity to perform as intended, or that results in increased maintenance or decreased operational life or safety. Other construction elements include but are not limited to the following:

a. Water, moisture, or vapor barriers.
b. Membranes and flashings.
c. Exterior curtain-wall construction.
d. Sprayed fire-resistive material.
e. Equipment supports.
f. Piping, ductwork, vessels, and equipment.
g. Noise- and vibration-control elements and systems.

4. Visual Elements: Do not cut and patch construction in a manner that results in visual evidence of cutting and patching. Do not cut and patch exposed construction in a manner that would, in Engineer's opinion, reduce the building's aesthetic qualities. Remove and replace construction that has been cut and patched in a visually unsatisfactory manner.

D. Manufacturer's Installation Instructions: Obtain and maintain on-site manufacturer's written recommendations and instructions for installation of specified products and equipment.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Comply with requirements specified in other Sections.

1. For projects requiring compliance with sustainable design and construction practices and procedures, use products for patching that comply with sustainable design requirements.

B. In-Place Materials: Use materials for patching identical to in-place materials. For exposed surfaces, use materials that visually match in-place adjacent surfaces to the fullest extent possible.

1. If identical materials are unavailable or cannot be used, use materials that, when installed, will provide a match acceptable to Engineer for the visual and functional performance of in-place materials. Use materials that are not considered hazardous.

C. Cleaning Agents: Use cleaning materials and agents recommended by manufacturer or fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property or that might damage finished surfaces.

1. Use cleaning products that comply with Green Seal's GS-37, or if GS-37 is not applicable, use products that comply with the California Code of Regulations maximum allowable VOC levels.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Existing Conditions: The existence and location of underground and other utilities and construction indicated as existing are not guaranteed. Before beginning sitework, investigate and verify the existence and location of underground utilities, mechanical and electrical systems, and other construction affecting the Work.

1. Before construction, verify the location and invert elevation at points of connection of sanitary sewer, storm sewer, gas service piping, and water-service piping; underground electrical services; and other utilities.
2. Furnish location data for work related to Project that must be performed by public utilities serving Project site.

B. Examination and Acceptance of Conditions: Before proceeding with each component of the Work, examine substrates, areas, and conditions, with Installer or Applicator present where indicated, for compliance with requirements for installation tolerances and other conditions affecting performance. Record observations.

1. Examine roughing-in for mechanical and electrical systems to verify actual locations of connections before equipment and fixture installation.
2. Examine walls, floors, and roofs for suitable conditions where products and systems are to be installed.
3. Verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.

C. Written Report: Where a written report listing conditions detrimental to performance of the Work is required by other Sections, include the following:

1. Description of the Work, including Specification Section number and paragraphs, and Drawing sheet number and detail, where applicable.
2. List of detrimental conditions, including substrates.
3. List of unacceptable installation tolerances.
4. Recommended corrections.

D. Proceed with installation only after unsatisfactory conditions have been corrected. Proceeding with the Work indicates acceptance of surfaces and conditions.

3.2 PREPARATION

A. Existing Utility Information: Furnish information to Owner that is necessary to adjust, move, or relocate existing utility structures, utility poles, lines, services, or other utility appurtenances located in or affected by construction. Coordinate with authorities having jurisdiction.

B. Field Measurements: Take field measurements as required to fit the Work properly. Recheck measurements before installing each product. Where portions of the Work are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

C. Space Requirements: Verify space requirements and dimensions of items shown diagrammatically on Drawings.

D. Review of Contract Documents and Field Conditions: Immediately on discovery of the need for clarification of the Contract Documents, submit a request for information to Engineer in accordance to requirements in Section 013100 "Project Management and Coordination."

3.3 CONSTRUCTION LAYOUT

A. Verification: Before proceeding to lay out the Work, verify layout information shown on Drawings, in relation to the property survey and existing benchmarks and existing conditions. If discrepancies are discovered, notify Engineer and Construction Manager promptly.

B. Engage a land surveyor experienced in laying out the Work, using the following accepted surveying practices.

1. Establish benchmarks and control points to set lines and levels at each story of construction and elsewhere as needed to locate each element of Project.
2. Establish limits on use of Project site.
3. Establish dimensions within tolerances indicated. Do not scale Drawings to obtain required dimensions.
4. Inform installers of lines and levels to which they must comply.
5. Check the location, level and plumb, of every major element as the Work progresses.
6. Notify Engineer and Construction Manager when deviations from required lines and levels exceed allowable tolerances.
7. Close site surveys with an error of closure equal to or less than the standard established by authorities having jurisdiction.

C. Site Improvements: Locate and lay out site improvements, including pavements, grading, fill and topsoil placement, utility slopes, and rim and invert elevations.

D. Building Lines and Levels: Locate and lay out control lines and levels for structures, building foundations, column grids, and floor levels, including those required for mechanical and electrical work. Transfer survey markings and elevations for use with control lines and levels. Level foundations and piers from two or more locations.

E. Record Log: Maintain a log of layout control work. Record deviations from required lines and levels. Include beginning and ending dates and times of surveys, weather conditions, name and

duty of each survey party member, and types of instruments and tapes used. Make the log available for reference by Engineer and Construction Manager.

3.4 FIELD ENGINEERING

A. Identification: Owner will identify existing benchmarks, control points, and property corners.

B. Reference Points: Locate existing permanent benchmarks, control points, and similar reference points before beginning the Work. Preserve and protect permanent benchmarks and control points during construction operations.

1. Do not change or relocate existing benchmarks or control points without prior written approval of Engineer or Construction Manager. Report lost or destroyed permanent benchmarks or control points promptly. Report the need to relocate permanent benchmarks or control points to Engineer and Construction Manager before proceeding.
2. Replace lost or destroyed permanent benchmarks and control points promptly. Base replacements on the original survey control points.

C. Benchmarks: Establish and maintain a minimum of two permanent benchmarks on Project site, referenced to data established by survey control points. Comply with authorities having jurisdiction for type and size of benchmark.

1. Record benchmark locations, with horizontal and vertical data, on Project Record Documents.
2. Where the actual location or elevation of layout points cannot be marked, provide temporary reference points sufficient to locate the Work.
3. Remove temporary reference points when no longer needed. Restore marked construction to its original condition.

D. Certified Survey: On completion of foundation walls, major site improvements, and other work requiring field-engineering services, prepare a certified survey showing dimensions, locations, angles, and elevations of construction and sitework.

E. Final Property Survey: Engage a land surveyor to prepare a final property survey showing significant features (real property) for Project. Include on the survey a certification, signed by land surveyor, that principal metes, bounds, lines, and levels of Project are accurately positioned as shown on the survey.

1. Show boundary lines, monuments, streets, site improvements and utilities, existing improvements and significant vegetation, adjoining properties, acreage, grade contours, and the distance and bearing from a site corner to a legal point.
2. Recording: At Substantial Completion, have the final property survey recorded by or with authorities having jurisdiction as the official "property survey."

3.5 INSTALLATION

A. Locate the Work and components of the Work accurately, in correct alignment and elevation, as indicated.

1. Make vertical work plumb and make horizontal work level.
2. Where space is limited, install components to maximize space available for maintenance and ease of removal for replacement.
3. Conceal pipes, ducts, and wiring in finished areas unless otherwise indicated.
4. Maintain minimum headroom clearance of 96 inches in occupied spaces and 90 inches in unoccupied spaces, unless otherwise indicated on Drawings.

B. Comply with manufacturer's written instructions and recommendations for installing products in applications indicated.

C. Install products at the time and under conditions that will ensure satisfactory results as judged by Engineer. Maintain conditions required for product performance until Substantial Completion.

D. Conduct construction operations so no part of the Work is subjected to damaging operations or loading in excess of that expected during normal conditions of occupancy of type expected for Project.

E. Sequence the Work and allow adequate clearances to accommodate movement of construction items onsite and placement in permanent locations.

F. Tools and Equipment: Select tools or equipment that minimize production of excessive noise levels.

G. Templates: Obtain and distribute to the parties involved templates for Work specified to be factory prepared and field installed. Check Shop Drawings of other portions of the Work to confirm that adequate provisions are made for locating and installing products to comply with indicated requirements.

H. Attachment: Provide blocking and attachment plates and anchors and fasteners of adequate size and number to securely anchor each component in place, accurately located and aligned with other portions of the Work. Where size and type of attachments are not indicated, verify size and type required for load conditions with manufacturer.

1. Mounting Heights: Where mounting heights are not indicated, mount components at heights directed by Engineer.
2. Allow for building movement, including thermal expansion and contraction.
3. Coordinate installation of anchorages. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

I. Joints: Make joints of uniform width. Where joint locations in exposed Work are not indicated, arrange joints for the best visual effect, as judged by Engineer. Fit exposed connections together to form hairline joints.

J. Repair or remove and replace damaged, defective, or nonconforming Work.

1. Comply with Section 017700 "Closeout Procedures" for repairing or removing and replacing defective Work.

© 2026 CDM Smith
All Rights Reserved

3.6 CUTTING AND PATCHING

A. General: Employ skilled workers to perform cutting and patching. Proceed with cutting and patching at the earliest feasible time, and complete without delay.

1. Cut in-place construction to provide for installation of other components or performance of other construction, and subsequently patch as required to restore surfaces to their original condition.

B. Existing Warranties: Remove, replace, patch, and repair materials and surfaces cut or damaged during installation or cutting and patching operations, by methods and with materials so as not to void existing warranties.

C. Temporary Support: Provide temporary support of Work to be cut.

D. Protection: Protect in-place construction during cutting and patching to prevent damage. Provide protection from adverse weather conditions for portions of Project that might be exposed during cutting and patching operations.

E. Adjacent Occupied Areas: Where interference with use of adjoining areas or interruption of free passage to adjoining areas is unavoidable, coordinate cutting and patching in accordance with requirements in Section 011000 "Summary."

F. Existing Utility Services and Mechanical/Electrical Systems: Where existing services/systems are required to be removed, relocated, or abandoned, bypass such services/systems before cutting to minimize interruption to occupied areas.

G. Cutting: Cut in-place construction by sawing, drilling, breaking, chipping, grinding, and similar operations, including excavation, using methods least likely to damage elements retained or adjoining construction. If possible, review proposed procedures with original Installer; comply with original Installer's written recommendations.

1. In general, use hand or small power tools designed for sawing and grinding, not hammering and chopping. Cut holes and slots neatly to minimum size required, and with minimum disturbance of adjacent surfaces. Temporarily cover openings when not in use.
2. Finished Surfaces: Cut or drill from the exposed or finished side into concealed surfaces.
3. Concrete and Masonry: Cut using a cutting machine, such as an abrasive saw or a diamond-core drill.
4. Excavating and Backfilling: Comply with requirements in applicable Sections where required by cutting and patching operations.
5. Mechanical and Electrical Services: Cut off pipe or conduit in walls or partitions to be removed. Cap, valve, or plug and seal remaining portion of pipe or conduit to prevent entrance of moisture or other foreign matter after cutting.
6. Proceed with patching after construction operations requiring cutting are complete.

H. Patching: Patch construction by filling, repairing, refinishing, closing up, and similar operations following performance of other Work. Patch with durable seams that are as invisible as practicable, as judged by Engineer. Provide materials and comply with installation requirements specified in other Sections, where applicable.

1. Inspection: Where feasible, test and inspect patched areas after completion to demonstrate physical integrity of installation.
2. Exposed Finishes: Restore exposed finishes of patched areas and extend finish restoration into retained adjoining construction in a manner that will eliminate evidence of patching and refinishing.

    a. Clean piping, conduit, and similar features before applying paint or other finishing materials.
    b. Restore damaged pipe covering to its original condition.

3. Floors and Walls: Where walls or partitions that are removed extend one finished area into another, patch and repair floor and wall surfaces in the new space. Provide an even surface of uniform finish, color, texture, and appearance. Remove in-place floor and wall coverings and replace with new materials, if necessary, to achieve uniform color and appearance.

    a. Where patching occurs in a painted surface, prepare substrate and apply primer and intermediate paint coats appropriate for substrate over the patch, and apply final paint coat over entire unbroken surface containing the patch, corner to corner of wall and edge to edge of ceiling. Provide additional coats until patch blends with adjacent surfaces.

4. Ceilings: Patch, repair, or rehang in-place ceilings as necessary to provide an even-plane surface of uniform appearance.
5. Exterior Building Enclosure: Patch components in a manner that restores enclosure to a weathertight condition and ensures thermal and moisture integrity of building enclosure.

I. Cleaning: Clean areas and spaces where cutting and patching are performed. Remove paint, mortar, oils, putty, and similar materials from adjacent finished surfaces.

3.7 PROGRESS CLEANING

A. Clean Project site and work areas daily, including common areas. Enforce requirements strictly. Dispose of materials lawfully.

1. Comply with requirements in NFPA 241 for removal of combustible waste materials and debris.
2. Do not hold waste materials more than seven days during normal weather or three days if the temperature is expected to rise above 80 deg F.
3. Containerize hazardous and unsanitary waste materials separately from other waste. Mark containers appropriately and dispose of legally, according to regulations.

    a. Use containers intended for holding waste materials of type to be stored.

4. Coordinate progress cleaning for joint-use areas where Contractor and other contractors are working concurrently.

B. Site: Maintain Project site free of waste materials and debris.

C. Work Areas: Clean areas where Work is in progress to the level of cleanliness necessary for proper execution of the Work.

1. Remove liquid spills promptly.
2. Where dust would impair proper execution of the Work, broom-clean or vacuum the entire work area, as appropriate.

D. Installed Work: Keep installed work clean. Clean installed surfaces according to written instructions of manufacturer or fabricator of product installed, using only cleaning materials specifically recommended. If specific cleaning materials are not recommended, use cleaning materials that are not hazardous to health or property and that will not damage exposed surfaces.

E. Concealed Spaces: Remove debris from concealed spaces before enclosing the space.

F. Exposed Surfaces: Clean exposed surfaces and protect as necessary to ensure freedom from damage and deterioration at time of Substantial Completion.

G. Waste Disposal: Do not bury or burn waste materials on-site. Do not wash waste materials down sewers or into waterways. Comply with waste disposal requirements in Section 017419 "Construction Waste Management and Disposal."

H. During handling and installation, clean and protect construction in progress and adjoining materials already in place. Apply protective covering where required to ensure protection from damage or deterioration at Substantial Completion.

I. Clean and provide maintenance on completed construction as frequently as necessary through the remainder of the construction period. Adjust and lubricate operable components to ensure operability without damaging effects.

J. Limiting Exposures: Supervise construction operations to ensure that no part of the construction, completed or in progress, is subject to harmful, dangerous, damaging, or otherwise deleterious exposure during the construction period.

3.8 STARTING AND ADJUSTING

A. Coordinate startup and adjusting of equipment and operating components with requirements in Section 019113 "General Commissioning Requirements."

B. Start equipment and operating components to confirm proper operation. Remove malfunctioning units, replace with new units, and retest.

C. Adjust equipment for proper operation. Adjust operating components for proper operation without binding.

D. Test each piece of equipment to verify proper operation. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

E. Manufacturer's Field Service: Comply with qualification requirements in Section 014000 "Quality Requirements."

© 2026 CDM Smith
All Rights Reserved

3.9 PROTECTION AND REPAIR OF INSTALLED CONSTRUCTION

A. Provide final protection and maintain conditions that ensure installed Work is without damage or deterioration at time of Substantial Completion.

B. Repair Work previously completed and subsequently damaged during construction period Repair to like-new condition.

C. Protection of Existing Items: Provide protection and ensure that existing items to remain undisturbed by construction are maintained in condition that existed at commencement of the Work.

D. Comply with manufacturer's written instructions for temperature and relative humidity.

SECTION 017419 - CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for the following:

1. Salvaging nonhazardous demolition and construction waste.
2. Recycling nonhazardous demolition and construction waste.
3. Disposing of nonhazardous demolition and construction waste.

B. Related Requirements:

1. Section 024119 “Selective Demolition”
2. Section 042000 "Unit Masonry" for disposal requirements for masonry waste.
3. Section 044313.13 "Anchored Stone Masonry Veneer" for disposal requirements for excess stone and stone waste.
4. Section 044313.16 "Adhered Stone Masonry Veneer" for disposal requirements for excess stone and stone waste.
5. Section 311000 "Site Clearing" for disposition of waste resulting from site clearing and removal of above- and below-grade improvements.

1.3 DEFINITIONS

A. Construction Waste: Building, structure, and site improvement materials and other solid waste resulting from construction, remodeling, renovation, or repair operations. Construction waste includes packaging.

B. Demolition Waste: Building, structure, and site improvement materials resulting from demolition operations.

C. Disposal: Removal of demolition or construction waste and subsequent salvage, sale, recycling, or deposit in landfill, incinerator acceptable to authorities having jurisdiction, or designated spoil areas on Owner’s property.

D. Recycle: Recovery of demolition or construction waste for subsequent processing in preparation for reuse.

E. Salvage: Recovery of demolition or construction waste and subsequent sale or reuse in another facility.

F. Salvage and Reuse: Recovery of demolition or construction waste and subsequent incorporation into the Work.

1.4 MATERIALS OWNERSHIP

A. Unless otherwise indicated, demolition and construction waste becomes property of Contractor. However, the Owner reserves the right to identify any of their existing equipment assets for salvage prior to demolition and disposal.

B. Historic items, relics, antiques, and similar objects including, but not limited to, cornerstones and their contents, commemorative plaques and tablets, and other items of interest or value to Owner that may be uncovered during demolition remain the property of Owner.

1. Carefully salvage in a manner to prevent damage and promptly return to Owner.

C. Project specific construction sequencing dictates that existing pumps are removed from service incrementally. Retain parts from existing pumps as they are removed from service to allow for maintenance and/or emergency repair of pumps that remain in service. Retain and store all pump parts that are removed from service until substantial completion or until otherwise approved by the Owner and Engineer. The Owner will retain ownership of all existing pumps until the end of the project.

1.5 ACTION SUBMITTALS

A. Waste Management Plan: Submit plan within 30 days of date established for the Notice to Proceed.

1.6 QUALITY ASSURANCE

A. Regulatory Requirements: Comply with transportation and disposal regulations of authorities having jurisdiction.

B. Waste Management Conference(s): Conduct conference(s) at Project site to comply with requirements in Section 013100 "Project Management and Coordination." Review methods and procedures related to waste management including, but not limited to, the following:

1. Review and discuss waste management plan including responsibilities of each contractor and waste management coordinator.
2. Review requirements for documenting quantities of each type of waste and its disposition.
3. Review and finalize procedures for materials separation and verify availability of containers and bins needed to avoid delays.
4. Review procedures for periodic waste collection and transportation to recycling and disposal facilities.
5. Review waste management requirements for each trade.

© 2026 CDM Smith
All Rights Reserved

1.7 WASTE MANAGEMENT PLAN

A. General: Develop a waste management plan according to requirements in this Section. Plan shall consist of waste identification, and waste disposal plan. Distinguish between demolition and construction waste. Indicate quantities by weight or volume, but use same units of measure throughout waste management plan.

B. Waste Identification: Indicate anticipated types and quantities of demolition site-clearing and construction waste generated by the Work. Use. Include estimated quantities and assumptions for estimates.

C. Waste Disposal: Identify facility name, location and contact information for locations where waste will be disposed.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.1 PLAN IMPLEMENTATION

A. General: Implement approved waste management plan. Provide handling, containers, storage, signage, transportation, and other items as required to implement waste management plan during the entire duration of the Contract.

1. Comply with operation, termination, and removal requirements in Section 015000 "Temporary Facilities and Controls."

B. Training: Train workers, subcontractors, and suppliers on proper waste management procedures, as appropriate for the Work.

1. Distribute waste management plan to everyone concerned within three days of submittal return.
2. Distribute waste management plan to entities when they first begin work on-site. Review plan procedures and locations established for salvage, recycling, and disposal.

C. Site Access and Temporary Controls: Conduct waste management operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.

1. Designate and label specific areas on Project site necessary for separating materials that are to be salvaged and recycled.
2. Comply with Section 015000 "Temporary Facilities and Controls" for controlling dust and dirt, environmental protection, and noise control.

3.2 SALVAGING DEMOLITION WASTE

A. Comply with requirements in Section 024119 "Selective Demolition" for salvaging demolition waste.

B. Salvaged Items for Reuse in the Work: Salvage items for reuse and handle as follows:

1. Clean salvaged items.
2. Pack or crate items after cleaning. Identify contents of containers with label indicating elements, date of removal, quantity, and location where removed.
3. Store items in a secure area until installation.
4. Protect items from damage during transport and storage.
5. Install salvaged items to comply with installation requirements for new materials and equipment. Provide connections, supports, and miscellaneous materials necessary to make items functional for use indicated.

C. Salvaged Items for Sale and Donation: Not permitted on Project site.

D. Salvaged Items for Owner's Use: Salvage items for Owner's use and handle as follows:

1. Clean salvaged items.
2. Pack or crate items after cleaning. Identify contents of containers with label indicating elements, date of removal, quantity, and location where removed.
3. Store items in a secure area until delivery to Owner.
4. Transport items to Owner's storage area designated by Owner.
5. Protect items from damage during transport and storage.

E. Doors and Hardware: Brace open end of door frames. Except for removing door closers, leave door hardware attached to doors.

F. Equipment: Drain tanks, piping, and fixtures. Seal openings with caps or plugs. Protect equipment from exposure to weather.

G. Plumbing Fixtures: Separate by type and size.

H. Lighting Fixtures: Separate lamps by type and protect from breakage.

I. Electrical Devices: Separate switches, receptacles, switchgear, transformers, meters, panelboards, circuit breakers, and other devices by type.

3.3 RECYCLING DEMOLITION AND CONSTRUCTION WASTE, GENERAL

A. General: Recycle paper and beverage containers used by on-site workers.

B. Recycling Incentives: Revenues, savings, rebates, tax credits, and other incentives received for recycling waste materials shall accrue to Contractor.

C. Preparation of Waste: Prepare and maintain recyclable waste materials according to recycling or reuse facility requirements. Maintain materials free of dirt, adhesives, solvents, petroleum contamination, and other substances deleterious to the recycling process.

D. Procedures: Separate recyclable waste from other waste materials, trash, and debris. Separate recyclable waste by type at Project site to the maximum extent practical according to approved construction waste management plan.

1. Provide appropriately marked containers or bins for controlling recyclable waste until removed from Project site. Include list of acceptable and unacceptable materials at each container and bin.

    a. Inspect containers and bins for contamination and remove contaminated materials if found.

2. Stockpile processed materials on-site without intermixing with other materials. Place, grade, and shape stockpiles to drain surface water. Cover to prevent windblown dust.
3. Stockpile materials away from construction area. Do not store within drip line of remaining trees.
4. Store components off the ground and protect from the weather.
5. Remove recyclable waste from Owner's property and transport to recycling receiver or processor as often as required to prevent overfilling bins.

3.4 DISPOSAL OF WASTE

A. General: Except for items or materials to be salvaged, remove waste materials from Project site and legally dispose of them in a landfill or incinerator acceptable to authorities having jurisdiction.

1. Except as otherwise specified, do not allow waste materials that are to be disposed of accumulate on-site.
2. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.

B. General: Except for items or materials to be salvaged, remove waste materials and legally dispose of at designated spoil areas on Owner’s property.

C. Burning: Do not burn waste materials.

SECTION 017700 - CLOSEOUT PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for Contract closeout, including, but not limited to, the following:

1. Substantial Completion procedures.
2. Final completion procedures.
3. Warranties.
4. Final cleaning.

B. Related Requirements:

1. Section 012900 “Payment Procedures” for requirements for Applications for Payment for Substantial Completion and Final Completion.
2. Section 013233 "Photographic Documentation" for submitting Final Completion construction photographic documentation.
3. Section 017823 "Operation and Maintenance Data" for additional operation and maintenance manual requirements.
4. Section 017839 "Project Record Documents" for submitting Record Drawings, Record Specifications, and Record Product Data.
5. Section 017900 "Demonstration and Training" for requirements to train the Owner's maintenance personnel to adjust, operate, and maintain products, equipment, and systems.

1.3 DEFINITIONS

A. List of Incomplete Items: Contractor-prepared list of items to be completed or corrected, prepared for the Engineer’s use prior to Engineer’s inspection, to determine if the Work is substantially complete.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of cleaning agent.

B. Contractor's List of Incomplete Items: Initial submittal at Substantial Completion.

C. Certified List of Incomplete Items: Final submittal at Final Completion.

© 2026 CDM Smith
All Rights Reserved

1.5 CLOSEOUT SUBMITTALS

A. Certificates of Release: From authorities having jurisdiction.

B. Certificate of Insurance: For continuing coverage.

C. Field Report: For pest-control inspection.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Schedule of Maintenance Material Items: For maintenance material submittal items required by other Sections.

1.7 SUBSTANTIAL COMPLETION PROCEDURES

A. Contractor's List of Incomplete Items: Prepare and submit a list of items to be completed and corrected (Contractor's “punch list”), indicating the value of each item on the list and reasons why the Work is incomplete.

B. Submittals Prior to Substantial Completion: Complete the following a minimum of 10 days prior to requesting inspection for determining date of Substantial Completion. List items below that are incomplete at time of request.

1. Certificates of Release: Obtain and submit releases from authorities having jurisdiction, permitting Owner unrestricted use of the Work and access to services and utilities. Include occupancy permits, operating certificates, and similar releases.
2. Submit closeout submittals specified in other Division 01 Sections, including Project Record Documents, operation and maintenance manuals, damage or settlement surveys, property surveys, and similar final record information.
3. Submit closeout submittals specified in individual Sections, including specific warranties, workmanship bonds, maintenance service agreements, final certifications, and similar documents.
4. Submit maintenance material submittals specified in individual Sections, including tools, spare parts, extra materials, and similar items, and deliver to location designated by Construction Manager. Label with manufacturer's name and model number.

    a. Schedule of Maintenance Material Items: Prepare and submit schedule of maintenance material submittal items, including name and quantity of each item and name and number of related Specification Section. Obtain Construction Manager's signature for receipt of submittals.

5. Submit testing, adjusting, and balancing records.
6. Submit sustainable design submittals not previously submitted.
7. Submit changeover information related to Owner's occupancy, use, operation, and maintenance.

C. Procedures Prior to Substantial Completion: Complete the following a minimum of 10 days prior to requesting inspection for determining date of Substantial Completion. List items below that are incomplete at time of request.

1. Advise Owner of pending insurance changeover requirements.
2. Make final changeover of permanent locks and deliver keys to Owner. Advise Owner's personnel of changeover in security provisions.
3. Complete startup and testing of systems and equipment.
4. Perform preventive maintenance on equipment used prior to Substantial Completion.
5. Instruct Owner's personnel in operation, adjustment, and maintenance of products, equipment, and systems. Submit demonstration and training video recordings specified in Section 017900 "Demonstration and Training."
6. Advise Owner of changeover in utility services.
7. Participate with Owner in conducting inspection and walkthrough with local emergency responders.
8. Terminate and remove temporary facilities from Project site, along with mockups, construction tools, and similar elements.
9. Complete final cleaning requirements.
10. Touch up paint and otherwise repair and restore marred exposed finishes to eliminate visual defects.

D. Inspection: Submit a written request for inspection to determine Substantial Completion a minimum of 10 days prior to date the Work will be completed and ready for final inspection and tests. On receipt of request, Engineer and Construction Manager will either proceed with inspection or notify Contractor of unfulfilled requirements. Engineer will prepare the Certificate of Substantial Completion after inspection or will notify Contractor of items, either on Contractor's list or additional items identified by Engineer, that must be completed or corrected before certificate will be issued.

1. Request reinspection when the Work identified in previous inspections as incomplete is completed or corrected.
2. Results of completed inspection will form the basis of requirements for Final Completion.

1.8 FINAL COMPLETION PROCEDURES

A. Submittals Prior to Final Completion: Before requesting final inspection for determining Final Completion, complete the following:

1. Submit a final Application for Payment in accordance with Section 012900 "Payment Procedures."
2. Certified List of Incomplete Items: Submit certified copy of Engineer's Substantial Completion inspection list of items to be completed or corrected (punch list), endorsed and dated by Engineer. Certified copy of the list shall state that each item has been completed or otherwise resolved for acceptance.
3. Certificate of Insurance: Submit evidence of final, continuing insurance coverage complying with insurance requirements.
4. Submit pest-control final inspection report.
5. Submit Final Completion photographic documentation.

B. Inspection: Submit a written request for final inspection to determine acceptance a minimum of 10 days prior to date the Work will be completed and ready for final inspection and tests. On receipt of request, Engineer and Construction Manager will either proceed with inspection or notify Contractor of unfulfilled requirements. Engineer will prepare a final Certificate for

Payment after inspection or will notify Contractor of construction that must be completed or corrected before certificate will be issued.

1. Request reinspection when the Work identified in previous inspections as incomplete is completed or corrected.

1.9 LIST OF INCOMPLETE ITEMS

A. Organization of List: Include name and identification of each space and area affected by construction operations for incomplete items and items needing correction including, if necessary, areas disturbed by Contractor that are outside the limits of construction.

1. Organize list of spaces in sequential order, starting with exterior areas first and proceeding from lowest floor to highest floor, listed by room or space number.
2. Organize items applying to each space by major element, including categories for ceilings, individual walls, floors, equipment, and building systems.
3. Include the following information at the top of each page:

    a. Project name.
    b. Date.
    c. Name of Engineer and Construction Manager.
    d. Name of Contractor.
    e. Page number.

4. Submit list of incomplete items in the following format:

    a. MS Excel Electronic File. Engineer, through Construction Manager, will return annotated file.
    b. PDF Electronic File. Engineer, through Construction Manager, will return annotated file.
    c. Web-Based Project Management Software Upload: Utilize software feature for creating and updating list of incomplete items (punch list).
    d. Three Paper Copies. Engineer, through Construction Manager, will return two copies.

1.10 SUBMITTAL OF PROJECT WARRANTIES

A. Time of Submittal: Submit written warranties on request of Engineer for designated portions of the Work where warranties are indicated to commence on dates other than date of Substantial Completion, or when delay in submittal of warranties might limit Owner's rights under warranty.

B. Partial Occupancy: Submit properly executed warranties within 15 days of completion of designated portions of the Work that are completed and occupied or used by Owner during construction period by separate agreement with Contractor.

C. Organize warranty documents into an orderly sequence based on the table of contents of Project Manual.

D. Warranty Electronic File: Provide warranties and bonds in PDF format. Assemble complete warranty and bond submittal package into a single electronic PDF file with bookmarks enabling navigation to each item. Provide bookmarked table of contents at beginning of document.

1. Submit by email to Engineer.

E. Warranties in Paper Form:

1. Bind warranties and bonds in heavy-duty, three-ring, vinyl-covered, loose-leaf binders, thickness as necessary to accommodate contents, and sized to receive 8-1/2-by-11-inch paper.
2. Provide heavy paper dividers with plastic-covered tabs for each separate warranty. Mark tab to identify the product or installation. Provide a typed description of the product or installation, including the name of the product and the name, address, and telephone number of Installer.
3. Identify each binder on the front and spine with the typed or printed title "WARRANTIES," Project name, and name of Contractor.

F. Provide additional copies of each warranty to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Cleaning Agents: Use cleaning materials and agents recommended by manufacturer or fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property or that might damage finished surfaces.

1. Use cleaning products that comply with Green Seal's GS-37, or if GS-37 is not applicable, use products that comply with the California Code of Regulations maximum allowable VOC levels.

PART 3 - EXECUTION

3.1 FINAL CLEANING

A. General: Perform final cleaning. Conduct cleaning and waste-removal operations to comply with local laws and ordinances and Federal and local environmental and antipollution regulations.

B. Cleaning: Employ experienced workers or professional cleaners for final cleaning. Clean each surface or unit to condition expected in an average commercial building cleaning and maintenance program. Comply with manufacturer's written instructions.

1. Complete the following cleaning operations before requesting inspection for certification of Substantial Completion for entire Project or for a designated portion of Project:

a. Clean Project site of rubbish, waste material, litter, and other foreign substances.

b. Sweep paved areas broom clean. Remove petrochemical spills, stains, and other foreign deposits.
c. Rake grounds that are not planted, mulched, or paved to a smooth, even-textured surface.
d. Remove tools, construction equipment, machinery, and surplus material from Project site.
e. Remove snow and ice to provide safe access to building.
f. Clean exposed exterior and interior hard-surfaced finishes to a dirt-free condition, free of stains, films, and similar foreign substances. Avoid disturbing natural weathering of exterior surfaces. Restore reflective surfaces to their original condition.
g. Remove debris and surface dust from limited access spaces, including roofs, plenums, shafts, trenches, equipment vaults, manholes, attics, and similar spaces.
h. Clean flooring, removing debris, dirt, and staining: clean according to manufacturer’s recommendations.
i. Vacuum and mop concrete.
j. Vacuum carpet and similar soft surfaces, removing debris and excess nap; clean according to manufacturer's recommendations if visible soil or stains remain.
k. Clean transparent materials, including mirrors and glass in doors and windows. Remove glazing compounds and other noticeable, vision-obscuring materials. Polish mirrors and glass, taking care not to scratch surfaces.
l. Remove labels that are not permanent.
m. Wipe surfaces of mechanical and electrical equipment, elevator equipment, and similar equipment. Remove excess lubrication, paint and mortar droppings, and other foreign substances.
n. Clean plumbing fixtures to a sanitary condition, free of stains, including stains resulting from water exposure.
o. Replace disposable air filters and clean permanent air filters. Clean exposed surfaces of diffusers, registers, and grills.
p. Clean ducts, blowers, and coils if units were operated without filters during construction or that display contamination with particulate matter on inspection.

    1) Clean HVAC system in compliance with NADCA ACR. Provide written report on completion of cleaning.

q. Clean luminaires, lamps, globes, and reflectors to function with full efficiency.
r. Clean strainers.
s. Leave Project clean and ready for occupancy.

C. Pest Control: Comply with pest control requirements in Section 015000 "Temporary Facilities and Controls." Prepare written report.

D. Construction Waste Disposal: Comply with waste disposal requirements in Section 017419 "Construction Waste Management and Disposal."

3.2 REPAIR OF THE WORK

A. Complete repair and restoration operations required by Section 017300 “Execution” before requesting inspection for determination of Substantial Completion.

SECTION 017823 - OPERATION AND MAINTENANCE DATA

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for preparing operation and maintenance manuals, including the following:

1. Operation and maintenance documentation directory manuals.
2. Emergency manuals.
3. Systems and equipment operation manuals.
4. Systems and equipment maintenance manuals.
5. Product maintenance manuals.

B. Related Requirements:

1. Section 011200 "Multiple Contract Summary" for coordinating operation and maintenance manuals covering the Work of multiple contracts.
2. Section 013300 "Submittal Procedures" for submitting copies of submittals for operation and maintenance manuals.
3. Section 019113 "General Commissioning Requirements" for verification and compilation of data into operation and maintenance manuals.

1.3 DEFINITIONS

A. System: An organized collection of parts, equipment, or subsystems united by regular interaction.

B. Subsystem: A portion of a system with characteristics similar to a system.

1.4 CLOSEOUT SUBMITTALS

A. Submit operation and maintenance manuals indicated. Provide content for each manual as specified in individual Specification Sections, and as reviewed and approved at the time of Section submittals. Submit reviewed manual content formatted and organized as required by this Section.

1. Engineer will comment on whether content of operation and maintenance submittals is acceptable.

2. Where applicable, clarify and update reviewed manual content to correspond to revisions and field conditions.

B. Format: Submit operation and maintenance manuals in the following format:

1. Submit on digital media acceptable to Engineer. Enable reviewer comments on draft submittals.
2. Submit three paper copies. Engineer, through Construction Manager, will return two copies.

C. Initial Manual Submittal: Submit draft copy of each manual at least 30 days before commencing demonstration and training. Engineer will comment on whether general scope and content of manual are acceptable.

D. Final Manual Submittal: Submit each manual in final form prior to requesting inspection for Substantial Completion and at least 15 days before commencing demonstration and training. Engineer will return copy with comments.

1. Correct or revise each manual to comply with Engineer's comments. Submit copies of each corrected manual within 15 days of receipt of Engineer's comments and prior to commencing demonstration and training.

E. Comply with Section 017700 "Closeout Procedures" for schedule for submitting operation and maintenance documentation.

1.5 FORMAT OF OPERATION AND MAINTENANCE MANUALS

A. Manuals, Electronic Files: Submit manuals in the form of a multiple file composite electronic PDF file for each manual type required.

1. Electronic Files: Use electronic files prepared by manufacturer where available. Where scanning of paper documents is required, configure scanned file for minimum readable file size.
2. File Names and Bookmarks: Bookmark individual documents based on file names. Name document files to correspond to system, subsystem, and equipment names used in manual directory and table of contents. Group documents for each system and subsystem into individual composite bookmarked files, then create composite manual, so that resulting bookmarks reflect the system, subsystem, and equipment names in a readily navigated file tree. Configure electronic manual to display bookmark panel on opening file.

B. Manuals, Paper Copy: Submit manuals in the form of hard-copy, bound and labeled volumes.

1. Binders: Heavy-duty, three-ring, vinyl-covered, loose-leaf binders, in thickness necessary to accommodate contents, sized to hold 8-1/2-by-11-inch; with clear plastic sleeve on spine to hold label describing contents and with pockets inside covers to hold folded oversize sheets.

a. If two or more binders are necessary to accommodate data of a system, organize data in each binder into groupings by subsystem and related components. Cross-

reference other binders if necessary to provide essential information for proper operation or maintenance of equipment or system.

b. Identify each binder on front and spine, with printed title "OPERATION AND MAINTENANCE MANUAL," Project title or name, and subject matter of contents, and indicate Specification Section number on bottom of spine. Indicate volume number for multiple-volume sets.

2. Dividers: Heavy-paper dividers with plastic-covered tabs for each section of the manual. Mark each tab to indicate contents. Include typed list of products and major components of equipment included in the section on each divider, cross-referenced to Specification Section number and title of Project Manual.
3. Protective Plastic Sleeves: Transparent plastic sleeves designed to enclose diagnostic software storage media for computerized electronic equipment. Enclose title pages and directories in clear plastic sleeves.
4. Supplementary Text: Prepared on 8-1/2-by-11-inch white bond paper.
5. Drawings: Attach reinforced, punched binder tabs on drawings and bind with text.

a. If oversize drawings are necessary, fold drawings to same size as text pages and use as foldouts.

b. If drawings are too large to be used as foldouts, fold and place drawings in labeled envelopes and bind envelopes in rear of manual. At appropriate locations in manual, insert typewritten pages indicating drawing titles, descriptions of contents, and drawing locations.

1.6 REQUIREMENTS FOR EMERGENCY, OPERATION, AND MAINTENANCE MANUALS

A. Organization of Manuals: Unless otherwise indicated, organize each manual into a separate section for each system and subsystem, and a separate section for each piece of equipment not part of a system. Each manual shall contain the following materials, in the order listed:

1. Title page.
2. Table of contents.
3. Manual contents.

B. Title Page: Include the following information:

1. Subject matter included in manual.
2. Name and address of Project.
3. Name and address of Owner.
4. Date of submittal.
5. Name and contact information for Contractor.
6. Name and contact information for Construction Manager.
7. Name and contact information for Engineer.
8. Name and contact information for Commissioning Authority.
9. Names and contact information for major consultants to the Engineer that designed the systems contained in the manuals.
10. Cross-reference to related systems in other operation and maintenance manuals.

C. Table of Contents: List each product included in manual, identified by product name, indexed to the content of the volume, and cross-referenced to Specification Section number in Project Manual.

1. If operation or maintenance documentation requires more than one volume to accommodate data, include comprehensive table of contents for all volumes in each volume of the set.

D. Manual Contents: Organize into sets of manageable size. Arrange contents alphabetically by system, subsystem, and equipment. If possible, assemble instructions for subsystems, equipment, and components of one system into a single binder.

E. Identification: In the documentation directory and in each operation and maintenance manual, identify each system, subsystem, and piece of equipment with same designation used in the Contract Documents. If no designation exists, assign a designation according to ASHRAE Guideline 4, "Preparation of Operating and Maintenance Documentation for Building Systems."

1.7 OPERATION AND MAINTENANCE DOCUMENTATION DIRECTORY MANUAL

A. Operation and Maintenance Documentation Directory: Prepare a separate manual that provides an organized reference to emergency, operation, and maintenance manuals. List items and their location to facilitate ready access to desired information. Include the following:

1. List of Systems and Subsystems: List systems alphabetically. Include references to operation and maintenance manuals that contain information about each system.
2. List of Equipment: List equipment for each system, organized alphabetically by system. For pieces of equipment not part of system, list alphabetically in separate list.
3. Tables of Contents: Include a table of contents for each emergency, operation, and maintenance manual.

1.8 EMERGENCY MANUALS

A. Emergency Manual: Assemble a complete set of emergency information indicating procedures for use by emergency personnel and by Owner's operating personnel for types of emergencies indicated.

B. Content: Organize manual into a separate section for each of the following:

1. Type of emergency.
2. Emergency instructions.
3. Emergency procedures.

C. Type of Emergency: Where applicable for each type of emergency indicated below, include instructions and procedures for each system, subsystem, piece of equipment, and component:

1. Fire.
2. Flood.
3. Gas leak.

4. Water leak.
5. Power failure.
6. Water outage.
7. System, subsystem, or equipment failure.
8. Chemical release or spill.

D. Emergency Instructions: Describe and explain warnings, trouble indications, error messages, and similar codes and signals. Include responsibilities of Owner's operating personnel for notification of Installer, supplier, and manufacturer to maintain warranties.

E. Emergency Procedures: Include the following, as applicable:

1. Instructions on stopping.
2. Shutdown instructions for each type of emergency.
3. Operating instructions for conditions outside normal operating limits.
4. Required sequences for electric or electronic systems.
5. Special operating instructions and procedures.

1.9 SYSTEMS AND EQUIPMENT OPERATION MANUALS

A. Systems and Equipment Operation Manual: Assemble a complete set of data indicating operation of each system, subsystem, and piece of equipment not part of a system. Include information required for daily operation and management, operating standards, and routine and special operating procedures.

1. Engage a factory-authorized service representative to assemble and prepare information for each system, subsystem, and piece of equipment not part of a system.
2. Prepare a separate manual for each system and subsystem, in the form of an instructional manual for use by Owner's operating personnel.

B. Content: In addition to requirements in this Section, include operation data required in individual Specification Sections and the following information:

1. System, subsystem, and equipment descriptions. Use designations for systems and equipment indicated on Contract Documents.
2. Performance and design criteria if Contractor has delegated design responsibility.
3. Operating standards.
4. Operating procedures.
5. Operating logs.
6. Wiring diagrams.
7. Control diagrams.
8. Piped system diagrams.
9. Precautions against improper use.
10. License requirements including inspection and renewal dates.

C. Descriptions: Include the following:

1. Product name and model number. Use designations for products indicated on Contract Documents.
2. Manufacturer's name.

3. Equipment identification with serial number of each component.
4. Equipment function.
5. Operating characteristics.
6. Limiting conditions.
7. Performance curves.
8. Engineering data and tests.
9. Complete nomenclature and number of replacement parts.

D. Operating Procedures: Include the following, as applicable:

1. Startup procedures.
2. Equipment or system break-in procedures.
3. Routine and normal operating instructions.
4. Regulation and control procedures.
5. Instructions on stopping.
6. Normal shutdown instructions.
7. Seasonal and weekend operating instructions.
8. Required sequences for electric or electronic systems.
9. Special operating instructions and procedures.

E. Systems and Equipment Controls: Describe the sequence of operation, and diagram controls as installed.

F. Piped Systems: Diagram piping as installed, and identify color coding where required for identification.

1.10 SYSTEMS AND EQUIPMENT MAINTENANCE MANUALS

A. Systems and Equipment Maintenance Manuals: Assemble a complete set of data indicating maintenance of each system, subsystem, and piece of equipment not part of a system. Include manufacturers' maintenance documentation, preventive maintenance procedures and frequency, repair procedures, wiring and systems diagrams, lists of spare parts, and warranty information.

1. Engage a factory-authorized service representative to assemble and prepare information for each system, subsystem, and piece of equipment not part of a system.
2. Prepare a separate manual for each system and subsystem, in the form of an instructional manual for use by Owner's operating personnel.

B. Content: For each system, subsystem, and piece of equipment not part of a system, include source information, manufacturers' maintenance documentation, maintenance procedures, maintenance and service schedules, spare parts list and source information, maintenance service contracts, and warranties and bonds as described below.

C. Source Information: List each system, subsystem, and piece of equipment included in manual, identified by product name and arranged to match manual's table of contents. For each product, list name, address, and telephone number of Installer or supplier and maintenance service agent, and cross-reference Specification Section number and title in Project Manual and drawing or schedule designation or identifier where applicable.

D. Manufacturers' Maintenance Documentation: Include the following information for each component part or piece of equipment:

1. Standard maintenance instructions and bulletins; include only sheets pertinent to product or component installed. Mark each sheet to identify each product or component incorporated into the Work. If data include more than one item in a tabular format, identify each item using appropriate references from the Contract Documents. Identify data applicable to the Work and delete references to information not applicable.

    a. Prepare supplementary text if manufacturers' standard printed data are not available and where the information is necessary for proper operation and maintenance of equipment or systems.

2. Drawings, diagrams, and instructions required for maintenance, including disassembly and component removal, replacement, and assembly.
3. Identification and nomenclature of parts and components.
4. List of items recommended to be stocked as spare parts.

E. Maintenance Procedures: Include the following information and items that detail essential maintenance procedures:

1. Test and inspection instructions.
2. Troubleshooting guide.
3. Precautions against improper maintenance.
4. Disassembly; component removal, repair, and replacement; and reassembly instructions.
5. Aligning, adjusting, and checking instructions.
6. Demonstration and training video recording, if available.

F. Maintenance and Service Schedules: Include service and lubrication requirements, list of required lubricants for equipment, and separate schedules for preventive and routine maintenance and service with standard time allotment.

1. Scheduled Maintenance and Service: Tabulate actions for daily, weekly, monthly, quarterly, semiannual, and annual frequencies.
2. Maintenance and Service Record: Include manufacturers' forms for recording maintenance.

G. Spare Parts List and Source Information: Include lists of replacement and repair parts, with parts identified and cross-referenced to manufacturers' maintenance documentation and local sources of maintenance materials and related services.

H. Maintenance Service Contracts: Include copies of maintenance agreements with name and telephone number of service agent.

I. Warranties and Bonds: Include copies of warranties and bonds and lists of circumstances and conditions that would affect validity of warranties or bonds.

1. Include procedures to follow and required notifications for warranty claims.

J. Drawings: Prepare drawings supplementing manufacturers' printed data to illustrate the relationship of component parts of equipment and systems and to illustrate control sequence and

flow diagrams. Coordinate these drawings with information contained in record Drawings to ensure correct illustration of completed installation.

1. Do not use original project record documents as part of maintenance manuals.

1.11 PRODUCT MAINTENANCE MANUALS

A. Product Maintenance Manual: Assemble a complete set of maintenance data indicating care and maintenance of each product, material, and finish incorporated into the Work.

B. Content: Organize manual into a separate section for each product, material, and finish. Include source information, product information, maintenance procedures, repair materials and sources, and warranties and bonds, as described below.

C. Source Information: List each product included in manual, identified by product name and arranged to match manual's table of contents. For each product, list name, address, and telephone number of Installer or supplier and maintenance service agent, and cross-reference Specification Section number and title in Project Manual and drawing or schedule designation or identifier where applicable.

D. Product Information: Include the following, as applicable:

1. Product name and model number.
2. Manufacturer's name.
3. Color, pattern, and texture.
4. Material and chemical composition.
5. Reordering information for specially manufactured products.

E. Maintenance Procedures: Include manufacturer's written recommendations and the following:

1. Inspection procedures.
2. Types of cleaning agents to be used and methods of cleaning.
3. List of cleaning agents and methods of cleaning detrimental to product.
4. Schedule for routine cleaning and maintenance.
5. Repair instructions.

F. Repair Materials and Sources: Include lists of materials and local sources of materials and related services.

G. Warranties and Bonds: Include copies of warranties and bonds and lists of circumstances and conditions that would affect validity of warranties or bonds.

1. Include procedures to follow and required notifications for warranty claims.

SECTION 017839 - PROJECT RECORD DOCUMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for Project Record Documents, including the following:

1. Record Drawings.
2. Record Specifications.
3. Record Product Data.
4. Miscellaneous record submittals.

B. Related Requirements:

1. Section 011200 "Multiple Contract Summary" for coordinating Project Record Documents covering the Work of multiple contracts.
2. Section 012900 “Payment Procedures” for maintaining and exhibiting project record documents as a prerequisite for progress payments.
3. Section 017300 "Execution" for final property survey.
4. Section 017700 "Closeout Procedures" for general closeout procedures.
5. Section 017823 "Operation and Maintenance Data" for operation and maintenance manual requirements.

1.3 CLOSEOUT SUBMITTALS

A. Record Drawings: Comply with the following:

1. Number of Copies: Submit one set(s) of marked-up record prints.
2. Number of Copies: Submit copies of Record Drawings as follows:

a. Initial Submittal:

1) Submit one paper-copy set(s) of marked-up record prints.
2) Submit PDF electronic files of scanned record prints and one set(s) of file prints.
3) Submit Record Digital Data Files and one set(s) of plots.
4) Engineer will indicate whether general scope of changes, additional information recorded, and quality of drafting are acceptable.

b. Final Submittal:

1) Submit PDF electronic files of scanned Record Prints and three set(s) of file prints.
2) Print each drawing, whether or not changes and additional information were recorded.

B. Record Specifications: Submit annotated PDF electronic files of Project's Specifications, including addenda and Contract modifications.

C. Record Product Data: Submit annotated PDF electronic files and directories of each submittal.

1. Where record Product Data are required as part of operation and maintenance manuals, submit duplicate marked-up Product Data as a component of manual.

D. Miscellaneous Record Submittals: See other Specification Sections for miscellaneous record-keeping requirements and submittals in connection with various construction activities. Submit annotated PDF electronic files and directories of each submittal.

E. Reports: Submit written report weekly indicating items incorporated into Project Record Documents concurrent with progress of the Work, including revisions, concealed conditions, field changes, product selections, and other notations incorporated.

1.4 RECORD DRAWINGS

A. Record Prints: Maintain one set of marked-up paper copies of the Contract Drawings and Shop Drawings, incorporating new and revised drawings as modifications are issued.

1. Preparation: Mark record prints to show the actual installation, where installation varies from that shown originally. Require individual or entity who obtained record data, whether individual or entity is Installer, subcontractor, or similar entity, to provide information for preparation of corresponding marked-up record prints.

a. Give particular attention to information on concealed elements that would be difficult to identify or measure and record later.
b. Accurately record information in an acceptable drawing technique.
c. Record data as soon as possible after obtaining it.
d. Record and check the markup before enclosing concealed installations.
e. Cross-reference record prints to corresponding photographic documentation.

2. Content: Types of items requiring marking include, but are not limited to, the following:

a. Dimensional changes to Drawings.
b. Revisions to details shown on Drawings.
c. Depths of foundations.
d. Locations and depths of underground utilities.
e. Revisions to routing of piping and conduits.
f. Revisions to electrical circuitry.
g. Actual equipment locations.
h. Duct size and routing.
i. Locations of concealed internal utilities.
j. Changes made by Change Order or Work Change Directive.

k. Changes made following Engineer's written orders.
l. Details not on the original Contract Drawings.
m. Field records for variable and concealed conditions.
n. Record information on the Work that is shown only schematically.

3. Mark the Contract Drawings and Shop Drawings completely and accurately. Use personnel proficient at recording graphic information in production of marked-up record prints.
4. Mark record prints with erasable, red-colored pencil. Use other colors to distinguish between changes for different categories of the Work at same location.
5. Mark important additional information that was either shown schematically or omitted from original Drawings.
6. Note Construction Change Directive numbers, alternate numbers, Change Order numbers, and similar identification, where applicable.

B. Record Digital Data Files: Immediately before inspection for Certificate of Substantial Completion, review marked-up record prints with Engineer and Construction Manager. When authorized, prepare a full set of corrected digital data files of the Contract Drawings, as follows:

1. Format: Same digital data software program, version, and operating system as for the original Contract Drawings.
2. Format: DWG, Version AutoCAD 2023, Microsoft Windows operating system.
3. Format: Annotated PDF electronic file with comment function enabled.
4. Incorporate changes and additional information previously marked on record prints. Delete, redraw, and add details and notations where applicable.
5. Refer instances of uncertainty to Engineer through Construction Manager for resolution.
6. Engineer will furnish Contractor with one set of digital data files of the Contract Drawings for use in recording information.

a. See Section 013100 "Project Management and Coordination" for requirements related to use of Engineer's digital data files.
b. Engineer will provide data file layer information. Record markups in separate layers.

C. Format: Identify and date each Record Drawing; include the designation "PROJECT RECORD DRAWING" in a prominent location.

1. Record Prints: Organize record prints into manageable sets. Bind each set with durable paper cover sheets. Include identification on cover sheets.
2. Format: Annotated PDF electronic file with comment function enabled.
3. Record Digital Data Files: Organize digital data information into separate electronic files that correspond to each sheet of the Contract Drawings. Name each file with the sheet identification. Include identification in each digital data file.
4. Identification: As follows:

a. Project name.
b. Date.
c. Designation "PROJECT RECORD DRAWINGS."
d. Name of Engineer and Construction Manager.
e. Name of Contractor.

© 2026 CDM Smith
All Rights Reserved

1.5 RECORD SPECIFICATIONS

A. Preparation: Mark Specifications to indicate the actual product installation, where installation varies from that indicated in Specifications, addenda, and Contract modifications.

1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.
2. Mark copy with the proprietary name and model number of products, materials, and equipment furnished, including substitutions and product options selected.
3. Record the name of manufacturer, supplier, Installer, and other information necessary to provide a record of selections made.
4. For each principal product, indicate whether Record Product Data has been submitted in operation and maintenance manuals instead of submitted as Record Product Data.
5. Note related Change Orders, Record Product Data, and Record Drawings where applicable.

B. Format: Submit Record Specifications as annotated PDF electronic file.

1.6 RECORD PRODUCT DATA

A. Recording: Maintain one copy of each submittal during the construction period for Project Record Document purposes. Post changes and revisions to Project Record Documents as they occur; do not wait until end of Project.

B. Preparation: Mark Product Data to indicate the actual product installation where installation varies substantially from that indicated in Product Data submittal.

1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.
2. Include significant changes in the product delivered to Project site and changes in manufacturer's written instructions for installation.
3. Note related Change Orders, Record Specifications, and Record Drawings where applicable.

C. Format: Submit Record Product Data as annotated PDF electronic file.

1. Include Record Product Data directory organized by Specification Section number and title, electronically linked to each item of Record Product Data.

1.7 MISCELLANEOUS RECORD SUBMITTALS

A. Assemble miscellaneous records required by other Specification Sections for miscellaneous record keeping and submittal in connection with actual performance of the Work. Bind or file miscellaneous records and identify each, ready for continued use and reference.

B. Format: Submit miscellaneous record submittals as PDF electronic file.

1. Include miscellaneous record submittals directory organized by Specification Section number and title, electronically linked to each item of miscellaneous record submittals.

© 2026 CDM Smith
All Rights Reserved

1.8 MAINTENANCE OF RECORD DOCUMENTS

A. Maintenance of Record Documents: Store Record Documents in the field office apart from the Contract Documents used for construction. Do not use Project Record Documents for construction purposes. Maintain Record Documents in good order and in a clean, dry, legible condition, protected from deterioration and loss. Provide access to Project Record Documents for Engineer's and Construction Manager's reference during normal working hours. As a prerequisite for monthly progress payments, exhibit the updated record documents for review by Owner and Engineer for accuracy and completeness.

SECTION 017900 - DEMONSTRATION AND TRAINING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for instructing Owner's personnel, including the following:

1. Instruction in operation and maintenance of systems, subsystems, and equipment.
2. Demonstration and training video recordings.

B. Allowances: Furnish demonstration and training instruction time under the demonstration and training allowance as specified in Section 012100 "Allowances."

C. Unit Price for Instruction Time: Length of instruction time will be measured by actual time spent performing demonstration and training in required location. No payment will be made for time spent assembling educational materials, setting up, or cleaning up. See requirements in Section 012200 "Unit Prices."

1.3 INFORMATIONAL SUBMITTALS

A. Instruction Program: Submit outline of instructional program for demonstration and training, including a list of training modules and a schedule of proposed dates, times, length of instruction time, and instructors' names for each training module. Include learning objective and outline for each training module.

1. Indicate proposed training modules using manufacturer-produced demonstration and training video recordings for systems, equipment, and products in lieu of video recording of live instructional module.

B. Attendance Record: For each training module, submit list of participants and length of instruction time.

C. Evaluations: For each participant and for each training module, submit results and documentation of performance-based test.

1.4 CLOSEOUT SUBMITTALS

A. Demonstration and Training Video Recordings: Submit two copies within seven days of end of each training module.

1. Identification: On each copy, provide an applied label with the following information:

    a. Name of Project.
    b. Name and address of videographer.
    c. Name of Engineer.
    d. Name of Construction Manager.
    e. Name of Contractor.
    f. Date of video recording.

2. Transcript: Prepared and bound in format matching operation and maintenance manuals. Mark appropriate identification on front and spine of each binder. Include a cover sheet with same label information as the corresponding video recording. Include name of Project and date of video recording on each page.
3. Transcript: Prepared in PDF electronic format. Include a cover sheet with same label information as the corresponding video recording and a table of contents with links to corresponding training components. Include name of Project and date of video recording on each page.
4. At completion of training, submit complete training manual(s) for Owner's use prepared in same paper and PDF file format required for operation and maintenance manuals specified in Section 017823 "Operation and Maintenance Data."

1.5 QUALITY ASSURANCE

A. Facilitator Qualifications: A firm or individual experienced in training or educating maintenance personnel in a training program similar in content and extent to that indicated for this Project, and whose work has resulted in training or education with a record of successful learning performance.

B. Instructor Qualifications: A factory-authorized service representative, complying with requirements in Section 014000 "Quality Requirements," experienced in operation and maintenance procedures and training.

C. Videographer Qualifications: A professional videographer who is experienced photographing demonstration and training events similar to those required.

D. Preinstruction Conference: Conduct conference at Project site to comply with requirements in Section 013100 "Project Management and Coordination." Review methods and procedures related to demonstration and training including, but not limited to, the following:

1. Inspect and discuss locations and other facilities required for instruction.
2. Review and finalize instruction schedule and verify availability of educational materials, instructors' personnel, audiovisual equipment, and facilities needed to avoid delays.
3. Review required content of instruction.
4. For instruction that must occur outside, review weather and forecasted weather conditions and procedures to follow if conditions are unfavorable.

© 2026 CDM Smith
All Rights Reserved

1.6 COORDINATION

A. Coordinate instruction schedule with Owner's operations. Adjust schedule as required to minimize disrupting Owner's operations and to ensure availability of Owner's personnel.

B. Coordinate instructors, including providing notification of dates, times, length of instruction time, and course content.

C. Coordinate content of training modules with content of approved emergency, operation, and maintenance manuals. Do not submit instruction program until operation and maintenance data have been reviewed and approved by Engineer.

1.7 INSTRUCTION PROGRAM

A. Program Structure: Develop an instruction program that includes individual training modules for each system and for equipment not part of a system, as required by individual Specification Sections.

B. Training Modules: Develop a learning objective and teaching outline for each module. Include a description of specific skills and knowledge that participant is expected to master. For each module, include instruction for the following as applicable to the system, equipment, or component:

1. Basis of System Design, Operational Requirements, and Criteria: Include the following:

    a. System, subsystem, and equipment descriptions.
    b. Performance and design criteria if Contractor is delegated design responsibility.
    c. Operating standards.
    d. Regulatory requirements.
    e. Equipment function.
    f. Operating characteristics.
    g. Limiting conditions.
    h. Performance curves.

2. Documentation: Review the following items in detail:

    a. Emergency manuals.
    b. Systems and equipment operation manuals.
    c. Systems and equipment maintenance manuals.
    d. Product maintenance manuals.
    e. Project Record Documents.
    f. Identification systems.
    g. Warranties and bonds.
    h. Maintenance service agreements and similar continuing commitments.

3. Emergencies: Include the following, as applicable:

    a. Instructions on meaning of warnings, trouble indications, and error messages.
    b. Instructions on stopping.
    c. Shutdown instructions for each type of emergency.

d. Operating instructions for conditions outside of normal operating limits.
e. Sequences for electric or electronic systems.
f. Special operating instructions and procedures.

4. Operations: Include the following, as applicable:

a. Startup procedures.
b. Equipment or system break-in procedures.
c. Routine and normal operating instructions.
d. Regulation and control procedures.
e. Control sequences.
f. Safety procedures.
g. Instructions on stopping.
h. Normal shutdown instructions.
i. Operating procedures for emergencies.
j. Operating procedures for system, subsystem, or equipment failure.
k. Seasonal and weekend operating instructions.
l. Required sequences for electric or electronic systems.
m. Special operating instructions and procedures.

5. Adjustments: Include the following:

a. Alignments.
b. Checking adjustments.
c. Noise and vibration adjustments.
d. Economy and efficiency adjustments.

6. Troubleshooting: Include the following:

a. Diagnostic instructions.
b. Test and inspection procedures.

7. Maintenance: Include the following:

a. Inspection procedures.
b. Types of cleaning agents to be used and methods of cleaning.
c. List of cleaning agents and methods of cleaning detrimental to product.
d. Procedures for routine cleaning.
e. Procedures for preventive maintenance.
f. Procedures for routine maintenance.
g. Instruction on use of special tools.

8. Repairs: Include the following:

a. Diagnosis instructions.
b. Repair instructions.
c. Disassembly; component removal, repair, and replacement; and reassembly instructions.
d. Instructions for identifying parts and components.
e. Review of spare parts needed for operation and maintenance.

© 2026 CDM Smith
All Rights Reserved

1.8 PREPARATION

A. Assemble educational materials necessary for instruction, including documentation and training module. Assemble training modules into a training manual organized in coordination with requirements in Section 017823 "Operation and Maintenance Data."

B. Set up instructional equipment at instruction location.

1.9 INSTRUCTION

A. Facilitator: Engage a qualified facilitator to prepare instruction program and training modules, to coordinate instructors, and to coordinate between Contractor and Owner for number of participants, instruction times, and location.

B. Engage qualified instructors to instruct Owner's personnel to adjust, operate, and maintain systems, subsystems, and equipment not part of a system.

1. Engineer will furnish an instructor to describe basis of system design, operational requirements, criteria, and regulatory requirements.
2. Owner will furnish an instructor to describe Owner's operational philosophy.
3. Owner will furnish Contractor with names and positions of participants.

C. Scheduling: Provide instruction at mutually agreed-on times. For equipment that requires seasonal operation, provide similar instruction at start of each season.

1. Schedule training with Owner, through Construction Manager, with at least seven days' advance notice.

D. Training Location and Reference Material: Conduct training on-site in the completed and fully operational facility using the actual equipment in-place. Conduct training using final operation and maintenance data submittals.

E. Evaluation: At conclusion of each training module, assess and document each participant's mastery of module by use of a demonstration performance-based test.

F. Cleanup: Collect used and leftover educational materials and give to Owner. Remove instructional equipment. Restore systems and equipment to condition existing before initial training use.

1.10 DEMONSTRATION AND TRAINING VIDEO RECORDINGS

A. General: Engage a qualified commercial videographer to record demonstration and training video recordings. Record each training module separately. Include classroom instructions and demonstrations, board diagrams, and other visual aids, but not student practice.

1. At beginning of each training module, record each chart containing learning objective and lesson outline.

B. Digital Video Recordings: Provide high-resolution, digital video in MPEG format, produced by a digital camera with minimum sensor resolution of 12 megapixels and capable of recording in full HD mode with vibration reduction technology.

1. Submit video recordings on CD-ROM or thumb drive or by uploading to web-based Project software site.
2. File Hierarchy: Organize folder structure and file locations according to Project Manual table of contents. Provide complete screen-based menu.
3. File Names: Utilize file names based on name of equipment generally described in video segment, as identified in Project specifications.
4. Contractor and Installer Contact File: Using appropriate software, create a file for inclusion on the equipment demonstration and training recording that describes the following for each Contractor involved on the Project, arranged according to Project Manual table of contents:

a. Name of Contractor/Installer.
b. Business address.
c. Business phone number.
d. Point of contact.
e. Email address.

C. Recording: Mount camera on tripod before starting recording, unless otherwise necessary to adequately cover area of demonstration and training. Display continuous running time.

1. Film training session(s) in segments not to exceed 15 minutes.

a. Produce segments to present a single significant piece of equipment per segment.
b. Organize segments with multiple pieces of equipment to follow order of Project Manual table of contents.
c. Where a training session on a particular piece of equipment exceeds 15 minutes, stop filming and pause training session. Begin training session again upon commencement of new filming segment.

D. Light Levels: Verify light levels are adequate to properly light equipment. Verify equipment markings are clearly visible prior to recording.

1. Furnish additional portable lighting as required.

E. Narration: Describe scenes on video recording by audio narration by microphone while or dubbing audio narration off-site after video recording is recorded. Include description of items being viewed.

F. Transcript: Provide a transcript of the narration. Display images and running time captured from videotape opposite the corresponding narration segment.

G. Preproduced Video Recordings: Provide video recordings used as a component of training modules in same format as recordings of live training.

SECTION 018819 - TIGHTNESS TESTING PERFORMANCE REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Tightness testing of cast-in-place reinforced concrete liquid retaining structures.

B. Related Requirements:

1. Section 033100 "Structural Concrete" for concrete related construction.
2. Section 031500 "Concrete Accessories" for joints in concrete structures.
3. Section 033600 "Grout" for grout related construction.
4. Section 400559.23 Stainless Steel Slide Gates” for water-controlling gates.
5. Section 400551 “Common Requirements for Process Valves” for valves and valve actuators.

C. References:

1. ACI-350.1 – Tightness Testing of Environmental Engineering Concrete Containment Structures

1.3 PRETESTING MEETINGS

A. Pretesting Conference: .

1. Discuss:

a. Testing methods to be used.
b. Measurement of precipitation and evaporation.
c. Pre-testing preparations.
d. Water filling and disposal operations, including coordination with Owner.
e. Cleanup activities.
f. Emergency actions, in case they are required.
g. Procedures necessary to obtain a specified special warranty.

2. Attendees:

a. Owner.

b. Construction Manager.
c. Contractor.
d. Engineer.

1.4 INFORMATIONAL SUBMITTALS

A. Submit in accordance with Section 013300:

1. Action Plan: Submit a detailed plan and schedule for each structure, which shows method of filling, testing and disposal of water.
2. Repair Procedures: Submit for acceptance the proposed repair methods, materials, and modifications needed, if structure does not meet tightness testing.
3. Test Reports: Submit a completed Tightness Test Report, Figure A, appended at the end of this Section of each test for each structure.

1.5 FIELD CONDITIONS

A. Coordinate timing and procedures for obtaining water for testing, structure testing, and water disposal with the Engineer and Owner a minimum of 30 days in advance of actual testing.

B. Water Source:

1. Provide water for testing independent from Owner's water source.
2. Use plant process water for testing. Obtain water at a time, flow rate, and location approved by Owner.
3. Use water for testing from Owner's plant water system. Obtain water at a time, flow rate, and location approved by Owner.
4. Provide labor, materials, equipment, incidentals, and power required to convey water to the structure.

C. Water Disposal:

1. Dispose of test water in an approved manner. Do not dispose by discharging onto the ground surface of public or private land.
2. Coordinate disposal of test water by reintroduction into the Plant process at a time, flow rate, and location with Owner.
3. Provide labor, materials, equipment, incidentals, and power required to convey water from the structure.

D. Environmental Conditions: Do not schedule test measurements for a period when the weather forecast indicates a substantial change in weather patterns that would affect testing. Do not schedule test measurements when weather forecast indicates water surface would be frozen before test is completed.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

© 2026 CDM Smith
All Rights Reserved

3.1 GENERAL

A. Perform tightness testing of cast-in-place reinforced concrete liquid retaining structures conforming to ACI 350.1 and as specified herein.

B. Perform tightness tests prior to waterproofing and dampproofing and prior to placing backfill around structures in order to permit observation and detection of leakage points.

C. Individually test each cell of multi-cell tanks.

D. Multi-cell tanks may be tested as a single unit where indicated.

3.2 PREPARATION

A. Remove soil, mud, debris and all other contaminants from structures prior to initiating tightness tests. Flush floor and sumps with water to provide a clean surface that is ready for testing.

B. Prior to testing, temporarily seal or bulkhead inlet and outlet pipes not required to be operational for testing procedures.

C. Prior to testing, install blind flange on Pump P-3 suction piping.

3.3 EXAMINATION

A. Examine structures to be tested for potential leakage paths including cracks, voids, honeycombs, and unsealed joints. Repair such paths to prevent leakage prior to testing.

B. Proceed with testing only after unsatisfactory conditions have been corrected.

3.4 TESTING PROCEDURES

A. Testing Conditions:

1. Do not begin filling of reinforced concrete structure until concrete elements of the structure have attained specified design strength, but not less than 14 days after placement of all concrete elements.
2. Do not begin filling of reinforced concrete structure until all concrete repairs, including, but not limited to, crack and spall repairs identified after inspection of the tank, are completed and fully cured in accordance with repair product manufacturer's recommendations, but not less than 14 days after completion of repairs.
3. Fill reinforced concrete structure not exceeding a rate of 4 feet per 1 hour.
4. To minimize water absorption by concrete during testing, fill reinforced concrete structure to maximum operating water surface level and maintain water at that level for at least 3 days, prior to beginning tightness tests. Observe the exterior surfaces of the structure in both the early mornings and late afternoons during 3 days prior to tightness testing. Note any water observed on the structure exterior surfaces.
5. Test only a single structure at a time. Concurrent testing of contiguous or adjacent structures will not be allowed.

B. Testing Procedures:

1. Test Duration / Test Period: At least the time required to lower the water surface 3/8 inch (9.5 mm), assuming a loss of water at the maximum allowable rate, but not longer than 5 days.
2. Measure water surface elevations at 24-hour intervals. The vertical distance to the water surface shall be measured to within 1/16 inchfrom a fixed point on the structure above the water surface. Measure water surface elevations at the same four locations, 90 degrees apart. Record water temperature 18 inches below water surface when taking the first and last sets of measurements.

    a. Use methods to determine amount of precipitation or evaporation as approved by the Engineer.

3. Compute percentage of water volume loss based on measured change in water surface elevation, area of the horizontal water surface, initial water volume, and correction for precipitation or evaporation where applicable.
4. Restart test when test measurements become unreliable due to unusual precipitation or other external factors.

C. Test New Pipe Penetration into the East and West Wet Wells, above the recommended wet well liquid operating levels by a minimum of 1-FT above the crown of the pipe(s), including but not limited to:

1. Three (3) 24 inch Plant Drains Pipes
2. Two (2) 10 inch Surge Relief Pipes
3. Two (2) 4 inch Air Release Drain Pipes

D. Reports: Prepare and submit as referenced in this Section.

3.5 ACCEPTANCE

A. Estimates of gate, valve and door leakage will not be allowed as adjustments to the measured structure leakage.

B. Following conditions are considered as not meeting the criteria for acceptance, regardless of actual loss of water volume from the structure:

1. Groundwater seeping or flowing into the structure through floors, walls, or wall-floor joints.
2. Structures which exhibit seeping or flowing water from joints, cracks, voids, honeycombs, or from beneath the foundation.
3. Damp spots on concrete surfaces.
4. Moisture can be deposited on a dry hand-held against the exterior surface of the structure.

C. Tightness of concrete tanks and structures will be considered acceptable when the conditions of conditions included in paragraph above are not present and when loss of water volume does not exceed 0.05 percent of the starting volume per day.

© 2026 CDM Smith
All Rights Reserved

3.6 REPAIRS AND RETESTING

A. Structures failing the tightness test and not exhibiting visible leakage may be retested after an additional stabilization period of 7 days. Structures failing this second test shall be repaired prior to further testing.

B. Retest repaired structures until the structure meets all requirements.

3.7 SCHEDULE

A. Test following structures for tightness:

1. Tank types include:

a. Influent Pump Station East Wet Well.
b. Influent Pump Station West Wet Well.
c. Influent Screen Building Channels.

2. Miscellaneous structures include:

a. Wet Well.
b. Influent Screen Building Channels.

3. Structures subject to requirements of Article 3.5 Paragraph A only include:

a. New East Wet Well Suction Pipe Connection to New Pump P-3

SECTION 019113 - GENERAL COMMISSIONING REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

B. Owner's Project Requirements and Basis-of-Design Document are included by reference for information only.

1.2 SUMMARY

A. Section Includes:

1. General requirements for coordinating and scheduling commissioning activities.
2. Commissioning meetings.
3. Commissioning reports.
4. Use of commissioning process test equipment, instrumentation, and tools.
5. Construction checklists, including, but not limited to, installation checks, startup, performance tests, and performance test demonstration.
6. Commissioning tests and commissioning test demonstration.
7. Adjusting, verifying, and documenting identified systems and assemblies.

B. Related Requirements:

1. Section 011000 "Summary" for Commissioning Authority responsibilities.
2. Section 011200 "Multiple Contract Summary" for Commissioning Authority responsibilities.
3. Section 013300 "Submittal Procedures" for submittal procedure requirements for commissioning process.
4. Section 017700 "Closeout Procedures" for Certificate of Construction-Phase Commissioning Process Completion submittal requirements.
5. Section 017823 "Operation and Maintenance Data" for preliminary operation and maintenance data submittal requirements.
6. Section 019119.43 "Exterior Enclosure Commissioning" for technical commissioning requirements for exterior closure.
7. Section 210800 "Commissioning of Fire Suppression" for technical commissioning requirements for fire suppression.
8. Section 220800 "Commissioning of Plumbing" for technical commissioning requirements for plumbing.
9. Section 230800 "Commissioning of HVAC" for technical commissioning requirements for HVAC.
10. Section 260800 "Commissioning of Electrical Systems" for technical commissioning requirements for electrical systems.

11. Section 270800 "Commissioning of Communications" for technical commissioning requirements for communications systems.
12. Section 280800 "Commissioning of Electronic Safety and Security" for technical commissioning requirements for electronic safety and security systems.

1.3 ALLOWANCES

A. Labor and management costs for the performance of commissioning process.

B. The following are excluded from the commissioning allowance:

1. Equipment and systems installation, startup, and field quality-control testing indicated in the Contract Documents.
2. Test equipment, instrumentation, and tools (including, but not limited to, proprietary test equipment, instrumentation, and tools) required to perform tests.
3. Work to correct commissioning issues.
4. Work to repeat tests when equipment and systems fail acceptance criteria.

1.4 UNIT PRICES

A. Commissioning allowance may be adjusted up or down by the "List of Unit Prices" Article in Section 012200 "Unit Prices" when actual labor hours are computed at the end of commissioning process. See Section 012100 "Allowances" for commissioning allowance.

B. The following are excluded from the computation for the adjustment of the commissioning allowance for technician labor hours:

1. Work to correct commissioning issues.
2. Work to repeat tests when equipment and systems fail acceptance criteria.

1.5 DEFINITIONS

A. Acceptance Criteria: Threshold of acceptable work quality or performance specified for a commissioning activity, including, but not limited to, construction checklists, performance tests, performance test demonstrations, commissioning tests, and commissioning test demonstrations.

B. Basis-of-Design Document: A document prepared by Engineer that records concepts, calculations, decisions, and product selections used to comply with Owner's Project Requirements and to suit applicable regulatory requirements, standards, and guidelines.

C. Commissioning Authority: An entity engaged by Owner, and identified in Section 011000 "Summary," to evaluate Commissioning-Process Work.

D. Commissioning Plan: A document, prepared by Commissioning Authority, that outlines the organization, schedule, allocation of resources, and documentation of commissioning requirements.

E. Commissioning: A quality-focused process for verifying and documenting that the facility and its systems and assemblies are planned, designed, installed, and tested to comply with Owner's

Project Requirements. The requirements specified here are limited to the construction phase commissioning activities. The scope of the commissioning process is defined in Section 011000 "Summary."

F. Construction-Phase Commissioning-Process Completion: The stage of completion and acceptance of commissioning process when resolution of deficient conditions and issues discovered during commissioning process and retesting until acceptable results are obtained has been accomplished. Owner will establish in writing the date construction-phase commissioning-process completion is achieved. See Section 017700 "Closeout Procedures" for Certificate of Construction-Phase Commissioning Process Completion submittal requirements.

1. Commissioning process is complete when the Work specified of this Section and related Sections has been completed and accepted, including, but not limited to, the following:

a. Completion of tests and acceptance of test results.
b. Resolution of issues, as verified by retests performed and documented with acceptance of retest results.
c. Comply with requirements in Section 017900 "Demonstration and Training."
d. Completion and acceptance of submittals and reports.

G. Owner's Project Requirements: A document that details the functional requirements of a project and the expectations of how it will be used and operated, including Project goals, measurable performance criteria, cost considerations, benchmarks, success criteria, and supporting information. This document is prepared either by the Owner or for the Owner by the Engineer or Commissioning Authority.

H. Owner's Witness: Commissioning Authority, Owner's Project Manager, or Engineer-designated witness authorized to authenticate test demonstration data and to sign completed test data forms.

I. "Systems," "Assemblies," "Subsystems," "Equipment," and "Components": Where these terms are used together or separately, they shall mean "as-built" systems, assemblies, subsystems, equipment, and components.

J. Test: Performance tests, performance test demonstrations, commissioning tests, and commissioning test demonstrations.

K. Sampling Procedures and Tables for Inspection by Attributes: As defined in ASQ Z1.4.

1.6 COMMISSIONING TEAM

A. Members Appointed by Contractor(s):

1. Commissioning Coordinator: A person or entity employed by Contractor to manage, schedule, and coordinate commissioning process.
2. Project superintendent and other employees that Contractor may deem appropriate for a particular portion of the commissioning process.
3. Subcontractors, installers, suppliers, and specialists that Contractor may deem appropriate for a particular portion of the commissioning process.
4. Appointed team members shall have the authority to act on behalf of the entity they represent.

B. Members Appointed by Owner:

1. Commissioning Authority, plus consultants that Commissioning Authority may deem appropriate for a particular portion of the commissioning process.
2. Owner representative(s), facility operations and maintenance personnel, plus other employees, separate contractors, and consultants that Owner may deem appropriate for a particular portion of the commissioning process.
3. Engineer, plus employees and consultants that Engineer may deem appropriate for a particular portion of the commissioning process.

1.7 INFORMATIONAL SUBMITTALS

A. Comply with requirements in Section 013300 "Submittal Procedures" for submittal procedure general requirements for commissioning process.

B. Commissioning Plan Information:

1. List of Contractor-appointed commissioning team members to include specific personnel and subcontractors performing the various commissioning requirements.
2. Schedule of commissioning activities, integrated with the Construction Schedule. Comply with requirements in Section 013200 "Construction Progress Documentation" for the Construction Schedule general requirements for commissioning process. Provide detailed schedule activities for maintenance of plant operations (MOPO) with accompanying narratives, figures, and identification of responsible parties.
3. Contractor personnel and subcontractors participating in each test.
4. List of instrumentation required for each test to include identification of parties that will provide instrumentation for each test.

C. Commissioning schedule.

D. Two-week look-ahead schedules.

E. Commissioning Coordinator Letter of Authority:

1. Within 10 days after approval of Commissioning Coordinator qualifications, submit a letter of authority for Commissioning Coordinator, signed by a principal of Contractor's firm. Letter shall authorize Commissioning Coordinator to do the following:

a. Make inspections required for commissioning process.
b. Coordinate, schedule, and manage commissioning process of Contractor, subcontractors, and suppliers.
c. Obtain documentation required for commissioning process from Contractor, subcontractors, and suppliers.
d. Report issues, delayed resolution of issues, schedule conflicts, and lack of cooperation or expertise on the part of members of the commissioning team.

F. Commissioning Coordinator Qualification Data: For entity coordinating Contractor's commissioning activities to demonstrate their capabilities and experience.

1. Experienced: When used with an entity or individual, "experienced" means having successfully completed a minimum of five previous projects similar in nature, size, and extent to this Project; being familiar with special requirements indicated; and having complied with requirements of authorities having jurisdiction.

G. List test instrumentation, equipment, and monitoring devices. Include the following information:

1. Make, model, serial number, and application for each instrument, equipment, and monitoring device.
2. Brief description of intended use.
3. Calibration record showing the following:

a. Calibration agency, including name and contact information.
b. Last date of calibration.
c. Range of values for which calibration is valid.
d. Certification of accuracy.
e. Certification for calibration equipment traceable to NIST.
f. Due date of the next calibration.

H. Test Reports:

1. Pre-Startup Report: Prior to startup of equipment or a system, submit signed, completed construction checklists.
2. Test Data Reports: At the end of each day in which tests are conducted, submit test data for tests performed.
3. Commissioning Issue Reports: Daily, at the end of each day in which tests are conducted, submit commissioning issue reports for tests for which acceptable results were not achieved.
4. Weekly Progress Report: Weekly, at the end of each week in which tests are conducted, submit a progress report.
5. Data Trend Logs: Submit data trend logs at the end of the trend log period.
6. System Alarm Logs: Daily, at the start of days following a day in which tests were performed, submit printout of log of alarms that occurred since the last log was printed.

I. Construction Checklists:

1. Material checks.
2. Installation checks.
3. Startup procedures, where required.

1.8 CLOSEOUT SUBMITTALS

A. Commissioning Report:

1. At Construction-Phase Commissioning Completion, include the following:

a. Pre-startup reports.
b. Approved test procedures.
c. Test data forms, completed and signed.

d. Progress reports.
e. Commissioning issue report log.
f. Commissioning issue reports showing resolution of issues.
g. Correspondence or other documents related to resolution of issues.
h. Other reports required by commissioning process.
i. List unresolved issues and reasons they remain unresolved and should be exempted from the requirements for Construction-Phase Commissioning Completion.
j. Report shall include commissioning work of Contractor.

B. Request for Certificate of Construction-Phase Commissioning Process Completion.

C. Operation and Maintenance Data: For proprietary test equipment, instrumentation, and tools to include in operation and maintenance manuals.

1.9 QUALITY ASSURANCE

A. Commissioning Coordinator Qualifications:

1. Documented experience commissioning systems of similar complexity to those contained in these documents on at least three projects of similar scope and complexity.
2. Certification of commissioning-process expertise. The following certifications are acceptable. Owner reserves the right to accept or reject certifications as evidence of qualification.

a. Certified Commissioning Authority, by AABC Commissioning Group (ACG).
b. Commissioning-Process Management Professional, by American Society of Heating, Refrigerating and Air-Conditioning Engineers.
c. Certified Commissioning Professional, by Building Commissioning Association.
d. Accredited Commissioning-Process Authority Professional, by University of Wisconsin.
e. Accredited Commissioning-Process Manager, by University of Wisconsin.
f. Accredited Green Commissioning-Process Provider, by University of Wisconsin.

B. Calibration Agency Qualifications: Certified by The American Association for Laboratory Accreditation that the calibration agency complies with minimum requirements of ISO/IEC 17025.

PART 2 - PRODUCTS

2.1 TEST EQUIPMENT, INSTRUMENTATION, AND TOOLS

A. Test equipment and instrumentation required to perform the commissioning process shall remain the property of Contractor unless otherwise indicated.

B. Test equipment and instrumentation required to perform commissioning process shall comply with the following criteria:

1. Be manufactured for the purpose of testing and measuring tests for which they are being used and have an accuracy to test and measure system performance within the tolerances required to determine acceptable performance.
2. Calibrated and certified.

    a. Calibration performed and documented by a qualified calibration agency according to national standards applicable to the tools and instrumentation being calibrated. Calibration shall be current according to national standards or within test equipment and instrumentation manufacturer's recommended intervals, whichever is more frequent, but not less than within six months of initial use on Project. Calibration tags shall be permanently affixed.
    b. Repair and recalibrate test equipment and instrumentation if dismantled, dropped, or damaged since last calibrated.

3. Maintain test equipment and instrumentation.
4. Use test equipment and instrumentation only for testing or monitoring Work for which they are designed.

2.2 PROPRIETARY TEST EQUIPMENT, INSTRUMENTATION, AND TOOLS

A. Proprietary test equipment, instrumentation, and tools are those manufactured or prescribed by tested equipment manufacturer and required for work on its equipment as a condition of equipment warranty, or as otherwise required to service, repair, adjust, calibrate, or perform work on its equipment.

1. Identify proprietary test equipment, instrumentation, and tools required in the test equipment identification list submittal.
2. Proprietary test equipment, instrumentation, and tools shall become the property of Owner at Substantial Completion.

2.3 REPORT FORMAT AND ORGANIZATION

A. General Format and Organization:

1. Bind report in three-ring binders.
2. Label the front cover and spine of each binder with the report title, volume number, project name, Contractor's name, and date of report.
3. Record report on compact disk.
4. Electronic Data: Portable document format (PDF); a single file with outline-organized bookmarks for major and minor tabs and tab contents itemized for specific reports.

B. Commissioning Report:

1. Include a table of contents and an index to each test.
2. Include major tabs for each Specification Section.
3. Include minor tabs for each test.
4. Within each minor tab, include the following:

    a. Test specification.

b. Pre-startup reports.
c. Approved test procedures.
d. Test data forms, completed and signed.
e. Commissioning issue reports, showing resolution of issues, and documentation related to resolution of issues pertaining to a single test. Group data forms, commissioning issue reports showing resolution of issues, and documentation related to resolution of issues for each test repetition together within the minor tab, in reverse chronological order (most recent on top).

PART 3 - EXECUTION

3.1 PREPARATION

A. Review preliminary construction checklists and preliminary test procedures and data forms.

3.2 CONSTRUCTION CHECKLISTS

A. Construction checklists cannot modify or conflict with the Contract Documents.

B. Create construction checklists based on actual systems and equipment to be included in Project.

C. Material Checks: Compare specified characteristics and approved submittals with materials as received. Include factory tests and other evaluations, adjustments, and tests performed prior to shipment if applicable.

1. Service connection requirements, including configuration, size, location, and other pertinent characteristics.
2. Included optional features.
3. Delivery Receipt Check: Inspect and record physical condition of materials and equipment on delivery to Project site, including agreement with approved submittals, cleanliness, and lack of damage.
4. Installation Checks:

a. Location according to Drawings and approved Shop Drawings.
b. Configuration.
c. Compliance with manufacturers' written installation instructions.
d. Attachment to structure.
e. Access clearance to allow for maintenance, service, repair, removal, and replacement without the need to disassemble or remove other equipment or building elements. Access coordinated with other building elements and equipment, including, but not limited to, ceiling and wall access panels, in a manner consistent with OSHA fall-protection regulations and safe work practices.
f. Utility connections are of the correct characteristics, as applicable.
g. Correct labeling and identification.
h. Startup Checks: Verify readiness of equipment to be energized. Include manufacturer's standard startup procedures and forms.

D. Startup: Perform and document initial operation of equipment to prove that it is installed properly and operates as intended according to manufacturer's standard startup procedures, at minimum.

E. Performance Tests:

1. Static Tests: As specified elsewhere, including, but not limited to, duct and pipe leakage tests, insulation-resistance tests, and water-penetration tests.
2. Component Performance Tests: Tests evaluate the performance of an input or output of components under a full range of operating conditions.
3. Equipment and Assembly Performance Tests: Test and evaluate performance of equipment and assemblies under a full range of operating conditions and loads.
4. System Performance Tests: Test and evaluate performance of systems under a full range of operating conditions and loads.
5. Intersystem Performance Tests: Test and evaluate the interface of different systems under a full range of operating conditions and loads.

F. Deferred Construction Checklists: Obtain Owner approval of proposed deferral of construction checklists, including proposed schedule of completion of each deferred construction checklist, before submitting request for Certificate of Construction-Phase Commissioning Process Completion. When approved, deferred construction checklists may be completed after date of Construction-Phase Commissioning Completion. Include the following in a request for Certificate of Construction-Phase Commissioning Process Completion:

1. Identify deferred construction checklists by number and title.
2. Provide a target schedule for completion of deferred construction checklists.
3. Written approval of proposed deferred construction checklists, including approved schedule of completion of each deferred construction checklist.

G. Delayed Construction Checklists: Obtain Owner approval of proposed delayed construction checklists, including proposed schedule of completion of each delayed construction checklist, before submitting request for Certificate of Construction-Phase Commissioning Process Completion. When approved, delayed construction checklists may be completed after date of Construction-Phase Commissioning Completion. Include the following in a request for Certificate of Construction-Phase Commissioning Process Completion:

1. Identify delayed construction checklist by construction checklist number and title.
2. Provide a target schedule for completion of delayed construction checklists.
3. Written approval of proposed delayed construction checklists, including approved schedule of completion of each delayed construction checklist.

3.3 GENERAL EXECUTION REQUIREMENTS

A. Schedule and coordinate commissioning process with the Construction Schedule.

B. Perform activities identified in construction checklists, including tests, and document results of actions as construction proceeds.

C. Perform test demonstrations for Owner's witness. Unless otherwise indicated, demonstrate tests for 100 percent of work to which the test applies.

D. Report test data and commissioning issue resolutions.

E. Schedule personnel to participate in and perform Commissioning-Process Work.

F. Installing contractors' commissioning responsibilities include, but are not limited to, the following:

1. Operating the equipment and systems they install during tests.
2. In addition, installing contractors may be required to assist in tests of equipment and systems with which their work interfaces.

3.4 COMMISSIONING COORDINATOR RESPONSIBILITIES

A. Management and Coordination: Manage, schedule, and coordinate commissioning process, including, but not limited to, the following:

1. Coordinate with subcontractors on their commissioning responsibilities and activities.
2. Obtain, assemble, and submit commissioning documentation.
3. Conduct periodic on-site commissioning meetings. Comply with requirements in Section 013100 "Project Management and Coordination."
4. Develop and maintain the commissioning schedule. Integrate commissioning schedule into the Construction Schedule. Update Construction Schedule at specified intervals.
5. Review and comment on preliminary test procedures and data forms.
6. Report inconsistencies and issues in system operations.
7. Verify that tests have been completed and results comply with acceptance criteria, and that equipment and systems are ready before scheduling test demonstrations.
8. Direct and coordinate test demonstrations.
9. Coordinate witnessing of test demonstrations by Owner's witness.
10. Coordinate and manage training. Be present during training sessions to direct video recording, present training, and direct the training presentations of others. Comply with requirements in Section 017900 "Demonstration and Training."
11. Prepare and submit specified commissioning reports.
12. Track commissioning issues until resolution and retesting is successfully completed.
13. Retain original records of Commissioning-Process Work, organized as required for the commissioning report. Provide Owner's representative access to these records on request.
14. Assemble and submit commissioning report.

3.5 COMMISSIONING TESTING

A. Quality Control: Construction checklists, including tests, are quality-control tools designed to improve the functional quality of Project. Test demonstrations evaluate the effectiveness of Contractor's quality-control process.

B. Owner's witness will be present to witness commissioning work requiring the signature of an owner's witness, including, but not limited to, test demonstrations. Owner's project manager will coordinate attendance by Owner's witness with Contractor's published Commissioning Schedule. Owner's witness will provide no labor or materials in the commissioning work. The only function of Owner's witness will be to observe and comment on the progress and results of commissioning process.

C. Construction Checklists:

1. Complete construction checklists as Work is completed.
2. Distribute construction checklists to installing contractors before they start work.
3. Installers:

   a. Verify installation using approved construction checklists as Work proceeds.
   b. Complete and sign construction checklists weekly for work performed during the preceding week.

4. Provide Commissioning Authority access to construction checklists.

D. Installation Compliance Issues: Record as an installation compliance issue Work found to be incomplete, inaccessible, at variance with the Contract Documents, nonfunctional, or that does not comply with construction checklists. Record installation compliance issues on the construction checklist at the time they are identified. Record corrective action and how future Work should be modified before signing off the construction checklist.

E. Pre-Startup Audit: Prior to executing startup procedures, review completed installation checks to determine readiness for startup and operation. Report conditions, which, if left uncorrected, adversely impact the ability of systems or equipment to operate satisfactorily or to comply with acceptance criteria. Prepare pre-startup report for each system.

F. Test Procedures and Test Data Forms:

1. Test procedures shall define the step-by-step procedures to be used to execute tests and test demonstrations.
2. Test procedures shall be specific to the make, model, and application of the equipment and systems being tested.
3. Completed test data forms are the official records of the test results.
4. Commissioning Authority will provide to Contractor preliminary test procedures and test data forms for performance tests and commissioning tests after approval of Product Data, Shop Drawings, and preliminary operation and maintenance manual.
5. Review preliminary test procedures and test data forms, and provide comments within 14 days of receipt from Commissioning Authority. Review shall address the following:

   a. Equipment protection and warranty issues, including, but not limited to, manufacturers' installation and startup recommendations, and operation and maintenance instructions.
   b. Applicability of the procedure to the specific software, equipment, and systems approved for installation.

6. After Contractor has reviewed and commented on the preliminary test procedures and test data forms, Commissioning Authority will revise and reissue the approved revised test procedures and test data forms marked "Approved for Testing."
7. Use only approved test procedures and test data forms marked "Approved for Testing" to perform and document tests and test demonstrations.

G. Performance of Tests:

1. The sampling rate for tests is 100 percent. The sampling rate for test demonstrations is 100 percent unless otherwise indicated.
2. Perform and complete each step of the approved test procedures in the order listed.
3. Record data observed during performance of tests on approved data forms at the time of test performance and when the results are observed.
4. Record test results that are not within the range of acceptable results on commissioning issue report forms in addition to recording the results on approved test procedures and data forms according to the "Commissioning Compliance Issues" Paragraph in this Article.
5. On completion of a test, sign the completed test procedure and data form. Tests for which test procedures and data forms are incomplete, not signed, or which indicate performance that does not comply with acceptance criteria will be rejected. Tests for which test procedures and data forms are rejected shall be repeated and results resubmitted.

H. Performance of Test Demonstration:

1. Perform test demonstrations on a sample of tests after test data submittals are approved. The sampling rate for test demonstrations shall be 100 percent unless otherwise indicated in the individual test specification.
2. Notify Owner's witness at least three days in advance of each test demonstration.
3. Perform and complete each step of the approved test procedures in the order listed.
4. Record data observed during performance of test demonstrations on approved data forms at the time of demonstration and when the results are observed.
5. Provide full access to Owner's witness to directly observe the performance of all aspects of system response during the test demonstration. On completion of a test demonstration, sign the completed data form and obtain signature of Owner's witness at the time of the test to authenticate the reported results.
6. Test demonstration data forms not signed by Contractor and Owner's witness at the time of the completion of the procedure will be rejected. Test demonstrations for which data forms are rejected shall be repeated and results shall be resubmitted.

    a. Exception for Failure of Owner's Witness to Attend: Failure of Owner's witness to be present for agreed-on schedule of test demonstration shall not delay Contractor. If Owner's witness fails to attend a scheduled test, Contractor shall proceed with the scheduled test. On completion, Contractor shall sign the data form for Contractor and for Owner's witness, and shall note the absence of Owner's witness at the scheduled time and place.

7. False load test requirements are specified in related sections.

    a. Where false load testing is specified, provide temporary equipment, power, controls, wiring, piping, valves, and other necessary equipment and connections required to apply the specified load to the system. False load system shall be capable of steady-state operation and modulation at the level of load specified. Equipment and systems permanently installed in this work shall not be used to create the false load without Engineer's written approval.

I. Deferred Tests:

1. Deferred Test List: Identify, in the request for Certificate of Construction-Phase Commissioning Process Completion, proposed deferred tests or other tests approved for

deferral until specified seasonal or other conditions are available. When approved, deferred tests may be completed after the date of Construction-Phase Commissioning Completion. Identify proposed deferred tests in the request for Certificate of Construction-Phase Commissioning Process Completion as follows:

a. Identify deferred tests by number and title.
b. Provide a target schedule for completion of deferred tests.

2. Schedule and coordinate deferred tests. Schedule deferred tests when specified conditions are available. Notify Engineer and Commissioning Authority at least three working days (minimum) in advance of tests.
3. Where deferred tests are specified, coordinate participation of necessary personnel and of Engineer, Commissioning Authority, and Owner's witness. Schedule deferred tests to minimize occupant and facility impact. Obtain Engineer's approval of the proposed schedule.

J. Delayed Tests:

1. Delayed Test List: Identify, in the request for Certificate of Construction-Phase Commissioning Process Completion, proposed delayed tests. Obtain Owner approval of proposed delayed tests, including proposed schedule of completion of each delayed test, before submitting request for Certificate of Construction-Phase Commissioning Process Completion. Include the following in the request for Certificate of Construction-Phase Commissioning Process Completion:

a. Identify delayed tests by test number and title.
b. Written approval of proposed delayed tests, including approved schedule of completion of delayed tests.

2. Schedule and coordinate delayed tests. Schedule delayed tests when conditions that caused the delay have been rectified. Notify Engineer and Commissioning Authority at least three working days (minimum) in advance of tests.
3. Where delayed tests are approved, coordinate participation of necessary personnel and of Engineer, Commissioning Authority, and Owner's witness. Schedule delayed tests to minimize occupant and facility impact. Obtain Engineer's approval of the proposed schedule.

K. Commissioning Compliance Issues:

1. Test results that are not within the range of acceptable results are commissioning compliance issues.
2. Track and report commissioning compliance issues until resolution and retesting are successfully completed.
3. If a test demonstration fails, determine the cause of failure. Direct timely resolution of issue and then repeat the demonstration. If a test demonstration must be repeated due to failure caused by Contractor work or materials, reimburse Owner for billed costs for the participation in the repeated demonstration.
4. Test Results: If a test demonstration fails to meet the acceptance criteria, perform the following:

a. Complete a commissioning compliance issue report form promptly on discovery of test results that do not comply with acceptance criteria.
b. Submit commissioning compliance issue report form within 24 hours of the test.
c. Determine the cause of the failure.
d. Establish responsibility for corrective action if the failure is due to conditions found to be Contractor's responsibility.

5. Commissioning Compliance Issue Report: Provide a commissioning compliance issue report for each issue. Do not report multiple issues on the same commissioning compliance issue report.

a. Exception: If an entire class of devices is determined to exhibit the identical issue, they may be reported on a single commissioning compliance issue report. (For example, if return-air damper actuators that are specified to fail to the open position are found to fail to the closed position, they may be reported on a single commissioning issue report. If a single commissioning issue report is used for multiple commissioning compliance issues, each device shall be identified in the report, and the total number of devices at issue shall be identified.
b. Complete and submit Part 1 of the commissioning compliance issue report immediately when the condition is observed.
c. Record the commissioning compliance issue report number and describe the deficient condition on the data form.
d. Resolve commissioning compliance issues promptly. Complete and submit Part 2 of the commissioning compliance issue report when issues are resolved.

6. Diagnose and correct failed test demonstrations as follows:

a. Perform diagnostic tests and activities required to determine the fundamental cause of issues observed.
b. Record each step of the diagnostic procedure prior to performing the procedure. Update written procedure as changes become necessary.
c. Record the results of each step of the diagnostic procedure.
d. Record the conclusion of the diagnostic procedure on the fundamental cause of the issue.
e. Determine and record corrective measures.
f. Include diagnosis of fundamental cause of issues in commissioning compliance issue report.

7. Retest:

a. Schedule and repeat the complete test procedure for each test demonstration for which acceptable results are not achieved. Obtain signature of Owner's witness on retest data forms. Repeat test demonstration until acceptable results are achieved. Except for issues that are determined to result from design errors or omissions, or other conditions beyond Contractor's responsibility, compensate Owner for direct costs incurred as the result of repeated test demonstrations to achieve acceptable results.
b. For each repeated test demonstration, submit a new test data form, marked "Retest."

8. Do not correct commissioning compliance issues during test demonstrations.

a. Exceptions will be allowed if the cause of the issue is obvious and resolution can be completed in less than five minutes. If corrections are made under this exception, note the deficient conditions on the test data form and issue a commissioning compliance issue report. A new test data form, marked "Retest," shall be initiated after the resolution has been completed.

3.6 COMMISSIONING MEETINGS

A. Schedule and conduct commissioning meetings. Comply with requirements in Section 013100 "Project Management and Coordination."

3.7 SEQUENCING

A. Sequencing of Commissioning Verification Activities: For a particular material, item of equipment, assembly, or system, perform the following in the order listed unless otherwise indicated:

1. Construction Checklists:

a. Material checks.
b. Installation checks.
c. Startup, as appropriate. Some startup may depend on component performance. Such startup may follow component performance tests on which the startup depends.
d. Performance Tests:

1) Static tests, as appropriate.
2) Component performance tests. Some component performance tests may depend on completion of startup. Such component performance tests may follow startup.
3) Equipment and assembly performance tests.
4) System performance tests.
5) Intersystem performance tests.

2. Commissioning tests.

B. Before performing commissioning tests, verify that materials, equipment, assemblies, and systems are delivered, installed, started, and adjusted to perform according to construction checklists.

C. Verify readiness of materials, equipment, assemblies, and systems by performing tests prior to performing test demonstrations. Notify Engineer if acceptable results cannot be achieved due to conditions beyond Contractor's control or responsibility.

D. Commence tests as soon as installation checks for materials, equipment, assemblies, or systems are satisfactorily completed. Tests of a particular system may proceed prior to completion of other systems, provided the incomplete work does not interfere with successful execution of test.

3.8 SCHEDULING

A. Commence commissioning process as early in the construction period as possible.

B. Commissioning Schedule: Integrate commissioning activities into Construction Schedule. See Section 013200 "Construction Progress Documentation."

1. Include detailed commissioning activities in monthly updated Construction Schedule and short-interval schedule submittals.
2. Schedule the start date and duration for the following commissioning activities:

    a. Submittals.
    b. Preliminary operation and maintenance manual submittals.
    c. Installation checks.
    d. Startup, where required.
    e. Performance tests.
    f. Performance test demonstrations.
    g. Commissioning tests.
    h. Commissioning test demonstrations.

3. Schedule shall include a line item for each installation check, startup, and test activity specific to the equipment or systems involved.
4. Determine milestones and prerequisites for commissioning process. Show commissioning milestones, prerequisites, and dependencies in monthly updated critical-path-method construction schedule and short-interval schedule submittals.

C. Two-Week Look-Ahead Commissioning Schedule:

1. Two weeks prior to the beginning of tests, submit a detailed two-week look-ahead schedule. Thereafter, submit updated two-week look-ahead schedules weekly for the duration of commissioning process.
2. Two-week look-ahead schedules shall identify the date, time, beginning location, Contractor personnel required, and anticipated duration for each startup or test activity.
3. Use two-week look-ahead schedules to notify and coordinate participation of Owner's witnesses.

D. Owner's Witness Coordination:

1. Coordinate Owner's witness participation via Engineer.
2. Notify Engineer of commissioning schedule changes at least two work days in advance for activities requiring the participation of Owner's witness.

3.9 COMMISSIONING REPORTS

A. Test Reports:

1. Pre-startup reports include observations of the conditions of installation, organized into the following sections:

a. Equipment Model Verification: Compare contract requirements, approved submittals, and provided equipment. Note inconsistencies.
b. Preinstallation Physical Condition Checks: Observe physical condition of equipment prior to installation. Note conditions including, but not limited to, physical damage, corrosion, water damage, or other contamination or dirt.
c. Preinstallation Component Verification Checks: Verify components supplied with the equipment, preinstalled or field installed, are correctly installed and functional. Verify external components required for proper operation of equipment correctly installed and functional. Note missing, improperly configured, improperly installed, or nonfunctional components.
d. Summary of Installation Compliance Issues and Corrective Actions: Identify installation compliance issues and the corrective actions for each. Verify that issues noted have been corrected.
e. Evaluation of System Readiness for Startup: For each item of equipment for each system for which startup is anticipated, document in summary form acceptable to Owner completion of equipment model verification, preinstallation physical condition checks, preinstallation component verification checks, and completion of corrective actions for installation compliance issues.

2. Test data reports include the following:

a. "As-tested" system configuration. Complete record of conditions under which the test was performed, including, but not limited to, the status of equipment, systems, and assemblies; temporary adjustments and settings; and ambient conditions.
b. Data and observations, including, but not limited to, data trend logs, recorded during the tests.
c. Signatures of individuals performing and witnessing tests.
d. Data trend logs accumulated overnight from the previous day of testing.

3. Commissioning Compliance Issue Reports: Report as commissioning compliance issues results of tests and test demonstrations that do not comply with acceptance criteria. Report only one issue per commissioning compliance issue report. Use sequentially numbered facsimiles of commissioning compliance issue report form included in this Section, or other form approved by Owner. Distribute commissioning compliance issue reports to parties responsible for taking corrective action. Identify the following:

a. Commissioning compliance issue report number. Assign unique, sequential numbers to individual commissioning compliance issue reports when they are created, to be used for tracking.
b. Action distribution list.
c. Report date.
d. Test number and description.
e. Equipment identification and location.
f. Briefly describe observations about the performance associated with failure to achieve acceptable results. Identify the cause of failure if apparent.
g. Diagnostic procedure or plan to determine the cause (include in initial submittal)
h. Diagnosis of fundamental cause of issues as specified below (include in resubmittal).
i. Fundamental cause of unacceptable performance as determined by diagnostic tests and activities.

j. When issues have been resolved, update and resubmit the commissioning issue report forms by completing Part 2. Identify resolution taken and the dates and initials of the persons making the entries.
k. Schedule for retesting.

4. Weekly progress reports include information for tests conducted since the preceding report and the following:

a. Completed data forms.
b. Equipment or system tested, including test number, system or equipment tag number and location, and notation about the apparent acceptability of results.
c. Activities scheduled but not conducted per schedule.
d. Commissioning compliance issue report log.
e. Schedule changes for remaining Commissioning-Process Work, if any.

5. Data trend logs shall be initiated and running prior to the time scheduled for the test demonstration.

a. Trend log data format shall be multiple data series graphs. Where multiple data series are trend logged concurrently, present the data on a common horizontal time axis. Individual data series may be presented on a segmented vertical axis to avoid interference of one data series with another, and to accommodate different axis scale values. Graphs shall be sufficiently clear to interpret data within the accuracy required by the acceptance criteria.
b. Attach to the data form printed trend log data collected during the test or test demonstration.
c. Record, print out, and attach to the data form operator activity during the time the trend log is running. During the time the trend log is running, operator intervention not directed by the test procedure invalidates the test results.

6. System Alarm Logs: Record and print out a log of alarms that occurred since the last log was printed. Evaluate alarms to determine if the previous day's work resulted in any conditions that are not considered "normal operation."

a. Conditions that are not considered "normal operation" shall be reported on a commissioning issue report attached to the alarm log. Resolve as necessary. The intent of this requirement is to discover control system points or sequences left in manual or disabled conditions, equipment left disconnected, set points left with abnormal values, or similar conditions that may have resulted from failure to fully restore systems to normal, automatic control after test completion.

3.10 CERTIFICATE OF CONSTRUCTION-PHASE COMMISSIONING PROCESS COMPLETION

A. When Contractor considers that construction-phase commissioning process, or a portion thereof which Owner agrees to accept separately, is complete, Contractor shall prepare and submit to Owner and Commissioning Authority through Engineer a comprehensive list of items to be completed or corrected. Failure to include an item on such list does not alter Contractor's responsibility to compete commissioning process.

B. On receipt of Contractor's list, Commissioning Authority will make an inspection to determine whether the construction-phase commissioning process or designated portion thereof is complete. If Commissioning Authority's inspection discloses items, whether included on Contractor's list, which is not sufficiently complete as defined in "Construction-Phase Commissioning Process Completion" Paragraph in the "Definitions" Article, Contractor shall, before issuance of the Certificate of Construction-Phase Commissioning Process Completion, complete or correct such items on notification by Commissioning Authority. In such case, Contractor shall then submit a request for another inspection by Commissioning Authority to determine construction-phase commissioning process completion.

C. Contractor shall promptly correct deficient conditions and issues discovered during commissioning process. Costs of correcting such deficient conditions and issues, including additional testing and inspections, the cost of uncovering and replacement, and compensation for Engineer's and Commissioning Authority's services and expenses made necessary thereby, shall be at Contractor's expense.

D. When construction-phase commissioning process or designated portion is complete, Commissioning Authority will prepare a Certificate of Construction-Phase Commissioning Process Completion that shall establish the date of completion of construction-phase commissioning process. Certificate of Construction-Phase Commissioning Process Completion shall be submitted prior to requesting inspection for determining date of Substantial Completion.

SECTION 024119 - SELECTIVE DEMOLITION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Demolition and removal of selected portions of building or structure.
2. Demolition and removal of selected site elements.
3. Salvage of existing items to be reused or recycled.

1.3 DEFINITIONS

A. Remove: Detach items from existing construction and dispose of them off-site unless indicated to be salvaged or reinstalled.

B. Remove Hazardous Materials: Isolate and remove hazardous materials from existing construction and properly dispose as required by existing regulations.

C. Remove and Salvage: Detach items from existing construction, in a manner to prevent damage, and store.

D. Remove and Reinstall: Detach items from existing construction, in a manner to prevent damage, prepare for reuse, and reinstall where indicated.

E. Existing to Remain: Leave existing items that are not to be removed and that are not otherwise indicated to be salvaged or reinstalled.

F. Dismantle: To remove by disassembling or detaching an item from a surface, using gentle methods and equipment to prevent damage to the item and surfaces; disposing of items unless indicated to be salvaged or reinstalled.

1.4 MATERIALS OWNERSHIP

A. Unless otherwise indicated, demolition waste becomes property of Contractor. However, the Owner reserves the right to identify any of their existing equipment assets for salvage prior to demolition and disposal.

B. Historic items, relics, antiques, and similar objects including, but not limited to, cornerstones and their contents, commemorative plaques and tablets, and other items of interest or value to Owner that may be uncovered during demolition remain the property of Owner.

1. Carefully salvage in a manner to prevent damage and promptly return to Owner.

C. Project specific construction sequencing dictates that existing pumps are removed from service incrementally. Retain parts from existing pumps as they are removed from service to allow for maintenance and/or emergency repair of pumps that remain in service. Retain and store all pump parts that are removed from service until substantial completion or until otherwise approved by the Owner and Engineer. The Owner will retain ownership of all existing pumps until the end of the project.

1.5 PREINSTALLATION MEETINGS

A. Pre-demolition Conference: Conduct conference at Project site.

1. Inspect and discuss condition of construction to be selectively demolished.
2. Review structural load limitations of existing structure.
3. Review and finalize selective demolition schedule and verify availability of materials, demolition personnel, equipment, and facilities needed to make progress and avoid delays.
4. Review and finalize items to be removed and salvaged by the Owner.
5. Review requirements of work performed by other trades that rely on substrates exposed by selective demolition operations.
6. Review areas where existing construction is to remain and requires protection.

1.6 INFORMATIONAL SUBMITTALS

A. Engineering Survey: Submit engineering survey of condition of building.

B. Proposed Protection Measures: Submit report, including Drawings, that indicates the measures proposed for protecting individuals and property, for environmental protection, for dust control and, for noise control. Indicate proposed locations and construction of barriers.

C. Schedule of Selective Demolition Activities: Indicate the following:

1. Detailed sequence of selective demolition and removal work, with starting and ending dates for each activity. Ensure Owner's building manager's and other tenants' on-site operations are uninterrupted.
2. Interruption of utility services. Indicate how long utility services will be interrupted.
3. Coordination for shutoff, capping, and continuation of utility services.
4. Use of elevator and stairs.
5. Coordination of Owner's continuing occupancy of portions of existing building and of Owner's partial occupancy of completed Work.

D. Pre-demolition Photographs or Video: Show existing conditions of adjoining construction, including finish surfaces, that might be misconstrued as damage caused by demolition

operations. Comply with Section 013233 "Photographic Documentation." Submit before Work begins.

E. Statement of Refrigerant Recovery: Signed by refrigerant recovery technician responsible for recovering refrigerant, stating that all refrigerant that was present was recovered and that recovery was performed according to EPA regulations. Include name and address of technician and date refrigerant was recovered.

F. Warranties: Documentation indicating that existing warranties are still in effect after completion of selective demolition.

1.7 CLOSEOUT SUBMITTALS

A. Inventory: Submit a list of items that have been removed and salvaged.

1.8 FIELD CONDITIONS

A. Owner will occupy portions of building in and around the selective demolition area. Conduct selective demolition so Owner's operations will not be disrupted.

B. Conditions existing at time of inspection for bidding purpose will be maintained by Owner as far as practical.

C. Notify Engineer of discrepancies between existing conditions and Drawings before proceeding with selective demolition.

D. Hazardous Materials may be present in piping, buildings materials, and structures to be selectively demolished.

1. Hazardous material remediation is specified in Division 2 of the Contract Specifications.
2. Do not disturb hazardous materials or items suspected of containing hazardous materials except under procedures specified elsewhere in the Contract Documents.

E. Storage or sale of removed items or materials on-site is not permitted.

F. Utility Service: Maintain existing utilities indicated to remain in service and protect them against damage during selective demolition operations.

1. Maintain fire-protection facilities in service during selective demolition operations.

1.9 WARRANTY

A. Existing Warranties: Remove, replace, patch, and repair materials and surfaces cut or damaged during selective demolition, by methods and with materials and using approved contractors so as not to void existing warranties. Notify warrantor before proceeding.

B. Notify warrantor on completion of selective demolition, and obtain documentation verifying that existing system has been inspected and warranty remains in effect. Submit documentation at Project closeout.

© 2026 CDM Smith
All Rights Reserved

1.10 COORDINATION

A. Arrange selective demolition schedule so as not to interfere with Owner's operations.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Comply with governing EPA notification regulations before beginning selective demolition. Comply with hauling and disposal regulations of authorities having jurisdiction.

B. Standards: Comply with ASSE A10.6 and NFPA 241.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that utilities have been disconnected and capped before starting selective demolition operations.

B. Review Project Record Documents of existing construction or other existing condition and hazardous material information provided by Owner. Owner does not guarantee that existing conditions are same as those indicated in Project Record Documents.

C. Engage a professional engineer to perform an engineering survey of condition of building to determine whether removing any element might result in structural deficiency or unplanned collapse of any portion of structure or adjacent structures during selective building demolition operations.

1. Perform surveys as the Work progresses to detect hazards resulting from selective demolition activities.

D. Steel Tendons: Locate tensioned steel tendons and include recommendations for de-tensioning.

E. Verify that hazardous materials have been remediated before proceeding with building demolition operations.

F. Survey of Existing Conditions: Record existing conditions by use of measured drawings preconstruction photographs and video.

1. Comply with requirements specified in Section 013233 "Photographic Documentation."
2. Inventory and record the condition of items to be removed and salvaged. Provide photographs or video of conditions that might be misconstrued as damage caused by salvage operations.
3. Before selective demolition or removal of existing building elements that will be reproduced or duplicated in final Work, make permanent record of measurements, materials, and construction details required to make exact reproduction.

© 2026 CDM Smith
All Rights Reserved

3.2 UTILITY SERVICES AND MECHANICAL/ELECTRICAL SYSTEMS

A. Existing Services/Systems to Remain: Maintain services/systems indicated to remain and protect them against damage.

B. Existing Services/Systems to Be Removed, Relocated, or Abandoned: Locate, identify, disconnect, and seal or cap off utility services and mechanical/electrical systems serving areas to be selectively demolished.

1. Owner will arrange to shut off indicated services/systems when requested by Contractor.
2. Arrange to shut off utilities with utility companies.
3. If services/systems are required to be removed, relocated, or abandoned, provide temporary services/systems that bypass area of selective demolition and that maintain continuity of services/systems to other parts of building.
4. Disconnect, demolish, and remove fire-suppression systems, plumbing, and HVAC systems, equipment, and components indicated on Drawings to be removed.

    a. Piping to Be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.
    b. Piping to Be Abandoned in Place: Drain piping and cap or plug piping with same or compatible piping material and leave in place.
    c. Equipment to Be Removed: Disconnect and cap services and remove equipment.
    d. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make equipment operational.
    e. Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to Owner.
    f. Ducts to Be Removed: Remove portion of ducts indicated to be removed and plug remaining ducts with same or compatible ductwork material.
    g. Ducts to Be Abandoned in Place: Cap or plug ducts with same or compatible ductwork material and leave in place.

3.3 PROTECTION

A. Temporary Protection: Provide temporary barricades and other protection required to prevent injury to people and damage to adjacent buildings and facilities to remain.

1. Provide protection to ensure safe passage of people around selective demolition area and to and from occupied portions of building.
2. Provide temporary weather protection, during interval between selective demolition of existing construction on exterior surfaces and new construction, to prevent water leakage and damage to structure and interior areas.
3. Protect walls, ceilings, floors, and other existing finish work that are to remain or that are exposed during selective demolition operations.
4. Cover and protect furniture, furnishings, and equipment that have not been removed.
5. Comply with requirements for temporary enclosures, dust control, heating, and cooling specified in Section 015000 "Temporary Facilities and Controls."

B. Temporary Shoring: Design, provide, and maintain shoring, bracing, and structural supports as required to preserve stability and prevent movement, settlement, or collapse of construction and

finishes to remain, and to prevent unexpected or uncontrolled movement or collapse of construction being demolished.

1. Strengthen or add new supports when required during progress of selective demolition.

C. Remove temporary barricades and protections where hazards no longer exist.

3.4 SELECTIVE DEMOLITION, GENERAL

A. General: Demolish and remove existing construction only to the extent required by new construction and as indicated. Use methods required to complete the Work within limitations of governing regulations and as follows:

1. Proceed with selective demolition systematically, from higher to lower level. Complete selective demolition operations above each floor or tier before disturbing supporting members on the next lower level.
2. Neatly cut openings and holes plumb, square, and true to dimensions required. Use cutting methods least likely to damage construction to remain or adjoining construction. Use hand tools or small power tools designed for sawing or grinding, not hammering and chopping. Temporarily cover openings to remain.
3. Cut or drill from the exposed or finished side into concealed surfaces to avoid marring existing finished surfaces.
4. Do not use cutting torches until work area is cleared of flammable materials. At concealed spaces, such as duct and pipe interiors, verify condition and contents of hidden space before starting flame-cutting operations. Maintain portable fire-suppression devices during flame-cutting operations.
5. Maintain fire watch during and for at least 4 hours after flame-cutting operations.
6. Maintain adequate ventilation when using cutting torches.
7. Remove decayed, vermin-infested, or otherwise dangerous or unsuitable materials and promptly dispose of off-site.
8. Remove structural framing members and lower to ground by method suitable to avoid free fall and to prevent ground impact or dust generation.
9. Locate selective demolition equipment and remove debris and materials so as not to impose excessive loads on supporting walls, floors, or framing.
10. Dispose of demolished items and materials promptly. Comply with requirements in Section 017419 "Construction Waste Management and Disposal."

B. Site Access and Temporary Controls: Conduct selective demolition and debris-removal operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.

C. Removed and Salvaged Items:

1. Clean salvaged items.
2. Pack or crate items after cleaning. Identify contents of containers.
3. Store items in a secure area until delivery to Owner.
4. Transport items to Owner's storage area designated by Owner.
5. Protect items from damage during transport and storage.

D. Removed and Reinstalled Items:

1. Clean and repair items to functional condition adequate for intended reuse.
2. Pack or crate items after cleaning and repairing. Identify contents of containers.
3. Protect items from damage during transport and storage.
4. Reinstall items in locations indicated. Comply with installation requirements for new materials and equipment. Provide connections, supports, and miscellaneous materials necessary to make item functional for use indicated.

E. Existing Items to Remain: Protect construction indicated to remain against damage and soiling during selective demolition. When permitted by Engineer, items may be removed to a suitable, protected storage location during selective demolition and cleaned and reinstalled in their original locations after selective demolition operations are complete.

3.5 PIPED UTILITY DEMOLITION

A. Disconnect, demolish, and remove piped utility systems, equipment, and components indicated to be removed:

1. Piping to Be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.
2. Piping to Be Abandoned in Place: Drain piping. Fill abandoned piping with flowable fill, and cap or plug piping with same or compatible piping material.
3. Equipment to Be Removed: Disconnect and cap services and remove equipment.
4. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make operational.
5. Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to Owner.

B. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.

3.6 SELECTIVE DEMOLITION PROCEDURES FOR SPECIFIC MATERIALS

A. Concrete: Demolish in small sections. Using power-driven saw, cut concrete to a depth of at least 3/4 inch at junctures with construction to remain. Dislodge concrete from reinforcement at perimeter of areas being demolished, cut reinforcement, and then remove remainder of concrete. Neatly trim openings to dimensions indicated.

B. Concrete: Demolish in sections. Cut concrete full depth at junctures with construction to remain and at regular intervals using power-driven saw and then remove concrete between saw cuts.

C. Masonry: Demolish in small sections. Cut masonry at junctures with construction to remain, using power-driven saw, and then remove masonry between saw cuts.

D. Concrete Slabs-on-Grade: Saw-cut perimeter of area to be demolished and then break up and remove.

E. Roofing: Remove no more existing roofing than what can be covered in one day by new roofing and so that building interior remains watertight and weathertight. See Section 075216 “Styrene-

Butadiene-Styrene (SBS) Modified Bituminous Membrane Roofing" for new roofing requirements.

1. Remove existing roof membrane, flashings, copings, and roof accessories.
2. Remove existing roofing system down to substrate.

3.7 DISPOSAL OF DEMOLISHED MATERIALS

A. Remove demolition waste materials from Project site and dispose of them in an EPA-approved construction and demolition waste landfill acceptable to authorities having jurisdiction.

1. Do not allow demolished materials to accumulate on-site.
2. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.
3. Remove debris from elevated portions of building by chute, hoist, or other device that will convey debris to grade level in a controlled descent.
4. Comply with requirements specified in Section 017419 "Construction Waste Management and Disposal."

B. Burning: Do not burn demolished materials.

3.8 CLEANING

A. Clean adjacent structures and improvements of dust, dirt, and debris caused by selective demolition operations. Return adjacent areas to condition existing before selective demolition operations began.

3.9 SELECTIVE DEMOLITION SCHEDULE

A. Refer to Section 013513.24 "Special Procedure or MOPO and Construction Sequence".

B. Remove and Salvage:

1. Existing encapsulating couplings located on 48" force main headers.
2. Existing centrifugal pumps A-1 through A-7.

    a. Retain and store existing pumps as they are removed from service until the end of the project to support use of spare parts for maintenance and emergency repair of existing pumps that remain in service. Dispose of pumps at the end of the project.

3. 48" force main fittings.
4. Pump Motor Starters
5. Load Break Switches

END OF SECTION 024119

SECTION 028200 - ASBESTOS REMOVAL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SCOPE OF WORK

A. This asbestos abatement Project will consist of the removal and disposal of asbestos containing materials associated with the Influent Pumping System Improvements Project located at the Cedar Creek Water Pollution Control Plant, 3340 Merrick Road, Wantagh, NY 11783, as indicated in the table below.

Work Area	Location	Description of Asbestos Material	Approximate Quantity Of ACM	ICR 56 Procedure
1a-c	Elevation -28.00 and -35.75	Assumed Gasket Material	200.0 SF	56-11.8
2	Elevation -28.00	Assumed Vibration Dampening Cloth on Exhaust Units	8.0 SF	56-11.3
3	Elevation -28.00	Cementitious Pipe Insulation Fitting/Elbow	50.0 LF	56-7.11
4	Elevation -6.50	Cementitious Pipe Insulation Fitting/Elbow	10.0 LF	56-11.3
5	Elevation 15.50	Cementitious Pipe Insulation Fitting/Elbow	10.0 LF	56-11.3
6	Elevation 15.50 – Electrical Cabinets	Assumed Backer Board/Transite Panel	500.0 SF	56-7.11
		Total:	708.0 SF / 70.0 LF	

B. The work shall include but not be limited to the abatement work tabulated in the H-100 series drawings.

C. The Contractor shall be aware of all conditions of the Project and is responsible for verifying quantities and locations of all Work to be performed. Failure to do so shall not relieve the Contractor of its obligation to furnish all labor and materials necessary to perform the Work.

D. All Work shall be performed in strict accordance with the Project Documents and all governing codes, rules, and regulations. Where conflicts occur between the Project Documents and applicable codes, rules, and regulations, the more stringent shall apply.

E. Working hours shall be as required and approved by the Owner. Asbestos abatement activities including, but not limited to, work area preparation, gross removal activities, cleaning activities, waste removal, etc. may need to be performed during ‘off-hours’ (including nights and weekends). In addition, multiple mobilizations may be required to perform the work identified in this project. The Contractor shall coordinate and schedule all Work with the facility and Owner’s representative.

© 2026 CDM Smith
All Rights Reserved

1.3 SPECIAL JOB CONDITIONS

A. Any special job conditions, including variances obtained by the Owner, are described below.

1. The Contractor shall be aware of all conditions of the Project and is responsible for verifying quantities and locations of all Work to be performed. Failure to do so shall not relieve the Contractor of its obligation to furnish all labor and materials necessary to perform the Work.
2. All Work shall be performed in strict accordance with the Project Documents and all governing codes, rules, and regulations. Where conflicts occur between the Project Documents and applicable codes, rules, and regulations, the more stringent shall apply.
3. Working hours shall be as required and approved by the Owner. Asbestos abatement activities including, but not limited to, work area preparation, gross removal activities, cleaning activities, waste removal, etc. may need to be performed during 'off-hours' (including nights and weekends). The Contractor shall coordinate and schedule all Work with the facility and Owner's representative.
4. Temporary water lines and electrical supply cables shall be extended to the work area at ceiling height. Disconnection to facility water and electrical systems shall be coordinated in advance with the appropriate site representatives to ensure that areas outside the abatement are not negatively impacted.
5. Water and electric source locations shall be coordinated with the owner/owners representative.
6. Placement of decontamination units shall not obstruct egress in corridors or block exits or interfere with building fire safety system components without the contractor providing mitigating measures approved by the owner.
7. All ACM materials shall be removed completely down to the substrate, to a surface that is free and clear of all residues and made suitable for replacement materials.
8. Contractor to confirm windows are operable to be utilized for Negative Air Unit Exhaust. If the windows are unable to be opened, the contractor shall coordinate with the facility / owner’s representative for removal of window assembly to allow for installation of exhaust manifold. For work areas in the basement/sub-basement a Site specific Variance (SSV) for interior exhaust may be required.
9. Work area 1 consists of assumed valve/flange gasket material. All pipe coatings have tested positive for lead based paint. The remediation of LBP shall be performed for any mechanical or tourch cutting/cut lines that must be performed before the intact abatement of the gaskets.

1.4 PERMITS AND COMPLIANCE

A. The Contractor shall assume full responsibility and liability for compliance with all applicable Federal, State, and local laws, rules, and regulations pertaining to Work practices, protection of Workers, authorized visitors to the site, persons, and property adjacent to the Work.

B. Perform asbestos related Work in accordance with New York State Industrial Code Rule 56 (herein referred to as Code Rule 56), 40 CFR 61, and 29 CFR 1926. Where more stringent requirements are specified, adhere to the more stringent requirements.

C. The Contractor must maintain current licenses, permits and certifications pursuant to New York State Department of Labor and Department of Environmental Conservation for all Work related

to this Project, including the removal, handling, transport, and disposal of asbestos containing materials.

D. The Contractor must have and submit proof upon request that any persons employed by the Contractor to engage in or supervise Work on any asbestos Project have a valid NYS asbestos handling certificate pursuant to Code Rule 56.

E. The Contractor shall be responsible for obtaining all Variances as may be required for the Project or as requested by the Owner. Approval of the Owner is required prior to submission of a Variance application to any regulatory agency. Failure to obtain Owner approval may result in Owner not permitting variance to be used on the project.

F. The Contractor shall be responsible for compliance with The New York State Uniform Fire Prevention and Building Code, or its successor during all Work at the site.

G. Failure to adhere to the Project Documents shall constitute a breach of the Contract and the Owner shall have the right to and may terminate the Contract provided, however, the failure of the Owner to so terminate shall not relieve the Contractor from future compliance.

1.5 SUBMITTALS

A. Pre-Work Submittals: Within 7 days prior to the pre-construction conference, the Contractor shall submit 3 copies of the documents listed below for review and approval prior to the commencement of asbestos abatement activities:

1. Contractor license issued by New York State Department of Labor.
2. A list of Projects performed within the past two (2) years including the dollar value of all Projects. Provide Project references to include Owner, consultant, and air monitoring firm's name, contact persons, address, and phone number.
   Progress Schedule:

   a. Show the complete sequence of abatement activities and the sequencing of Work within each building or building section.
   b. Show the dates for the beginning and completion of each major element of Work including substantial completion dates for each Work Area, building, or phase.

3. Project Notifications: As required by Federal and State regulatory agencies together with proof of transmittal (i.e. certified mail return receipt).
4. Building Occupant Notification: As required by regulatory agencies.
5. Abatement Work Plan: Provide plans that clearly indicate the following:

   a. All Work Areas/containments numbered sequentially.
   b. Locations and types of all decontamination enclosures.
   c. Entrances and exits to the Work Areas/containments'. Type of abatement activity/technique for each Work Area/containment.
   d. Number and location of negative air units and exhaust. Also provide calculations for determining number of negative air pressure units.
   e. Location of water and electrical connections to building services.
   f. Waste transport routes through the building to the waste storage container.

6. Disposal Site/Landfill Permit from applicable regulatory agency.
7. NYS Department of Environmental Conservation Waste Transporter Permit.

B. On-Site Submittals: Refer to Part 3.01.C & D for all submittals, documentation, and postings required to be maintained on-site during abatement activities.

C. Project Close-out Submittals: Within 30 days of the completion of each abatement phase, the Contractor shall submit one copy of the documents listed below to the environmental consultant for review and approval prior to Contractor's final payment. Once the close-out submittal is approved, the Contractor shall provide three sets of the approved close-out documents (double-sided and bound) to.

1. All waste disposal manifests and disposal logs (Original waste manifests shall be sent to.
2. OSHA compliance air monitoring records conducted during the Work.
3. Daily progress log, including the entry/exit log.
4. Disposal Site/Landfill Permit from applicable regulatory agency.
5. Project notifications, amended notifications, Variances.

1.6 PRE-CONSTRUCTION CONFERENCE

A. Prior to start of preparatory Work under this Contract, the Contractor shall attend a pre-construction conference attended by Owner, Facility Personnel, and Environmental Consultant.

B. Agenda for this conference shall include but not necessarily be limited to:

1. Contractor's scope of Work, Work plan, and schedule to include number of workers and shifts.
2. Contractor's safety and health precautions including protective clothing and equipment and decontamination procedures.
3. Environmental Consultant's duties, functions, and authority.
4. Contractor's Work procedures including:

    a. Methods of job site preparation and removal methods.
    b. Respiratory protection.
    c. Disposal procedures.
    d. Cleanup procedures.
    e. Fire exits and emergency procedures.

5. Contractor's required pre-work and on-site submittals, documentation, and postings.
6. Contractor's plan for twenty-four (24) hour Project security both for prevention of theft and for barring entry of unauthorized personnel into Work Areas.
7. Temporary utilities.
8. Handling of furniture and other moveable objects.
9. Storage of removed asbestos containing materials.
10. Waste disposal requirements and procedures, including use of the Owner supplied waste manifest.

C. In conjunction with the conference the Contractor shall accompany the Owner and Environmental Consultant on a pre-construction walk-through documenting existing condition

of finishes and furnishings, reviewing overall Work plan, location of fire exits, fire protection equipment, water supply and temporary electric tie-in.

1.7 APPLICABLE STANDARDS AND REGULATIONS

A. The Contractor shall comply with the following codes and standards, except where more stringent requirements are shown or specified:

B. Federal Regulations:

1. 29 CFR 1910.1001, "Asbestos" (OSHA)
2. 29 CFR 1910.1200, "Hazard Communication" (OSHA)
3. 29 CFR 1910.134, "Respiratory Protection" (OSHA)

5. ASTM Standard E1368 “Standard Practice for Visual Inspection of Asbestos Abatement Projects”

1.8 NOTICES

A. The Contractor shall provide notification of intent to commence asbestos abatement activities as indicated below.

1. At least ten (10) Working days prior to beginning abatement activities, send written notification to:

U.S. Environmental Protection Agency

National Emissions Standards for Hazardous Air Pollutants (NESHAPS) Coordinator
26 Federal Plaza
New York, NY 10007

2. At least ten (10) days prior to beginning abatement activities send written notification to:

New York State Department of Labor
Division of Safety and Health, Asbestos Control Program.
State Office Campus
Building 12 - Room 161B
Albany, NY 12240

B. The Contractor is required to send notifications to regulatory agencies via electronic, mail, or package delivery service that will provide proof of delivery and receipt.

C. The Contractor shall be responsible for maintaining current project filings with regulatory agencies for the duration of the project.

D. The Contractor shall post and/or provide Building Occupant Notification at least 10 days prior to beginning abatement activities as required by Code Rule 56.

1.9 PROJECT MONITORING AND AIR SAMPLING

A. The Owner shall engage the services of an Environmental Consultant (the Consultant) who shall serve as the Owner's Representative in regard to the performance of the asbestos abatement Project and provide direction as required throughout the entire abatement Project period. The consultant and all subconsultants shall not have any contractual relationship with the Contractor for the duration of the asbestos project.

B. The Contractor is required to ensure cooperation of its personnel with the Consultant for the air sampling and Project monitoring functions described in this section. The Contractor shall comply with all direction given by the Consultant during the course of the Project.

C. The Consultant shall provide the following administrative services:

1. Review and approve or disapprove all submittals, shop drawings, schedules, and samples.
2. Assure that all notifications to governmental agencies by the Contractor are submitted in a timely manner and are correct in content.

D. The Consultant shall staff the Project with a trained and certified person(s) to act on the Owner's behalf at the job site. This individual shall be designated as the Abatement Project Monitor (APM).

1. The APM shall be on-site at all times the Contractor is on-site. The Contractor shall not be permitted to conduct any Work unless the APM is on-site (except for inspection of barriers and negative air system during non-working days).
2. The APM shall have the authority to direct the actions of the Contractor verbally and in writing to ensure compliance with the Project documents and all regulations. The APM shall have the authority to Stop Work when gross Work practice deficiencies or unsafe

practices are observed, or when ambient fiber concentrations outside the removal area exceed .01 f/cc or background level.

a. Such Stop Work order shall be effective immediately and remain in effect until corrective measures have been taken and the situation has been corrected.
b. Standby time and air sample collection and analysis required to resolve the situation shall be at the Contractor's expense.

3. The APM shall provide the following services:

a. Inspection of the Contractor's Work, practices, and procedures, including temporary protection requirements, for compliance with all regulations and Project specifications.
b. Provide abatement Project air sampling as required by applicable regulations (NYS, AHERA) and the Owner. Sampling will include, but not be limited to background, work area preparation, asbestos handling, final cleaning, and clearance air sampling.
c. Verify daily that all Workers used in the performance of the Project are certified by the appropriate regulatory agency.
d. Monitor the progress of the Contractor's Work, and report any deviations from the schedule to the Owner.
e. Monitor, verify, and document all waste load-out operations including placement of generator and location labels on each waste container, as required by federal regulations.
f. Verify that the Contractor is performing personal air monitoring daily, and that results are being returned and posted at the site as required.
g. The APM shall maintain a log on site that documents all project related and Consultant and Contractor actions, activities, and occurrences.
h. Verify landfill to be used for waste disposal with waste transporter(driver) and Contractor prior to waste trailer/dumpster leaving site. Confirm the waste transporter firm and landfill are listed on the regulatory notifications for the project and the waste transport vehicle license number is listed on the current NYS DEC Waste Transporter permit.

4. The following minimum inspections shall be conducted by the APM, accompanied by the Contractor’s supervisor. Additional inspections shall be conducted as required by Project conditions and/or the Owner’s direction. Progression from one phase of Work to the next by the Contractor is only permitted with the written approval of the APM.

a. Pre-Construction Inspection: The purpose of this inspection is to verify the existing conditions of the Work Areas and to document these conditions.
b. Pre-Commencement Inspection: The purpose of this inspection is to verify the integrity of each containment system prior to disturbance of any asbestos containing material. This inspection shall take place only after the Work Area is fully prepped for removal.
c. Work Inspections: The purpose of this inspection is to monitor the Work practices and procedures employed on the Project and to monitor the continued integrity of the containment system. Inspections within the removal areas shall be conducted by the APM during all preparation, removal, and cleaning activities at least twice every Work shift. Additional inspections shall be conducted as warranted.

d. Pre-Encapsulation Inspection: The purpose of this inspection is to ensure the complete removal of Asbestos Containing Material (ACM), from all surfaces in the Work Area prior to encapsulation.
e. Visual Clearance Inspection: The purpose of this inspection is to verify that: all materials in the scope of work have been properly removed; no visible asbestos debris/residue remains; no pools of liquid or condensation remains; and all required cleanings are complete. This inspection shall be conducted before final air clearance testing.
f. Post-Clearance Inspection: The purpose of this inspection is to ensure the complete removal of ACM, including debris, from the Work Area after satisfactory final clearance sampling and removal of all isolation and critical barriers and equipment from the Work Area.
g. Punch List Inspection: The purpose of this inspection is to verify the Contractor's certification that all Work has been completed as contracted and the existing condition of the area prior to its release to the Owner.

E. The Consultant shall provide abatement Project air sampling and analysis as required by applicable regulations (New York State and/or AHERA). Sampling will include but is not limited to, background, work area preparation, asbestos handling, and final cleaning and clearance air sampling.

1. Unless otherwise required by applicable regulations, the Consultant shall have samples analyzed by Phase Contrast Microscopy (PCM). Results shall be available within 24 hours of completion of sampling.
2. Samples shall be collected as required by applicable regulations (New York State and/or AHERA) and these specifications. If Transmission Electron Microscopy (TEM) clearance air sampling is utilized by the owner, the clearance criteria and sampling protocols must be in compliance with AHERA. If PCM air sample analysis results exceed the satisfactory clearance criteria, then TEM analysis of the entire set of clearance air samples may be used, provided that a standard NIOSH/ELAP accepted laboratory analysis method is utilized that shall report each air sample result in fibers per cubic centimeter.
3. If the air sampling during any phase of the abatement project reveals airborne fiber levels at or above .01 fibers/cc or the established background level, whichever is greater, outside the regulated Work Area, Work shall stop immediately and corrective measures required by Code Rule 56 shall be initiated. Notify all employers and occupants in adjacent areas. The Contractor shall bear the burden of any and all costs incurred by this delay.
4. The Environmental Consultant shall submit copies of all elevated air sampling results collected during abatement and all final air clearance results to the Commissioner of Labor, as required by regulation.

1.10 CONTRACTOR AIR SAMPLING

A. In addition to the requirements of OSHA 1926.1101, the Contractor shall be required to perform personal air monitoring every Work shift in each Work Area during which abatement activities occur in order to determine that appropriate respiratory protection is being worn and utilized.

B. The Contractor shall conduct air sampling that is representative of both the 8-hour time weighted average and 30-minute short-term exposures to indicate compliance with the permissible exposure and excursion limits.

C. The Contractor's laboratory analysis of air samples shall be conducted by an NYS DOH ELAP approved laboratory. The consultant shall not collect or analyze the Contractor’s air samples.

D. Results of personnel air sample analyses shall be available, verbally, within twenty-four (24) hours of sampling and shall be posted upon receipt. Written laboratory reports shall be delivered and posted at the Work site within five (5) days. Failure to comply with these requirements may result in all work being stopped until compliance is achieved.

1.11 PROJECT SUPERVISOR

A. The Contractor shall designate a full-time Project Supervisor who shall meet the following qualifications:

1. The Project Supervisor shall hold New York State certification as an Asbestos Supervisor.
2. The Project Supervisor shall meet the requirements of a "Competent Person" as defined by OSHA 1926.1101 and shall have a minimum of one year experience as a supervisor.
3. The Project Supervisor must be able to speak, read, and write English fluently, as well as communicate in the primary language of the Workers.

B. If the Project Supervisor is not on-site at any time whatsoever, all Work shall be stopped. The Project Supervisor shall remain on-site until the Project is complete. The Contractor may not remove the Project Supervisor from the Project without the written consent of the Owner and the Environmental Consultant; however the Project Supervisor shall be removed from the Project if so requested by the Owner.

C. The Project Supervisor shall maintain the bound Daily Project Log and the entry/exit logs as required by New York State Department of Labor.

D. The Project Supervisor shall be responsible for the performance of the Work and shall represent the Contractor in all respects at the Project site. The Supervisor shall be the primary point of contact for the Asbestos Project Monitor.

1.12 MEDICAL REQUIREMENTS

A. Before exposure to airborne asbestos fibers, provide Workers with a comprehensive medical examination as required by 29 CFR 1910.1001, and 29 CFR 1926.1101.

1. This examination is not required if adequate records show the employee has been examined as required by 29 CFR 1910.1001, and 29 CFR 1926.1101 within the past year.
2. The same medical examination shall be given on an annual basis to employees engaged in an occupation involving potential disturbance of asbestos fibers.

© 2026 CDM Smith
All Rights Reserved

1.13 TRAINING

A. As required by applicable regulations, prior to assignment to asbestos Work instruct each employee with regard to the hazards of asbestos, safety and health precautions, and the use and requirements of protective clothing and equipment.

B. Establish a respirator program as required by ANSI Z88.2 and 29 CFR 1910.134, and 29 CFR 1926.1101. Provide respirator training and fit testing.

1.14 RESPIRATORY PROTECTION

A. Select respirators from those approved by the National Institute for Occupational Safety and Health (NIOSH).

B. Respirators shall be individually fit-tested to personnel under the direction of an Industrial Hygienist on a yearly basis. Fit-tested respirators shall be permanently marked to identify the individual fitted, and use shall be limited to that individual.

C. Where fiber levels permit, and in compliance with regulatory requirements, Powered Air Purifying Respirators (PAPR) are the minimum allowable respiratory protection permitted to be utilized during gross removal operations of OSHA Class I or OSHA Class II friable ACM.

D. No respirators shall be issued to personnel without such personnel participating in a respirator training program.

E. High Efficiency Particulate Air (HEPA) respirator filters shall be approved by NIOSH and shall conform to the OSHA requirements in 29 CFR 1910.134 and 29 CFR 1926.1101.

F. A storage area for respirators shall be provided by the Contractor in the clean room side of the personnel decontamination enclosure where they will be kept in a clean environment.

G. The Contractor shall provide and make available a sufficient quantity of respirator filters so that filter changes can be made as necessary during the work day.

H. Filters used with negative pressure air purifying respirators shall not be used any longer than one eight (8) hour work day. Any loose respirator filters found within the regulated area, must be disposed of as asbestos waste.

I. Any authorized visitor, Worker, or supervisor found in the Work Area not wearing the required respiratory protection shall be removed from the Project site and not be permitted to return.

J. The Contractor shall have at least two (2) Powered Air Purifying Respirators stored on site designated for authorized visitors use. Appropriate respirator filters for authorized visitors shall be made available by the Contractor.

1.15 DELIVERY AND STORAGE

A. Deliver all materials to the job site in original packages with containers bearing manufacturer's name and label.

B. Store all materials at the job site in a suitable and designated area.

1. Store materials subject to deterioration or damage away from wet or damp surfaces and under cover.
2. Protect materials from unintended contamination and theft.
3. Storage areas shall be kept clean and organized.

C. Remove damaged or deteriorated materials from the job site. Materials contaminated with asbestos shall be disposed of as asbestos debris as herein specified. This includes unused Contractor supplies located in the regulated work area.

1.16 TEMPORARY UTILITIES

A. Shut down and lock out all electrical power to the asbestos Work Areas, including lighting circuits. Any electrical power passing through the Work Areas that can't be shut down due to health and safety reasons, shall be protected as per the requirements of Industrial Code Rule 56.

B. Provide temporary 120-240 volt, single phase, three wire, 100 amp electric service with Ground Fault Circuit Interrupters (GFCI) for all electric requirements within the asbestos Work Area.

1. Where available, obtain from Owner's existing system. Otherwise provide power from other sources (i.e. generator).
2. Provide temporary wiring and "weatherproof" receptacles in sufficient quantity and location to serve all HEPA equipment and tools.
3. Provide wiring and receptacles as required by the Environmental Consultant for project monitoring and air sampling equipment (pumps, fans, leaf blowers, etc.).
4. All power to the Work Area shall be brought in from outside the area through GFCI's at the source.

C. Provide temporary lighting with "weatherproof" fixtures for all Work Areas including decontamination chambers.

1. The entire Work Area shall be kept illuminated at all times.
2. Provide lighting as required by the Environmental Consultant for the purposes of performing required inspections.

D. All temporary devices and wiring used in the Work Area shall be capable of decontamination procedures including HEPA vacuuming and wet-wiping.

E. Utilize domestic water service, if available, from Owner's existing system. Provide hot water heaters with sufficient capacity to meet Project demands.

PART 2 - PRODUCTS

2.1 PROTECTIVE CLOTHING

A. Provide personnel utilized during the Project with disposable protective whole body clothing, head coverings, gloves and foot coverings. Provide disposable plastic or rubber gloves to protect hands. Cloth gloves may be worn inside the plastic or rubber for comfort, but shall not

be used alone. Make sleeves secure at the wrists and make foot coverings secure at the ankles by the use of tape, or provide disposable coverings with elastic wrists or tops.

B. Provide sufficient quantities of protective clothing to assure a minimum of four (4) complete disposable outfits per day for each individual performing abatement Work.

C. Eye protection and hard hats shall be provided and made available for all personnel entering any Work Area.

D. Authorized visitors shall be provided with suitable protective clothing, headgear, eye protection, and footwear whenever they enter the Work Area.

2.2 SIGNS AND LABELS

A. Provide warning signs and barrier tapes at all approaches to asbestos Work Areas. Locate signs at such distance that personnel may read the sign and take the necessary protective steps required before entering the area.

1. Provide danger signs in vertical format conforming to 29 CFR 1926.1101, minimum 20" x 14" displaying the following legend.

DANGER
ASBESTOS CANCER AND LUNG DISEASE
HAZARD
AUTHORIZED PERSONNEL ONLY
RESPIRATORS AND PROTECTIVE CLOTHING
ARE REQUIRED IN THIS AREA

2. Provide 3" wide yellow barrier tape printed with black lettered, "DANGER ASBESTOS REMOVAL". Locate barrier tape across all corridors, entrances and access routes to asbestos Work Area. Install tape 3' to 4' AFF.

B. Provide asbestos danger labels affixed to all asbestos materials, scrap, waste, debris and other products contaminated with asbestos.

1. Provide asbestos danger labels of sufficient size to be clearly legible, displaying the following legend:

DANGER
CONTAINS ASBESTOS FIBERS
AVOID CREATING DUST
CANCER AND LUNG DISEASE HAZARD

2. Provide the following asbestos labels, of sufficient size to be clearly legible, for display on waste containers (bags or drums) which will be used to transport asbestos contaminated material in accordance with United States Department of Transportation 49 CFR Parts 171 and 172: (Note: Include “RQ” for friable asbestos waste only.)

RQ, NA2212, (WASTE) ASBESTOS, 9, PGIII

3. Generator identification information shall be affixed to each waste container or any packaging used to containerize asbestos waste indicating the following printed in indelible ink:

   Generator Name
   Facility Name
   Facility Address
   Date

2.3 DAILY PROJECT LOG & WORK AREA ENTRY/EXIT LOG

A. Provide a bound Daily Project Log. The log shall contain on title page the Project name; name, address and phone number of Owner; name, address and phone number of Environmental Consultant; name, address and phone number of Abatement Contractor; emergency numbers including, but not limited to local Fire/Rescue department and all other New York State Department of Labor requirements.

B. All entries into the log shall be made in non-washable, permanent ink and such pen shall be strung to or otherwise attached to the log to prevent removal from the log-in area. Under no circumstances shall pencil entries be permitted.

C. All persons entering and exiting the Work Area shall sign the entry/exit log and include name, certification number, and time.

D. The Project Supervisor shall document all Work performed daily and note all inspections required by Code Rule 56, i.e. testing and inspection of barriers and enclosures.

2.4 SCAFFOLDING AND LADDERS

A. Provide all scaffolding and/or staging as necessary to accomplish the Work of this Contract. Scaffolding may be of suspension type or standing type such as metal tube and coupler, tubular welded frame, pole or outrigger type or cantilever type. The type, erection and use of all scaffolding and ladders shall comply with all applicable OSHA construction industry standards.

B. Provide scaffolding and ladders as required by the Environmental Consultant for the purposes of performing required inspections.

2.5 SURFACTANT (AMENDED WATER)

A. Wet all asbestos-containing materials prior to removal with surfactant mixed and applied in /accordance with manufacturer's printed instructions.

2.6 ENCAPSULANT

A. Encapsulant shall be tinted or pigmented so that application when dry is readily discernible.

B. The encapsulant solvent or vehicle shall not contain a volatile hydrocarbon.

2.7 WASTE DISPOSAL BAGS, DRUMS, AND CONTAINERS

A. Provide 6 mil polyethylene disposal bags printed with asbestos caution labels. Bags shall also be imprinted with U.S. Department of Transportation required markings.

B. Provide 30 or 55 gallon capacity fiber, plastic, or metal drums capable of being sealed air and water tight if asbestos waste has the potential to damage or puncture disposal bags. Affix asbestos caution labels on lids and at one-third points around drum circumference to assure ready identification.

C. Containers and bags must be labeled accordance with 40 CFR Part 61 NESHAPS and Code Rule 56. When the bags/containers are moved to the holding area, lockable trailer, or lockable hardtop dumpster from the waste decontamination system washroom, each bag/container must also be appropriately labeled with the date moved in waterproof markings.

D. Labeled ACM waste containers or bags shall not be used for non-ACM waste or trash. Any material placed in labeled containers or bags, whether turned inside out or not shall be handled and disposed of as ACM waste.

2.8 HEPA VACUUM EQUIPMENT

A. All vacuuming performed under this contract shall be performed with High Efficiency Particulate Air (HEPA) filter equipped industrial vacuums conforming to ANSI Z9.2.

2.9 POWER TOOLS

A. Any power tools used to drill, cut into, or otherwise disturb asbestos material shall be manufacturer equipped with HEPA filtered local exhaust ventilation.

2.10 FIRE RETARDANT PLASTIC SHEETING

A. All polyethylene (plastic) sheeting used on the Project (including but not limited to sheeting used for critical and isolation barriers, fixed objects, walls, floors, ceilings, waste container) shall be at least 6 mil fire retardant sheeting.

B. Decontamination enclosure systems shall utilize at least 6 mil opaque fire retardant plastic sheeting. At least 2 layers of 6 mil reinforced fire retardant plastic sheeting shall be used for the flooring.

PART 3 - EXECUTION

3.1 GENERAL REQUIREMENTS

A. Should visible emissions or water leaks be observed outside the Work Area, immediately stop Work and institute emergency procedures per Code Rule 56. Should there be elevated fiber levels outside the Work Area, immediately stop Work, institute emergency procedures per Code Rule 56, and notify all employers and occupants in adjacent areas. All costs incurred in

decontaminating such non-Work Areas and the contents thereof shall be borne by the Contractor, at no additional cost to the Owner.

B. Valid NYS DOL Asbestos Handler certification cards shall be on site prior to admittance of any Contractor's employees to the asbestos Work Area.

C. The following submittals, documentation, and postings shall be maintained on-site by the Contractor during abatement activities at a location approved by the Abatement Project Monitor:

1. Valid Contractor handling license issued by New York State Department of Labor.
2. NYS DOL Asbestos Handler certification cards for each person employed in the removal, handling, or disturbance of asbestos.
3. Daily OSHA personal air monitoring results.
4. NYS Department of Health ELAP certification for the laboratory that will be analyzing the OSHA personnel air samples.
5. NYS Department of Environmental Conservation Waste Transporter Permit.
6. Project documents (specifications and drawings.)
7. Notifications, Variances, Approved Work Plan. Ensure that the most up-to-date notifications and Variances are on-site.
8. Applicable regulations.
9. Material Safety Data Sheets of supplies/chemicals used on the Project.
10. Disposal Site/Landfill Permit from applicable regulatory agency.
11. List of emergency telephone numbers.
12. Magnahelic manometer semi-annual calibration certification.
13. Waste Disposal Log.
14. Daily Project Log.
15. Entry/Exit Logs.

D. The following documentation shall be maintained on-site by the Abatement Project Monitor during abatement activities:

1. Valid Contractor handling license issued by New York State Department of Labor.
2. Air Sample Log.
3. Air sample results.
4. Project Monitor Daily Log
5. Asbestos Survey Report.
6. A copy of ASTM Standard E1368 "Standard Practice for Visual Inspection of Asbestos Abatement Projects."
7. Calibration chart for rotometer(s) used on-site.

E. The Work Area must be vacated by building occupants prior to decontamination enclosure construction and Work Area preparation.

F. All demolition necessary to access asbestos containing materials for removal must be conducted within negative pressure enclosures by licensed asbestos handlers. Demolition debris may be disposed of as construction and demolition debris provided the Abatement Project Monitor determines that it is not contaminated with asbestos and there has been no disturbance of ACM within the enclosure. If the demolition debris is determined to be contaminated or ACM has been disturbed, it must be disposed of as asbestos waste.

3.2 PERSONNEL DECONTAMINATION ENCLOSURE

A. Provide personnel decontamination enclosure contiguous to the Work Area or as per Variance. The decontamination enclosure shall be attached to the Work Area and not located within it unless isolation barriers are installed. If the decontamination chamber is accessible to the public it shall be fully framed, sheathed, and lockable to prevent unauthorized entry.

B. Access to the Work Area will be from the clean room through an air-lock to the shower and through an air lock to the equipment room. Each airlock shall be a minimum of three feet from door to door. Additional air locks shall be provided as required by Code Rule 56 for remote decontamination enclosures.

C. The decontamination enclosure ceiling and walls shall be covered with one layer of opaque 6 mil fire retardant plastic sheeting. Two layers of reinforced fire retardant plastic sheeting shall be used to cover the floor.

D. The entrance to the clean room shall have a lockable door with adequate small openings for Work Area make-up air. Provide suitable lockers for storage of Worker's street clothes. Storage for respirators along with replacement filters and disposable towels shall also be provided.

E. Provide a temporary shower with individual hot and cold water supplies and faucets. Provide a sufficient supply of soap and shampoo. There shall be one shower for every six Workers. The shower room shall be constructed in such a way so that travel through the shower chamber shall be through the shower. The shower shall not be able to be bypassed.

F. Shower water shall be drained, collected and filtered through a system with at least a 5.0 micron particle size collection capability containing a series of several filters with progressively smaller pore sizes to avoid rapid clogging of the system. The filtered waste water shall then be discharged in accordance with applicable codes and the contaminated filters disposed of as asbestos waste.

G. The equipment room shall be used for the storage of tools and equipment. A walk-off pan filled with water shall be located in the Work Area outside the equipment room for Workers to clean foot coverings when leaving the Work Area. A labeled 6 mil plastic ACM waste bag for collection of contaminated clothing shall be located in this room.

H. The personal decontamination enclosure shall be cleaned and disinfected minimally at the end of each Work shift and as otherwise directed by the Asbestos Project Monitor.

3.3 WASTE DECONTAMINATION ENCLOSURE

A. Provide a waste decontamination enclosure contiguous to the Work area. The decontamination enclosure shall be attached to the Work Area and not located within it unless isolation barriers are installed. If the decontamination chamber is accessible to the public it shall be fully framed, sheathed, and lockable to prevent unauthorized entry.

B. The waste decontamination enclosure system shall consist of a holding area, air lock and washroom. The airlock shall be a minimum of three feet from door to door. The entrance to the holding area shall have a lockable door.

C. The decontamination enclosure ceiling and walls shall be covered with one layer of opaque 6 mil fire retardant plastic sheeting on walls and ceiling. Two layers of reinforced fire retardant plastic sheeting shall be used to cover the floor.

D. Where there is only one egress from the Work Area, the holding area of the waste decontamination enclosure system may branch off from the personnel decontamination enclosure equipment room, which then serves as the waste wash room.

E. The waste wash room water shall be drained, collected, and filtered through a system with at least a 5.0 micron particle size collection capability containing a series of several filters with progressively smaller pore sizes to avoid rapid clogging of the system. The filtered waste water shall then be discharged in accordance with applicable codes and the contaminated filters disposed of as asbestos waste.

F. In small asbestos Projects where only one egress from the Work Area exists, the shower room may be used as a waste washroom. In this instance, the clean room shall not be used for waste storage, but shall be used for waste transfer to carts, which shall immediately be removed from this enclosure.

3.4 WORK AREA ENTRY AND EXIT PROCEDURES

A. Access to and from the asbestos Work Area is permitted only through the personnel decontamination enclosure unless otherwise stipulated in a Site Specific Variance.

B. Workers shall sign the entry/exit log upon every entry and exit.

C. The following procedures shall be followed when entering the Work Area:

1. Before entering the Work Area, Workers shall proceed to the clean room, remove all street clothes, and don protective clothing, equipment, and respirators.
2. Workers shall proceed from the clean room through the shower room and the equipment room and into the Work Area.

D. The following procedures shall be followed when exiting the Work Area:

1. Before leaving the Work Area, gross asbestos contamination will be removed by brushing, wet cleaning and/or HEPA vacuuming, followed by use of the walk-off pan.
2. In the equipment room, Workers shall remove disposable clothing, but not respirators, and shall place clothing in plastic disposal bags for disposal as contaminated debris prior to entering the shower room. Reusable equipment shall be removed and stored in the equipment room (e,g, work boots).
3. Workers shall shower thoroughly while wearing respirators, then wash respirator with soap and water prior to removal.
4. Upon exiting the shower, Workers shall enter the clean room and don new disposable clothing if the Work shift is to continue or street clothes to exit area. Under no circumstances shall Workers enter public non-Work Areas in disposable protective clothing.

E. If remote decontamination enclosures are permitted by Code Rule 56 or a Site Specific Variance, workers shall wear two disposable suits for all phases of Work. Workers exiting the

work area shall HEPA vacuum the outer suit, enter the airlock, remove the outer suit and then place it back into the Work Area. A clean second suit shall be donned before exiting the airlock and proceeding to the decontamination enclosure or another work area via the designated pathway required by Code Rule 56.

3.5 WORK AREA PREPARATION

A. Asbestos danger signs shall be posted at all approaches to the asbestos Work Area. Post all emergency exits as emergency exits only on the Work Area side, post with asbestos caution signs on the non-Work Area side. Provide all non-Work Area stairs and corridors accessible to the asbestos Work Area with warning tapes at the base of stairs and beginning of corridors. Warning tapes shall be in addition to caution signs.

B. Shut down and lock out the building heating, ventilating, and air conditioning systems. Electrical systems and circuits shall also be shut down unless permitted to remain active per Code Rule 56 and appropriately protected and labeled. Existing lighting sources shall not be utilized. Provide temporary electric power and lighting as specified herein.

C. All non-ACM surfaces and objects within the Work Area shall be pre-cleaned using HEPA vacuuming and/or wet-wiping methods. Dry sweeping and any other methods that raise dust shall be prohibited. ACM shall not be disturbed during pre-cleaning.

D. Movable objects within the Work Area shall be HEPA vacuumed and/or wet-wiped and removed from the Work Area.

E. All non-movable equipment in the Work Area shall be completely covered with 2 layers of fire retardant plastic sheeting, at least 6 mil in thickness, and secured in place with duct tape and/or spray adhesive. Active Fire Protection System components in the Work Area shall not be covered with fire retardant plastic sheeting or any other obstruction.

F. Provide enclosure of the asbestos Work Area necessary to isolate it from unsealed areas of the building in accordance with the approved asbestos Work plan and as specified herein.

G. Provide critical barriers by sealing off all openings including but not limited to operable windows and skylights, doorways, diffusers, grills, electrical outlets and boxes, doors, floor drains, and any other penetrations to surfaces in the Work Area enclosure, using 2 layers of at least 6 mil fire retardant plastic sheeting.

H. Provide isolation barriers by installing temporary framing and sheathing at openings larger than 32 square feet forming the limits of the asbestos Work Area. Sheathing thickness must be a minimum of 3/8 inch and all sheathing shall be caulked and the Work Area side sealed with two layers of 6 mil fire retardant plastic sheeting. Isolation barriers in stairwells and at work area egress locations shall not be covered with sheathing, only two layers of 6 mil fire retardant plastic sheeting.

I. Isolation barriers shall be installed at all elevator openings in the Work Area. Elevators running through the regulated abatement work area shall be shut down or isolated as per Code Rule 56. Elevator controls shall be modified so that elevators bypass the Work Area

J. Provide two independent layers of 6 mil fire retardant plastic sheeting over all floor, wall, and ceiling surfaces. Isolation barriers shall also be covered with two independent layers (for a total of four layers). Sheeting shall be secured with duct tape. All joints in fire retardant plastic sheeting shall overlap 12" minimum. Carpeting left in place shall be covered with 3/8 inch plywood sheathing prior to plasticizing.

K. Unless otherwise specified for removal, the Contractor shall either protect all fiberglass insulation on piping, ductwork, tanks, etc. in the Work Area using two layers of six mil fire retardant plastic sheeting or remove the insulation as asbestos containing waste. If the Contractor elects to remove the fiberglass insulation as asbestos-contaminated, he/she shall be responsible for reinsulation if reinsulation of removed insulations is part of the Contract or Project.

L. Frame out emergency exits from Work Area. Provide double layer 6 mil fire retardant plastic sheeting and tape seal opening. Post as emergency exits only and tape utility knife to the Work Area side of each exit. Within the Work Area, mark the locations and directions of emergency exits throughout the Work Area using exit signs and/or duct tape.

M. Remove all items attached to or in contact with ACM only after the Work Area enclosure is in place. HEPA vacuum and wet wipe with amended water all items prior to their removal from the Work Area and before the start of asbestos removal operations.

N. Suspended ceiling tiles shall only be removed after Work Area preparation is complete. If possible, non-contaminated ceiling tiles shall be HEPA vacuumed and removed from the Work Area before asbestos removals begin. Contaminated ceiling tiles shall be disposed of as asbestos waste.

3.6 NEGATIVE AIR PRESSURE FILTRATION SYSTEM

A. Provide a portable asbestos filtration system that develops a minimum pressure differential of negative 0.02 in. of water column within all full enclosure areas relative to adjacent unsealed areas and that provides a minimum of 4 air changes per hour in the Work Area during abatement and 6 air changes for non-friable flooring and/or mastic removal.

B. Such filtration systems must be made operational after critical and isolation barriers are installed but before wall, floor, and ceilings are plasticized and shall be operated 24 hours per day during the entire Project until the final cleanup is completed and satisfactory results of the final air samples are received from the laboratory.

C. The system shall include a series of pre-filters and filters to provide High Efficiency Particulate Air (HEPA) filtration of particles down to 0.3 microns at 100% efficiency and below 0.3 microns at 99.9% efficiency. Provide sufficient replacement filters to replace pre-filters every 2 hours, secondary pre-filters every 24 hours, and primary HEPA filters every 600 hours (25 continuous days) of operation. HEPA filter sides shall be marked with installation date during all new HEPA filter installations on project.

D. A minimum of one additional filtration unit of at least the same capacity as the primary unit(s) shall be installed and fully functional to be used during primary unit (s) filter changing and in case of primary failure.

E. At no time will the unit exhaust indoors, within 15 feet of a receptor, including but not limited to windows and doors, or adversely affect the air intake of the building. Exhaust ducting shall not exceed 25' in length, except as allowed by Industrial Code Rule 56. Provide construction fencing at ground level exhaust termination locations per Code Rule 56.

F. Upon electric power failure or shut-down of any filtration unit, all abatement activities shall stop immediately and only resume after power is restored and all filtration units are fully operating. For shut-downs longer than one hour, all openings into the Work Area, including the decontamination enclosures, shall be sealed.

G. For all OSHA Class I removal Work Areas, the Contractor shall provide a manometer to verify negative air pressure. Manometers shall be read twice daily and recorded within the Daily Project Log.

H. There shall be at least a 4 hour settling period after the Work Area is fully prepared and the negative filtration units have been started to ensure integrity of the barriers.

I. Once installed and operational, the Contractor's Supervisor shall conduct daily inspections of the Work Area to insure the airtight integrity of the enclosure and operation of the negative air system. Findings shall be recorded within the Daily Project Log. Inspections shall also be conducted on days when no abatement activities are in progress per Code Rule 56 (i.e. weekends).

3.7 REMOVAL OF ASBESTOS CONTAINING MATERIALS

A. Asbestos-containing materials shall be removed in accordance with the Contract Documents and the approved Asbestos Work Plan. Only one type of ACM shall be abated at a time within a Work Area. Where there are multiple types of ACM requiring abatement, Code Rule 56 procedures for sequential abatement shall be followed.

B. Sufficiently wet asbestos materials with a low pressure, airless fine spray of surfactant to ensure full penetration prior to material removal. Re-wet material that does not display evidence of saturation.

C. One Worker shall continuously apply amended water while ACM is being removed.

D. Perform cutting, drilling, abrading, or any penetration or disturbance of asbestos containing material in a manner to minimize the dispersal of asbestos fibers into the air. Use equipment and methods specifically designed to limit generation of airborne asbestos particles. All power operated tools used shall be provided with manufacturer HEPA equipped filtered local exhaust ventilation, as required by regulation.

E. Upon removal of ACM from the substrate, the newly exposed surfaces shall be HEPA vacuumed and/or wet cleaned. Surfaces must be thoroughly cleaned using necessary methods and any required solvents to completely remove any adhesive, mastic, etc.

F. All removed material shall be placed into 6 mil plastic disposal bags or other suitable container upon detachment from the substrate. Cleanup of accumulations of loose debris or waste shall be performed whenever there is enough accumulation to fill a single bag or container and minimally at the end of each work shift.

G. Large components shall be wrapped in two layers of 6 mil fire retardant plastic sheeting. Sharp components likely to tear disposal bags shall be placed in fiber drums or boxes and then wrapped with sheeting.

H. Power or pressure washers are not permitted for asbestos removal or clean-up procedures unless approved in a Site Specific Variance and allowed by owner.

I. All open ends of pipe and duct insulation not scheduled for removal shall be encapsulated using lag cloth.

J. All construction and demolition debris determined by the Environmental Consultant to be contaminated with asbestos shall be handled and disposed of as asbestos waste.

K. The use of metal shovels, metal dust pans, etc. are not permitted inside the work area.

3.8 EQUIPMENT AND WASTE CONTAINER DECONTAMINATION AND REMOVAL PROCEDURES

A. External surfaces of contaminated containers and equipment shall be cleaned by wet cleaning and/or HEPA vacuuming in the Work Area before moving such items into the waste decontamination enclosure system airlock by persons assigned to this duty. The persons in the Work Area shall not enter the airlock. No gross removal operations are permitted when waste transfer is in progress.

B. The containers and equipment shall be removed from the airlock by persons stationed in the washroom during waste removal operations. The external surfaces of containers and equipment shall be cleaned a second time by wet cleaning.

C. The cleaned containers of asbestos material and equipment are to be dried of any excessive pooled or beaded liquid, placed in uncontaminated 6 mil plastic bags or sheeting, as the item's physical characteristics demand, and sealed airtight.

D. The clean recontainerized items shall be moved into the airlock that leads to the holding area. Workers in the washroom shall not enter this airlock.

E. Containers and equipment shall be moved from the airlock and into the holding area by persons dressed in clean personal protective equipment, who have entered from the holding area.

F. The cleaned containers of asbestos material and equipment shall be placed in water tight carts with doors or tops that shall be closed and secured. These carts shall be held in the holding until transfer to the waste container. The carts shall be wet cleaned and/or HEPA vacuumed at least once each day.

G. The exit from the decontamination enclosure system shall be secured to prevent unauthorized entry.

H. Where the waste removal enclosure is part of the personnel decontamination enclosure, waste removal shall not occur during shift changes or when otherwise occupied. Precautions shall be taken to prevent short circuiting and cycling of air outward through the shower and clean room.

3.9 WORK AREA DECONTAMINATION, CLEANING, AND CLEARANCE PROCEDURES

A. Following completion of gross abatement and after all accumulations of asbestos waste materials have been containerized, the following decontamination procedures shall be followed unless modified by a Site Specific Variance.

B. First Cleaning:

1. All bagged asbestos waste and unnecessary equipment shall be decontaminated and removed from the Work Area.
2. All surfaces in the Work Area shall be wet cleaned, except active fire protection system components that may be damaged by water. A wet-purpose shop vacuum may be used to pick up excess liquid, and may either be decontaminated prior to removal from the Work Area or disposed of as asbestos waste.
3. The Abatement Project Monitor (APM) shall conduct a visual inspection of the Work Area for cleanliness and completion of abatement.
4. The Contractor shall then apply a thin coat of encapsulant to all surfaces in the Work Area that were not the subject of removal. In no event shall encapsulant be applied to any surface that was the subject of removal prior to obtaining satisfactory air monitoring results. Encapsulants shall be pigmented or tinted to provide an indication for completeness of coverage. The APM shall determine adequacy of coverage.
5. After the encapsulant has been applied and the required waiting/settling / drying time has elapsed, the first layer of fire retardant plastic sheeting shall then be removed and bagged as asbestos waste.

C. Second Cleaning

1. All surfaces in the Work Area shall be HEPA vacuumed and then wet cleaned. Wet cleaning of active fire protection system components is not necessary if damage may occur.
2. The APM shall conduct a second visual inspection of the Work Area for cleanliness.
3. After the required waiting/settling/drying time has elapsed, the second layer of fire retardant plastic sheeting shall be removed and bagged as asbestos waste.

D. Third Cleaning

1. All surfaces in the Work Area shall be HEPA vacuumed and then wet cleaned. Wet cleaning of active fire protection system components is not necessary if damage may occur.
2. After the required waiting/settling/drying time has elapsed, the APM shall conduct a third visual inspection of the Work Area for completeness of abatement and cleanliness. The APM shall document the results of the visual inspection in the Project Monitor Log and Contractor’s Daily Project Log.
3. After satisfactory APM visual inspection, aggressive final clearance air sampling shall then be conducted by the Environmental Consultant provided no visible asbestos debris/residue; pools of liquid, or condensation remains. NOTE: TEM samples should be used vs. PCM if demolition or other dust-generating evolutions are taking place in adjacent areas, as evident from excessive loading.
4. Upon receipt of satisfactory final clearance air sampling results, the negative air pressure equipment can then be shut down, and the isolation and critical barriers removed and bagged as asbestos waste. Following this and satisfactory inspections by the project

supervisor and the APM for cleanliness, the decontamination enclosures shall be removed.

E. As a result of any visual inspection by the APM or should air sampling results indicate high fiber levels, the Contractor will re-clean the affected areas at no additional expense to the Owner.

3.10 TENT ENCLOSURES

A. Tent enclosures may only be used where specifically permitted by Code Rule 56 or a Site Specific Variance issued by the NYS Department of Labor.

B. The Contractor shall restrict access to the immediate area where tent removal procedures are taking place using barrier tape and/or construction barriers. Caution signs shall be posted.

C. Remote personnel decontamination enclosures shall be constructed. Configuration shall be as required by Project size and a washroom with attached airlock shall be constructed contiguous to the tent enclosure for small and large size tent enclosure work areas. For tent enclosures with gross abatement of friable materials, a contiguous decontamination system shall be constructed, maintained and utilized, except for minor size tent enclosure work areas where an adjacent decontamination room or area is permitted by Code Rule 56.

D. The Work Area shall be precleaned. All objects and equipment that will remain in the restricted area during abatement shall be sealed with two layers of six mil polyethylene and tape.

E. The tent shall be a single use barrier constructed with a rigid frame and at least two layers of six mil polyethylene unless one layer of six mil polyethylene is otherwise permitted by Code Rule 56. Tents with twenty (20) square feet or less of floor space or no gross removal of friable ACM shall be constructed of one (1) layer of six mil polyethylene and shall include walls, ceilings and a floor (except portions of walls, floors and ceilings that are the removal surface) with double folded seams. All seams shall be sealed airtight using duct tape and/or spray adhesive.

F. The tent shall be constructed with at least one airlock for worker/waste egress.

G. A manometer shall be used for all OSHA Class I abatement.

H. Negative air shall be maintained at four (4) air changes per hour for non-friable and glovebag abatement tent enclosure work areas. Eight (8) air changes shall be maintained for friable gross removal tent enclosure work areas. In a Minor size abatement tent enclosure work area a HEPA vacuum may be used to maintain the required air changes.

I. OSHA compliance air monitoring is required per section 1.09.

J. ACM removal shall follow procedures defined in section 3.07.

K. Waste material shall be placed in properly labeled 6 mil plastic bags or other appropriate containers. The outside of the bags or containers shall be wet wiped and/or HEPA vacuumed in the washroom and shall then be placed in a second bag/container before being transferred to the waste storage container. All transportation of waste bags and containers outside the Work Area

shall be in watertight carts. These carts shall be held in the holding area until transfer to the waste container. The carts shall be wet cleaned and/or HEPA vacuumed at least once each day.

L. Following completion of gross abatement and after all accumulations of asbestos waste materials have been containerized, the following decontamination procedures shall be followed.

1. All bagged asbestos waste and unnecessary equipment shall be decontaminated and removed from the Work Area.
2. All surfaces in the Work Area shall be wet cleaned. A wet-purpose shop vacuum may be used to pick up excess liquid, and shall be decontaminated prior to removal from the Work Area.
3. The Contractor shall then apply a thin coat of encapsulant to all non-removal surfaces covered with plastic in the Work Area. In no event shall encapsulant be applied to any surface that was the subject of removal prior to obtaining satisfactory air monitoring results. Encapsulants shall be pigmented or tinted to provide an indication for completeness of coverage. The APM shall determine adequacy of coverage.
4. After the waiting/settling/drying time requirements have elapsed, the Asbestos Project Monitor shall conduct a visual inspection of the Work Area for cleanliness and completion of abatement. The APM shall document the results of the visual inspection in the Project Monitor Log and Contractor's Daily Project Log.
5. After satisfactory APM visual inspection, aggressive final clearance air sampling shall then be conducted by the Environmental Consultant.
6. Upon receipt of satisfactory final clearance air sampling results, the tent shall be collapsed into itself, placed in suitable disposal bags, and tranferred through the washroom to the waste decontamination enclosure. Isolation and critical barriers shall then be removed and bagged as asbestos waste followed by satisfactory visual inspections by the project supervisor and the APM for cleanliness.

3.11 GLOVEBAG REMOVAL

A. Glovebag removals may only be used as specifically permitted by Code Rule 56 or a Site Specific Variance issued by the NYS Department of Labor. Glovebags may only be used on pipe or duct insulation.

B. In addition to conformance with applicable regulations and variances, glovebag removals are only permitted to be conducted within tent enclosures complying with these specifications.

C. The Contractor shall restrict access to the immediate area where tent/glovebag removal procedures are taking place using barrier tape and/or construction barriers. Caution signs shall be posted.

D. Remote personnel decontamination enclosures shall be constructed. Configuration shall be as required by Project size and a washroom with attached airlock shall be constructed contiguous to the tent enclosure.

E. Glovebag removals shall utilize commercially available glovebags of at least six mil thickness. Use shall be in accordance with the manufacturer's instructions and the following minimum requirements:

1. The sides of the glovebag shall be cut to fit the size pipe being removed. Tools shall be inserted into the attached tool pocket.
2. The glovebag shall be placed around the pipe and the open edges shall be folded and sealed with staples and duct tape. The glovebag shall also be sealed at the pipe to form a tight seal.
3. Openings shall be made in the glovebag for the wetting tube and HEPA vacuum hose. The opening shall be sealed to form a tight seal.
4. All glovebags shall be smoke tested by the Asbestos Project Monitor under negative pressure using the HEPA vacuum before removal operations commence. Glovebags that do not pass the smoke test shall be resealed and then retested.
5. After first wetting the materials to be removed, removal may commence. ACM shall be continuously wetted. After removal of the ACM, the piping shall be scrubbed or brushed so that no visible ACM remains. Open ends of pipe insulation shall be encapsulated.
6. After the piping is cleaned, the inside of the glovebag shall be washed down and the wetting tube removed. Using the HEPA vacuum, the glovebag shall be collapsed and then twisted and sealed with tape with the ACM at the bottom of the bag.
7. A disposal bag shall be placed around the glovebag that is then detached from the pipe. The disposal bag is then sealed and transferred through the washroom to the waste storage container.

F. After glovebag removals are complete, tent decontamination procedures shall be followed.

3.12 RESTORATION OF UTILITIES, FIRESTOPPING, AND FINISHES

A. After final clearance, remove locks and restore electrical and HVAC systems. All temporary power shall be disconnected, power lockouts removed and power restored. All temporary plumbing shall be removed.

B. Finishes damaged by asbestos abatement activities including, but not limited to, plaster/paint damage due to duct tape, staples, and spray adhesives, and floor tile lifted due to wet or humid conditions, shall be restored prior to final payment.

1. Finishes unable to be restored shall be replaced under this Contract at the Contractor’s expense.
2. All foam and expandable foam products and materials used to seal Work Area openings shall be completely removed upon completion of abatement activities.

C. All penetrations (including, but not limited to, pipes, ducts, etc.) through fire rated construction shall be firestopped using materials and systems tested in accordance with ASTM E814 on Projects where reinsulation is part of the required work.

3.13 DISPOSAL OF ASBESTOS WASTE

A. Transportation And Disposal Site

1. The Contractor's Hauler and Disposal Site shall be approved by the Owner. All waste generated during the asbestos project shall be disposed of as RACM asbestos waste.
2. The Contractor shall give twenty-four (24) hour notification prior to removing any waste from the site. Waste shall be removed from the site only during normal working hours

unless otherwise specified. No waste may be taken from the site unless the Contractor and Environmental Consultant are present and the Environmental Consultant authorizes the release of the waste as described herein.

3. All waste generated as part of the asbestos project shall be removed from the site within ten (10) calendar days after successful completion of all asbestos abatement work.
4. Upon arrival at the Project Site, the Hauler must possess and present to the Environmental Consultant a valid New York State Department of Environmental Conservation Part 364 Asbestos Hauler's Permit. The Environmental Consultant may verify the authenticity of the hauler's permit with the proper authority.
5. The Hauler, with the Contractor and the Environmental Consultant, shall inspect all material in the transport container prior to taking possession and signing the Asbestos Waste Manifests.

B. Waste Storage Containers

1. All waste containers shall be fully enclosed and lockable (i.e. enclosed dumpster, trailer, etc.). No open containers will be permitted on-site (i.e. open dumpster with canvas cover, etc.) unless specifically permitted by applicable regulation or a Site Specific Variance. When asbestos contaminated waste must be kept on the work site overnight or longer, it shall be double bagged and stored in accordance with Federal, State, and local laws.
2. The Environmental Consultant shall verify that the waste storage container and/or truck tags (license plates) match that listed on the New York State Department of Environmental Conservation Part 364 permit. Any container not listed on the permit shall be removed from the site immediately.
3. The container shall be plasticized and sealed with two (2) layers of 6 mil polyethylene. Once on site, it shall be kept locked at all times, except during load out. The waste container shall not be used for storage of equipment or contractor supplies.
4. While on-site, the container shall be labeled with EPA Danger signage:

DANGER
CONTAINS ASBESTOS FIBERS
AVOID CREATING DUST
CANCER AND LUNG DISEASE HAZARD

5. The New York State Department of Environmental Conservation Asbestos Hauler's Permit number shall be stenciled on both sides and back of the container.
6. The container is not permitted to be loaded unless it is properly plasticized, has the appropriate danger signage affixed, and has the permit number appropriately stenciled on the container.
7. Waste generated off-site is not permitted to be brought onto the Project site and loaded into the waste container.
8. All asbestos waste removed from the project site shall be transported directly to the disposal site without any addtional waste being added to the container during transport.

C. Hauler's Asbestos Waste Manifest

1. The Hauler's Manifest shall be completed by the Contractor and verified by the Environmental Consultant that all the information and amounts are accurate and the proper signatures are in place.

2. The Manifests shall have the appropriate signatures of the Environmental Consultant, the Contractor, and the Hauler representatives prior to any waste being removed from the site.
3. Copies of the completed Hauler's Manifest shall be retained by the Environmental Consultant and the Contractor and shall remain on site for inspection.
4. Upon arrival at the Disposal Site, the Hauler's Manifest shall be signed by the Disposal Facility operator to certify receipt of ACM covered by the manifest.
5. The Contractor shall forward copies of the Hauler's Manifest to the Environmental Consultant within 14 days of the waste container being removed from the site. Failure to do so may result in payment being withheld from the Contractor.
6. All waste disposal manifests and disposal logs shall be submitted by the Contractor to the Owner with the final close-out documentation.

SECTION 028300 - REMOVAL AND DISPOSAL OF LEAD-CONTAINING PAINT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Description Of Work

1. This specification covers the removal and disposal of lead-based or lead-containing paint associated with the Influent Pumping System Improvements Project located at the Cedar Creek Water Pollution Control Plant, 3340 Merrick Road, Wantagh, NY 11783.

Floor	Room	Component	Color	Substrate	WA Desig-nation	Approximate Quantity	Procedure

2. All layers of coating shall be considered as LBP and removed down to the substrates. Substrates coated with LBP and targeted for demolition may be removed and disposed of solid structure waste following TCLP testing.
3. Substrates coated with LBP and targeted for refurbishment and recoating shall be abated using manual wet scraping or chemical stripping procedures, localized testing of chemical stripping products shall proceed broader use and only after approval by the DPW Environmental Consultant.
4. The abatement contractor shall separate paint chips and contaminated dust/particulate generated by the abatement from other project waste streams including worker personal protective equipment and plastic sheeting. All waste other than lead paint chips and contaminated dust/particulate shall be TCLP tested prior to disposal.
5. Waste generated by the work of this method shall be stored on site in a NYSDEC compliant Hazardous and Waste Storage Area and transported under manifest to the disposal site.
6. The contractor shall prepare a project specific work plan and project specific HASP for the work of this contract.
7. LBP remediation shall be consistent with guidelines from SSPC and work shall comply with the OSHA regulations including the use of decontamination units and hand wash stations.
8. The contractor may propose alternate LBP removal procedures however, use of alternate procedures will require approval by DPW Environmental Consultant; the abatement contractor is responsible with maintaining the physical conditions and integrity of the targeted substrates, and the surrounding structures during abatement work.
9. The Contractor shall request and receive in writing prior to proceeding with any work info from the owner regarding surfaces/materials that require protection.

B. Definitions

1. Action Level: Employee exposure, without regard to use of respirators, to an airborne concentration of lead of 30 micrograms per cubic meter of air averaged over an 8 hour period in an occupational/industrial environment.

2. Area Sampling: Sampling of lead concentrations within the lead control area and inside the physical boundaries, which is representative of the airborne lead concentrations but is not collected in the breathing zone of personnel. This sampling will be conducted by Westchester County Department of Public Works and Transportation (DPW) third party consultant, if required.
3. Certified Contractor: Certified under 40 CFR 745.226 to inspect, assess or remove lead-based paint, dust or soil. Certification as required to provide notification to the Environmental Protection Agency prior to the commencement of lead-based paint abatement activities in residential dwellings and child occupied facilities.
4. Contaminated Room: Room for removal of contaminated personal protective equipment (PPE).
5. Decontamination Shower Facility: That facility that encompasses a clean clothing storage room, and a contaminated clothing storage and disposal room#, with a shower facility in between.
6. Eight-Hour Time Weighted Average (TWA): Airborne concentration of lead to which an employee is exposed, averaged over an 8 hour workday as indicated in 29 CFR 1926.62.
7. EPA Notification: The certified contractor shall notify the Environmental Protection Agency at least 5 business days prior to conducting lead-based paint abatement in residential or child occupied facilities. The notification requirements for updating and canceling projects shall also be completed as required.
8. High Efficiency Particulate Air (HEPA) Filter Equipment: HEPA filtered vacuuming equipment with a UL 586 filter system capable of collecting and retaining lead-contaminated paint dust. A high efficiency particulate filter means 99.97 percent efficient against 0.3 micron or larger size particles.
9. Lead: Metallic lead, inorganic lead compounds, and organic lead soaps.
10. Lead-Based Paint (LBP): Paint or other surface coating that contains lead in excess of 1.0 milligrams per centimeter squared or 0.5 percent by weight.
11. Lead-Based Paint Hazard (LBP Hazard): Any condition that causes exposure to lead from lead-contaminated dust, lead-contaminated soil, and lead-based paint that is deteriorated or present in accessible surfaces, friction surfaces, or impact surfaces that would result in adverse human health effects.
12. Lead-Containing Paint (LCP): Lead-based paint or other similar surface coating containing lead or lead compound in excess of 0.06 percent by weight of the total nonvolatile content of the paint.
13. Lead Control Area: An enclosed area or structure, constructed as a temporary containment equipped with HEPA filtered local exhaust, which prevents the spread of lead dust, paint chips, or debris existing as a condition of lead-based paint removal operations. The lead control area is also isolated by physical boundaries to prevent unauthorized entry of personnel.
14. Lead Permissible Exposure Limit (PEL): Fifty micrograms per cubic meter of air as an 8 hour time weighted average as determined by 29 CFR 1926.62. If an employee is exposed for more than eight hours in a workday, the PEL shall be determined by the following formula: PEL (micrograms/cubic meter of air) = 400/No. Hours worked per day.
15. Personal Sampling: Sampling of airborne lead concentrations within the breathing zone of an employee to determine the 8 hour time weighted average concentration in accordance with 29 CFR 1926.62. Samples shall be representative of the employees' work tasks. The sampling, conducted by the Contractor, shall provide information to complete the required exposure assessment to identify the level of exposure a worker would be subject to without respiratory protection. Whenever there has been a change of

equipment, process, control, personnel or a new task has been initiated, the Contractor shall conduct additional personal sampling.

16. Physical Boundary: Area physically roped or partitioned off around an enclosed lead control area to limit unauthorized entry of personnel. As used in this section, "inside boundary" shall mean the same as "outside lead control area but inside boundary."
17. Project Supervisor (PS): As used in this section, refers to a person employed by the Contractor who is trained and certified in the recognition and control of lead hazards in accordance with current federal, State, and local regulations. The PS shall be trained and certified to inspect, assess or remove lead based paint, dust or soil.
18. Third Party Consultant: DPW will provide a third party consultant to provide pre-work assessments, project monitoring assessments for the work area and surrounding areas and final clearance assessments.
19. Worker certifications: All workers inspecting, assessing, or removing lead-based paint, dust or soil who are trained and certified to conduct these activities. As per 40 CFR Part 745 and 29 CFR 1926.

C. Submittals: Submit the following:

1. Product Data:

    a. Vacuum and negative air filters (if units are required)
    b. Respirators

2. Test Reports

    a. Compliance Assessment report

3. Certificates

    a. Certifications of PS
    b. Testing laboratory qualifications
    c. Contractor Consultant qualifications, if any required
    d. Respiratory protection program
    e. Hazard communication program
    f. EPA approved hazardous waste treatment or disposal facility for lead disposal
    g. Hazardous waste management plan
    h. Vacuum filters
    i. Employee training certifications
    j. Certification of medical examinations

4. Manufacturer's Instructions

    a. Chemicals and equipment
    b. Materials
    c. Material safety data sheets for all chemicals

5. Lead-Based Paint/Lead-Containing Paint Removal Plan (LBP/LCPRP) including PS approval (signature, date, and certification number):

    a. The job specific plan for the work procedures to be utilized,

b. The job specific plan for worker protection issues regarding personal protective equipment, the work procedures, and exposure assessment procedures,
c. The job specific plan for protecting the work area, ventilation and drainage systems,
d. Collected waste water disposal,
e. Paint debris disposal (hazardous and non-hazardous waste).

6. Containment Design

a. The containment design proposed for use during surface preparation and clean up activities as required to perform the work. The Plan for staging, installing, moving and removing the containment. Include all data, calculations and assumptions used for the design of the containment and ventilation system to ensure that airborne lead concentrations of 30 micrograms per cubic meter of air and baseline lead dust/soil concentrations are not reached or exceeded outside of the lead control area.
b. Methods to be used to verify adequate air flow characteristics and negative pressure within containment.
c. The plan for staging and storing any waste material;
d. The plan for establishing barriers to control access of personnel within the exposure zones.

7. Compliance Plan

a. Establish monitoring programs for the monitoring activities that are the responsibility of the Contractor and include provisions for complying with the results of any monitoring and analysis that is conducted by the Contractor and DPW.
b. Establish procedures for monitoring of airborne exposures surrounding project activities and the establishment of visible barriers to control the access of personnel within the exposure zones. DPW will provide instrument monitoring of airborne exposure and/or wipe sampling within the work area or the surrounding areas by a third party consultant.
c. Provide procedures for the visual assessment of the ground (soil) to determine whether it has been impacted by project activities, if required. Identify the corrective action that will be taken in the event of unacceptable results. In the event visual assessments of the ground show unacceptable results, the Contractor will undertake the necessary clean up of the ground (soil) as appropriate as directed by DPW. Clean up to pre-project levels will be required. The third party consultant will provide final visual, instrument and wipe sampling to clear the work and surrounding areas.
d. Final Clearance Evaluation – Provide written procedures identifying the methods that will be used to conduct final project clean up and the final cleanliness inspections and evaluations that will be undertaken in compliance with the project requirements.

8. Closeout Submittals

a. Completed and signed hazardous waste manifest from treatment or disposal facility
b. Certification of medical examinations, if required

D. Qualifications of Project Supervisor (PS): Submit name, address, telephone number and the EPA certification number of the PS selected to perform responsibilities specified in paragraph entitled "Project Supervisor (PS) Responsibilities." Provide at least two (2) years of previous experience with lead-based paint abatement projects. Submit proper documentation that the PS is trained and certified in accordance with federal, State, and local laws.

E. Contractor Consultant Qualifications: Submit the name, address, telephone number and the EPA certification number of the Contractor Consultant (Contractor) if one is selected to perform the worker protection sampling and any additional sampling the Contractor may decide to take. Submit proper documentation that the Contractor consultant is trained and certified as an inspector technician or inspector/risk assessor by the USEPA and authorized State (or local) certification and accreditation program. The Contractor consultant shall have at least two (2) years of previous experience with lead-based paint abatement projects.

F. Testing Laboratory: Submit the name, address, and telephone number of the testing laboratory selected to perform the air sampling and disposal testing. The air sampling results shall be utilized for reporting of airborne concentrations of lead for Contractor worker protection issues. This sampling will be separate from the third party consultant sampling that will be conducted by DPW. Use a laboratory accredited under the EPA National Lead Laboratory Accreditation Program (NLLAP) by either the American Association for Laboratory Accreditation (A2LA) or the American Industrial Hygiene Association (AIHA) and that is successfully participating in the Environmental Lead Proficiency Analytical Testing (ELPAT) program to perform sample analysis.

G. Lead-Based Paint/Lead-Containing Paint Removal Plan (LBP/LCPRP): Information to also be included in the LBP/LCPRP not indicated in Section 1.1, C 5 & 6 shall include but not be limited to the following items. The plan shall include a sketch showing the location, size, and details of lead control areas, location and details of the decontamination facilities. Include in the plan, eating, drinking, smoking and sanitary procedures, interface of trades and sequencing of lead related work. Include site preparation and cleanup procedures. Include occupational and environmental sampling (if any by the Contractor), frequency and duration of sampling.

H. Occupational And Environmental Sampling Results: Submit occupational and environmental sampling results to the DPW within three working days of collection, signed by the testing laboratory responsible official, the employee that performed the sampling, and the PS.

1. The sampling results shall represent each job classification, or if working conditions are similar to previous jobs by the same employer, provide previously collected exposure data that can be used to estimate worker exposures in accordance with 29 CFR 1926.62. The data shall represent the worker's regular daily exposure to lead.
2. Submit worker exposure data conducted during the task based trigger operations of 29 CFR 1926.62.
3. The initial monitoring shall determine the requirements for further monitoring and the need to fully implement the control and protective requirements including the compliance program (LBP/LCP) in accordance with 29 CFR 1926.62.

I. Occupational And Environmental Assessment Data Report:

1. Some LBP/LCP removal work may not require full implementation of the requirements of 29 CFR 1926.62. Based on the experience of the Contractor and/or the use of a specific process or method for performing the work, the Contractor may be able to

provide historic data (previous 12 months) to demonstrate that airborne exposures are controlled below the action level. Such methods or controls shall be fully presented in the LBP/LCPRP. To reduce the full implementation of 29 CFR 1926.62, the Contractor shall provide documentation in an Assessment Data Report.

2. Submit occupational and environmental assessment report to DPW prior to start of work, signed by the testing laboratory responsible official, and the PS.

    a. Submit a report that supports the determination regarding the reduction of the need to fully implement the requirements of 29 CFR 1926.62 and supporting the LBP/LCP. The exposure assessment shall represent each job classification, or if working conditions are similar to previous jobs by the same employer, provide previously collected exposure data that can be used to estimate worker exposures in accordance with 29 CFR 1926.62. The data shall represent the worker's regular daily exposure to lead for stated work.
    b. Submit worker exposure data conducted during the task based trigger operations of 29 CFR 1926.62 with a complete process description in supporting a negative assessment.
    c. The initial assessment shall determine the requirement for further monitoring and the need to fully implement the control and protective requirements including the compliance program (LBP/LCPRP) in accordance with 29 CFR 1926.62.

J. Quality Assurance

1. Medical Examinations: Initial medical surveillance as required by 29 CFR 1926.62 shall be made available to all employees exposed to lead at any time (1 day) above the action level. Full medical surveillance shall be made available to all employees on an annual basis who are or may be exposed to lead in excess of the action level for more than 30 days a year or as required by 29 CFR 1926.62. Adequate records shall show that employees meet the medical surveillance requirements of 29 CFR 1926.33, 29 CFR 1926.62, and 29 CFR 1926.103.

    a. Medical Records: Maintain complete and accurate medical records of employees for a period of at least 30 years or for the duration of employment plus 30 years, whichever is longer.
    b. Medical Surveillance: Provide medical surveillance to all personnel exposed to lead as indicated in 29 CFR 1926.62.

2. Project Supervisor (PS) Responsibilities

    a. Certify training as meeting all federal, State, and local requirements.
    b. Review and approve lead-based paint/lead-containing paint removal plan for conformance to the applicable referenced standards.
    c. Continuously inspect lead-based paint removal work for conformance with the approved plan.
    d. Perform air sampling, if required by Contractor.
    e. Ensure work is performed in strict accordance with specifications at all times.
    f. Control work to prevent hazardous exposure to human beings and to the environment at all times.
    g. Certify the conditions of the work as called for elsewhere in this specification.

3. Training: Train each employee performing inspection, assessing, paint removal, disposal, and air sampling operations prior to the time of initial job assignment and annually thereafter, in accordance with 40 CFR 745.225, 29 CFR 1926.21, 29 CFR 1926.62, and State and local regulations.

    a. Training Certification: Submit a certificate for each employee, signed and dated by the approved training source, stating that the employee has received the required lead training.

4. Respiratory Protection Program

    a. Furnish each employee required to wear a negative pressure respirator or other appropriate type with a respirator fit test at the time of initial fitting and at least annually thereafter as required by 29 CFR 1926.62.
    b. Establish and implement a respiratory protection program as required by ANSI Z88.2, 29 CFR 1926.103, 29 CFR 1926.62, and 29 CFR 1926.55.

5. Hazard Communication Program: Establish and implement a Hazard Communication Program as required by 29 CFR 1926.59.
6. Hazardous Waste Management: The Hazardous Waste Management Plan shall comply with applicable requirements of federal, State, and local hazardous waste regulations and address:

    a. Identification and classification of hazardous wastes associated with the work.
    b. Estimated quantities of wastes to be generated and disposed of.
    c. Names and qualifications of each Contractor that will be transporting, storing, treating and/or disposing of the wastes. Include the facility location and operator and a 24-hour point of contact. Furnish two copies of EPA, or State and local hazardous waste permit applications or permits or manifests, as required, and co-ordinate with DPW regarding the use of an existing EPA Identification number or developing separate EPA Identification numbers.
    d. Names, qualifications and training (experience and training) of personnel who will be working on-site with hazardous wastes.
    e. List of waste handling equipment to be used in performing the work, to include cleaning, volume reduction, and transport equipment.
    f. Spill prevention, containment, and cleanup contingency measures including a health and safety plan to be implemented in accordance with 29 CFR 1926.65.
    g. Work plan and schedule for waste containment, removal and disposal. Wastes shall be cleaned up and containerized daily.
    h. Unit cost for hazardous waste disposal according to this plan.

7. Environmental, Safety and Health Compliance: In addition to the detailed requirements of this specification, comply with laws, ordinances, rules, and regulations of Federal, State, and local authorities regarding removing, handling, storing, transporting, and disposing of lead waste materials. Comply with the applicable requirements of the current issue of 40 CFR Part 745 and 29 CFR 1926.62. Submit matters regarding interpretation of standards to DPW for resolution before starting work. Where specification requirements and the referenced documents vary, the most stringent requirement shall apply.
8. Pre-Construction Conference: Along with the PS, meet with DPW and any facility or consultant representatives to discuss in detail the hazardous waste management plan and

the lead-based paint/lead-containing paint removal plan, including work procedures and precautions for the removal plan.

K. Equipment

1. Respirators: Furnish appropriate respirators approved by the National Institute for Occupational Safety and Health (NIOSH), Department of Health and Human Services, for use in atmospheres containing lead dust. Respirators shall comply with the requirements of 29 CFR 1926.62.
2. Special Protective Clothing: Furnish personnel who will be exposed to lead-contaminated dust with proper disposable uncontaminated, reusable protective whole body clothing, head covering, gloves, and foot coverings as required by 29 CFR 1926.62. Furnish proper disposable plastic or rubber gloves to protect hands. Reduce the level of protection only after obtaining approval from the PS.
3. Vacuum Filters: UL 586 labeled HEPA filters.
4. Equipment for Owner's Personnel: Furnish DPW with two complete sets of personal protective equipment (PPE) daily, as required herein, for entry into and inspection of the paint removal work within the lead controlled area. Personal protective equipment shall include disposable whole body covering, including appropriate foot, head, and hand protection. PPE shall remain the property of the Contractor. The Owner will provide respiratory protection for DPW and their representatives.

L. Removal

1. Title to Materials: Materials resulting from demolition work, except as specified otherwise, shall become the property of the Contractor and shall be disposed of in accordance with all federal, State and local regulations.

1.3 PRODUCT

A. Chemicals: Submit applicable Safety Data Sheets for all chemicals used in paint removal work. Use the least toxic product approved by DPW.

1.4 EXECUTION

A. Protection

1. Notification: Notify DPW 20 days prior to the start of any lead based paint removal work.
2. Notification: Notify the Environmental Protection Agency at least 5 days prior to conducting lead-based paint abatement activities in a residential dwelling or child occupied facility.
3. Lead Control Area Requirements

a. If LBP will be removed by means which will not likely create airborne, lead-containing dust (such as careful wet scraping or chemical stripping), establish a lead control area by situating critical barriers and physical boundaries around the area or structure where LBP/LCP removal operations will be performed.

b. If removal practice will create airborne, lead-containing dust (such as sanding, abrasive blasting, thermal cutting, demolition, or needle gun use), utilize full containment procedures - Contain removal operations by the use of critical barriers and HEPA filtered exhaust or a negative pressure enclosure system with decontamination facilities and with HEPA filtered exhaust if required by the PS, as directed.

4. Protection of Existing Work to Remain: Perform paint removal work without damage or contamination of adjacent areas. Where existing work is damaged or contaminated, restore work to its original condition or better.
5. Boundary Requirements: Provide physical boundaries around the lead control area by roping off the area designated in the work plan or providing curtains, portable partitions or other enclosures to ensure that airborne concentrations of lead will not reach 30 micrograms per cubic meter of air outside of the lead control area.

   a. Physical Boundary: Provide physical boundaries around the lead control area by roping off the area designated in the work plan or providing curtains, portable partitions or other enclosures to ensure that airborne concentrations of lead will not reach 30 micrograms per cubic meter of air outside of the lead control area.
   b. Warning Signs: Provide warning signs at approaches to lead control areas. Locate signs at such a distance that personnel may read the sign and take the necessary precautions before entering the area. Signs shall comply with the requirements of 29 CFR 1926.62.

6. Furnishings:

   a. The Owner will remove furniture and equipment from the building before lead-based paint removal work begins.
      or
   b. Furniture and equipment will remain in the building. Protect and cover furnishings or remove furnishings from the work area and store in a location approved by DPW.
      or
   c. Existing furniture and equipment are lead contaminated, decontaminate, dispose of as lead contaminated waste.

7. Heating, Ventilating and Air Conditioning (HVAC) Systems: Shut down, lock out, and isolate HVAC systems that supply, exhaust, or pass through the lead control areas. Seal intake and exhaust vents in the lead control area with 6 mil plastic sheet and tape. Seal seams in HVAC components that pass through the lead control area. Provide temporary HVAC system for areas in which HVAC has been shut down outside the lead control area.
8. Decontamination Shower Facility: Provide clean and contaminated change rooms and shower facilities in accordance with this specification and 29 CFR 1926.62.
9. Eye Wash Station: Where eyes may be exposed to injurious corrosive materials, suitable facilities for quick drenching or flushing of the eyes shall be provided within the work area.
10. Mechanical Ventilation System

    a. Use adequate ventilation to control personnel exposure to lead in accordance with 29 CFR 1926.62.

b. To the extent feasible, use fixed local exhaust ventilation connected to HEPA filters or other collection systems, approved by the PS. Local exhaust ventilation systems shall be designed, constructed, installed, and maintained in accordance with ANSI Z9.2.
c. Vent local exhaust outside the building only and away from building ventilation intakes.
d. Use locally exhausted, power actuated, paint removal tools.

11. Personnel Protection: Personnel shall wear and use protective clothing and equipment as specified herein. Eating, smoking, or drinking or application of cosmetics is not permitted in the lead control area. No one will be permitted in the lead control area unless they have been appropriately trained and provided with protective equipment.

B. Work Procedures: Perform removal and disposal of lead-based paint in accordance with approved lead-based paint/lead-containing paint removal plan. Use procedures and equipment required to limit occupational and environmental exposure to lead when lead-based paint is removed in accordance with 29 CFR 1926.62, except as specified herein.

1. Personnel Exiting Procedures: Whenever personnel exit the lead-controlled area, they shall perform the following procedures and shall not leave the workplace wearing any clothing or equipment worn during the work day:

a. Vacuum themselves off.
b. Remove protective clothing in the contaminated change room and place them in an approved impermeable disposal bag.
c. Shower or Wash hands and face at the site, as directed, don appropriate disposable or uncontaminated reusable clothing; move to an appropriate facility; shower.
d. Change to clean clothes prior to leaving the physical boundary designated around the lead control area.

2. Sampling

a. Air sample for lead in accordance with 29 CFR 1926.62 and as specified herein. Air sampling shall be directed or performed by the PS.

1) The PS shall be on the job site directing the air sampling and inspecting the lead-based paint removal work to ensure that the requirements of the contract have been satisfied during the entire lead-based paint removal operation.
2) Collect personal air samples on employees who are anticipated to have the greatest risk of exposure as determined by the PS. In addition, collect air samples on at least 25 percent of the work crew or a minimum of two employees; whichever is greater, during each work shift.
3) Submit results of air samples, signed by the PS, within 24 hours after the air samples are taken. Notify DPW immediately of exposure to lead at or in excess of the action level of 30 micrograms per cubic meter of air outside of the lead control area.

b. Surface and/or soil sampling shall be conducted as required for residential dwellings and child occupied facilities or as may be required for high profile, sensitive work areas, such as administrative buildings, kitchens, barracks, etc., to

determine clearance (i.e., that the work has not contaminated surfaces within and adjacent to the control area) will be performed by a third party consultant provided by DASNY. Notification to DPW will also outline any sampling requirements to be provided for the work.

1) Before any work begins, DPW's third party consultant will collect and analyze baseline soil or wipe samples in accordance with methods defined in federal, State, and local standards inside and outside of the physical boundary to assess the degree of soil and/or dust contamination prior to when lead-based paint removal activities are initiated.
2) After all work is completed, DPW's third party consultant will collect and analyze soil or wipe samples in accordance with methods defined in federal, State, and local standards inside and outside of the physical boundary to assess the degree of soil and/or dust contamination after the lead-based paint removal activities are completed.

c. Area Air Sampling During Paint Removal Work: DPW will conduct area air sampling while lead-based paint removal operations are performed, in areas immediately adjacent to the lead control area. Area monitoring shall be conducted to ensure unprotected personnel adjacent to the lead control area are not exposed at or above 30 micrograms per cubic meter of air. If 30 micrograms per cubic meter of air is reached or exceeded, the Contractor will be advised to stop work, and correct the conditions(s) causing the increased levels. DPW will determine if condition(s) require any further change in work methods. Removal work shall resume only after approval is given by DPW. For outdoor operations, at least one sample on each shift shall be taken on the downwind side of the lead control area.

3. Lead-Based Paint Removal

a. Provide methodology for removing LBP/LCP in the work plan. Remove paint within the areas designated on the drawings in order to completely expose the substrate. Take whatever precautions necessary to minimize damage to the underlying substrate.
b. Avoid flash rusting or deterioration of the substrate. Co-ordinate surface preparations as required by DPW.
c. Provide methodology for LBP/LCP removal processes to minimize contamination of work areas outside the control area with lead-contaminated dust or other lead-contaminated debris/waste and to ensure that unprotected personnel are not exposed to hazardous concentrations of lead. Describe this LBP/LCP removal process in the LBP/LCPRP.
d. Indoor Lead Paint Removal: Perform manual or mechanical or thermal or chemical, as directed, paint removal in lead control areas using enclosures, barriers, or containments and powered locally exhausted paint removal tools. Collect residue and/or debris for disposal in accordance with federal, State, and local requirements.
e. Outdoor Lead Paint Removal: Perform outdoor removal as indicated in federal, State, and local regulations and in the LBP/CPRP. The worksite preparation (barriers or containments) shall be job dependent and presented in the LBP/LCPRP.
f. Sampling After Paint Removal: After the visual inspection, DPW will conduct soil sampling if bare soil is present during external removal operations and collect area

air samples inside and outside the lead control area to determine the airborne levels of lead inside and outside the work area. DPW will collect wipe samples according to the HUD protocol contained in HUD Guidelines to determine the lead content of settled dust and dirt in micrograms per square foot of surface area and parts per million (ppm) or micrograms per gram (µg/g) for soil.

4. Cleanup and Disposal

a. Cleanup: Maintain surfaces of the lead control area free of accumulations of paint chips and dust. Restrict the spread of dust and debris; keep waste from being distributed over the work area. Do not dry sweep or use compressed air to clean up the area. At the end of each shift and when the paint removal operation has been completed, clean the area of visible lead paint contamination by vacuuming with a HEPA filtered vacuum cleaner, wet mopping the area and wet wiping the area as indicated by the PS. Re-clean areas showing dust or residual paint chips or debris. After visible dust, chips and debris is removed, wet wipe and HEPA vacuum all surfaces in the work area. If adjacent areas become contaminated at any time during the work, clean, visually inspect, and then wipe sample all contaminated areas. The PS shall then certify in writing that the area has been cleaned of lead contamination before restarting work.

b. Clearance Certification

1) The Contractor shall document in writing and provide analytical documentation to certify that the employee exposure to an airborne concentration of lead were below the required action level, respiratory protection used for the employees was adequate; the work procedures were performed in accordance with 29 CFR 1926.62 and 40 CFR 745; and that there were no visible accumulations of material and dust containing lead left in the work site. Do not remove the lead control area or roped off boundary and warning signs prior to DPW's acknowledgement of the third party sampling results, if required, and upon receipt of the Contractor certification.

2) The DPW third party consultant shall certify surface wipe sample results collected inside and outside the work area are less than 100 micrograms per square foot on uncarpeted floors, less than 500 micrograms per square foot on interior window sills and less than 800 micrograms per square foot on window troughs or not significantly greater than the initial surface loading determined prior to work, as directed.

3) For exterior paint removal work, the DPW third party consultant will provide soil samples taken at the exterior of the work site to be used to determine if soil lead levels had increased at a statistically significant level (significant at the 95 percent confidence limit) from the soil lead levels prior to the work. If soil lead levels do show a statistically significant increase above any applicable Federal or State standard for lead in soil, the soil shall be remediated back to the pre-work level.

c. Testing of Lead-Based Paint Residue and Used Abrasive: The Contractor shall test paint residue and used abrasive in accordance with 40 CFR 261 for hazardous waste.

d. Disposal

1) Collect lead-contaminated waste, scrap, debris, bags, containers, equipment, and lead-contaminated clothing, which may produce airborne concentrations of lead particles. Label the containers in accordance with 29 CFR 1926.62 and 40 CFR 261. Dispose of lead-contaminated waste material at an EPA or State approved hazardous waste treatment, storage, or disposal facility off Owner's property.
2) Store waste materials in U.S. Department of Transportation (49 CFR 178) approved 55-gallon drums. Properly label each drum to identify the type of waste (49 CFR 172) and the date the drum was filled. DPW or an authorized representative will assign an area for interim storage of waste-containing drums. Do not store hazardous waste drums in interim storage longer than 90 calendar days from the date affixed to each drum.
3) Handle, store, transport, and dispose lead or lead-contaminated waste in accordance with 40 CFR 260, 40 CFR 261, 40 CFR 262, 40 CFR 263, 40 CFR 264, and 40 CFR 265. The Contractor shall provide documentation the transporter is authorized to transport the waste, authorized to deliver the waste to the treatment, storage, or disposal facility and the treatment, storage, or disposal facility is authorized to accept the waste. Comply with land disposal restriction notification requirements as required by 40 CFR 268.
4) All material, whether hazardous or non-hazardous shall be disposed in accordance with laws and provisions and federal, State, or local regulations. Ensure waste is properly characterized. The result of each waste characterization (TCLP for RCRA materials) will dictate disposal requirements.

5. Disposal Documentation: Submit written evidence the hazardous waste treatment, storage, or disposal facility (TSD) is approved for lead disposal by the EPA and State or local regulatory agencies. Submit one copy of the completed manifest, signed and dated by the initial transporter in accordance with 40 CFR 262.
6. Payment for Hazardous Waste: Payment for disposal of hazardous waste will not be made until a signed copy of the manifest from the treatment or disposal facility certifying the amount of lead-containing materials delivered is returned and a copy is furnished to the Owner.

SECTION 028310 - LCP/LBP DISTURBANCES USING OSHA LEAD SAFE WORK PRACTICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SCOPE OF WORK

A. The work covered by this Specification shall consist of furnishing all labor, materials, tools, and equipment necessary to control and mitigate potential lead-based paint (LBP) and lead-containing paint (LCP) material hazards during demolition/renovation activities associated with the Influent Pumping System Improvements Project located at the Cedar Creek Water Pollution Control Plant, 3340 Merrick Road, Wantagh, NY 11783.

B. This Specification shall be used as a guideline for Contractors who complete the demolition/renovation activities pertaining to this Project, as detailed within Section 1.01, B of this Specification. The intent of this Specification is to remain in conformance with Occupational Safety and Health Administration (OSHA) Regulation 29 CFR 1926.62 “Lead Exposure in Construction” and to maintain an airborne concentration of lead-dust below the Action Level. This Specification is written to outline the worst-case scenario regarding lead safe work practices.

C. The following is a detailed listing of identified LBP and/or LCP, above the laboratory and/or device detection limit:

Floor	Room	Component	Color	Substrate	XRF Reading (mg/cm^2)	Paint Condition (Intact, Fair, or Poor)
-28 Level	Basement Dry Well	Centrifugal Pumps 1	Grey	Metal	0.2	Poor
-28 Level	Basement Dry Well	Centrifugal Pumps 2	Yellow	Metal	3.4	Poor
-28 Level	Basement Dry Well	Centrifugal Pumps 2	Grey	Metal	2.1	Poor
-28 Level	Basement Dry Well	Centrifugal Pumps 3	Yellow	Metal	1.8	Poor
-28 Level	Basement Dry Well	Centrifugal Pumps 3	Grey	Metal	2.4	Poor
-28 Level	Basement Dry Well	Centrifugal Pumps 4	Yellow	Metal	3.2	Poor
-28 Level	Basement Dry Well	Centrifugal Pumps 4	Grey	Metal	1.1	Poor
-28 Level	Basement Dry Well	Centrifugal Pumps 5	Yellow	Metal	1.6	Poor
-28 Level	Basement Dry Well	Centrifugal Pumps 5	Grey	Metal	2.2	Poor
-28 Level	Basement Dry Well	Centrifugal Pumps 6	Yellow	Metal	1.4	Poor

Floor	Room	Component	Color	Substrate	XRF Reading (mg/cm^2)	Paint Condition (Intact, Fair, or Poor)
30.5 Level	HVAC Demolition Overall Plan	HVAC/Duct Coating	Grey	Canvas	0.2	Poor
30.5 Level	HVAC Demolition Overall Plan	HVAC/Duct Coating	Grey	Canvas	0.2	Poor

It should be noted that several components tested did contain minimal lead-concentrations below the EPA threshold level of 1.0 mg/cm^2 or 0.5% by weight for classification as LBP and are considered lead-containing paints or coatings by 29CFR 1926.62. OSHA does not recognize a minimum limit for lead concentration in paint for the purpose of disturbance. Personal Air monitoring of workers performing demolition/cleaning/disturbance of painted surfaces shall be completed to document personnel occupational exposure and reviewed by the Contractor's Competent Person. Items containing any amount of lead concentration are considered lead-containing paints or coatings per 29 CFR 1926.62. See project environmental survey report for lead paint reports. Lead paint summary information is located within the Appendices of this specification.

D. Manual demolition, scraping and sanding of lead-based paint or lead containing paint coated surfaces, power tool cleaning with dust collection systems shall be performed in conjunction with engineering and work practice controls meeting the requirements of 29 CFR 1926.62(e)(1).

E. Components with LBP and LCP shall be removed intact to the extent practicable. A 6-mil polyethylene drop cloth shall be placed around and/or beneath the component, prior to its removal, to catch any paint chips that may become dislodged. Intact components shall be wrapped in a layer of clear 6-mil polyethylene prior to movement to the disposal container. The area around the component removal shall be wet wiped and high-efficiency particulate air (HEPA) filter vacuumed, including the tent enclosure (if applicable). The polyethylene sheeting shall be carefully folded in on itself and placed in a 6-mil disposal bag and sealed closed. All debris shall be properly disposed of in accordance with the respective waste stream Resource Conservation Recovery Act (RCRA) Toxicity Characteristic Leaching Procedure (TCLP) testing results.

F. Chemical stripping may be used for LBP and LCP removal on surfaces that will be subjected to welding, cutting, torch burning or where it is the only acceptable procedure. No chemical strippers containing methylene chloride shall be used by the Contractor on this project. SDS for stripping and neutralizing chemicals must be reviewed and approved by the Consultant prior to use and a copy shall be posted at the site.

G. The Contractor's use of a subcontractor (must be approved) shall not relieve the Contractor of full responsibility for the work to be performed.

H. If available and approved by the Competent Person, the Contractor may utilize exposure assessment data that is compliant with OSHA and was obtained within the last twelve (12) months from previous jobs conducted under similar conditions, control methods, work practices and environmental conditions to be used in this contract for LCP disturbances only. Other objective data may be used to demonstrate that work activities in this contract will not result in occupational exposures to airborne lead that exceeds the PEL for LCP disturbances only. The assessment shall include comparable lead concentrations (LCP only) in paint/coating materials, work practices, engineering controls and work schedules.

I. The Contractor must provide to his workers the following: Respiratory protection in accordance with the Contractor's Respiratory Protection Program, personal protective clothing, lead-free change areas, hand washing/shower facilities, blood lead level monitoring and training per 29 CFR 1926.62. Respiratory Protection is required for all LBP disturbances.

J. The Contractor shall ensure that any HVAC equipment intakes within and around the control areas are protected by shutting down the units. The Contractor shall alter the size and extent of the isolation barriers as necessary due to weather conditions, functional space use and density of building occupants in the vicinity, as required.

1.3 DEFINITIONS, REGULATIONS & REFERENCE STANDARDS

A. Definitions (excerpted from 29 CFR 1926.62)

1. Action Level: Employee exposure, without regard to the use of respirators, to an airborne lead concentration of 30 micrograms per cubic meter (30 ug/m^3) calculated as an 8-hour time-weighted average (TWA). Exceedance of the Action Level requires blood lead monitoring implementation.
2. Competent Person: One who is capable of identifying existing and predictable lead hazards in the surroundings or working conditions and who has the authorization to take prompt corrective measures to eliminate them. For LBP work, the Competent Person shall also be the on-site Supervisor/Foreman in-charge of the work crew.
3. Exposure Assessment: Each employer who has a workplace or operation covered by 29 CFR 1926.62 shall initially determine if any employee may be exposed to lead at or above the Action Level.
4. Lead: Metallic lead, all inorganic lead compounds, and organic lead soaps. Excluded from this definition are all other organic lead compounds.
5. Lead-Based Paint (LBP): Paint, varnish, shellac or other coatings on surfaces that contain 1.0 milligram per square centimeter (1.0 mg/cm^2) or more lead or 0.5% or more lead by weight. The concentration of 0.5% is equivalent to:

    a. 5,000 parts per million (5,000 ppm) and;
    b. 5,000 milligrams per kilogram (5,000 mg/kg)

6. Lead-Containing Paint (LCP): Paint, varnish, shellac or other coatings on surfaces that contain measurable concentrations less than 1.0 milligrams per square centimeter (1.0 mg/cm^2) lead or less than 0.5% or more lead by weight including equivalents less than 5,000 ppm and 5,000 mg/kg. This does not include paint, varnish, shellac or other coatings on surfaces where the concentration is below the detection limit of the respective laboratory method / device.
7. LBP Inspection: A surface by surface investigation to determine the presence of LBP. A report is then issued that identifies if there is LBP present and where it is located.
8. Lead Risk Assessor: EPA trained and certified to conduct LBP inspections and collect samples for the presence of lead in air, dust and soil for the purposes of abatement clearance testing as well as conduct risk assessments.
9. Permissible Exposure Limit (PEL): The limit above which the employer shall not expose workers to lead. The current PEL for lead is 50 ug/m^3 over an eight-hour time-weighted-average for all employees covered.

B. General Requirements

1. The Contractor is required to perform all work related to this project in strict accordance with all applicable Federal, State and Local regulations.
2. Where these requirements vary, the most stringent shall apply.
3. Specific Requirements

a. American National Standards Institute (ANSI)
ANSI Z9.2-79 – Fundamentals Governing the Design and Operation of Local Exhaust Systems.
b. Z88.2-80 – Practice for Respiratory Protection.
c. Code of Federal Regulations (CFR)
d. 29 CFR Part 1910.120 – Hazardous Waste Operations and Emergency Response.
e. 29 CFR Part 1910.134 – Respiratory Protection.
f. 29 CFR Part 1910.146 – Confined Space Entry Program.
g. 29 CFR Part 1910.1025 – Lead (General Industry Standard).
h. 29 CFR Part 1910.1200 – Hazard Communication.
i. 29 CFR Part 1926.55 – Gases, Vapors, Fumes, Dusts and Mists.
j. 29 CFR Part 1926.57 – Ventilation.
k. 29 CFR Part 1926.62 – Lead (Construction Industry Standard).
l. 40 CFR Part 260 – Hazardous Waste Management Systems: General.
m. 40 CFR Part 261 – Identification and Listing of Hazardous Waste.
n. 40 CFR Part 262 – Generators of Hazardous Wastes.
o. 40 CFR Part 263 – Transporters of Hazardous Waste.
p. 40 CFR Part 264 – Owners and Operators of Hazardous Waste Treatment, Storage & Disposal Facilities.
q. 40 CFR Part 265 – Interim Status Standards for Owners and Operators of Hazardous Waste Treatment, Storage & Disposal Facilities.
r. 40 CFR Part 268 – Land Disposal Restrictions.
s. 40 CFR Part 745 – Lead; Requirements for Lead-Based Paint Activities in Child Occupied Facilities
t. 49 CFR Parts 170-178 – Department of Transportation Regulations.
u. New York Codes of Rules and Regulations (NYCRR)

1) 6 NYCRR Part 360 – Solid Waste Regulations.
2) 6 NYCRR Part 364 – Waste Transporter Permits.
3) 6 NYCRR Part 370-373 – Hazardous Waste Regulations.

v. Steel Structures Painting Council (SSPC)

1) SSPC-Guide 6 – Guide for Containing Debris Generated During Paint Removal Operations.
2) SSPC-Guide 7 – Guide for the Disposal of Lead-Contaminated Surface Preparation Debris.

w. Underwriters Laboratories. Inc. (UL)

1) UL 586 – High Efficiency, Particulate Air Filter Units.

1.4 QUALITY ASSURANCE

A. The Contractor's Competent Person is required to maintain a copy of the following documents on-site.

B. Qualifications:

1. Contractor: Documentation that the Contractor has prior experience on LBP and LCP activity projects similar in nature and extent to ensure the capability to perform the required work procedures in a satisfactory manner.
2. Competent Person: Certification that the Contractor's full-time on-site Competent Person meets the Competent Person requirements of 29 CFR Part 1926.62 and is experienced in administration and supervision of LBP and LCP activity projects, including work practices, protective measures for building and personnel, disposal procedures, etc. The Competent Person shall also be the project Supervisor.
3. Contractor's Testing Laboratory: Documentation that the laboratory performing the OSHA personal sample analysis is an EPA National Lead Laboratory Accreditation Program (NLLAP) accredited laboratory and that it is listed proficient in the NIOSH/EPA Environmental Lead Proficiency Analytical Testing Program (ELPAT), and is a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) certified laboratory. Certification shall include accreditation for heavy metal analysis, and a Quality Assurance and Quality Control Program. Currently, the American Association for Laboratory Accreditation (ASLA) and the American Industrial Hygiene Association (AIHA) are the EPA recognized laboratory accreditors. Documentation shall include the date of accreditation or reaccreditation.
4. Blood Lead Testing Laboratory: Adequate documentation that the laboratory is certified to perform blood lead analysis for the State where the work site is located.

C. Respiratory Protection Devices

1. Manufacturer's NIOSH certification for respiratory protection devices utilized on the site.

D. Cartridges, Filters, and Vacuum Systems

1. Manufacturer's NIOSH certification of approval of respirator cartridges (organic vapor, acid gas, mist, dust, high efficiency particulate); High Efficiency Particulate Air (HEPA) filtration capabilities for all cartridges, filters, and HEPA vacuum systems.

E. Medical Examination and Records

1. Certification that employees who are involved in LBP and LCP work have received medical examinations and will receive continued medical surveillance, including blood lead level monitoring, as required by 29 CFR Part 1926.62, 29 CFR Part 910.1200, 29 CFR Part 1910.120 and by the state and local regulations pertaining to such work. Records shall be retained, at Contractor expense, in accordance with 29 CFR Part 1910.20.
2. Provide medical surveillance to workers until exposure monitoring reveals that workers are not exposed to airborne lead at or above the Action Level of 30 ug/m^3. This consists of a blood test measuring the level of lead and zinc protoporphyrin by a licensed physician. Further testing and medical exams may be necessary depending on the results of initial blood tests and/or the initial exposure assessment.

F. Training

1. Training certification shall be maintained and posted at the site, prior to the start of work involving LBP and LCP work, for all of the Contractors' workers, supervisors and Competent Person. Training shall meet the requirements of 29 CFR Part 1926.62, 29 CFR Part 1926.59, 29 CFR Part 1910.1200 and 49 CFR 172. Training shall be provided prior to the time of job assignment and as required by the regulations thereafter. The project specific training shall, at a minimum, include the following.

   a. Lead Paint Awareness Training as per 29 CFR 1926.62.
   b. Specific nature of the operation, which could result in exposure to lead.
   c. Purpose, proper selection, fitting, use and limitations of respirators.
   d. Purpose and description of the medical surveillance program and the medical removal protection program, including information concerning the adverse health effects associated with excessive exposure to lead (with particular attention to the adverse reproductive effects on both males and females, hazards to the fetus and additional precautions for employees who are pregnant).
   e. Relevant engineering controls and good work practices.
   f. The contents of any compliance plan in effect.
   g. Instructions to employees that chelating agents should not routinely be used to remove lead from their bodies and should not be used at all except under the direction of a licensed physician.
   h. The employee's right of access to records under 29 CFR part 1910.20.

G. Respiratory Protection Program

1. Furnish each employee required to wear a negative pressure respirator or other appropriate type with a respirator fit test at the time of initial fitting and at least every 12 months thereafter as required by 29 CFR Part1910.134 and 29 CFR Part 1926.62.
2. Establish and implement a respiratory protection program as required by ANSI Z88.2, 29 CFR Part 1910.134 and 29 CFR Part 1926.62.
3. All workers are required to don respirator(s) with the appropriate level of protection commensurate with the airborne concentrations of lead in which they are working. The level of protection will be determined by the Contractor, based on objective air monitoring data.

1.5 ON-SITE SUBMITTALS

A. The Contractor's Competent Person is required to maintain a copy of the following documents on-site.

B. Certifications:

C. Prior to the start of work, maintain the on-site, required certifications and licenses listed above in Section 1.03.

D. Equipment List:

E. Maintain a list of equipment items to be used in the work, including brand names, model, capacity, performance characteristics, quantities, and other pertinent information.

F. LBP and LCP Safe Work Practice Compliance Plan:

1. The contractor shall prepare a detailed LBP and LCP Safe Work Practice Compliance Plan that identifies the work procedures, health and safety measures to be used in LBP and LCP work procedures; and that addresses spill prevention, containment, and emergency response procedures. The Plan shall be maintained on-site. The plan shall address the methods to be undertaken during LBP and LCP disturbances to include all requirements of 1926.62(e)(2)(ii) including, but not limited to the following key elements:

    a. LBP and LCP containment methods to control employee exposure to lead at or below the permissible exposure limit.
    b. Training requirements as required by Federal, State, and Local regulations.
    c. Unique problems associated with the LBP and LCP project.
    d. Sketch of location and details of LBP and LCP control areas, decontamination procedures.
    e. Eating, drinking, smoking, and rest room procedures.
    f. Sequencing of LBP and LCP related work.
    g. Personal protective equipment and respiratory protection program, including controls.
    h. Engineering controls, containment structures and safety measures. Refer to 1.07, D of this Section for HEPA filtered negative air unit requirements, as applicable.
    i. Worker exposure assessment procedures.
    j. Work Practice controls.
    k. Housekeeping.
    l. Hygiene facilities and practice.
    m. Medical surveillance, including medical removal procedures.
    n. Sampling, testing and analytical methods for personal air sampling requirements of 29 CFR Part 1926.62. Procedures must include frequency, locations, sampling, and analytical methods to be used.
    o. Contractor to include the segregation and minimization of lead waste streams from construction and demolition waste in their lead-based paint management plan.
    p. Visual clearance log for each control area that is maintained by the Contractor's Competent Person.

G. Compliance Program

1. Contractor's Compliance Program prepared in accordance with 29 CFR Part 1926.62 (e) (2) shall be maintained on-site.

H. Sampling and Laboratory Analysis Reports

1. Maintain on-site all field sampling logs for all personal air samples taken, including copies of laboratory analysis reports and chain of custody records for all sample analyses.

I. Competent Person certification per Sections 1.02 and 1.03.

1.6 CLOSEOUT SUBMITTALS:

A. At the conclusion of the LBP/LCP project, the Contractor shall provide the following closeout submittals:

1. Submit copies of all "Visual Clearance Logs" to the Project Manager for owner's reference.

2. Signed Certification from the Contractor's Competent Person that all required documentation has been provided.

1.7 POSTED WARNINGS & NOTICES

A. The following regulations, warnings and notices shall be posted at the work site in accordance with 29 CFR Part 1926.62.

B. Regulations

1. A copy of applicable Federal, State, and Local regulations shall be maintained at the work site.

C. Warning Signs

1. Warning signs shall be provided at approaches to LBP/LCP control areas. Signs shall be located at a distance from the LBP and LCP control areas that will allow personnel to read the sign and take the necessary protective actions required before entering the LBP/LCP control area. The signs shall comply with the requirements of 29 CFR Part 1926.62.

D. Worker Information

1. Right-to-know notices shall be placed in clearly visible areas of the work site in compliance with Federal, State and Local regulations.

E. Exposure Air Monitoring Results

1. Exposure air monitoring results shall be prepared in order to be easily understood by the workers and shall be placed in a clearly visible area of the work site.

F. Emergency Telephone Numbers

1. A list of telephone numbers shall be posted at the site. The list shall include numbers of the local hospital, emergency squad, police and fire departments, Government and Contractor representatives who can be reached 24 hours per day as well as professional consultants directly involved in the project.

1.8 EQUIPMENT & MATERIALS

A. Sufficient quantities of health and safety materials required by 29 CFR Part 1926.62, and other materials and equipment needed to complete the project, shall be available and kept on the site.

B. Respirators

1. Air-purifying respirators shall be approved by NIOSH for use with dust, fumes and mists having permissible exposure limits less than 0.05 milligrams per cubic meter (i.e. have high-efficiency particulate air [HEPA] filters) and for other hazardous airborne contaminants that may be encountered, as determined by the Competent Person. The Contractor shall furnish, at no cost to personnel/employees, respirators to provide protection from airborne concentrations of lead. Respirators shall comply with the

requirements of 29 CFR Part 1926.62 and shall be used in accordance with 29 CFR Part 1926.62, 29 CFR Part 1926.103 and 29 CFR Part 1910.134.

C. Respirator Cartridges

1. A sufficient supply of respirator cartridges shall be maintained at the work site to provide new cartridges to employees and authorized visitors throughout the duration of the project. Cartridges shall be replaced according to the manufacturer's recommendations, when breathing becomes difficult, or if the cartridges become wet.

D. Protective Clothing

1. The Contractor shall furnish, at no cost to personnel/employee, equipment/ clothing for protection from airborne and waterborne LBP and LCP debris. An adequate supply of these items shall be available for worker and authorized visitor use. Workers and visitors shall not take protective clothing and equipment off the work site at any time. Protective clothing includes:

   a. Coveralls (Whole Body Protective Coverings): Full-body coveralls and head covers shall be worn by workers in the control area as necessary. Sleeves shall be secured at the wrist and pants legs at the ankle with tape. Permeable clothing shall be provided in heat-stress conditions. Where non-disposable coveralls are provided, these coveralls shall be cleaned after each wearing and kept within the control area or decon/airlock (bagged). Cleaning of coveralls and other non-disposable clothing shall be in accordance with the provisions for cleaning in 29 CFR Part 1926.62.
   b. Boots: Work boots with nonskid soles or impermeable work boot covers shall be worn by workers. Where required by OSHA, safety boots (steel toe or steel toe and shank) shall be worn. Paint the uppers of boots red with waterproof enamel. Do not allow boots to be removed from the control area for any reason after being contaminated with LBP or LCP debris. Keep within control area or decon/airlock (bagged).
   c. Gloves: Inner gloves, appropriate for items and hazards encountered, and disposable outer work gloves shall be provided to each worker and shall be worn while the worker is in the control area. Glove material shall be appropriate for the specific chemical exposure. Gloves shall not be removed from the control area and shall be disposed of as LBP or LCP contaminated waste at the end of the work.
   d. Hard Hats: Head protection (hard hats) shall be provided as required by OSHA for workers and authorized visitors. Protective plastic-strap suspension hats shall be used. Hard hats shall be worn at all times when work is in progress. Hard hats shall remain in the control area until the project is completed. Hard hats shall be thoroughly cleaned, decontaminated, dried and bagged before being removed from the control area at the end of the project.
   e. Eye Protection: Fog-proof goggles for personnel engaged in LBP and LCP operations shall be worn when the use of a full-face piece respirator is not required and kept within control area or decon/airlock (bagged) until completion of project.

E. Negative Air Pressure System

1. When a LBP or LCP control area requires the use of an airtight containment barrier, a negative air pressure system shall be used and pressure differential recordings taken. LBP and LCP shall not be removed from the LBP/LCP control area until the proper engineering controls and HEPA filtration systems are in place.

2. HEPA Filter Requirements

   a. The negative air pressure system shall be equipped with approved HEPA filters per UL 586. Negative air pressure equipment shall be equipped with new HEPA filters, and shall be sufficient to maintain a minimum pressure differential of minus 5 Pascals (Pa), equivalent to 0.02 inch of water column relative to adjacent, unsealed areas. Negative air pressure system minimum requirements are listed below.
   b. The unit shall be capable of delivering its rated volume of air with a clean first stage filter, an intermediate filter and a primary HEPA filter in place. The units shall be clean and sealed (intake & exhaust) at all times when not operating in a control area.
   c. The HEPA filter shall be certified as being capable of removing particles as small as 0.3 micrometers at a minimum efficiency of 99.97 percent. 700 hours is the manufacturer life recommendation of a HEPA filter (approximately 1 month of continuous operating).
   d. The unit shall be capable of continuing to deliver no less than 70 percent of rated capacity when the HEPA filter is 70 percent full or measures 620 Pa (2.5 inches of water) static pressure differential on a magnehelic gauge.
   e. The unit shall be equipped with a manometer-type negative pressure differential monitor with minor scale division of 0.02 inches of water and accuracy within plus or minus 1.0 percent. The manometer shall be calibrated in accordance with the manufacturer's recommendations. Record manually manometer readings of the pressure differential between the LBP control area and adjacent unsealed areas at the beginning and end of each workday.
   f. The unit shall be equipped with a means for the operator to easily interpret the readings in terms of the volumetric flow rate of air per minute moving through the machine at any given moment.
   g. The unit shall be equipped with an electronic mechanism that automatically shuts the machine off in the event of a filter breach or absence of a filter.
   h. The unit shall be equipped with an audible horn that sounds an alarm when the machine has shut itself off.
   i. The unit shall be equipped with an automatic safety mechanism that prevents a worker from improperly inserting the main HEPA filter.
   j. The unit shall be ducted through the containment barrier wall to the exterior of the building. The unit shall not be exhausted into any interior areas. If exhausting to the exterior is not feasible, utilize an unoccupied area or room that is large enough to handle the volume of air with two units connected in series. Applicable warning signage shall be posted at this location.

3. Number of Units Required

   a. The air within the containment barrier shall be changed at least once every 15 minutes by a continuously operating negative air pressure system, until the LBP/LCP control area barrier is removed. Filters shall be replaced as necessary to maintain the efficiency of the system. A back-up unit shall be maintained on-site.

4. Auxiliary Generator

   a. If site conditions can't provide power, an auxiliary generator shall be provided. The generator shall not present a carbon monoxide hazard to workers.

5. Discontinuing Negative Air Pressure System

a. The negative air pressure system shall not be shut down during LBP/LCP work unless authorized by the environmental consultant. At the completion of the LBP/LCP work procedures and disposal project, units shall be run until removal is completed satisfactorily and full cleanup has been completed and satisfactory clearance has been achieved. Dismantling of the negative air pressure systems shall conform to the written decontamination procedures. Prefilters shall be removed and properly disposed. The intake and exhaust of the machines shall be sealed with polyethylene to prevent environmental contamination.

F. Expendable Materials

1. Polyethylene Sheet and Bags - General

a. Polyethylene sheet and bags shall be minimum 6-mil thick. Bags shall have pre-printed labels, and 5-inch (minimum) long plastic ties, pointed and looped to secure the filled bags. Polyethylene sheets shall be in roll sizes to minimize seams.

2. Polyethylene Sheet - Flame Resistant

a. Where a potential for fire exists, flame-resistant polyethylene sheets shall be provided. Polyethylene film shall conform to the requirements of NFPA 701.

3. Polyethylene Sheet - Reinforced

a. Reinforced polyethylene sheet shall be provided where high skin strength is required such as where it constitutes the only barrier between the LBP control area and the indoor and outdoor environments. The sheet stock shall consist of translucent, nylon-reinforced or woven-polyethylene thread laminated between two layers of polyethylene film. Films meet flame resistant standards of NFPA 701.

4. Tape and Adhesive Spray

a. Tape and adhesive shall be capable of sealing joints between polyethylene sheets and for attachment of polyethylene sheets to adjacent surfaces. After dry application, tape or adhesive shall retain adhesion when exposed to wet conditions, including amended water. Tape shall be minimum 2 inches wide, industrial strength.

5. Containers

a. DOT approved impermeable containers shall be used to receive and retain LBP and LCP waste and debris and lead contaminated material until disposal. Containers shall be labeled in accordance with EPA, DOT and OSHA standards, as applicable for the type of waste. Waste streams shall be segregated in a manner to reduce the potential volume of hazardous waste generated.

6. Chemicals

a. Chemicals, including caustics and paint strippers, shall be properly labeled, stored in leak-tight containers and properly/safely secured from the general public.

G. Vacuum Systems

1. HEPA filtered vacuum systems shall be used during LBP/LCP operations which generate dust. The systems shall be suitably sized for the project, and filters shall be capable of removing particles as small as 0.3 micrometers at a minimum efficiency of 99.97 percent. Vacuum opening, wands and hoses shall be sealed at all times when not in a control area.

H. Chemical Paint Strippers

1. Chemical paint strippers shall contain no methylene chloride.

I. Chemical Paint Stripper Neutralizer

1. Neutralizers for paint strippers shall be compatible with the substrate and suitable for use with the chemical stripper that has been applied to the surface.

J. Storage of Materials

1. Materials shall be stored in an approved enclosed structure, which protects them from damage, rain, wind, etc. and contamination. During periods of cold weather, plastic materials shall be protected from the cold. Regularly inspect materials to identify damaged or deteriorating items. Damaged or deteriorated items shall not be used and shall be removed from the site as soon as they are discovered. Stored materials shall not present a hazard or an inconvenience to workers, visitors, employees and/or other building occupants.

PART 2 - EXECUTION

2.1 WORK PROCEDURES

A. LBP and LCP work procedures and related work shall be performed in accordance with the accepted Contractor's LBP and LCP Safe Work Practice Compliance Plan, 29 CFR Part 1926.62 and as specified herein. LBP/LCP waste and debris, lead contaminated debris and personal protective clothing and equipment shall be disposed of in compliance with Federal, State, and Local regulations and in accordance with the respective waste stream TCLP testing results.

B. Personal Protection Procedures

1. Respiratory Protection is required for all LBP disturbances. Personnel shall wear and use protective clothing and equipment as specified and required by 29 CFR Part 1926.62 and 29 CFR Part 1910.120. Eating, smoking, drinking, chewing tobacco, chewing gum, applying makeup and use of non-work-related walkie-talkies/phones shall not be permitted in the LBP and LCP control area. Personnel of trades not engaged in the LBP or LCP work procedures and disposal of LBP and LCP shall not be exposed at any time to airborne concentrations of lead equal to or in excess of 30 micrograms per cubic meter of air (30 ug/m^3). Electrical service shall be disconnected when wet removal is performed, and temporary electrical service protected by a ground fault circuit interrupter (GFCI) shall be provided.

C. Safety and Health Procedures

1. The Competent Person shall be present on the work site throughout the LBP and LCP project to supervise, monitor and document the project's health and safety provisions. A daily log shall be maintained showing the results of air sampling tests throughout the project area. LBP and LCP work being conducted within an LBP or LCP control area where an airtight barrier is required shall be stopped if measured airborne lead concentrations, collected during LBP or LCP work procedures, exceed the Action Level.

D. Safety and Health Responsibilities

1. The Competent Person shall:

a. Verify that training meets applicable requirements.
b. Review and approve LBP/LCP Safe Work Practice Compliance Plan for conformance to the applicable referenced standards.
c. Inspect LBP and LCP removal work for conformance with the accepted Safe Work Practice Compliance Plan.
d. Ensure that worker exposure air monitoring activities are in accordance with 29 CFR Part 1926.62.
e. Ensure work is performed in strict accordance with specifications.
f. Ensure hazardous exposure to personnel and to the environment are adequately controlled.
g. The Contractor's Competent Person shall be responsible for directing personal air monitoring and shall also perform visual inspections prior to the visual inspection conducted by the third-Party Environmental Consultant (if applicable), to verify the control areas are free of all visible debris.
h. If required, the Contractor's Competent Person shall coordinate with the owner and the third-party environmental consultant for any control areas requiring final air/wipe testing clearance testing (Action Level/wipe) in accordance with OSHA and/or US Department of Housing and Urban Development (HUD) protocols.

E. Medical Surveillance Procedures

1. Medical surveillance shall be implemented in accordance with the accepted Contractor's LBP/LCP Safe Work Practice Compliance Plan and shall comply with the requirements of 29 CFR Part 1926.62, including the provisions for blood lead level monitoring, medical removal, protection and a physician's written opinion, signed by the physician performing the employee examination. The Contractor's Competent Person shall maintain on-site, a copy of the written opinion for Contractor's employees prior to each employee's commencement of work.

F. Engineering Controls and Containment Structures

1. Engineering and work practice controls are the primary means of maintaining exposures to lead below the PEL. Paint removal and surface preparation activities must keep dust levels at a minimum. Power tools must be equipped with manufacturer equipped vacuum shrouds including an attached HEPA filtered vacuum system.
2. LBP/LCP Control Area

a. The control area is where LBP/LCP work procedures occur and as such shall be considered contaminated. The LBP/LCP control area shall be isolated to prevent LBP/LCP containing dust or debris from passing into adjacent areas. The control

area shall be decontaminated at the completion of the LBP/LCP work procedures and disposal work.

3. Boundary Requirements.

   a. Physical boundaries along with Warning Signage shall be provided around exterior LBP/LCP control areas by taping off the area indicated in the Safe Work Practice Compliance Plan.

4. Control Barriers

   a. The LBP/LCP control area shall be designated and separated from other outside areas with control barriers. The polyethylene sheeting shall mask and seal all openings. The LBP/LCP control area shall be erected according to the Contractors LBP/LCP Safe Work Practice Compliance Plan. Polyethylene sheeting shall be mechanically supported, independent of duct tape or spray adhesive.

5. Exterior Masking and Sealing

   a. Exterior LBP/LCP control area requirements: Where the construction of a contained LBP/LCP control area is impractical or not required based on the method of lead work procedures, a taped-off perimeter shall be installed around the area where the LBP/LCP handling procedures are performed and other requirements for LBP/LCP control areas shall be maintained. Personal monitoring of airborne concentrations is still required and shall be conducted in accordance with 29 CFR Part 1926.62.

6. Hand Wash Station

   a. An operational hand washing station shall be provided to all workers adjacent to each LBP/LCP control area utilizing polyethylene sheeting as a drop cloth. Water shall be hot and cold or warm. Soap dish, continuing supply of soap, and clean towels shall be provided. The hand wash station shall be maintained in a sanitary condition. Waste water shall be collected and placed within 6-mil polyethylene bags and sealed. Bags shall be immediately placed within non-leaking, drums and sealed.

7. Equipment Decontamination

   a. An equipment decontamination area shall be installed at the entrance to each LBP/LCP control area to allow for the cleaning of all equipment utilized on the project. Polyethylene sheeting shall be utilized as a drop cloth, along with a utility tub to clean and capture debris/water during the cleaning process. Water shall be hot and cold or warm. Continuing supply of detergent, and clean towels shall be provided. The equipment decontamination area shall be maintained in a sanitary condition. Waste water shall be collected and placed within 6-mil polyethylene bags and sealed. Bags shall be immediately placed within non-leaking, drums and sealed.

G. Temporary Utilities

1. Temporary equipment as necessary to provide adequate power, light, heat, and water shall be installed, as needed, to accomplish the LBP/LCP operations properly and safely. The Contractor shall maintain the security and maintenance of the utility system in the

LBP/LCP control areas. In the event of a failure of any utility system, the Owner will not be responsible for any loss of time or other expense incurred by the Contractor. In addition to any site-specific temporary utility requirements, the Contractor shall provide:

a. Back-flow protection on all water connections. Fittings installed by the Contractor shall be removed after completion of work with no damage or alteration to existing water piping and equipment.
b. When applicable, heavy-duty abrasion-resistant hoses to provide water to each control area and decontamination area.
c. A hot water heater, if necessary, to provide warm water to the decontamination showers, hand wash station and equipment decontamination area.
d. Electrical service to control areas. Electrical service shall comply with National Electric Code, State and Local requirements and UL standards. Warning signs shall be posted at power outlets, which are other than 110-120 volt power. Only grounded extension cords connected into a GFCI shall be used. Incandescent lamps and light fixtures shall be of adequate wattage to provide good illumination in LBP/LCP control areas.
e. Temporary heating units, when needed, that have been tested and labeled by UL, FM, or another recognized trade association related to the fuel being consumed. Forced air or fan type units shall not be utilized inside a control area. Units shall have tip-over protection.

2.2 LEAD-BASED/CONTAINING PAINT WORK PRACTICES (Use methods as applicable)

A. Component Removal:

1. Components shall be removed intact to the extent practicable. A 6-mil polyethylene drop cloth shall be placed around and/or beneath the component, prior to its removal, to catch any paint chips that may become dislodged. The component shall be wrapped and sealed in a layer of clear 6-mil polyethylene prior to movement to the disposal container. Follow proper disposal requirements. The area around the component removal shall be wet wiped and HEPA vacuumed. The polyethylene sheeting shall be carefully folded in on itself and placed in a 6-mil disposal bag. Containment debris shall be properly stored of in accordance with respective waste stream as per the Contractor’s LBP/LCP Safe Work Practice Compliance Plan

B. Chemical Stripping:

1. Chemical stripping may be used for LBP and LCP removal on surfaces that will be subjected to welding, cutting, torch burning or where it is the only acceptable procedure. No chemical strippers or associated neutralizer chemicals containing methylene chloride shall be used by the Contractor on this project.
2. Horizontal surfaces directly below and in a radial direction from the area where chemical stripping is to be performed shall be covered with 6-mil plastic sheeting and shall also extend ten (10) feet on either side of the control area or to the furthest practical distance to catch any paint chips that may become dislodged.
3. All LBP/LCP on specified surfaces shall be removed to the bare substrate. The job is not considered complete until the substrate is dry, free of paint, debris, and LBP/LCP residue.
4. LBP/LCP stripping agents shall be brushed or troweled on the designated surfaces, or otherwise applied to a minimum thickness in accordance with manufacturer's specifications.

5. The required application/reaction time for stripping will depend upon the ambient temperature, humidity, and thickness of LBP/LCP. If LBP/LCP is not completely removed following the initial application of stripper, additional applications and wet scrapings may be required.
6. Removed LBP/LCP shall not be deposited on the polyethylene containment surfaces but shall be transferred directly into clear 6-mil polyethylene bags from the scraper and sealed. LBP/LCP shall be removed by wet scraping to the maximum extent feasible. If the substrate is to be reused, the removal activities shall not damage the substrate.
7. Any residue not removable by wet scraping shall be washed down to the bare metal substrate with an appropriate, pre-approved solution. LBP/LCP-contaminated wastewater shall be kept to a minimum using wet scrub brushes or sponges. These residues and disposable cleaning media shall also be directly transferred to 6-mil polyethylene bags and sealed. Bags shall be immediately placed within non-leaking, drums and sealed. Free standing water shall be eliminated by use of a drying agent. Contractor to include the segregation and minimization of lead waste from construction and demolition waste in their LBP/LCP Safe Work Practice Compliance Plan .

C. Manual Demolition/Scraping/Cleaning:

1. Manual demolition, scraping, sanding and power tool cleaning with dust collection systems shall be performed in conjunction with engineering and work practice controls meeting the requirements of 29 CFR 1926.62(e)(1).
2. Seal openings of HVAC ductwork and other penetrations (doors, windows, etc.) within the Control Area with two layers of 6-mil polyethylene sheeting. For work on vertical surfaces, place a layer of 6-mil polyethylene sheeting below the area prior to manual demolition/scraping/sanding/cleaning. The sheeting shall extend ten (10) feet on either side of the control area or to the furthest practical distance to catch any paint chips that may become dislodged.
3. Wet methods shall be used during manual scraping, sanding and power tool cleaning with dust collection systems. Local HEPA ventilation shall be utilized in conjunction with manual scraping, sanding and power tool cleaning with dust collection systems. In the case that local HEPA ventilation is not sufficient to control dust hazards, the Contractor shall be required to install engineering controls to meet requirements of specification section 1.06, D., “Negative Air Pressure System”.
4. Removed LBP/LCP shall not be allowed to accumulate on surfaces within the Control Area but shall be HEPA vacuumed or placed directly into 6-mil polyethylene bags. The Contractor shall maintain all surfaces as free as practicable of accumulated lead dust to prevent the dispersal of lead into the work places that are outside of the lead paint control areas. LBP/LCP shall be removed by manual methods to the maximum extent feasible.
5. Debris shall be bagged in 6-mil polyethylene bags, sealed, and secured in leak proof drums. The area around the surfaces subject to work shall be wet wiped and HEPA vacuumed, including the polyethylene sheeting. Upon a satisfactory clearance inspection the cleaned polyethylene sheeting shall be carefully folded in on itself and placed in a 6-mil disposal bag. Containment debris shall be properly stored of in accordance with the respective waste stream as indicated in the contractor’s LBP/LCP Safe Work Practice Compliance Plan . The contractor shall coordinate with the third-party environmental consultant to test the waste streams for disposal.

D. Alternative Lead Work Procedures

1. Any work procedure deviating from the outlined procedures above shall be submitted to the Owner’s third-party Environmental Consultant for review and approval prior to the start of the project. As there are many different components in different areas of the

building(s), it is impractical to address every potential lead work procedure. The intent of alternative lead work procedures shall be to maintain compliance with 29 CFR 1926.62 and maintain airborne concentrations of lead dust below the Action Level of 30 ug/m^3.

2.3 PERSONAL AIR MONITORING, WASTE SAMPLING & CLEARANCE SAMPLING (If Required)

A. During all LBP/LCP removal and disposal operations, the Contractor's OSHA Competent Person shall be on-site inspecting the work to ensure that the health and safety requirements of this contract are satisfied. The owner may elect to have a Third-Party Environmental Consultant on-site to perform visual clearance inspections and/or clearance sampling.

B. Personal Air Monitoring (Provided by the Contractor, as necessary)

1. Personal air monitoring samples for airborne concentrations of lead shall be collected and analyzed in accordance with 29 CFR Part 1926.62. Results shall be reported in micrograms per cubic meter of air. The Competent Person shall use personal air monitoring results to determine the effectiveness of engineering controls, the adequacy of PPE and to determine if proper work practices are being employed. The third-party environmental consultant shall be notified if any personal air monitoring result meets or exceeds 30 ug/m^3 of air. The Contractor shall stop work and take steps to reduce the concentration of lead in the air. Such corrective actions shall be documented in the daily log. Personal air sampling results shall be verbally available within 24-hours of sampling with hard copy reports available within five (5) calendar days of sampling.

C. Waste Sampling and Testing (Provided by Third Party Environmental Consultant)

1. Sampling and testing of all waste streams, shall be in accordance with 40 CFR Part 261, 6 NYCRR Part 371 and SW-846, Chapter 9, Sampling Plan. See Paragraph 2.05 C. of this specification section for waste sampling and analyses requirements.

D. Dust/Wipe Sampling (If Required, will be provided by Third Party Environmental Consultant).

1. Dust/wipe samples shall be taken after clean-up activities have been completed and the control areas passed a visual inspection. Refer to Section 2.01 C. 7. for visual inspection requirements.
2. Sampling for clearance criteria shall be performed in compliance with HUD Guidance document.
3. If clearance fails, the recleaning and any additional costs (dust/wipe sample analyses, etc.) to clear the control area shall be the responsibility of the Contractor. The control area shall remain in place until satisfactory clearance has been achieved.
4. Clearance Levels:

a. Floors: 10 ug/ft^2
b. Window Sills: 50 ug/ft^2
c. Window Wells: 100 ug/ft^2

2.4 ADJACENT AREAS

A. Damage to adjacent areas shall be repaired by the Contractor to the approval of the Owner.

2.5 CLEAN-UP & DISPOSAL

A. Cleanup

1. Daily: Surfaces in the LBP/LCP control area shall be maintained free of accumulations of paint chips, LBP/LCP debris and dust. Spread of dust and debris shall be restricted; waste shall not be distributed over the control area. Dry sweeping or compressed air shall not be used for cleanup. At the end of each shift, the area shall be cleaned of visible lead paint contamination by vacuuming with a HEPA filtered vacuum cleaner and wet wiping the area. LBP/LCP work procedures shall cease during the cleanup.
2. At completion of LBP/LCP work and a satisfactory visual inspection by Third Party Environmental Consultant (if applicable) and OSHA Competent Person, a clean-up shall be performed by the Contractor. This clean-up includes removal of any contaminated material, equipment or debris including polyethylene sheeting from the control area. The polyethylene sheeting shall be sprayed or misted with water for dust control, construction debris removed and polyethylene sheeting wet wiped. Then the sheeting shall be removed by folding it in upon itself.

    a. Lead-contaminated debris shall be containerized in accordance with the Contractor's LBP/LCP Safe Work Practice Compliance Plan Waste bags shall not be overloaded and shall be securely sealed and stored in the designated area.
    b. Removal of surface polyethylene sheeting shall begin from top to bottom. Removal of floor polyethylene sheeting shall begin at the corners and folded in the middle to contain the dust. Polyethylene shall be disposed of as per the Contractor's LBP/LCP Safe Work Practice Compliance Plan Cleaning Equipment. The Contractor shall decontaminate the lead abatement equipment and equipment used in the control area. The wastewater from cleaning shall be contained, sampled and disposed of as specified within Section 2.01 E. 6. and 2.02 B. 7 *and as per* contractor's LBP/LCP Safe Work Practice Compliance Plan.

B. Certification

1. The Contractor's Competent Person shall certify and sign within the log that the respiratory protection for the employees was adequate, the work procedures were performed in accordance with 29 CFR Part 1926.62 and that there were no visible accumulations of LBP/LCP paint/coating or dust on the worksite. Do not remove warning signs at the lead control area or roped-off boundary signs prior to the completion of the Competent Person's signed certification. If applicable, the Contractor's Competent Person's certification shall be forwarded to the Project Manager and the Third Party Environmental Consultant's for review prior to removing warning signs at the lead control area or roped-off boundary signs.

C. Waste Storage and Disposal (Provided by the Contractor) and Sampling/Analysis (Provided by Third Party Environmental Consultant).

SECTION 028600 - IDENTIFICATION AND DISPOSAL OF HAZARDOUS WASTE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SCOPE OF WORK

A. This specification covers the identification and disposal of hazardous waste, and related hazardous materials associated with the Influent Pumping System Improvements Project located at the Cedar Creek Water Pollution Control Plant, 3340 Merrick Road, Wantagh, NY 11783.

1. The work shall include but not be limited to the removal of the following.

Building	Description of Material	Approximate Quantity (units)
Cedar Creek Water Pollution Control Plant	Assumed PCB Containing Light Ballasts	40 Ballasts
Total Quantity		40 Ballasts

2. The Contractor shall be aware of all conditions of the Project and is responsible for verifying quantities and locations of all Work to be performed. Failure to do so shall not relieve the Contractor of its obligation to furnish all labor and materials necessary to perform the Work.
3. All Work shall be performed in strict accordance with the Project Documents and all governing codes, rules, and regulations. Where conflicts occur between the Project Documents and applicable codes, rules, and regulations, the more stringent shall apply.
4. Working hours shall be as required and approved by the Owner. Removal activities including, but not limited to, work area preparation, gross removal activities, cleaning activities, waste removal, etc. may need to be performed during ‘off-hours’ (including nights and weekends). In addition, multiple mobilizations may be required to perform the work identified in this project. The Contractor shall coordinate and schedule all Work with the facility and Owner’s representative.

1.3 DEFINITIONS

A. Hazardous waste shall be any materials to be disposed that possess at least one of four characteristics (ignitability, corrosivity, reactivity or toxicity) as defined and regulated by the Resource Conservation and Recovery Act (RCRA) and applicable state and federal regulations, or a material specifically identified as hazardous waste by applicable Federal or State lists, in 40 CFR 261 or 6 NYCRR 371, respectively.

A. A Conditionally Exempt/Very Small Quantity Generator (CESQ/VSQG) of hazardous waste shall be a waste handler who generates no more than 100 kilograms per month of listed and/or characteristic hazardous waste, generates no more than 1 kilogram of acute hazardous waste in any calendar month, and stores no more than 1,000 kilograms of listed and/or characteristic hazardous waste or more than 1 kilogram of acutely hazardous waste.

B. A Small Quantity Generator (SQG) of hazardous waste shall be a waste handler who generates no more than 1,000 kilograms per month of listed and/or characteristic hazardous waste, generates no more than 1 kilogram of acute hazardous waste per month, and stores no more than 6,000 kilograms of listed and/or characteristic hazardous waste or more than 1 kilogram of acutely hazardous waste.

C. Large Quantity Generator (LQG) of hazardous waste shall be a waste handler who generates more than 1,000 kilograms per month of listed and/or characteristic hazardous waste, generates more than 1 kilogram of acute hazardous waste per month, or stores more than 6,000 kilograms of hazardous waste or 1 kilogram of acutely hazardous waste.

D. The Owner's Environmental Consultant: The Owner shall provide a third-party environmental consultant to provide pre-work assessments, project monitoring assessments for the construction procedures for the work area, surrounding areas waste sampling, and container storage area, submittal review, and inspection and signoff of all hazardous waste shipments as well as final clearance assessments. The Contractor shall be responsible for the worker protection requirements.

1.4 SUBMITTALS

A. Pre-Work Submittals: Within 7 days prior to the pre-construction conference, the Contractor shall submit an electronic copy of the documents listed below

A. for review, comment and approval prior to the commencement of abatement/removal activities:

1. Training & Certifications

a. Certificate of on-site supervisor for completion of the OSHA 40-hour Health and Safety course for handling hazardous waste and spills, including most recent refresher training.
b. OSHA 8-hour supervisor training for hazardous waste.
c. List of the employees scheduled to perform this work and certificates of workers, for successful completion of the OSHA 40-Hour Health and Safety Course for Hazardous Waste and spills, including most recent refresher training.
d. Valid United States Department of Transportation (DOT) training for supervisor and all employees loading waste and maintaining on-site waste storage area. This training shall include: general awareness / familiarization training; function specific training; safety training; security awareness training; and in-depth security training.
e. Annual hazardous waste RCRA training sign-in sheets for all employees and supervisors working on the project. This training may be either 2 hours, 4 hours or 8 hours.
f. If applicable, Lead Paint certification for each of the employees and supervisors as per EPA.

g. Employees managing Hazardous Waste must also meet the Personnel training requirements in section 6 NYCRR 373-3.2. Provide proof of training for these employees.

2. Transportation & Disposal

a. Valid Hazardous Waste Transporter NYS Part 364 permit for all transporters.
b. Valid Hazardous Waste Transport vehicle permit for all transporters for each state the waste is being transported through to reach the Treatment, Storage and Disposal Facility (TSDF).
b. Valid DOT vehicle permit for Transporters.
c. Transfer Facility Permit (if used) including the name, address and EPA ID No. of the facility, contact person, and acknowledgement letter stating that the facility has the capacity and is permitted to accept the waste from the project site.
d. Final Disposal Facility permit including the name, address and EPA ID No. of the facility, contact person, and acknowledgement letter stating that the facility has the capacity and is permitted to accept the waste from the project site.
e. The TSDF permit(s) must identify the waste material(s) to be received.
f. Draft Land Disposal Restriction (LDR) form.
g. Draft Waste Profile.

3. Site-specific

a. Safety Data Sheet (SDS) for all materials to be removed.
b. If the Contractor introduces any chemical into the work environment, a SDS for each chemical must be presented to the Owner's Representative prior to use.
c. Progress Schedule:

1) Show the complete sequencing of removal activities and the sequencing of Work within each building, wing or section of building.
2) Show the dates for the beginning and completion of each major element of Work including substantial completion dates for each Work Area, building or phase.

d. Project Plan: Provide a description of the methods, procedures and materials to be used in performing the work and handling all hazardous wastes. Also provide a schedule identifying specific work areas and duration. The schedules will be utilized to schedule facility and third-party environmental consultant requirements. Provide plans that indicate the following:

1) Include a sketch showing the location, size, and details of each hazardous waste work area, as well as location and details of the decontamination facilities. All Work Areas/containments shall be numbered sequentially.
2) Waste transport routes to the waste storage container and/or container storage area (CSA).
2) Type of removal activity/technique for each Work Area/containment.
3) The job specific plan for worker protection issues regarding personal protective equipment, the work procedures, and exposure assessment procedures.
4) Collected wastewater disposal/treatment plan.
5) Waste disposal plan (hazardous and non-hazardous waste).

6) Include in the plan, eating, drinking, and sanitary procedures, interface of trades and sequencing of hazardous waste generation.
7) Include site preparation and cleanup procedures.
8) Include plan for hazardous waste segregation and minimization.
9) Include occupational and environmental sampling (if any by the Contractor), frequency and duration of sampling.
10) Proposed location and construction of storage facilities and field office.

e. Health and Safety Plan and Facility Contingency Plan revision information for material handling and emergency procedures.

1) CSA location details.
1) Contractor waste generation details (amount per day, per week or per quarter) in kgs or tons.
2) Waste types being generated.
3) Waste storage details (drums, containers, or dumpsters, types, with cover?).
4) Waste containment details. How is the waste being stored? (indoors or outdoors, is it being contained to prevent impact to adjoining spaces or environment?).
5) Contractor emergency evacuation plan requirements and evacuation route for the project specific areas.
6) Duration of waste generation and contract.
7) Contractor and Project team emergency contact numbers.

4. Do not start work until submittals are returned with the Owner's Representative stamp indicating that the submittal is approved for unrestricted use.

B. On-Site & During Construction:

1. The following submittals, documentation, and postings shall be maintained on-site by the Contractor during abatement activities at a location approved by the Environmental Consultant:

a. Approved pre-work submittals.
b. Project Documents (specifications and drawings).
c. Applicable regulations.
d. Updated licenses/permits and acknowledgement letters for any changes in transporter or disposal site.
e. For each employee, current annual medical respiratory clearance.
f. For each employee, current satisfactory respiratory fit test results.
g. Coordinate with facility for a 30-minute training on the facility contingency plan requirements and contractors emergency action plan. Submit proof of contingency plan training.
h. Contractor shall provide weekly update, including initial container storage dates for each container stored, an approximate estimate of amount of waste being generated during each work-day, week or month that it is stored on-site. The actual weight of the waste, excluding the weight of the dumpster, shall be identified.
i. Toxicity Characteristic Leaching Procedure (TCLP) waste sample results. Contractor shall notify the owners representative and Environmental Consultant for waste stream sampling prior to any waste being removed from the site.

j. Completed Waste Profile form(s). Contractor shall utilize analytical test results from the survey report and / or TCLP results provided by Environmental Consultant, as appropriate, to generate waste profile and LDR form.
k. Completed LDR form.
l. List of emergency phone numbers.
m. Waste disposal log.
n. Daily Project Log.
o. Copy of Waste manifest for each load of waste that is removed from site.
p. Copy of completed hazardous waste manifest including legible transporter and disposal facility information, dates and times of waste shipment departures / arrivals, and signatures, for each load of waste, within 35 days of waste being removed from site.

2. The following documentation shall be maintained on-site by the Environmental Consultant during abatement activities:

a. Valid Environmental Consultant personnel OSHA, RCRA, and DOT training certifications.
b. Proof of current Facility Contingency Plan Training.
c. Consultant Daily Log.
d. Listing of all visual inspections with the date of inspection and the date of signoff on the supervisor's log.
e. Hazardous Materials Survey Report.
f. All TCLP waste sample laboratory results including completed chain of custody forms and valid laboratory NYS DOH ELAP certifications.
g. CSA Inspections – Initial Inspection and Weekly Inspections Thereafter.
h. All applicable waste documentation, including but not limited to Universal Hazardous Waste Manifests, waste profiles, LDR forms, and disposal facility letter(s).

C. Close-out:

1. Within 30 days after project completion, the Contractor shall submit one electronic copy of the closeout-out submittal (requirements listed below) for review and approval prior to the Contractor's final payment.

a. Fully Executed Copies of all completed hazardous waste disposal manifests, Original hazardous waste manifests shall be sent to the Owner or disposal facility state, as applicable. Original WSRs, if applicable, shall be sent to the Contractor
b. Daily progress log.
c. Entry/Exit Logs. Decontamination unit entry/exit log for Hazardous Waste generation work areas (must be separate from any documentation associated with Asbestos removals, unless the material is both Hazardous and ACM).
d. If TSDF transfer facility is utilized, completed hazardous waste manifest from final destination must also be provided. Final destination of waste must be within the United States.

© 2026 CDM Smith
All Rights Reserved

1.5 PRE-CONSTRUCTION CONFERENCE

A. Prior to start of preparatory Work under this Contract, the Contractor shall attend a pre-construction conference attended by Owner, Facility Personnel, and Environmental Consultant.

A. Agenda for this conference shall include but not necessarily be limited to:

1. Contractor's scope of Work, Work plan, and schedule to include number of workers and shift days and times.
2. Contractor's safety and health precautions including protective clothing and equipment and decontamination procedures.
3. Environmental Consultant's duties, functions, and authority.
4. Contractor's Work procedures including:

    a. Methods of job site preparation and removal methods.
    b. Respiratory protection.
    c. Disposal procedures.
    d. Cleanup procedures.
    e. Fire exits and emergency procedures.

5. Contractor’s required pre-work and on-site submittals, documentation, and postings.
6. Contractor's plan for 24-hour Project security both for prevention of theft and for barring entry of unauthorized personnel into Work Areas.
7. Temporary utilities.
8. Handling of furniture and other movable objects.
9. Storage of Hazardous waste in CSA.
10. Waste disposal requirements and procedures, including Contractor notification to project management and Environmental Consultant for TCLP waste stream sampling, once waste stream generation has commenced, and prior to any waste being removed from site.
11. If applicable, contingency plan training information.

B. In conjunction with the conference the Contractor shall accompany the Owner and Environmental Consultant on a pre-construction walk-through documenting existing condition of finishes and furnishings, reviewing overall Work plan, location of CSA, location of fire exits, fire protection equipment, water supply and temporary electric tie-in.

1.6 APPLICABLE STANDARDS AND REGULATIONS

A. All activities related to the work shall be conducted in compliance with all applicable laws, regulations, and requirements which may include, but not be limited to: EPA, DOT, RCRA, TSCA, OSHA, New York State Department of Environmental Conservation (NYS DEC), New York City Department of Environmental Protection (NYC DEP), and New York City Fire Department.

A. The Contractor is required to secure and maintain all required regulatory permits necessary to perform all aspects of the work.

B. The Contractor shall containerize and store waste in accordance with all applicable regulations. All containers are to be appropriately marked/labeled.

© 2026 CDM Smith
All Rights Reserved

1.7 PROJECT SUPERVISOR

A. The Contractor shall designate a full-time Project Supervisor who shall meet the following qualifications:

1. The Project Supervisor shall be trained in hazardous waste removal/generation procedures and hazardous waste management in NYS, via a 40-hour HAZWOPER and 8-hour Supervisor training course, as well as appropriate RCRA and DOT training.
2. The Project Supervisor shall have a minimum of one year experience as a supervisor.
3. The Project Supervisor must be able to read and write English fluently, as well as communicate in the primary language of the Workers.

B. If the Project Supervisor is not on-site at any time whatsoever, all Work shall be stopped. The Project Supervisor shall remain on-site until the Project is complete. The Project Supervisor cannot be removed from the Project without the written consent of the Owner and the Environmental Consultant. The Project Supervisor shall be removed from the Project if so requested by the Owner.

C. The Project Supervisor shall maintain a bound Daily Project Log that includes the Waste Disposal Log required by section 4.03 of this specification.

D. The Project Supervisor shall be responsible for the performance of the Work and shall represent the Contractor in all respects at the Project site. The Supervisor shall be the Contractor primary point of contact for the Environmental Consultant.

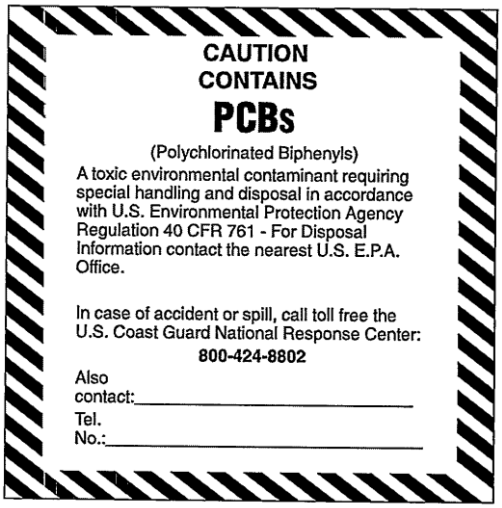
E. As required by applicable regulations, prior to assignment to hazardous waste work, instruct each employee with regard to the hazards of the generated waste, safety and health precautions, and the use and requirements of protective clothing and equipment, as well as the facility contingency plan and/or Contractor emergency action plan.

PART 2 - PRODUCTS

2.1 PROTECTIVE CLOTHING

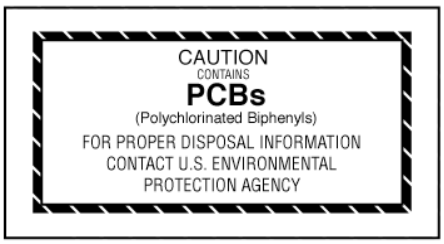
A. Provide personnel utilized during the Project with disposable protective whole body clothing, head coverings, and foot coverings. Provide appropriate disposable gloves (i.e. neoprene or butyl gloves for handling PCBs), suitable to prevent hazardous waste skin contact, to protect hands.

A. Provide sufficient quantities of protective clothing to assure a minimum of four (4) complete disposable outfits per day for each individual performing abatement Work.



B. Eye protection and hard hats shall be provided and made available for all personnel entering any Work Area.

C. Authorized visitors shall be provided with suitable protective clothing, headgear, eye protection, and footwear whenever they enter the Work Area.



2.2 SIGNS AND LABELS, CONTAINERS

A. Provide warning signs and barrier tapes at all approaches to Hazardous Waste generation Work Areas. Locate signs at such distance that personnel may read the sign and take the necessary protective steps required before entering the area.

A. For PCB Hazardous Waste, provide the appropriate “Large PCB Mark” or “Small PCB Mark” (M_L or M_S per 40 CFR 761) as shown below, of sufficient size to be clearly legible, for display on waste containers (bags, boxes, rolloffs or drums) which will be used to contain or transport PCB contaminated material, in accordance with 40 CFR 761. In addition, U.S. Department of Transportation (DOT) 49 CFR Parts 171 and 172 requires the name and UN number of the material to be on the bags or drums, and, if shipped in bulk (rolloffs, Gaylord boxes, etc.) the bulk container must also be labeled: Polychlorinated Biphenyl, solid mixture UN 3432.

M_L

M_S

B. The PCB materials are also NYS Hazardous Waste, and must have a label stating the following on each container.

HAZARDOUS WASTE--Federal Law Prohibits Improper Disposal. If found, contact the nearest police or public safety authority, or the U.S. Environmental Protection Agency.

Proper DOT Shipping Name_____
Generator's Name, Address, City, State, ZIP and phone_____
Generator's EPA Identification Number, Waste code_____
Accumulation Start Date _____
Manifest Tracking Number _____

C. Provide 6 mil plastic disposal bags with PCB caution labels.

1. The “Small PCB Label” (M_S per 40 CFR 761) may be used as shown above. Bags shall also be labeled with U.S. DOT required markings per 49 CFR 172, Polychlorinated Biphenyl, solid mixture UN 3432.

2. Labeled PCB waste containers or bags shall not be used for non-PCB waste or trash. Any material placed in labeled containers or bags, whether turned inside out or not, shall be handled and disposed of as PCB waste.

2.3 DAILY PROJECT LOG

A. Provide a Daily Project Log. The log shall contain on title page name, address and phone number of Owner; name, address and phone number of Environmental Consultant; name, address and phone number of Abatement Contractor; and emergency numbers including, but not limited to local Fire/Rescue department.

A. All entries into the log shall be made in non-washable, permanent ink and such pen shall be strung to or otherwise attached to the log to prevent removal from the log-in area. Under no circumstances shall pencil entries be permitted.

B. The Project Supervisor shall document all Work performed daily and note all inspections.

2.4 SCAFFOLDING AND LADDERS

A. Provide all scaffolding and/or staging as necessary to accomplish the Work of this Contract. Scaffolding may be of suspension type or standing type such as metal tube and coupler, tubular welded frame, pole or outrigger type or cantilever type. The type, erection and use of all scaffolding and ladders shall comply with all applicable OSHA construction industry standards.

A. Provide scaffolding and ladders as required by the Environmental Consultant for the purposes of performing required inspections.

2.5 SHIPPING CONTAINERS AND PACKAGING

A. Provide packaging in accordance with 49 CFR 173 Packaging Group 9, such as 30 or 55 gallon capacity fiber, plastic, or metal drums, Gaylord Boxes or other Intermediate Bulk Containers (IBCs), or non-siftable bulk containers, capable of being sealed air and water tight if hazardous waste has the potential to damage or puncture disposal bags. Affix hazardous waste caution labels on lids of drums, and opposite sides of drums or bulk containers, as well as the ends of bulk containers. Recovery or salvage drums must be acceptable for disposal of hazardous waste. Prior approval of drums is required. Drums or containers must meet the required OSHA, EPA (40 CFR Parts 260-264 and 300), and DOT Regulations (49 CFR Parts 171-178). Use of damaged containers shall not be allowed.

2.6 EQUIPMENT AND MATERIALS

A. All dry vacuuming performed under this contract shall be performed with HEPA filter equipped industrial vacuums conforming to ANSI Z9.2.

A. Any power tools used to drill, cut into, or otherwise disturb hazardous material shall be manufacturer equipped with HEPA filtered local exhaust ventilation, unless specified otherwise.

B. All polyethylene (plastic) sheeting used on the Project (including but not limited to sheeting used for critical and isolation barriers, fixed objects, walls, floors, ceilings, waste container) shall be at least 6 mil fire retardant sheeting.

C. Absorbent Material: Clay, soil or any commercially available absorbent used for the purpose of absorbing hazardous or potentially hazardous materials.

2.7 RESPIRATORY PROTECTION

A. Establish a respirator program as required by ANSI Z88.2 and 29 CFR 1910.134. Provide respirator training.

A. Select respirators from those approved by the National Institute for Occupational Safety and Health (NIOSH), Department of Health and Human Services. High Efficiency Particulate Air (HEPA) respirator filters shall be approved by NIOSH and shall conform to the OSHA requirements in 29 CFR 1910.134.

B. Respirators shall be individually fit-tested to personnel under the direction of an Industrial Hygienist initially and on a yearly basis. Fit-tested respirators shall be permanently marked to identify the individual fitted, and use shall be limited to that individual.

C. A storage area for respirators shall be provided by the Contractor in the clean portion of the decontamination enclosure where they will be kept in a clean environment

D. The Contractor shall provide and make available a sufficient quantity of respirator filters so that filter changes can be made as necessary during the work day. Filters will be removed and discarded during the decontamination process. Filters cannot be reused. Filters must be changed if breathing becomes difficult.

E. Filters used with negative pressure air purifying respirators shall not be used any longer than one eight (8) hour work day.

F. Any authorized visitor, Worker, or supervisor found in the Work Area not wearing the required respiratory protection shall be removed from the Project site and not be permitted to return.

G. The Contractor shall have at least two (2) Powered Air Purifying Respirators stored on site designated for authorized visitors use. Appropriate respirator filters for authorized visitors shall be made available by the Contractor.

PART 3 - EXECUTION

3.1 HAZARDOUS WASTE GENERATION AND ON-SITE STORAGE

A. All waste shall be stored, handled, transported and disposed of in accordance with all federal, state, and local guidelines and regulations. The Contractor shall obtain all permits, licenses, etc., which are necessary for the storing, transporting and disposing of hazardous waste. The Contractor shall develop all applicable manifests, Waste Profile Sheets, LDR Forms and any other documentation and coordinate with the Owner regarding proper signatures.

A. All hazardous waste generated shall be placed into 6 mil plastic disposal bags or other suitable container upon detachment from the substrate. Large components with residue shall be wrapped in one layer of 6 mil plastic sheeting. Sharp components likely to tear disposal bags shall be placed in fiber drums or boxes and then wrapped with sheeting.

B. All construction and demolition debris determined by the Environmental Consultant to be contaminated with hazardous waste shall be handled and disposed of as hazardous waste.

C. All hazardous waste must be located at or near the point of generation, under the control of the Project Supervisor. Up to 55 gallons may be stored at the point of generation for an indefinite period, but any greater than 55 gallons must be moved within three 3 days to a Container Storage Area (CSA) as specified in 6 NYCRR Section 372.2 "Standards Applicable to Generators of Hazardous Waste", or off-site. Waste may be stored at the CSA for 90 days (large quantity generator) or 180 days (small quantity generator), during which labeling, inspections, and other requirements must be met as described in 6 NYCRR Section 372.2, Section 373-3.1(d) and Subpart 373-3.

D. The Contractor shall identify and classify the hazardous waste generated through the performance of the work as per the governing regulations, and in accordance with the waste stream TCLP results provided by the third-party Environmental Consultant. The Contractor shall utilize the TCLP results to confirm the requirements for handling, storing, transporting and disposing of the hazardous waste.

E. The Third-Party Environmental Consultant shall sample all potential hazardous waste streams for TCLP analyses prior to disposal, in accordance with 40 CFR 261 for hazardous waste. The waste profile, LDR form, and waste transporter permit must be reviewed and approved by the Environmental Consultant prior to any hazardous waste leaving the site. The DOT-trained Environmental Consultant must be on-site for all hazardous waste shipment removals and will be responsible for inspection of the waste shipment as well as signoff on the hazardous waste manifest, on behalf of the owner, to allow the hazardous waste shipment to leave the site.

F. On-site Storage Requirements.

1. Each waste dumpster\container shall have completed hazardous waste label with facility name, correct EPA ID number, full address, waste codes, and waste information.
2. Appropriate hazardous waste storage and contents labels shall also be posted on the containers.
3. Since this is considered a main storage area for the project, third-party Environmental Consultant shall be completing an initial and thence weekly hazardous waste storage area inspection logs. Weekly inspection records shall be maintained for three years.
4. Each dumpster\container shall also post all relevant DOT labels to indicate proper waste types.
5. Each dumpster\container shall identify the accumulation start date. Maximum storage limit is 90 days from the date of accumulation.
6. All dumpsters and containers being stored outside shall meet EPA RCRA container requirements and shall not leak. All dumpsters and containers must be fully covered and protected from the elements as well as secured by lock when not in use.
7. Spill kit shall be maintained in the CSA.
8. Regarding the posting of emergency numbers, Contractor shall coordinate with facility to post all required emergency numbers. Sign shall be posted in the lockable CSA.

G. The CSA and personnel managing it must also meet the following requirements of 6 NYCRR 373:

1. Preparedness and Prevention provisions of Section 373-3.3
2. Secondary containment requirements of 373-2.9(f)(1)
3. Personnel training in section 373-3.2
4. Contingency plans and emergency procedures in section 373-3.4 subparagraph 376.1(g)(1)(v)
5. The containers must be dated when placed in storage, and accumulation times must be observed.
6. The total amount of hazardous waste stored in the CSA at any given time must not exceed the maximum for the current generator status(6,000kg-SQG, no limit-LQG).
7. A label or sign stating "Hazardous Waste" must identify all areas and containers used to accumulate hazardous waste.

I. Closure of the CSA. If a CSA was created specifically for the Hazardous waste generation work, once the work is complete, the Contractor shall immediately close out the CSA, as per 373-3.7(b) and (e).

H. The Contractor is required to provide temporary protection of the building (i.e. roof, window openings, construction joints, etc.) as applicable for the work, at the end of each Work shift so as to maintain the building in a watertight condition. Any damage to the facility caused by inadequate Contractor protection shall be the responsibility of the contractor.

3.2 DISPOSAL OF HAZARDOUS WASTE

A. Transportation And Disposal Site

1. The Contractor's Hauler and Disposal Facility shall be approved by the Owner. Prior to the hazardous waste being removed from the site, written notice must be provided and confirmation received from the intended disposal facility, indicating proper authority to receive the hazardous waste, as well as the ultimate disposal method for the waste. The notice shall be acknowledged in writing via a disposal facility representative’s signature, printed name and title, as well as phone number, in compliance with 6 NYCRR 372.2(b)(2). For disposal within New York State, facilities must be specifically permitted to accept hazardous waste. In addition, The Contractor is responsible for securing appropriate treatment or disposal for the generated hazardous waste streams at a permitted TSDF, if necessary, in compliance with all regulatory requirements, and for obtaining a copy of the waste manifest and waste profile of the treated waste as executed by the TSDF. If the manifest is not returned within 35 calendar days from removal from the site, the contractor shall notify the Owner and the NYS DEC, and initiate an investigation as required.
2. The Contractor shall give at least 24-hour notification prior to removing any waste from the site. Waste shall be removed from the site only during normal working hours unless otherwise specified. No waste may be taken from the site unless the Contractor and Environmental Consultant are present, and the Environmental Consultant authorizes the release of the waste. The DOT-trained Environmental Consultant must be on-site for all hazardous waste shipment removals and will be responsible for inspection of the waste shipment as well as signoff on the hazardous waste manifest on behalf of the owner to allow the hazardous waste shipment to leave the site.

3. The Contractor shall supply all required placard and labeling and shall have an appropriately DOT - trained individual to prepare the waste container and inspect the packaging of the hazardous waste.
4. All hazardous waste generated as part of the project shall be removed from the site within ten (10) calendar days after successful completion of all hazardous waste generation work. However, all disposal facility permits/licenses, waste profiles, LDR forms, hauler permit(s), and all other necessary paperwork must be submitted and approved by the Environmental Consultant before the waste is removed from the site. Waste stream samples shall be collected by the Environmental Consultant for TCLP analysis and the results utilized by the Contractor for waste stream characterization and disposal determination.
5. Upon arrival at the Project Site, the Hauler must possess and present to the Environmental Consultant a valid DEC Part 364 Waste Hauler's Permit. The Environmental Consultant may verify the authenticity of the hauler's permit with the proper authority.
6. The Hauler, with the Contractor and the Environmental Consultant, shall inspect all material in the transport container prior to taking possession and signing the Hazardous Waste Manifests.
7. Transporters shall maintain waste manifest and shipment record forms. All transporters are required to obtain and maintain NYS DEC Part 364 Waste Transporter permits and, if applicable, a NYC Fire Department permit for transporting flammables. The Part 364 Permit shall have the license plate number of the vehicle, the expiration date of the permit, the type of waste the hauler can transport and the TSDF to which the hauler can transport the waste. The transporter must also have all applicable, current waste transportation permits for the states where the proposed disposal facilities are located.

B. Waste Shipment Storage Containers

1. All waste shipment storage containers shall be fully enclosed and lockable (i.e. enclosed dumpster, trailer, etc.).
2. The Environmental Consultant shall verify that the waste shipment storage container and/or truck tags (license plates) match that listed on the DEC Part 364 permit. Any waste shipment storage container not listed on the permit shall be removed from the site immediately prior to storage of any material from the site.
3. The waste shipment storage container shall be plasticized and sealed with one layer of 6 mil plastic. Once on-site, it shall be kept locked at all times, except during load out. The waste shipment storage container shall not be used for storage of equipment or contractor supplies.
4. While on-site, the waste shipment storage container shall be labeled with DEC Hazardous Waste Warning Labels as specified in Section 2.02.
5. The DEC Waste Hauler's Permit number shall be stenciled on both sides and back of the waste shipment storage container.
6. The waste shipment storage container is not permitted to be loaded unless it is properly plasticized, has the appropriate danger signage affixed, and has the permit number appropriately stenciled on the container.
7. The Owner may initiate random checks at the Disposal Site to ensure that the procedures outlined herein are complied with.

C. Hazardous Waste Manifests & Disposal Documentation

1. The Contractor is responsible for securing appropriate treatment or disposal for the waste streams at a permitted TSDF, in compliance with all requirements, and for obtaining a copy of the waste manifest (interim storage and final disposal) as executed by the TSDF. If the manifest is not returned within 35 calendar days from removal from the site, the Contractor shall notify the Owner and the NYS DEC, and initiate an investigation as required. The Contractor shall contact the EPA and file an Exception report if the manifest is not returned within 45 days.
2. A Uniform Hazardous Waste Manifest shall be utilized solely as the waste Manifest for transportation. A hauler billing form or bill of lading may be used if the hauler needs an independent record, but shall not be used as a shipping document.
3. The Manifest, if applicable, shall be completed by the Contractor and verified by the Environmental Consultant that all the information and amounts are accurate and the proper signatures are in place.
4. The Manifest, if applicable, shall have the appropriate signatures of the Owner's Representative (the Generator) and the Hauler representative prior to any waste being removed from the site.
5. Copies of the completed Manifest, if applicable, shall be retained by the Environmental Consultant and shall remain on-site for inspection.
6. Upon arrival at the Disposal Site, the Manifest, if applicable, shall be signed by the Disposal Facility operator to certify receipt of hazardous and asbestos wastes covered by the manifest, respectively.
7. The Disposal Facility operator shall return the original Manifest to the Owner's Representative or the disposal facility state as required by the DEC in 6 NYCRR 372 within 35 days. The Environmental Consultant must call the facility to investigate if the Manifest is not returned within 35 days and contact the DEC and file an Exception report if not returned within 45 days.
8. Copies of all waste disposal manifests as well as originals shall be submitted by the Contractor to the Owner with the final close-out documentation.
9. The Contractor must also submit reports and records per the requirements of 6 NYCRR 372.2.
10. Payment for disposal of hazardous waste will not be made until a signed copy of the manifest from the treatment or disposal facility certifying the amount of hazardous waste delivered is returned for each load of waste removed from the site.
11. Unless directed otherwise, the Contractor shall file the annual report and fee report, if applicable, for the hazardous waste shipped, and provide closure notification to EPA and DEC.

NEW YORK STATE GENERATOR RESTRICTED WASTE NOTIFICATION/CERTIFICATION FOR PCB WASTES

ALL NEW YORK STATE GENERATORS WHO GENERATE PCB WASTES MUST ATTACH THIS ADDENDUM TO THE UNIFORM HAZARDOUS WASTE MANIFEST
(THIS NOTIFICATION/CERTIFICATION IS ONLY APPLICABLE WITHIN THE STATE OF NEW YORK)

GENERATOR NAME: EPA ID NO.:

SIGNATURE: DATED:

MANIFEST NO:

This addendum to the uniform hazardous waste manifest must be completed for any New York State regulated hazardous waste generated in the State of New York. This form ensures that New York State generators comply with the notification requirements of 6 NYCCR Part 376. All New York State generators shipping PCB waste which is a New York State regulated hazardous waste must check the box and indicate the applicable waste code below.

☐ Check Here: The waste associated with the above manifest includes New York State Regulated PCB waste which is land restricted in the State of New York and is subject to 6 NYCRR Part 376.4(f). This waste shall be disposed of in accordance with 40 CFR 761. Pursuant to 376.4(f) (l) (i), B002 waste from any source other than a spill may not be stabilized or mixed with any other substance to conform with any provision of 40 CFR Part 761 regarding land disposal if the disposal occurs in the state of New York.

Check all which apply:

☐ B001 - PCB oil (concentrated) from transformers, capacitors, etc.

☐ B002 - Petroleum oil or other liquid containing 50 ppm or greater of PCBs, but less than 500 ppm PCBs.

☐ B003 - Petroleum oil or other liquid containing 500 ppm or greater of PCBs.

☐ B004 - PCB articles containing 50 ppm or greater of PCBs, but less than 500 ppm PCBs, excluding small capacitors.

☐ B005 - PCB articles, other than transformers, that contain 500 ppm or greater of PCBs, excluding small capacitors.

☐ B006* - PCB transformers. *PCB transformers* means any transformer that contains 500 ppm PCB or greater.

☐ B007* - Other PCB wastes, including contaminated soil, solids, sludges, clothing, rags and dredge material.

* Generators are required to certify that their B006 and/or B007 waste can be land disposed in accordance with 40 CFR Part 761 without further treatment if:

a. The waste is a B006 and is a transformer which has been drained and flushed pursuant to 40CFR761.60(b)(l)(i)(B) or

b. The waste is a B007 and does not contain PCBs which have been deliberately solicited.

☐ Check here if the B006 and/or B007 waste associated with this manifest conforms with either “a” or “b” and is intended for land disposal and sign this form at the top of the page. In accordance with 6 NYCRR Part 376.1 (g) (l)(ii) the generator makes the following certification:

“I certify under penalty of law that I personally have examined and am familiar with the waste, through analysis and testing or through knowledge of the waste, to support this certification that the waste complies with the treatment standards specified in part 376, section 376.4 and all applicable prohibitions set forth in subdivision 376.3(b) of Part 376 or RCRA section 3..04(d). I believe that the information I submitted is true, accurate, and complete. I am aware that there are significant penalties for submitting a false certification, including the possibility of a find and imprisonment. “

SECTION 028700 - REMOVAL AND DISPOSAL OF UNIVERSAL WASTE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 DESCRIPTION OF WORK

A. This specification covers the removal and disposal of Universal Waste, including lamps such as fluorescent and high-intensity discharge (HID) lamps, mercury-containing equipment (MCE) such as thermostats and switches, batteries, and pesticides (not PCB lighting ballasts) associated with the Influent Pumping System Improvements Project located at the Cedar Creek Water Pollution Control Plant, 3340 Merrick Road, Wantagh, NY 11783.

B. Universal Wastes are regulated by the United States Environmental Protection Agency (EPA) under 40 CFR Part 273 and by New York State Department of Environmental Conservation (NYS DEC) under 6 NYCRR (New York Codes, Rules and Regulations) Part 374-3. The EPA regulation identifies Universal Waste that includes MCE and aerosol cans whereas the NYS DEC regulation addresses mercury thermostats only and does not include aerosol cans. Universal Waste was expanded to include MCE by NYS DEC's Commissioner Policy CP-39, "Mercury-Containing Equipment" promulgated May 8, 2006. This CP-39 was issued to align with EPA's inclusion of MCE. MCE shall be recycled as per current regulations, instead of disposed as Universal Waste. NYS DEC did not include aerosol cans as Universal Waste; therefore, aerosol cans are to be disposed of as hazardous waste. Demolition and removal of materials shall be as required to support the work.

C. The work shall include but not be limited to the removal of the following:

Building & Floor	Description of Material	Approximate Quantity (lbs/units)
Cedar Creek Water Pollution Control Plant	4' Fluorescent Light Tubes	80 Bulbs
Total Quantity		80 Bulbs

D. The Contractor shall be aware of all conditions of the Project and is responsible for verifying quantities and locations of all Work to be performed. Failure to do so shall not relieve the Contractor of its obligation to furnish all labor and materials necessary to perform the Work.

E. All Work shall be performed in strict accordance with the Project Documents and all governing codes, rules, and regulations. Where conflicts occur between the Project Documents and applicable codes, rules, and regulations, the more stringent shall apply.

F. Working hours shall be as required and approved by the Owner. Removal activities including, but not limited to, work area preparation, gross removal activities, cleaning activities, waste

removal, etc. may need to be performed during 'off-hours' (including nights and weekends). In addition, multiple mobilizations may be required to perform the work identified in this project. The Contractor shall coordinate and schedule all Work with the facility and Owner's representative.

1.3 SUBMITTALS

A. Pre-Work Submittals: Within seven (7) days prior to the pre-construction conference, the Contractor shall submit an electronic copy of the documents listed below for review and approval prior to the commencement of activities:

1. Training & Certifications

   a. Certificate of on-site supervisor for completion of the OSHA 40-hour Health and Safety course for handling hazardous waste and spills, including most recent refresher training.
   a. OSHA 8-hour supervisor training for hazardous waste.
   b. List of the employees scheduled to perform this work and certificates of workers, for successful completion of the OSHA 40-Hour Health and Safety Course for Hazardous Waste and spills, including most recent refresher training.
   c. Valid United States Department of Transportation (DOT) training for supervisor and all employees loading waste and maintaining on-site waste storage area. This training shall include: general awareness / familiarization training; function specific training; safety training; security awareness training; and in-depth security training.
   d. Employees managing Universal Waste must also meet the Personnel training requirements of EPA 40 CFR Section 273.36. Provide proof of training for these employees.

2. Transportation & Disposal

   a. Valid Universal Waste Transporter NYS Part 364 permit for all transporters.
   b. Valid Universal Waste Transport vehicle permit for all transporters for each state the waste is being transported through to reach the Treatment, Storage and Disposal Facility (TSDF).
   c. Valid DOT vehicle permit for Transporters.
   d. Transfer Facility Permit (if used) including the name, address and EPA ID No. of the facility, contact person, and acknowledgement letter stating that the facility has the capacity and is permitted to accept the waste from the project site.
   e. Final Disposal Facility permit including the name, address and EPA ID No. of the facility, contact person, and acknowledgement letter stating that the facility has the capacity and is permitted to accept the waste from the project site.
   f. The TSDF permit(s) must identify the waste material(s) to be received.
   g. Draft Waste Profile.

3. Site-specific

   a. Safety Data Sheet (SDS) for all materials to be removed.

b. If the Contractor introduces any chemical into the work environment, a SDS for each chemical must be presented to the Owner's Representative for review and approval prior to use.

c. Progress Schedule:

1) Show the complete sequencing of removal activities and the sequencing of Work within each building, wing or section of building.
2) Show the dates for the beginning and completion of each major element of Work including substantial completion dates for each Work Area, building or phase.

d. Project Plan: Provide a description of the methods, procedures and materials to be used in performing the work and handling all universal wastes. Also provide a schedule identifying specific work areas and duration. The schedules will be utilized to schedule facility and third-party environmental consultant requirements. Provide plans that indicate the following:

1) Include a sketch showing the location, size, and details of each universal waste generation work area, as well as location and details of the decontamination facilities. All Work Areas/containments shall be numbered sequentially.
2) Waste transport routes to the waste storage container and/or container storage area (CSA).
3) Type of removal activity/technique for each Work Area/containment.
4) The job specific plan for worker protection issues regarding personal protective equipment, the work procedures, and exposure assessment procedures.
5) Waste disposal plan (universal and non-hazardous waste).
6) Include in the plan, eating, drinking, and sanitary procedures, interface of trades and sequencing of universal waste generation.
7) Include site preparation and cleanup procedures.
8) Include plan for universal waste segregation and minimization.
9) Include occupational and environmental sampling (if any by the Contractor), frequency and duration of sampling.
10) Proposed location and construction of storage facilities and field office.

e. Health and Safety Plan information for material handling and emergency procedures.

1) CSA location details.
1) Contractor waste generation details (amount per day, per week or per quarter) in kgs or tons.
2) Waste types being generated.
3) Waste storage details (drums, containers, or dumpsters, types, with cover?).
4) Waste containment details. How is the waste being stored? (indoors or outdoors, is it being contained to prevent impact to adjoining spaces or environment?) Appropriate fire extinguisher(s) and spill kit included?.
5) Contractor emergency evacuation plan requirements and evacuation route for the project specific areas.
6) Duration of waste generation and contract.
7) Contractor and Project team emergency contact numbers.

B. On-Site & During Construction:

1. The following submittals, documentation, and postings shall be maintained on-site by the Contractor during abatement activities at a location approved by the Environmental Consultant:

a. Approved pre-work submittals.
b. Project Documents (specifications and drawings).
c. Applicable regulations.
d. Updated licenses/permits and acknowledgement letters for any changes in transporter or disposal site.
e. For each employee, current annual medical respiratory clearance.
f. For each employee, current satisfactory respiratory fit test results.
g. Contractor shall provide weekly update, including initial container storage dates for each container stored, an approximate estimate of amount of waste being generated during each work-day, week or month that it is stored on-site. The actual weight of the waste, excluding the weight of the dumpster, shall be identified.
h. Completed Waste Profile form(s).
i. List of emergency phone numbers.
j. Waste disposal log.
k. Daily Project Log.
l. Copy of Waste manifest/shipment record for each load of waste that is removed from site.
m. Copy of completed universal waste manifest/shipment record including legible transporter and disposal facility information, dates and times of waste shipment departures / arrivals, and signatures, for each load of waste, within 35 days of waste being removed from site.

2. The following documentation shall be maintained on-site by the Environmental Consultant during abatement activities:

a. Valid Environmental Consultant personnel OSHA, RCRA, and DOT training certifications.
b. Consultant Daily Log.
c. Listing of all visual inspections with the date of inspection and the date of signoff on the supervisor’s log.
d. Environmental Survey Report.
e. All applicable waste documentation, including but not limited to Universal Waste Manifest/shipment records, waste profiles, and disposal facility letter(s).

1.4 DEFINITIONS

A. Large Quantity Handler (LQH) of Universal Waste shall be a waste handler who accumulates 5,000 kilograms or more of Universal Waste at any time. This designation as a large quantity handler of Universal Waste is retained through the end of the calendar year in which 5,000 kilograms (11,000 pounds) or more total of Universal Waste is accumulated. The LQH shall notify the EPA, acquire or coordinate with a facility regarding an EPA identification number, and provide records for each shipment. The LQH shall ensure all employees are thoroughly

familiar with proper waste handling and emergency procedures, relative to their responsibilities during normal facility operations and emergencies.

B. Small Quantity Handler of Universal Waste (SQH) shall be a waste handler who does not accumulate 5,000 kilograms (11,000 pounds) or more of total Universal Waste (batteries, pesticides, MCE, or lamps, calculated collectively) at any time.

C. Destination Facility shall be a facility that can legally accept Universal Waste from off-site so that the Universal Waste can be treated, disposed, or recycled in accordance with regulatory requirements.

D. Universal Waste Transporter shall be anyone who transports Universal Waste. In New York, Universal Waste Transporters that transport greater than 500 pounds of Universal Waste in a single shipment must be a permitted Universal Waste Transporter pursuant to Federal and State regulations. Proper notification with the receiving handler agreeing to receive the shipment is required by the Universal Waste Transporter.

E. Universal Waste consists of the following discarded materials, as identified in 40 CFR Part 273 and 6 NYCRR 374-3: Fluorescent light and high-intensity discharge (HID) lamps, mercury thermostats, batteries, and pesticides. CP-39 expanded thermostats to MCE as discussed in section 1.01 above. Removed or replaced MCE must be delivered to a designated mercury collection site as per current NYC DEC regulations. Disposal of MCE in a solid waste management facility is prohibited. PCB ballasts/capacitors from light fixtures shall not be treated as Universal Waste; they shall be handled and disposed of as hazardous waste. See the Hazardous Waste Disposal Specification for these wastes.

1.5 PROJECT SUPERVISOR

A. The Contractor shall designate a full-time Project Supervisor who shall meet the following qualifications:

1. The Project Supervisor shall be trained in hazardous waste removal/generation procedures and hazardous waste management in NYS, via a 40-hour HAZWOPER and 8-hour Supervisor training course, as well as appropriate RCRA and DOT training.
2. The Project Supervisor shall have a minimum of one year experience as a supervisor.
3. The Project Supervisor must be able to read and write English fluently, as well as communicate in the primary language of the Workers.

B. If the Project Supervisor is not on-site at any time whatsoever, all Work shall be stopped. The Project Supervisor shall remain on-site until the Project is complete. The Project Supervisor cannot be removed from the Project without the written consent of the Owner and the Environmental Consultant. The Project Supervisor shall be removed from the Project if so requested by the Owner.

C. The Project Supervisor shall maintain a bound Daily Project Log.

D. The Project Supervisor shall be responsible for the performance of the Work and shall represent the Contractor in all respects at the Project site. The Supervisor shall be the Contractor primary point of contact for the Environmental Consultant.

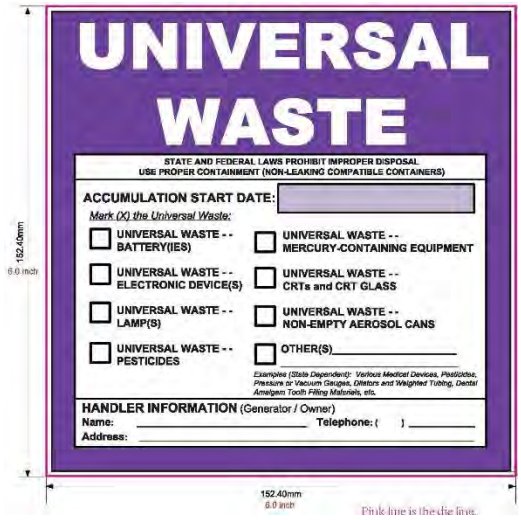
E. As required by applicable regulations, prior to assignment to universal waste work, instruct each employee with regard to the hazards of the generated waste, safety and health precautions, and the use and requirements of protective clothing and equipment, as well as the Contractor emergency action plan.

PART 2 - PRODUCTS

2.1 PROTECTIVE CLOTHING

A. Provide personnel utilized during the Project with disposable protective whole body clothing, head coverings, and foot coverings. Provide appropriate disposable gloves, suitable to prevent skin contact, to protect hands.

B. Provide sufficient quantities of protective clothing to assure a minimum of four (4) complete disposable outfits per day for each individual generating or packaging Universal Waste.



C. Eye protection and hard hats shall be provided and made available for all personnel entering any Work Area.

D. Authorized visitors shall be provided with suitable protective clothing, headgear, eye protection, and footwear whenever they enter the Work Area.

2.2 SIGNS AND LABELS, CONTAINERS

A. Provide warning signs and barrier tapes at all approaches to Universal Waste generation Work Areas. Locate signs at such distance that personnel may read the sign and take the necessary protective steps required before entering the area.

B. Universal waste containers must be marked with the words that clearly indicate the type of waste in the container, for example, “Universal waste – Batteries” or “Universal waste – Bulbs” as per 40 CFR 273.13 and 273.34;

2.3 DAILY PROJECT LOG

A. Provide a Daily Project Log. The log shall contain the name, address and phone number of Owner; name, address and phone number of Environmental Consultant; name, address and phone number of Abatement Contractor; and emergency numbers including, but not limited to local Fire/Rescue department.

B. All entries into the log shall be made in non-washable, permanent ink and such pen shall be strung to or otherwise attached to the log to prevent removal from the log-in area. Under no circumstances shall pencil entries be permitted.

C. The Project Supervisor shall document all Work performed daily and note all inspections.

2.4 SCAFFOLDING AND LADDERS

A. Provide all scaffolding and/or staging as necessary to accomplish the Work of this Contract. Scaffolding may be of suspension type or standing type such as metal tube and coupler, tubular welded frame, pole or outrigger type or cantilever type. The type, erection and use of all scaffolding and ladders shall comply with all applicable OSHA construction industry standards.

B. Provide scaffolding and ladders as required by the Environmental Consultant for the purposes of performing required inspections.

2.5 SHIPPING CONTAINERS AND PACKAGING

A. Provide packaging in accordance with 49 CFR 173 Packaging Group 9, such as 30 or 55 gallon capacity fiber, plastic, or metal drums, Gaylord Boxes or other Intermediate Bulk Containers (IBCs), or non-siftable bulk containers. Affix universal waste caution labels on lids of drums, and opposite sides of drums or bulk containers, as well as the ends of bulk containers. Recovery or salvage drums must be acceptable for disposal of universal waste. Prior approval of drums is required. Drums or containers must meet the required OSHA, EPA (40 CFR Parts 260-264, 273 and 300), and DOT Regulations (49 CFR Parts 171-180). Use of damaged containers shall not be allowed.

2.6 EQUIPMENT AND MATERIALS

A. All dry vacuuming performed under this contract shall be performed with HEPA filter equipped industrial vacuums conforming to ANSI Z9.2.

B. All polyethylene (plastic) sheeting used on the Project (including but not limited to sheeting used for critical and isolation barriers, fixed objects, walls, floors, ceilings, waste container) shall be at least 6 mil fire retardant sheeting.

C. Absorbent Material: Clay, soil or any commercially available absorbent used for the purpose of absorbing hazardous or potentially hazardous materials.

PART 3 - EXECUTION

3.1 GENERATING UNIVERSAL WASTE

A. Employee training shall ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures, relative to their responsibilities during normal operations and emergencies, as well as to the type of waste they are handling.

B. MCE shall be segregated from other Universal Wastes to allow for required recycling.

C. Battery Labels: The container(s) holding intact batteries shall be labeled or marked as “Universal Waste – Battery(ies)”, “Waste Battery(ies)”, or “Used Battery(ies)”.

D. Lamp Labels: The container(s) holding lamps shall be labeled or marked as “Universal Waste – Lamp(s)”, “Waste Lamp(s)”, or “Used Lamp(s)”.

E. MCE Labels: The container(s) holding MCE shall be labeled or marked as “Universal Waste – Mercury-Containing Equipment”, “Waste - Mercury-Containing Equipment”, or “Used Mercury-Containing Equipment”.

F. Mercury Thermostat Labels: The container(s) holding mercury thermostats only may be labeled or marked as “Universal Waste – Mercury Thermostat(s)”, “Waste Mercury Thermostat(s)”, or “Used Mercury Thermostat(s)”.

G. Pesticide Labels: The container(s) holding pesticides shall be labeled or marked as “Universal Waste – Pesticide(s)” or “Waste Pesticide(s)”.

H. Once the properly labeled containers holding the Universal Waste have been filled and sealed, they shall be stored in designated accumulation areas as agreed upon by the Owner’s Representative and Contractor. They shall not be stored in transportation vehicles, or on-site for more than one year from the date the waste storage was initiated.

I. Documentation when Universal Waste in storage was first accumulated shall be provided. This is to be done by dating and labeling the waste with the date of the earliest accumulation that can document the length of time the Universal Waste has been accumulated.

J. Maintenance of an inventory system on-site that identifies the earliest date that any Universal Waste in a group of Universal Waste items or a group of containers of Universal Waste became a waste was received.

K. Any waste developed from the work that exhibits one or more characteristics of hazardous waste, that are not specifically identified by EPA and NYS DEC as Universal Waste, must be handled accordingly and not as a Universal Waste. See the Hazardous Waste Disposal Specification section 02 86 00 for those wastes types.

3.2 DISPOSAL OF UNIVERSAL WASTE

A. Transportation And Disposal

1. The Contractor's Hauler and Disposal Facility shall be approved by the Owner. The Contractor is responsible for securing appropriate treatment or disposal for the generated universal waste streams at a permitted TSDF, if necessary, in compliance with all regulatory requirements, and for obtaining a copy of the waste manifest/shipping record and waste profile of the treated waste as executed by the TSDF.
2. The Contractor shall give at least 24 hour notification prior to removing any waste from the site. Waste shall be removed from the site only during normal working hours unless otherwise specified. No waste may be taken from the site unless the Contractor and Environmental Consultant are present, and the Environmental Consultant authorizes the release of the waste. The DOT-trained Environmental Consultant must be on-site for all universal waste shipment removals and will be responsible for inspection of the waste shipment.
3. All universal waste generated as part of the project shall be removed from the site within ten (10) calendar days after successful completion of work. However, all disposal facility permits/licenses, waste profiles, hauler permit(s), and all other necessary paperwork must be submitted and approved by the Environmental Consultant before the universal waste is removed from the site. Waste stream samples, if required, shall be collected by the Environmental Consultant for TCLP analysis and the results utilized by the Contractor for waste stream characterization and disposal determination.
4. Upon arrival at the Project Site, the Hauler must possess and present to the Environmental Consultant a valid New York State Department of Environmental Conservation Part 364 Waste Hauler's Permit. The Environmental Consultant may verify the authenticity of the hauler's permit with the proper authority.
5. The Hauler, with the Contractor and the Environmental Consultant, shall inspect all material in the transport container prior to taking possession and signing the Universal Waste Manifest/shipping record.

B. Waste Shipment Storage Containers

1. All waste shipment storage containers shall be fully enclosed and lockable (i.e. enclosed dumpster, trailer, etc.).
2. The Environmental Consultant shall verify that the waste shipment storage container and/or truck tags (license plates) match that listed on the New York State Department of Environmental Conservation Part 364 permit. Any waste shipment storage container not listed on the permit shall be removed from the site immediately prior to storage of any material from the site.
3. Once on-site, it shall be kept locked at all times, except during load out. The waste shipment storage container shall not be used for storage of equipment or contractor supplies.
4. While on-site, the waste shipment storage container shall be labeled with Universal Waste Labels.
5. The waste shipment storage container is not permitted to be loaded unless it is properly plasticized, has the appropriate danger signage affixed.
6. The Owner may initiate random checks at the Disposal Site to ensure that the procedures outlined herein are complied with.

C. Waste Manifest/Shipment Records & Disposal Documentation

1. A Universal Waste Manifest/Shipping Record (UWMSR) shall be utilized solely as the waste record documentation for transportation. A hauler billing form or bill of lading may

be used if the hauler needs an independent record, but shall not be used as a shipping document.

2. The UWMSR, shall be completed by the Contractor and verified by the Environmental Consultant that all the information and amounts are accurate and the proper signatures are in place.
3. The UWMSR, if applicable, shall have the appropriate signatures of the Owner's Representative (the Handler) and the Hauler representative prior to any waste being removed from the site.
4. Copies of the completed UWMSR, shall be retained by the Environmental Consultant and shall remain on-site for inspection.
5. Originals of all UWMSRs and disposal logs (copies are acceptable for electronic closeout submittal review) shall be submitted by the Contractor to the Owner with the final close-out documentation.
6. Payment for disposal of universal waste will not be made until a signed copy of the manifest/shipment record from the treatment or disposal facility certifying the amount of universal waste delivered is returned for each load of waste removed from site, the originals are furnished to the Owner.
7. Off-Site Shipment of Universal Waste

    a. Off-Site shipments shall meet the requirements for off-site shipments and handlers / transporters are prohibited from sending or taking Universal Waste to a place other than a designated Universal Waste handler or a Universal Waste destination facility.
    b. LQHs of Universal Waste must notify EPA in writing and develop an EPA identification number or coordinate with the facility regarding use of their EPA identification number, prior to exceeding 5,000 kilograms of Universal Waste on-site.
    c. SQHs do not need to notify EPA, receive an EPA identification number or keep records of shipments of Universal Waste.
    d. LQHs must keep a record of all Universal Waste shipments received or sent off-site and must retain those records for at least three (3) years from the date of receipt or shipment. Records may include invoices, manifest/shipment records, logs, bills of lading, or other shipping documents.
    e. The Contractor shall provide certified copies of all receipts obtained from designated mercury recycling collection sites within 30 days of MCE acceptance by collection site.
    f. The Contractor shall furnish all certified copies of manifest/shipment records (interim storage and final disposal) within regulatory requirements. Within 30 days from acceptance of the waste by the disposal facility, the Contractor shall provide the Owner with Certificate of Disposal documents, as a requirement for final payment.

SECTION 030100 – MAINTENANCE OF CONCRETE

PART 1 - GENERAL

1.1 SUMMARY

A. The Contractor shall furnish all labor, materials, equipment and appliances required for the complete execution of concrete rehabilitation to existing structures as determined by field survey directed by the Engineer and in accordance with the requirements of the Specifications as specified herein.

B. Principal items of work include:

1. The Contractor shall determine by field survey, in conjunction with the Engineer, the extent of concrete to be repaired, stabilized and resurfaced. Areas to be replaced or modified by new work shall not be included. Report of field survey shall be submitted by the Contractor to the Engineer for review and approval prior to starting work.
2. Preparation for repairing, stabilizing and resurfacing exterior and interior cast-in-place concrete floors, walls, ceilings, platforms, steps and the like.

C. Related Sections:

1. Section 030551 “Concrete Bonding Agents”
2. Section 030555 “Concrete Admixtures and Additives”
3. Section 031500 “Concrete Accessories”
4. Section 033100 “Structural Concrete”
5. Section 036000 “Grout”

1.2 REFERENCES

A. American Concrete Institute:

1. ACI 503.4 - Standard Specifications for Repairing Concrete with Epoxy Mortars.

B. ASTM International:

1. ASTM A82/A82M - Standard Specification for Steel Wire, Plain, for Concrete Reinforcement.
2. ASTM A615/A615M - Standard Specification for Deformed and Plain Billet-Steel Bars for Concrete Reinforcement.
3. ASTM A996/A996M - Standard Specification for Rail-Steel and Axle-Steel Deformed Bars for Concrete Reinforcement.
4. ASTM C33 - Standard Specification for Concrete Aggregates.
5. ASTM C109/C109M - Standard Test Method for Compressive strength of Hydraulic Cement Mortars (Using 2-in. or (50 mm) Cube Specimens).
6. ASTM C150 - Standard Specification for Portland Cement.

7. ASTM C260 - Standard Specification for Air-Entraining Admixtures for Concrete.
8. ASTM C293 - Standard Test Method for Flexural Strength of Concrete (Using Simple Beam With Center-Point Loading).
9. ASTM C404 - Standard Specification for Aggregates for Masonry Grout.
10. ASTM C881/C881M – Standard Specification for Epoxy-Resin-Base Bonding Systems for Concrete.
11. ASTM C496/C496M - Standard Test Method for Splitting Tensile Strength of Cylindrical Concrete Specimens.
12. ASTM C882 - Standard Test Method for Bond Strength of Epoxy-Resin Systems Used With Concrete By Slant Shear.
13. ASTM C1042 - Standard Test Method for Bond Strength of Latex Systems Used With Concrete By Slant Shear.
14. ASTM D638 - Standard Test Method for Tensile Properties of Plastics.
15. ASTM D695 - Standard Test Method for Compressive Properties of Rigid Plastics.
16. ASTM D790 - Standard Test Methods for Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials.

C. American Welding Society:

1. AWS D1.4 - Structural Welding Code - Reinforcing Steel.

1.3 SUBMITTALS

A. Section 013300 “Submittal Procedures”: Requirements for submittals.

B. Shop drawings showing proposed methods and corresponding area to be repaired.

C. Samples of all materials proposed to be used.

D. Material certifications and technical data sheets on all grouts, mortars, chemical resins, sealers, aggregates and repair products specified.

E. Name, address and detailed qualifications of firm to which the Contractor intends to award the work under this Section.

1.4 QUALITY ASSURANCE

A. The Contractor shall furnish the name of all subcontractors which he proposes to use for this work including necessary evidence and/or experience records to ascertain their qualifications in the application of epoxy, polyurethane, polymer-modified and cement-based compounds.

B. Approved applicator qualifications shall include:

1. A minimum five years experience in applying epoxy, polyurethane and polymer-modified and cement-based compounds similar to those specified in this Section.
2. A letter from the manufacturer of the specified materials, on the manufacturer’s letterhead, signed by an officer of the company, stating that the subcontractor/applicator

has been trained in the proper techniques for the preparation of the surface, and proper methods for mixing, placing, curing, and caring of the manufacturer's products. This letter shall further state that the subcontractor/applicator is on the manufacturer's approved list of contractors.

1.5 QUALIFICATIONS

A. A minimum five years experience in applying epoxy, polyurethane and polymer-modified and cement-based compounds similar to those specified in this Section.

B. Design reinforcement splices under direct supervision of Professional Engineer experienced in design of this Work and registered in the State of New York.

1.6 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Section 016000 "Product Requirements": Requirements for transporting, handling, storing, and protecting products.

B. All materials shall be delivered in original unopened and undamaged cartons with packing bearing the name of manufacturer.

C. Cementitious materials shall be stored in waterproof locations to prevent intrusion of moisture and other damage from the elements. Containers showing evidence of damage will be rejected.

D. Aggregates shall be stored in separate bins to prevent mixing with foreign particles.

E. Any materials that have hardened, partially set, become caked and/or been contaminated or deteriorated shall be rejected.

F. Handle materials with care to prevent damage or contamination.

PART 2 - PRODUCTS

2.1 GENERAL

A. All materials utilized in the repair of the existing structures shall be suitable for use in a water treatment facility and shall conform to USEPA and USPHS standards for surface contact with public water supplies.

2.2 WATER

A. The water used for mixing concrete repair products shall be clear, potable and free of deleterious substances.

© 2026 CDM Smith
All Rights Reserved

2.3 AGGREGATE

A. All aggregates shall conform to ASTM C33 and the requirements listed below:

1. Pea Gravel: Pea gravel shall meet the gradation of New York State size #9 and meet all material requirements specified in Section 703 for coarse aggregate as described by the New York State Department of Transportation Standard Specifications and shall be clean and free from deleterious matter. Pea gravel shall contain no limestone.

2.4 EPOXY BONDING AGENT

A. Bonding agents shall be a two (2) component, 100% solids, 100% reactive compound epoxy adhesive suitable for use on dry or damp surfaces.

B. Bonding Agents shall be ASTM C881 and AASHTO 235 compliant and suitable for use under ACI 503.1, ACI 503.2, ACI 503.3 and ACI 503.4.

C. Bonding compounds shall conform to the following properties:

Property	Test	Time	Result
Bond Strength - Plastic Concrete to Hardened Concrete, Moist Cure	ASTM C882	2 days	1,700 psi (min.)
		14 days	2,200 psi (min.)
Compressive Strength	ASTM D695	28 days	11,000 psi (min.)
Tensile Strength	ASTM D638	7 day	6,900 psi (min.)
Water Absorption	ASTM D570	7 Day	0.35% (max.)

D. Acceptable Products and Manufacturers:

1. Sikadur 32, Hi-Mod – Sika Chemical Co.
2. Euco #435 Epoxy system – Euclid Chemical Co.
3. Or Approved Equal.

2.5 STRUCTURAL CRACK REPAIR MATERIAL

A. Structural crack repair material shall be a two-com]\\ponent, polymer-modified cementitious mortar and shall conform to USEPA/USPHS standards for surface contact with potable water supplies.

Characteristic	Test Method	Results
Bond Strength	ASTM C882	2,200 psi
Splitting Tensile Strength	ASTM C496	750 psi
Flexural Strength	ASTM C293	2,000 psi

Compressive Strength	ASTM D695	6,500 psi

B. Manufacturers:

1. The Euclid Chemical Company Model Duraltop Gel.
2. Sika Corporation Model Sika Top 123 Plus.
3. Or Approved Equal.

2.6 EPOXY CRACK REPAIR BINDER

A. Epoxy crack repair binder shall be a two-component, 100 percent solids, high-modulus, low viscosity epoxy adhesive designed for structural repair.

Characteristic	Test Method	Results
Bond Strength	ASTM C882	2,000 psi at 2 days
Tensile Strength	ASTM D638	7,000 psi
Compressive Strength	ASTM D695	10,000 psi

B. Manufacturers:

1. The Euclid Chemical Company Model Duralcrete Epoxy System.
2. Sika Corporation Model Sikadur 35, Hi-Mod LV.
3. Or Approved Equal.

2.7 FLEXIBLE POLYURETHANE CRACK REPAIR MATERIAL

A. Flexible polyurethane crack repair material shall be a one-component, water-activated polyurethane hydrophilic injection grout capable of 700 percent expansion. Polyurethane grout shall form a tough flexible foam seal that is impenetrable to water.

B. Manufacturers:

1. De Neef Construction Chemicals Model Hydro-Active Flex LV.
2. Prime Resins Model Prime Flex 900 XLV.
3. 3M Construction Markets Model Scotch Seal 5600 Chemical Grout.
4. Or Approved Equal.

2.8 RIGID POLYURETHANE CRACK REPAIR MATERIAL

A. Rigid polyurethane crack repair material shall be a one-component, water-activated polyurethane hydrophobic injection grout capable of 700 percent expansion. Polyurethane grout shall form a tough rigid foam seal that is impenetrable to water.

B. Manufacturers:

1. De Neef Construction Chemicals Model Hydro-Active Cut.
2. Prime Resins Model Prim Flex 920.
3. Sika Corporation Model Sikafix HH.
4. Or Approved Equal.

2.9 SPALL REPAIRS NOT REQUIRING FORMWORK

A. Spall repairs not requiring formwork shall be repaired using a two-component, polymer-modified cementitious mortar and shall have minimum 28-day compressive strength of 7,000 psi.

B. Manufacturers for spall repair mortar for use in horizontal applications:

1. The Euclid Company Model Duraltop Flowable Mortar.
2. Sika Corporation Model Sikatop 122 Plus.
3. Or Approved Equal.

C. Manufacturers for spall repair mortar for use in vertical applications:

1. The Euclid Company Model Duraltop Gel.
2. Sika Corporation Model Sikatop 123 Plus.
3. Or Approved Equal.

D. All spall repair materials shall conform to USEPA/USPHS standards for surface contact with potable water supplies.

2.10 SPALL REPAIRS REQUIRING FORMWORK

A. All spall repairs requiring formwork shall be repaired using a two-component, polymer-modified cementitious mortar/pea gravel mixture and shall have a minimum 28-day compressive strength of 6,000 psi. Each unit of mortar shall be mixed with Saturated Surface Dry (SSD) pea gravel to form the repair material following the manufacturer's recommendations.

B. Manufacturers:

1. The Euclid Company Model Duraltop Flowable Mortar.
2. Sika Corporation Model Sikatop 111 Plus
3. Or Approved Equal.

C. All spall repair materials shall conform to USEPA/USPHS standards for surface contact with potable water supplies.

2.11 WATERPROOF MEMBRANE PATCH

A. Waterproof membrane patch shall be a hypalon sealing strip secured to the concrete substrate with an epoxy adhesive.

B. Manufactures:

1. Sika Corporation Model Sikadur Combiflex.
2. Or Approved Equal.

2.12 CEMENT BASED TEXTURED COATING

A. Manufacturers:

1. The Euclid Company Model Duraltop Coating.
2. Sika Corporation Model Sikatop 144.
3. Or Approved Equal.

2.13 SEALANT

A. Sealant shall be a two-component polyurethane sealant. Primers and bond breakers shall conform to the sealant manufacturer's recommendations.

2.14 EXPANSION JOINT FILLER

A. Expansion joint filler shall be as specified in Specification 03 15 00.

PART 3 - EXECUTION

3.1 GENERAL REQUIREMENTS

A. All exterior work shall be performed during dry weather and appropriate temperature conditions in accordance with the manufacturer's recommendations. All unfinished work shall be protected during inclement weather with tarpaulins or heavy gage polyethylene sheeting.

B. All work in spaces within structures shall be performed at temperature and conditions suitable for proper curing in accordance with the manufacturer's recommendations.

C. Concrete rehabilitation work shall be coordinated with other work being performed.

D. Scaling, broke, loose and disintegrating materials shall be removed by use of hand tools or power driven saws, down to solid unyielding material.

E. All surfaces shall be thoroughly cleaned of efflorescence, oils, grease and other objectionable material in area to be repaired in accordance with the manufacturer's recommendations.

3.2 EPOXY BONDING AGENT

A. As directed by the Engineer, an epoxy bonding agent shall be used to adhere fresh concrete to existing concrete. Existing concrete surfaces shall be roughened prior to application of bonding agent. Concrete surface shall be clean and sound, free of all foreign particles and laitance. Repair material shall be placed while bonding agent is still tacky. If bonding agent cures prior to placement of repair material, bonding agent shall be reapplied.

B. Repairing concrete with epoxy mortars shall conform to all the requirements of ACI 503.4, and as specified herein.

3.3 ANTI-CORROSION COATING

A. Reinforcing steel cut or exposed during alteration and/or repair operations shall be sandblasted, cleaned and coated with an anti-corrosive coating.

B. Coating shall thoroughly cover all exposed parts of the steel and shall be applied according to manufacturer's recommendations.

3.4 STRUCTURAL CRACK REPAIR

A. As directed by the Engineer, all existing structural cracks 1/16-inch and wider to be repaired shall utilize a structural crack repair material. Rout crack to ¾-inch wide by ¾-inch deep V-notch to expose sound concrete.

B. Where rebar has deteriorated, crack shall be routed to expose ¾-inch all around rebar. The resulting void in concrete shall be patched flush with the existing concrete surface using structural crack repair material.

3.5 EPOXY CRACK REPAIR

A. Cracks ¼-inch and Narrower: As directed by the Engineer, all existing structural cracks ¼-inch or narrower to be repaired shall be pressure injected with an epoxy crack repair binder into the prepared crack. Crack surface shall be sealed and injection ports installed per manufacturer's recommendations.

1. Holes drilled for injection ports shall not cut rebar. If rebar is encountered during drilling, the hole shall be abandoned and relocated, and the abandoned hole shall be patched immediately with non-shrink grout flush with the surface of the existing concrete.
2. Once the surface sealing material has cured, inject crack with epoxy crack repair binder using pressure injection equipment as directed by the manufacturer.

B. Cracks wider than ¼-inch: As directed by the Engineer, all existing structural cracks wider than ¼ -inch to be repaired shall be gravity fed an epoxy crack repair binder into the prepared crack.

1. Concrete surface shall be routed to form a minimum ¼-inch wide by ¼-inch deep V-notch and the crack cleaned to remove all loose and foreign particles. Crack shall be filled with clean, dry sand then epoxy crack repair binder poured into V-notch, completely filling crack.
2. As binder penetrates into crack additional binder shall be applied to the V-notch.

3.6 RIGID AND FLEXIBLE POLYURETHANE CRACK REPAIR

A. As directed by the Engineer, all existing, leaking cracks ¼-inch and narrower to be repaired shall be pressure injected with a waterproof hydrophilic or hydrophobic injection grout into the prepared crack. Crack surface shall be sealed and injection ports installed per manufacturer's recommendations.

B. Holes drilled for injection ports shall not cut rebar. If rebar is encountered during drilling, the hole shall be abandoned and relocated, and the abandoned hole shall be patched immediately with non-shrink grout flush with the surface and the existing concrete.

C. Once the surface sealing material has cured, inject crack with waterproof hydrophilic or hydrophobic injection grout using pressure injection equipment as directed by the manufacturer.

3.7 SPALL REPAIR

A. As directed by the Engineer, all voids or spalled areas to be repaired shall be chipped back a minimum of 1/8-inch to sound concrete and the area cleaned and repaired to original dimensions with spall repair patching material according to manufacturer's recommendations.

B. All patching shall provide a final finished surface which is flat, level and even with the existing concrete surface. Repair mortar shall not be feathered to meet existing concrete surface.

C. Final patching on horizontal surfaces shall receive a finish consistent with the finish on the existing structure.

3.8 EXPANSION JOINT REPAIR

A. Remove all sealant and breaker and joint filler.

B. Remove all unsound concrete on the joint faces as directed by the Engineer.

C. Remove all laitance and provide a clean dry surface.

D. Prepare an epoxy mortar by combining epoxy crack repair binder with aggregates following manufacturer's instructions.

E. Restore surface to original dimensions by toweling epoxy mortar onto the existing substrate in a manner to ensure bonding following manufacturer's instructions.

F. Cure repair following manufacturer's instructions.

G. Replace joint filler and sealant as indicated on the Contract Drawings.

3.9 WATERPROOF MEMBRANE PATCH

A. As directed by the Engineer, existing concrete areas requiring a textured patch shall be thoroughly cleaned and the waterproof membrane patch applied according to manufacturer's recommendations.

3.10 CEMENT BASED TEXTURED COATING

A. As directed by the Engineer, existing concrete areas requiring a textured coating shall be thoroughly cleaned and the cement based textured coating applied according to manufacturer's recommendations.

B. All other concrete rehabilitation work as directed by the Engineer shall be completed prior to applying coating.

3.11 CURING

A. All repair materials utilized shall be cured in strict accordance with manufacturer recommendations.

3.12 CLEANING

A. Pumps and hoses used for crack repair shall be completely flushed. A sharp sided tool such as a putty knife or trowel shall be used to remove excess material from walls, floors, etc. Material shall be cured before removing.

B. The uncured polyurethane chemical grout shall be cleaned from tools with an approved solvent. The cured polyurethane chemical grout can only be removed mechanically.

C. The uncured polymer-modified Portland cement mortar shall be cleaned from tools with water. The cured polymer-modified Portland cement mortar can only be removed mechanically.

D. Excess materials caused by work under this Section shall be cleaned from existing surfaces by the use of power sanders and the surfaces shall be vacuumed clean and readied to receive final cleaning and finishing specified under other sections of the specifications. All cracks shall be sanded and shall lie in the same plane as adjacent surfaces.

© 2026 CDM Smith
All Rights Reserved

E. Misplaced sealants shall be removed using methods and materials recommended by the manufacturers, and the finished work and work area shall be left in a neat and clean condition.

SECTION 030551 - CONCRETE BONDING AGENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Epoxy Bonding Agents (Adhesive) for cast-in-place concrete.

1.2 REFERENCES

A. General Requirements:

1. Except as modified by governing codes and by this Specification, comply with the applicable provisions and recommendations of latest editions of the following.
2. Where the language in any of the documents referred to herein is in the form of a recommendation or suggestion, such recommendations or suggestions shall be deemed to be mandatory under this Contract unless otherwise directed by the Engineer.
3. Conflicts: Conform to requirements of cited standard unless specified otherwise. In case of apparent conflict between standards, or between standards and the specifications herein, the more stringent shall apply unless otherwise directed by the Engineer.

B. American Concrete Institute:

1. ACI 503.1 – Bonding Hardened Concrete, Steel, Wood, Brick, and Other Materials to Hardened Concrete with a Multi-Component Epoxy Adhesive

   a. ACI 503.2 – Bonding Plastic Concrete to Hardened Concrete with a Multi-Component Epoxy Adhesive

2. ACI 318 – Building Code Requirements for Structural Concrete

C. ASTM International:

1. ASTM C881 – Epoxy-Resin-Base Bonding Systems for Concrete.
2. ASTM C882 – Bond Strength of Epoxy Resin Systems Used with concrete by Slant Shear
3. ASTM D570 – Standard Test Method for Water Absorption of Plastics
4. ASTM D638 – Standard Test Method for Tensile Properties of Plastics
5. ASTM D648 – Standard Test Method for Deflection Temperature of Plastics Under Flexural Load in the Edgewise Position
6. ASTM D695 – Standard Test Method for Compressive Properties of Rigid Plastics

D. American Association of State Highway and Transportation Officials (AASHTO)

1. AASHTO 235 – Standard Specification for Epoxy Resin Adhesives

1.3 SUBMITTALS

A. Product Data: Submit manufacturer’s product data, properties, including surface preparation and placement instructions.

B. Safety Data Sheets.

1.4 QUALITY ASSURANCE

A. Products used in the work of this section shall be produced by manufacturer’s who are regularly engaged in the manufacturer and/or supply of similar items for at least five (5) years and which have a history of successful production, acceptable to the Engineer.

B. The Contractor shall provide an adequate number of trained workmen experienced in the work of this Section.

C. Workmen shall have received training of the use of the products of this Section by a manufacturer’s representative.

D. The Contractor shall provide the services of a qualified manufacturer's technical representative who shall instruct the Contractor's personnel in the mixing, proper use and application of the bonding agents.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver in manufacturer's original, unopened containers with proper labels intact. Damaged containers shall be removed from the project site.

B. Store in a dry shelter in accordance with manufacturer’s instructions. Maintain storage area temperature within limits set by the manufacturer.

C. Keep containers sealed until ready for use.

D. Protect materials during handling, mixing and application to prevent damage or contamination.

E. Condition the materials in accordance with manufacturer’s instructions prior to use.

F. Mix, apply and clean-up materials in accordance with all safety and weather conditions required by the manufacturer, or as modified by applicable rules and regulations of local, state and federal authorities.

G. Consult Material Safety Data Sheets (MSDS) for complete handling recommendations.

PART 2 - PRODUCTS

2.1 BONDING AGENTS

A. Bonding agents shall be a two (2) component, 100% solids, 100% reactive compound epoxy adhesive suitable for use on dry or damp surfaces.

B. Bonding Agents shall be ASTM C881 and AASHTO 235 compliant and suitable for use under ACI 503.1, ACI 503.2, ACI 503.3 and ACI 503.4.

C. Bonding compounds shall conform to the following properties:

Property	Test	Time	Result
Bond Strength - Plastic Concrete to Hardened Concrete, Moist Cure	ASTM C882	2 days	1,700 psi (min.)
		14 days	2,200 psi (min.)
Compressive Strength	ASTM D695	28 days	11,000 psi (min.)
Tensile Strength	ASTM D638	7 day	6,900 psi (min.)
Water Absorption	ASTM D570	7 Day	0.35% (max.)

D. Acceptable Products and Manufacturers:

1. Sikadur 32, Hi-Mod – Sika Chemical Co.
2. Euco #452 Epoxy system – Euclid Chemical Co.
3. Or Approved Equal

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine surfaces to receive bonding agents. Do not begin surface preparation unacceptable conditions are corrected.

3.2 SURFACE PREPARATION

A. Prepare all contact surfaces in accordance with manufacturer’s recommendations.

B. Remove defective concrete, laitance, dirt, oil, grease and other foreign material from concrete surfaces by brushing, hammering, chipping or other similar means until sound, clean concrete surface is achieved.

C. Prepare surfaces mechanically to provide a surface profile in accordance with manufacturer’s instructions.

© 2026 CDM Smith
All Rights Reserved

3.3 MIXING

A. Ensure components are at proper temperature prior to mixing.

B. Mix components in accordance with manufacturer's instructions.

C. Mix only quantity that can be applied within its pot life.

3.4 APPLICATION

A. All work shall be done in strict accordance with manufacturer's recommendations, including special precautions, procedures and limitations.

B. Apply bonding agents in accordance with manufacturer's instructions. Ensure bonding agent, substrate and air temperatures are within the manufacturer's specified limits.

3.5 CLEAN-UP

A. Clean-up in accordance with manufacturer's instructions.

SECTION 030555 - CONCRETE ADMIXTURES AND ADDITIVES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Admixtures and additives for cast-in-place concrete.

B. Related Sections:

1. Section 030551 “Concrete Bonding Agents”
2. Section 031113 “Structural Cast-in-Place Concrete Forming”
3. Section 031500 “Concrete Accessories”
4. Section 032100 “Reinforcing Steel”
5. Section 032200 “Welded Wire Fabric Reinforcing”
6. Section 033100 “Structural Concrete”
7. Section 033900 “Concrete Curing”
8. Section 036000 “Grout”

1.2 REFERENCES

A. General Requirements:

1. Except as modified by governing codes and by this Specification, comply with the applicable provisions and recommendations of latest editions of the following.
2. Where the language in any of the documents referred to herein is in the form of a recommendation or suggestion, such recommendations or suggestions shall be deemed to be mandatory under this Contract unless otherwise directed by the Engineer.
3. Conflicts: Conform to requirements of cited standard unless specified otherwise. In case of apparent conflict between standards, or between standards and the specifications herein, the more stringent shall apply unless otherwise directed by the Engineer.

B. American Concrete Institute:

1. ACI 211.1 – Standards Practice for Selecting Proportions for Normal, Heavyweight and Mass Concrete
2. ACI 211.2 – Standard Practice for Selecting Proportions for Structural Lightweight Concrete
3. ACI 212.3R – Chemical Admixtures for Concrete
4. ACI 212.4R – Guide for Use of High-Range Water-Reducing Admixtures (Superplasticizers) in Concrete
5. ACI 301 – Specifications for Structural Concrete.
6. ACI 302.1R – Guide for Concrete Floor and Slab Construction
7. ACI 304R – Guide for Measuring, Mixing, Transporting, and Placing Concrete
8. ACI 304.2R – Placing Concrete by Pumping Methods

9. ACI 304.4R – Placing Concrete with Belt Conveyors
10. ACI 305.1 – Standard Specifications for Hot Weather Concreting
11. ACI 305 – Hot Weather Concreting.
12. ACI 306.1 – Standard Specification for Cold Weather Concreting
13. ACI 306R – Cold Weather Concreting
14. ACI 318 – Building Code Requirements for Structural Concrete

C. ASTM International:

1. ASTM C94/C94M – Standard Specification for Ready-Mixed Concrete.
2. ASTM C143/C143M – Standard Test Method for Slump of Hydraulic Cement Concrete.
3. ASTM C150 – Standard Specification for Portland Cement.
4. ASTM C260 – Standard Specification for Air-Entraining Admixtures for Concrete.
5. ASTM C494/C494M – Standard Specification for Chemical Admixtures for Concrete.
6. ASTM C595 – Standard Specification for Blended Hydraulic Cements.
7. ASTM C618 – Standard Specification for Coal Fly Ash and Raw or Calcined Natural Pozzolan for Use as a Mineral Admixture in Concrete.
8. ASTM C989 – Standard Specification for Ground Granulated Blast-Furnace Slag for Use in Concrete and Mortars.
9. ASTM C1017/C1017M – Standard Specification for Chemical Admixtures for Use in Producing Flowing Concrete.
10. ASTM C1240 – Standard Specification for Silica Fume Used in Cementitious Mixtures.

D. New York State Department of Transportation Standard Specifications (NYSDOT-SS):

1. Section 501-2.03 – Concrete Batching Facility Requirements
2. Section 501-3.03 – Concrete Mixing, Transporting and Discharging

1.3 SUBMITTALS

A. Product Data: Submit data for all additives and admixtures.

B. Concrete Mix Designs for all mixes with proposed admixtures to be included.

C. Identify chloride content of admixtures and whether or not chloride was added during manufacturing.

D. Certification of Compatibility

1. Contractor shall provide certification that all materials and admixtures are compatible with each other.

E. Laboratory Test Data:

1. Laboratory test reports by the supplier of chemical admixtures containing information on the chloride ion content and alkali content expressed as Na2O equivalent. Test reports are not required for air entraining admixtures used at dosages less than 130 ml per 100 kg (2 fl oz per 100 lb) or cement of nonchloride chemical admixtures used at maximum dosages less than 325 ml per 100 kg (5 fl oz per 100 lb). Both the chloride ion and total

alkali content of the admixtures are to be expressed in percent by mass of cement for a stated or typical dosage of the admixture.

2. Laboratories supplying test reports or data shall provide evidence that the laboratory is properly equipped and qualified to perform the tests method(s) in conformance with ASTM C1077 and C1222.

1.4 QUALITY ASSURANCE

A. Products used in the work of this section shall be produced by manufacturer's who are regularly engaged in the manufacturer and/or supply of similar items for at least five (5) years and which have a history of successful production, acceptable to the Engineer

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS

A. Provide admixtures produced by established reputable manufacturers, and use in compliance with the manufacturer's printed instructions.

B. All admixtures shall be provided by manufacturers capable of providing qualified field service representation.

C. All admixtures shall be compatible with other admixtures and cementitious materials.

D. Admixtures shall not contain more chloride ions than present in municipal drinking water.

E. Do not use admixtures containing calcium chloride.

F. Mix Designs not containing fly ash shall include air entraining and water-reducing admixtures as required. High-range water reducing admixtures may be added to improve workability. High-range water reducing admixtures shall be used to facilitate pumping.

G. Mix Designs containing fly ash shall include air entraining and high-range water-reducing admixtures as required.

H. Do not air entrain interior concrete floors and suspended slabs in buildings that will receive a trowel finish. Do not allow entrapped air content to exceed 3 percent.

I. Do not use admixtures which have not been incorporated and tested in the accepted design mixes, unless otherwise authorized by the Engineer.

2.2 WATER REDUCING ADMIXTURE

A. The admixture shall conform to ASTM C494, Type A and not contain more chloride ions than are present in municipal drinking water.

B. Acceptable Products and Manufacturers:

1. WRDA with Hycol – W.R. Grace & Co.
2. Eucon WR-75 – Euclid Chemical Co.
3. MasterPozzolith 200 – Master Builders
4. Or Approved Equal

2.3 WATER REDUCING RETARDING ADMIXTURE

A. The admixture shall conform to ASTM C494, Type D and not contain more chloride ions than are present in municipal drinking water.

B. Acceptable Products and Manufacturers:

1. Eucon WR-75 – Euclid Chemical Co.
2. MasterSet R 100 – Master Builders
3. Plastiment XR – Sika Chemical Corp.
4. Or Approved Equal

2.4 HIGH RANGE WATER REDUCING RETARDING ADMIXTURE (SUPERPLASTICIZER)

A. The admixture shall conform to ASTM C494, Type F or G, and not contain more chloride ions than are present in municipal drinking water.

B. Acceptable Products and Manufacturers:

1. Daracem 19 or Daracem 100 – W.R. Grace & Co.
2. Eucon 37 – Euclid Chemical Co.
3. MasterRheobuild 1000 – Master Builders
4. Sikament SPMN – Sika Chemical Co.
5. Or Approved Equal.

2.5 AIR ENTRAINING ADMIXTURES

A. The admixture shall conform to ASTM C-260 and not contain more chloride ions than present in municipal drinking water.

B. Acceptable Products and Manufacturers:

1. Darex AEA – W.R. Grace & Co.
2. Eucon Air Mix – Euclid Chemical Co.
3. MasterAir AE 200 – Master Builders
4. Sika-AIR – Sika Chemical Co.
5. Or Approved Equal

2.6 NON-CHLORIDE ACCELERATING ADMIXTURES

A. The admixture shall conform to ASTM C 494/C 494M requirements for Type C accelerating and not contain more chloride ions than present in municipal drinking water.

B. Non-chloride accelerating admixtures shall only be used during cold weather concreting.

C. Acceptable Products and Manufacturers:

1. MasterSet FP 20 – Master Builders
2. SikaSet NC – Sika Chemical Co.
3. Accelguard 80 – Euclid Chemical Co.
4. Or Approved Equal

2.7 PROHIBITED ADMIXTURES

A. Calcium chloride, thiocyanates or admixtures containing more than 0.05% chloride ions are not permitted. No admixture shall cause an increase in shrinkage when tested in accordance with ASTM C494 and ASTM C157

PART 3 - EXECUTION

3.1 GENERAL

A. Accurately proportion admixtures in accordance withy those established in the design mix.

B. Admixtures shall be added in accordance with manufacturer’s printed instructions.

3.2 READY MIX CONCRETE

A. Ready Mix Concrete Plants shall be provided with Admixture Dispensing Systems equipped with calibrated systems that meet the following:

1. A sufficient number of dispensing systems to supply the concrete mixture specified.
2. The ability to dispense each admixture through its own measuring system
3. Accurate measurement within the tolerance limits specified in Table 501-4, Batching Tolerances.
4. A bypass valve to obtain a calibrated sample of admixture from each measuring device.
5. Uniform distribution of admixture throughout the mix within the specified mixing period.
6. When multiple admixtures are added, no direct contact with each other prior to mixing.
7. An approved automatic admixture dispensing system in plants equipped with automated proportioning systems.
8. Volumetric measuring devices interlocked with the automated proportioning equipment that insures the preset quantity has been actually measured and completely discharged.
9. A readable indication at the operator's normal work station of the actual quantity batched.
10. Interlock the admixture system with the automated proportioning system so that aggregate and/or cement weigh hopper discharge gates cannot be opened until the preset quantity of admixture has been batched or discharged.
11. Recordation of the presence of admixture is dependent on completion of admixture discharge.

All Rights Reserved

3.3 BATCH MIXING AT SITE

A. Batch mixing of admixtures on-site shall not be permitted without prior approval of the Engineer.

3.4 REDOSAGE

A. Redosage of admixtures on-site shall not be permitted without prior approval of the Engineer.

END OF SECTION 030555

SECTION 031113 - STRUCTURAL CAST-IN-PLACE CONCRETE FORMING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Formwork for cast-in place concrete.
2. Shoring, bracing, and anchorage.
3. Form stripping.

B. Related Sections:

1. Section 079200 “Joint Sealants”
2. Section 031500 “Concrete Accessories”
3. Section 032100 “Reinforcing Steel”
4. Section 032200 “Welded Wire Fabric”
5. Section 033100 “Structural Concrete”
6. Section 033500 “Concrete Finishing”
7. Section 033900 “Concrete Curing”
8. Section 036000 “Grout”

1.2 REFERENCES

1.3 DESIGN REQUIREMENTS

A. Design of all formwork, shoring and bracing shall be prepared by a Professional Engineer licensed in the State of New York.

B. Design, engineer and construct formwork, shoring and bracing in accordance with ACI 301, 302, 318 and 347; and all applicable Federal, State and Municipal codes and regulations including revisions to date of contract to achieve concrete shape, line and dimension as indicated on the Contract Drawings.

C. Design, erect, support and maintain formwork so that it will safely support vertical and lateral loads that might be applies, until such loads can be supported by the concrete structure.

D. Carry vertical and lateral loads to ground by formwork systems and in-place construction that has attained adequate strength for that purpose.

E. Construct formwork so that concrete members and structures are of correct size, shape, alignment, elevation and position.

F. Design forms and falsework to include assumed values of live load, dead load, weight of moving equipment operated on formwork, concrete mix, height of concrete drop, vibratory frequency, ambient temperature, foundation pressures, stresses, lateral stability and other factors pertinent to the safety of the structure.

G. Provide shores and struts with positive means of adjustment capable of taking up formwork settlement during concrete placement operations, using wedges or jacks or a combination thereof.

H. Provide trussed supports when adequate foundations for shores and struts cannot be secured.

I. Support form facing material by structural members spaced sufficiently close to prevent objectionable deflection.

J. Fit forms placed in successive units for continuous surfaces to accurate alignment, free from irregularities, and within allowable tolerances.

K. Provide camber in formwork as required for anticipated deflections due to weight and pressures of fresh concrete and construction loads.

L. Provide formwork sufficiently tight to prevent leakage of cement paste during concrete placement.

1.4 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Requirements for submittals.

B. Formwork Shop Drawings: Prepared by or under the supervision of a qualified New York State licensed professional engineer detailing fabrication, assembly, and support of formwork. Design and engineering of formwork, shoring and bracing are Contractor's responsibility.

C. Shoring and Reshoring: Indicate proposed schedule and sequence of stripping formwork, shoring removal, and installing and removing reshoring. Submit details of form types, method of form construction and erection, design computations and location of form joints, form ties and embedded items. Formwork shop drawings shall include the following as a minimum:

1. Pertinent dimensions, openings, methods of construction, types of connections, materials, joint arrangement and details, ties and shores, location of framing, studding and bracing, and temporary supports.
2. All joint locations shall be shown and detailed on the drawings.
3. Means of leakage prevention for concrete exposed to view in finished construction.
4. Sequence and timing of erection and stripping of formwork.
5. Required compressive strength of concrete at time of formwork stripping
6. Height of concrete lift and height of concrete drop during concrete placement.
7. Vertical, horizontal and special loads in accordance with ACI 347, Section 2.2 and camber diagrams, when applicable.
8. Notes to formwork erector showing size and location of conduits and piping embedded in concrete in accordance with ACI 318, Section 6.3.
9. Procedure and schedule for removal of shores.

D. Product Data: Submit data with descriptions and installation instructions for:

1. Form Materials
2. Form Systems
3. Form Ties
4. Form Spreaders
5. Corner Formers
6. Form Coatings
7. Form Release Agents

E. Design Data: Signed and sealed by Professional Engineer registered in the State of New York

1. Indicate design data for formwork and shoring.
2. Indicate loads transferred to structure during process of concreting and shoring.
3. Structural calculations to support design of formwork and shoring.

1.5 QUALITY ASSURANCE

A. Perform Work in accordance with ACI 301, ACI 302, ACI 318 and ACI 347.

B. For wood products furnished for work of this Section, comply with AF&PA.

C. Perform Work in accordance with all applicable Federal, State and Municipal codes and regulations including revisions to date of contract.

© 2026 CDM Smith
All Rights Reserved

1.6 QUALIFICATIONS

A. Design formwork under direct supervision of Professional Engineer experienced in design of this Work and registered in the State of New York.

1.7 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Section 016000 “Product Requirements”: Requirements for transporting, handling, storing, and protecting products.

B. Deliver void forms and installation instructions in manufacturer's packaging.

C. Store off ground in ventilated and protected manner to prevent contamination deterioration from moisture.

D. Handle materials with care to prevent damage or contamination

1.8 COORDINATION

A. Coordinate this Section with other Contracts and sections of work, requiring attachment of components to formwork.

PART 2 - PRODUCTS

2.1 GENERAL FORMWORK REQUIREMENTS

A. Form Material: At the discretion of the Contractor subject to acceptance of the Engineer.

B. Exposed Concrete Surfaces

1. Construct formwork for exposed (painted or unpainted) concrete surface with smooth faced undamaged plywood or other type panel materials approved by the Engineer to provide continuous, straight, smooth as-cast surfaces.
2. Furnish panels (plywood or other accepted panel materials) in the largest practical sizes to minimize the number of joints.

C. Strength

1. Provide form material with sufficient strength to withstand pressure of newly placed concrete without excessive and objectionable bow or deflection.

2.2 WOOD FORM MATERIALS

A. Lumber Forms:

1. Application: Use for edge forms and unexposed finish concrete.

2. Boards: 6 inches or 8 inches in width, shiplapped or tongue and groove, “Standard” Grade Douglas Fir, conforming to WCLIB Standard Grading Rules for West Coast Lumber or approved equal.
3. Surface boards on four sides.

B. Plywood Forms:

1. Application: Use for exposed finish concrete.
2. Forms: All plywood shall conform to NIST PS 1; full size 4 x 8 feet panels; each panel labeled with grade trademark of APA/EWA.
3. Plywood for general exposed finish concrete: Minimum of 5/8 inch thick; APA/EWA “B-B Plyform Structural I Exterior” grade.
4. Plywood where “Smooth Finish” is required, as indicated on Contract Drawings: APA/EWA “HD Overlay Plyform Structural I Exterior” grade, minimum of 3/4 inch thick.

C. Hardboard Forms:

1. Application: Use for lining forms for exposed finish concrete where “Smooth Finish” free from grain markings is required.
2. Tempered smooth-one-side (SIS), minimum of 3/16 inch thick conforming to PS 58.
3. Shingle nails or other nails with thin, flat heads and thin shanks should be used to fasten the sheets to the backup lumber.
4. Edges of adjacent sheets shall be nailed to the same backing boards to prevent slight offsets that may accentuate joints.
5. Joints between adjacent sheets shall be filled with plaster, putty or tape and sanded to make the joints invisible.
6. Holes for form ties should be drilled from the face side to avoid tearing the board.
7. The surface of the board should be oiled, and the material thoroughly wet for several hours prior to being used.

2.3 PREFABRICATED FORMS

A. Preformed Steel Forms: Minimum 16 gage matched, tight fitting, stiffened to support weight of concrete without deflection detrimental to tolerances and appearance of finished surfaces.

B. Glass Fiber Fabric Reinforced Plastic Forms: Matched, tight fitting, stiffened to support weight of concrete without deflection detrimental to tolerances and appearance of finished concrete surfaces.

C. Framing, Studding and Bracing: Stud or No. 3 structural light framing grade.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify lines, levels, and centers before proceeding with formwork. Verify dimensions agree with Contract Drawings.

B. Verify the concrete cover of all reinforcement after form placement. When formwork placement results in insufficient concrete cover over reinforcement, the formwork shall be removed and reset to maintain the required concrete cover unless otherwise directed by the Engineer.

C. Examine the substrate and conditions under which the work of this Section is to be performed, and correct unsatisfactory conditions that would prevent proper and timely completion of the Work. Do not proceed until unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Conform to ACI 347, except as specified herein.

B. Initially and before re-use, forms shall be cleaned and a coat of non-staining form release agent applied per manufacturer's instructions.

1. Care shall be taken to avoid splashing of oil on reinforcing steel or existing concrete.
2. Do not apply form release agent where concrete surfaces are scheduled to receive special finishes which may be affected by the agent.

3.3 INSTALLATION

A. Section 017000 "Execution and Closeout": Requirements for installation.

B. Earth Forms:

1. Earth forms are not permitted.

C. Formwork - General:

1. Construct forms complying with ACI 347, to exact sizes, shapes, lines and dimensions shown, and as required to obtain accurate alignment, location, grades, level and plumb work in finished structures.
2. Fabricate forms for easy removal without hammering or prying against concrete surfaces. Provide crush plates or wrecking plates where stripping may damage cast concrete surfaces
3. Forms shall be, mortar-tight, braced, and of sufficient strength to maintain shape and position under imposed loads from construction operations.
4. All form joints shall be backed-up to assure that the edges of abutting panels are in the same plane, straight and true, and forced tightly together to minimize fins. The quality of the form contact surfaces shall be subject to the acceptance of the Engineer.
5. Provide falsework and bracing to ensure stability of the formwork. Strengthen all formwork liable to be overstresses by construction loads.
6. Provide top form for sloped surfaces steeper than 1.5 horizontal to 1 vertical to hold shape of concrete during placement, unless it can be demonstrated that top forms can be omitted.
7. Camber forms where necessary to achieve ACI 301 tolerances.
8. Carefully verify horizontal and vertical positions of forms. Correct misaligned or misplaced forms before placing concrete.

9. Provide temporary ports in formwork to facilitate cleaning and inspection. Locate openings at the bottom of the forms to allow flushing water to drain. Close ports with tight fitting panels, flush with the inside face of the forms, neatly fitted so that the joints will not be apparent in exposed concrete.
10. Provide openings for offsets, sinkages, keyways, recesses, moldings, reglets, chamfers, blocking, screeds, bulkheads, anchorages, inserts and other features required. Use selected materials to obtain required finishes.
11. Form openings and construction which accommodates installation by other trades whose materials and products must be fabricated before opportunity exists to verify the measurements of adjacent construction which affects such installations, shall be accurately sized and located as dimensioned on the Contract Drawings. In the event that deviation from the Drawing dimensions results in problems in the field, the Contractor shall be responsible for resolution of the conditions as accepted by the Engineer, without additional expense to the Owner.

D. Forms – Falsework and Bracing:

1. Erect formwork, shoring, and bracing to achieve design requirements, in accordance with requirements of ACI 301, 318 and 347.
2. Erect falsework and support, brace and maintain it to safely support vertical, lateral and asymmetrical loads applied until such loads can be supported by in-place construction.
3. Construct falsework so that adjustments can be made for take-up and settlement.
4. Provide wedges, jacks or camber strips to facilitate vertical adjustments.
5. Carefully inspect falsework and formwork during and after concrete placement operations to detect abnormal deflection or signs of failure; make necessary adjustments to produce work of required dimensions.

E. Forms for Exposed Concrete

1. Drill forms to suit ties used to prevent leakage of concrete mortar around the tie holes. Do not splinter forms by driving ties through improperly prepared holes
2. Provide sharp, clean corners at intersecting planes, without visible edges or offsets. Back joints with extra studs or girts to maintain true, square intersections.
3. Use extra studs, walers and bracing to prevent objectionable bowing forms between studs and to avoid bowed appearance in concrete. Do not use narrow strip form material which will produce bow.
4. Assemble forms so that they may be readily removed without damage to exposed concrete surfaces.

F. Forms for Smooth Finish Concrete:

1. Use steel, plywood or lined board forms.
2. Use clean and smooth plywood and form liners, uniform in size, and free from surface and edge damage capable of affecting resulting concrete finish.
3. Install form lining with close-fitting square joints between separate sheets without springing into place.
4. Use full size sheets of form lines and plywood wherever possible.
5. Tape joints to prevent protrusions in concrete.
6. Use care in forming and stripping wood forms to protect corners and edges.
7. Level and continue horizontal joints.
8. Keep wood forms wet until stripped.

© 2026 CDM Smith
All Rights Reserved

G. Forms for Surfaces to Receive Membrane Waterproofing: Use plywood or steel forms. After erection of forms, tape form joints to prevent protrusions in concrete.

H. Obtain Engineer’s approval before framing openings in structural members not indicated on Contract Drawings.

I. Corner Treatment:

1. Unless shown otherwise, form 3/4”chamfers with strips on external corners of columns, walls, girders, beams, foundation walls projecting beyond overlying masonry, and other external corners that will be exposed.
2. Extend terminal edges to required limit and miter chamfer strips at changes in direction.

J. Provisions of Other Trades:

1. Provide openings, slots, reglets, recesses, sleeves, bolts, anchors, inserts, etc.. in concrete formwork to accommodate the work of other trades.
2. Verify sizes and location of openings, slots, recesses sleeves, bolts, anchors, inserts and chases with the trade(s) requiring such items.
3. Accurately place and securely support items to be built into the forms.

K. Do not patch formwork.

3.4 APPLICATION - FORM RELEASE AGENT

A. Apply form release agent on formwork in accordance with manufacturer's recommendations.

B. Apply prior to placement of reinforcing steel, anchoring devices, and embedded items.

C. Do not apply form release agent where concrete surfaces are indicated to receive special finishes or applied coverings that are affected by agent. Soak inside surfaces of untreated forms with clean water. Keep surfaces coated prior to placement of concrete.

D. Reuse and Coating of Forms: Thoroughly clean forms and reapply form coating before each reuse. For exposed work, do not reuse forms with damaged faces or edges. Apply form coating to forms in accordance with manufacturer’s specifications. Do not coat forms for concrete indicated to receive “scored finish”. Apply form coatings before placing reinforcing steel.

E. Do not allow excess form release agent to accumulate in forms or to come into contact with surfaces which will be bonded to fresh concrete.

3.5 INSTALLATION - INSERTS, EMBEDDED PARTS, AND OPENINGS

A. General:

1. Set and build into the work anchorage devices and other embedded items required for other work attached to, or supported by, cast in-place concrete. Use setting drawings, diagrams, instructions and directions provided by suppliers of the items to be attached thereto.

2. Those trades whose work is related to the concrete or must be supported by it shall be given ample notice and opportunity to install embedded items before the concrete is placed.
3. Electrical conduit, junction boxes, pipes, sleeves, inserts and similar items shall be placed in the concrete in accordance with all of the requirements of the Building Code and authority having jurisdiction. Such items shall be protected to the extent they are not displaced or damaged during the placing of concrete.

B. Install formed openings for items to be embedded in or passing through concrete work.

C. Locate and set in place items required to be cast directly into concrete.

D. Position recessed reglets for brick veneer masonry anchors in accordance with spacing and intervals as shown or specified.

E. Install accessories straight, level, and plumb. Ensure items are not disturbed during concrete placement.

F. Waterstops:

1. Waterstops shall be installed so as to form a continuous watertight diaphragm without displacing reinforcement.
2. Adequate provisions shall be made to support and completely protect the waterstops during the progress of the work. Waterstops shall be wire tied to the steel reinforcement to prevent movement during placement.
3. Splices shall be made in conformance with the recommendations if the waterstop manufacturer.

G. Provide temporary ports or openings in formwork where required to facilitate cleaning and inspection. Locate openings at bottom of forms to allow flushing water to drain.

H. Form Ties:

1. Use sufficient strength and sufficient quantity to prevent spreading of forms.
2. Place ties at least 1 inch away from finished surface of concrete. Patch with cement mortar to match adjacent surface color and texture.
3. Form ties for liquid containment structures shall leave no metal or other material except concrete within1-1/2 inch of the formed surface. Patch with cement mortar to match adjacent surface color and texture.
4. Leave inner rods in concrete when forms are stripped. Rods remaining in place in liquid containment structures:

    a. Shall be provided with an integral waterstop.
    b. Shall provide a cone shaped depression at least 1-inch in diameter and 1-1/2 inches deep to allow for filling and patching. Patch with cement mortar to match adjacent surface color and texture.

5. Through ties that are to be completely removed form liquid containment structures should be tapered over the portion that passes through the concrete.

    a. The large end of the tapered tie should be positioned on the liquid side of the wall.

6. Space form ties equidistant, symmetrical and aligned vertically and horizontally unless otherwise shown on Contract Drawings.

I. Arrangement: Arrange formwork to allow proper erection sequence and to permit form removal without damage to concrete.

J. Joints

1. Provide isolation, control, contraction, expansion and construction joints in accordance with the following.
2. Continue reinforcing steel and wire fabric across construction joints where not indicated as being free to move.
3. Install premolded joint filler at locations shown. Extend joint filler from bottom of concrete up flush to finish concrete surfaces or hold down below finish surface as detailed.
4. Make splices in premolded filler in manner to preclude penetration of concrete between joint faces.
5. Concrete shall not be allowed to enter the joint or space for the sealant and backing rod and destroy the proper function of the joint.
6. The surface of all joints shall be thoroughly cleaned and all laitance removed by wire brushing, air or light sand blasting.
7. All joints shall be clean and free from dirt, debris before primer and sealer are applied.
8. Construction Joints:

    a. Construction joints shall be as shown on the Contract Drawings where structural integrity is affected, otherwise, the Contractor shall submit descriptions of the joints and their locations to the Engineer of approval.
    b. Unless otherwise shown of the Contract Drawings, construction joints shall be made and located so as not to impair the strength of the structure. Provisions shall be made for transfer of shear and other forces through the joints.
    c. Construction joints in floors shall be located within the middle third of spans of slabs, beams and girders. Joints in girders shall be offset a minimum of two times the width of the intersecting beams.
    d. Beams, girders, or slabs supported by columns or walls shall not be cast or erected until concrete in the walls or vertical supports members is no longer plastic
    e. Beams, girders, haunches, drop panels, and capitals shall be placed monolithically as part of a slab system, unless otherwise shown in the Contract Drawings.
    f. Construction joints shall be perpendicular to the main reinforcement
    g. Construction joints in water retaining structures shall have an integral continuous waterstops extending above the waterline and stopping nine inches below the top surfaces of the concrete.
    h. In non liquid containing structures aterstops shall be provided at all construction joints below grade in walls or slabs that enclose an accessible area.
    i. The maximum distance between horizontal joints in slabs and vertical joints in walls shall be 30’-0” unless otherwise indicated on the Contract Drawings.
    j. All corners shall be part of a continuous placement.
    k. Construction joints shall not be located closer than 5 feet from any corner.
    l. The elapsed time between casting adjoining concrete shall be at least 48 hours.
    m. The surfaces of all construction joints shall be prepared in accordance with the requirements of ACI 301.

n. Immediately before new concrete is placed, all construction joints shall be wetted and standing water removed
o. All construction joints shall be bonded by one of the following methods:

1) The use of an approved bonding agent applied in accordance with manufacturer's recommendations.
2) The use of Portland cement grout of similar proportions to the concrete applied in an acceptable manner.

p. Install surfaced pouring strip where construction joints intersect exposed surfaces to provide straight line at joints.
q. Just prior to subsequent concrete placement, remove strip and tighten forms to conceal shrinkage.
r. Show no overlapping of construction joints. Construct joints to present same appearance as butted plywood joints.
s. Arrange joints in continuous line straight, true and sharp.

9. Control Joints in Liquid Containing Structures

a. Provide control joints as shown on the Contract Drawings.
b. Construct joints as Detailed in the Drawings.
c. Control joints in water retaining structures shall have an integral continuous waterstop.
d. The maximum distance between horizontal joints in slabs and vertical joints in walls shall be 30'-0" unless otherwise indicated on the Contract Drawings.
e. The maximum distance between horizontal joints in walls shall be 12'-0" unless otherwise indicated on the Contract Drawings.

10. Control Joints in building floor slabs on grade.

a. Provide control joints as shown on the Contract Drawings
b. Control joints shall have a maximum spacing of 20 feet in each direction.
c. Form control joints by inserting prefabricated strip into fresh concrete until the top surface of the strip is flush with the surface.
d. After the concrete has cured for at least seven days, remove inserts and clean loose debris from the groove.
e. Caulk in accordance with the requirements of Section 079200.
f. The sawcutting of control joints in lieu of forming shall not be allowed unless otherwise indicated on the Contract Drawings.

1) Where allowed, joints shall be sawed within 24 hours of concrete placement.
2) Sawcutting shall not take place until the concrete can support foot traffic without impressions or other surface damage.

g. Unless otherwise noted in the Contract Drawings, control joints shall be:

1) Reinforced Concrete: 1/2-inches deep
2) Unreinforced Concrete: 1/3 of concrete thickness.

11. Expansion Joints

a. Provide expansion joints as shown on the Contract Drawings.
b. All expansion joints shall include a compressible preformed joint filler and joint sealant.
c. A nine inch center-bulb type waterstops shall be provided:

1) For all expansion joints in water retaining structures.
2) All expansion joints below grade in walls or slabs that enclose an accessible area.

d. Reinforcement or other embedded items bonded to the concrete (except dowels in floors bonded only on one side of a joint) shall not be permitted to extend continuously through any expansion joint.

12. Isolation Joints in slab on grade

a. Provide isolation joints in slabs on grade at points of contact between slabs on grade and vertical surfaces where indicated
b. Caulk in accordance with the requirements of Section 079200.

13. Sealant Slots

a. Where premolded joint filler is held down below finished concrete face, install in the form a water-soaked wood strip of dimensions shown to form after its removal a proper sized slot to receive the sealant.

K. Embedded Items:

1. Make provisions for pipes, sleeves, anchors, inserts, reglets, anchor slots, nailers, water stops, and other features.
2. All pipes and sleeves passing through the concrete of liquid containing structures shall include an integral waterstop.
3. Piping and conduit shall be so fabricated and installed that cutting, bending or displacement of reinforcement from its proper location will not be required.
4. Do not embed wood or uncoated aluminum in concrete.
5. Obtain installation and setting information for embedded items furnished under other Specification sections.
6. Securely anchor embedded items in correct location and alignment prior to placing concrete.
7. Verify conduits and pipes, including those made of coated aluminum, meet requirements of ACI 318 for size and location limitations.
8. Locate anchor bolts as shown on the Contract Drawings and on the Shop Drawings. Obtain necessary templates as required for the proper setting of anchor bolts and other items for equipment as required
9. Assist other trades and Contracts in the installation of piping, pipe sleeves, conduit and similar items where such items are to be installed in concrete. Provide frames to securely hold anchor bolts and anchorage devices in place during construction, and take care that no displacement occurs during the pouring of concrete.

L. Openings for Items Passing Through Concrete:

1. Frame openings in concrete where indicated on Contract Drawings. Establish exact locations, sizes, and other conditions required for openings and attachment of work specified under other sections.
2. Coordinate work to avoid cutting and patching of concrete after placement.
3. Perform cutting and repairing of concrete required as result of failure to provide required openings.

M. Screeds:

1. Set screeds and establish levels for tops of concrete slabs and levels for finish on slabs.
2. Slope slabs to drain where required or as shown on Contract Drawings.
3. Before depositing concrete, remove debris from space to be occupied by concrete and thoroughly wet forms. Remove freestanding water.

N. Screed Supports:

1. For concrete over waterproof membranes and vapor retarder membranes, use cradle, pad or base type screed supports which will not puncture membrane.
2. Staking through membrane is not be permitted.

O. Cleanouts and Access Panels:

1. Provide removable cleanout sections or access panels at bottoms of forms to permit inspection and effective cleaning of loose dirt, debris and waste material.
2. Clean forms and surfaces against which concrete is to be placed. Remove chips, saw dust and other debris. Thoroughly blow out forms with compressed air just before concrete is placed.

3.6 FORM CLEANING

A. Clean forms as erection proceeds, to remove foreign matter within forms.

B. Clean formed cavities of debris prior to placing concrete.

C. Flush with water or use compressed air to remove remaining foreign matter. Ensure that water and debris drain to exterior through clean-out ports.

D. During cold weather, remove ice and snow from within forms. Do not use de-icing salts. Do not use water to clean out forms, unless formwork and concrete construction proceed within heated enclosure. Use compressed air or other means to remove foreign matter.

3.7 FORM REUSE

A. Split, frayed, delaminated or otherwise damaged form facing material will not be acceptable and shall be replaced.

© 2026 CDM Smith
All Rights Reserved

3.8 SHORES AND SUPPORTS

A. Comply with ACI 347 for shoring and reshoring in multi-story construction, and as specified herein.

B. Submit a shore removal and reshoring schedule and drawings for the Engineer's review before proceeding with this work

C. Do not proceed until the schedule and drawings have been reviewed.

3.9 FORM REMOVAL

A. Forms shall not be removed without the permission of the Engineer. In general, forms shall not be removed until the concrete has hardened sufficiently to support its own load safely, plus any superimposed loads that might be placed thereon.

B. Loosen forms carefully. Do not wedge pry bars, hammers, or tools against finish concrete surfaces scheduled for exposure to view.

C. Store removed forms in manner that surfaces to be in contact with fresh concrete will not be damaged. Discard damaged forms.

D. The following schedule shall be considered the minimum period before formwork can be removed under normal conditions with the use of Type II cement. Its use shall not relieve the contractor of responsibility for the safety and appearance of the structure.

Type of Form	Above 60°F	50°- 60°F	40°- 50°F
Columns 5' high	24 hours	36 hours	72 hours
Columns 5' – 10' high	3 days	5 days	7 days
Columns 10' high	5 days	7 days	10 days
Walls 10' high	24 hours	36 hours	72 hours
Walls 5' – 10' high	3 days	5 days	7 days
Beam Side Forms	24 hours	36 hours	72 hours
Beam Bottom Forms	14 days	18 days	21 day6s
Slabs up to 6' Span*	5 days	7 days	14 days
Construction Joint	24 hours	36 hours	72 hours
Bulkheads	24 hours	36 hours	72 hours

* For slabs more than six (6) foot span add twelve (12) hours for each additional foot over five (5) feet.

1. When the temperature to which the forms or concrete surfaces are exposed to falls below 40°F, the forms shall remain in place an additional time equal to the time of the sub-40°F exposure. If form insulation is used, concrete surface temperature shall apply.
2. The Engineer may modify the form removal schedule if compressive tests indicate that the in-place concrete is of sufficient strength. Methods of field curing the cylinders shall simulate that of the concrete and shall be approved by the Engineer. All such tests shall be at the option and expense of the Contractor.
3. When Type III cement or retarders are used, the form removal schedule above does not apply and may be modified by the Engineer.

E. Immediately following the removal of the forms, the projecting ties shall be removed and all holes filled with grout flush with the wall. Care shall be taken to use the same brand of cement and same mix proportions used in the wall to prevent color differences.

F. Care shall be taken in removing forms, wales, shoring, supports and form ties to avoid spalling or marring the concrete. Patching as may be required shall be started immediately upon removal of the forms.

3.10 ERECTION TOLERANCES

A. Construct formwork to maintain tolerances required by ACI 301 and ACI 318.

B. Camber slabs and beams 1/4 inch per 10 feet in accordance with ACI 301.

3.11 FIELD QUALITY CONTROL

A. Inspect erected formwork, shoring, and bracing to ensure that work is in accordance with formwork design, and that supports, fastenings, wedges, ties, and items are secure.

B. Notify the Engineer after placement of reinforcing steel in forms, but prior to placing concrete.

C. Schedule concrete placement to permit formwork inspection before placing concrete.

SECTION 031500 - CONCRETE ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Form Ties
2. Chamfer Strips
3. Dovetail Anchor Slots
4. Concrete Inserts
5. Sealant Material for Concrete Joints
6. Bar Supports for Steel Reinforcement (brick and blocks not permitted)
7. Waterstops
8. Concrete Joints and Joint Materials
9. All other concrete accessories required to complete the work.

B. Related Sections:

1. Section 031113 “Structural Cast-in-Place Concrete Forming”
2. Section 032100 “Reinforcing Steel”
3. Section 032200 “Welded Wire Fabric Reinforcing”
4. Section 033100 “Structural Concrete”
5. Section 033500 “Concrete Finishing”
6. Section 033900 “Concrete Curing”
7. Section 036000 “Grout”
8. Section 079200 “Joint Sealants”

1.2 REFERENCES

A. General Requirements:

1. Except as modified by governing codes and by this Specification, comply with the applicable provisions and recommendations of latest editions of the following.
2. Where the language in any of the documents referred to herein is in the form of a recommendation or suggestion, such recommendations or suggestions shall be deemed to be mandatory under this Contract unless otherwise directed by the Engineer.
3. Conflicts: Conform to requirements of cited standard unless specified otherwise. In case of apparent conflict between standards, or between standards and the specifications herein, the more stringent shall apply unless otherwise directed by the Engineer.

B. American Concrete Institute:

1. ACI 117 – Standard Specifications for Tolerances for Concrete Construction and Materials.
2. ACI 301 – Specifications for Structural Concrete.

3. ACI 318 – Building Code Requirements for Structural Concrete.
4. ACI 347 – Guide to Formwork for Concrete.

C. American Hardboard Association

1. AHA A135.4 – Basic Hardboard

D. ASTM International:

1. ASTM D412 – Standard test Method for Vulcanized Rubber and Thermoplastic Elastomers – Tension.
2. ASTM D570 – Standard Test Method for the Water Absorption of Plastics.
3. ASTM D746 – Standards Test Method for Brittleness Temperature of Plastics and Elastomers by Impact.
4. ASTM D747 – Standard Test Method for Apparent Bending Modulus of Plastics by Means of Cantilever Beam.
5. ASTM D792 – Standard Test Method for Density and Specific Gravity of Plastics by Displacement.
6. ASTM D1751 – Standard Specification for Preformed Expansion Joint Filler for Concrete Paving and Structural Construction (Nonextruding and Resilient Bituminous Types).
7. ASTM D1752 – Standard Specification for Preformed Sponge Rubber, Cork and Recycled PVC Expansion
8. ASTM D2240 – Standard Test Method for Rubber Property – Durometer Hardness.
9. ASTM D5249 – Backer Material for Use with cold and Hot Applied Joint Sealants in Portland Cement Concrete and Asphalt Joints.
10. ASTM E96 – Standard Test Methods for Water Vapor Transmission of Materials.

E. U.S. Army Corps of Engineers:

1. CRD-C-572 – Polyvinylchloride Waterstop

1.3 PERFORMANCE REQUIREMENTS

A. Vapor Retarder Permeance: Maximum 1 perm when tested in accordance with ASTM E96, Procedure A.

1.4 SUBMITTALS

A. Manufacturer’s specifications and other data required to demonstrate compliance with the specific requirements.

B. Manufacturer’s recommended instructions for:

1. Installing concrete accessories.
2. Splicing non-metallic waterstops.

C. On the concrete reinforcement and concrete formwork shop drawings clearly show in detail the locations of all concrete joints, accessories, insets and embedded items of other trades; and

show details of how all joints, accessories, insets and embedded items of other trades are held in place during concrete placement.

D. Test results from independent testing laboratories showing compliance with these specifications. Sworn affidavits or statements from suppliers are not acceptable.

E. Furnish manufacturer's certification or test results identifying physical characteristics.

1.5 QUALITY ASSURANCE

A. Perform Work in accordance with ACI 301, ACI 302, ACI 318, ACI 350 and ACI 347

1.6 QUALIFICATIONS

A. Products used in the work of this section shall be produced by manufacturer’s who are regularly engaged in the manufacturer and/or supply of similar items for at least five (5) years and which have a history of successful production, acceptable to the Engineer.

1.7 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Deliver concrete accessories and installation instructions in original manufacturer's packaging.

B. Store off ground in ventilated and protected manner to prevent contamination, and deterioration from moisture.

C. Protect from UV exposure.

1.8 COORDINATION

A. Coordinate this Section with other sections of work, requiring attachment of components to formwork.

PART 2 - PRODUCTS

2.1 FORM TIES

A. Characteristics:

1. Factory fabricated, adjustable length, removable or snapoff metal form ties, designed to prevent form deflection and to prevent spalling concrete surfaces upon removal.
2. Snapoff Metal Form ties:

    a. Snapoff metal form ties with integral waterstops shall be provided for all liquid containment structures and below grade walls which have occupied interior spaces.
    b. Snapoff ties shall be designed so that:

1) The portion remaining with the concrete after removal of exterior parts is at least 1-1/2 inches from the formed concrete surface
2) A cone shaped a hole not larger than 1-inch diameter and 1-1/2 inches deep remains in the concrete surface. The minimum diameter of the hole shall not be less than 3/8 inch.

c. Snapoff metal form ties used with concrete formliner shall be 316 stainless steel.

3. The tie holes shall be filled with a cement mortar to match color and texture of the adjacent concrete surfaces.

B. Acceptable Manufacturers:

1. Dayton Superior Concrete Accessories
2. Or Approved equal

2.2 CHAMFER STRIPS

A. Characteristics:

1. Type: Triangular fillets with nailing flange
2. Material: Extruded vinyl
3. Size: ¾-inch x ¾-inch or as indicated on the Contract Drawings.

B. Acceptable Manufacturers:

1. Greenstreak
2. Vinylex Waterstop & Accessories
3. Dayton Superior Concrete Accessories
4. Or Approved equal

2.3 WATERSTOPS

A. Polyvinylchloride (PVC) Waterstops

1. PVC material shall be compounded from virgin PVC resins and shall contain no reclaimed, reground or reworked materials. The material shall meet the following physical property requirements.

Property	Test	Requirement
Tensile Strength (psi)	ASTM D412	1400 min
Ultimate Elongation (%)	ASTM D412	280 min
Hardness, Type A Durometer	ASTM D2240	65-88
Stiffness in Flexure (psi)	ASTM D747	750 min
Specific Gravity	ASTM D792	1.38 max.
Water Absorption in 48 hrs.(%)	ASTM D570	.5 max.
Low Temperature Brittleness	ASTM D746	No sign of failure @ 35ºF
Accelerated Aging		
- Tensile Strength (psi)	CRD-C-572	1500 min.

- Elongation (%)	CRD-C-572	300 min
Effect of Alkali in 7 Days		
- Weight Change (%)	CRD-C-572	-.10 to +.25
- Hardness, Type A Durometer	CRD-C-572	± 5 max.
- Tensile Strength Change (%)		-15 max.

2. Construction and Control Joints

   a. Type: Ribbed Flat
   b. Size: 6-inch wide x 3/8-inch thick (minimum at any point) with 5/8-inch rib and center bulb.
   c. Head Pressure Rating: 175 ft water
   d. Securely wired to reinforcement
   e. Split units may be used instead of splitting the formwork.

3. Expansion Joints

   a. Type: Ribbed with center bulb
   b. Size: 9-inch wide x 3/8-inch thick (minimum at any point) with ½-inch ID, 1” OD center bulb (minimum)
   c. Head Pressure Rating: 175 ft water

4. Acceptable Manufacturers:

   a. No. CR-9380 and No. CR-6380 Wirestop by Paul Murphy Plastics Company;
   b. No. RLB9 and No. RB6-38 by Vinylex;
   c. No. 718 and No. 70S by Greenstreak;
   d. Or Approved Equal.

B. Hydrophilic Waterstops

1. Hydrophilic waterstops shall be installed where new concrete is placed against existing concrete and watertightness is required and as shown on the Contract Drawings.
2. Hydrophilic waterstops shall be manufactured from a natural rubber product that has been chemically bonded to a hydrophilic agent. The product shall undergo expansion when exposed to moisture. The hydrophilic waterstop shall have an embedded stainless steel mesh to direct expansion in the thickness direction and restrict expansion in the longitudinal direction. The product shall develop an expansion pressure not less than 400 psi. The product shall withstand a hydraulic head pressure of a minimum of 150 feet. The product shall be suitable for use in wastewater and wastewater anaerobic sludge digester applications.
3. Physical Properties

Property	Test Method	Requirement
Hardness Hs	JIS K 6253	A30
Tensile Strength	JIS K 6251	0.9 MPa
Elongation	JIS K 6251	560 %
Specific Gravity	JIS K 6350	1.18
Change in Volume		120 %
Change in Mass		≤ 5.0 %

4. Hydrophilic waterstop shall be installed in conjunction with a hydrophilic paste. This paste shall be used to secure the hydrophilic waterstop to the surface of the concrete.
5. Install hydrophilic waterstop and hydrophilic paste in accordance with the manufacturer's recommendations.
6. Acceptable Manufacturer's

    a. Adeka Corporation

        1) Waterstop: Ultra Seal MC-2010MN
        2) Hydrophilic Paste: Ultra Seal P-201

    b. BBZ USA, Inc.

        1) Waterstop: Duroseal Gasket Type 2010
        2) Hydrophilic Paste: Duroseal Paste

    c. Greenstreak

        1) Waterstop: Hydrotite
        2) Hydrophilic Paste: Leakmaster

    d. Or Approved Equal

2.4 JOINT MATERIALS

A. Expansion Joint Filler

1. Characteristics

    a. Type: Preformed, closed cell Joint Filler
    b. Material: superior grade polyethylene, non-extruding PVC or Virgin homogeneous sponge rubber conforming to ASTM D1752, Type I. Granulated materials shall not be permitted. Where required, backer material shall conform to ASTM D 5249.
    c. Joint filler material shall be held back for sealants.
    d. Thickness: As required

2. Acceptable Manufacturers

    a. A.P. S. Cork
    b. W.R. Meadows, Inc.
    c. Sonolastic Expansion Joint Filler by Sonneborn
    d. Rodofoam II by W.R. Grace

e. Or Approved equal

B. Isolation Joint Filler Material

1. Characteristics

a. Type: Preformed closed cell rigid foam, cork, or non-impregnated fiberboard.
b. Thickness: As required
c. Joint filler material shall be held back for sealants.

2. Acceptable Manufacturers

a. Conflex LT by Masonite Corporation Building Products
b. Or Approved equal.

C. Control Joint Strips

1. Characteristics

a. Type: Prefabricated 1/8-inch thick tempered hardboard conforming to AHA A135.4, Class 1 In lieu of hardboard strips, rigid polyvinyl chloride (PVC) or high impact polystyrene (HIPS) insert strips specifically designed to control cracking. Such strips shall have a removable top section.
b. Dimensions:

1) Width: 1/8 inch
2) Depth:

a) Reinforced Concrete: ½-inch deep
b) Unreinforced Concrete: $^1/_3$ of concrete thickness

D. Sealants:

1. Sealants for expansion joints in structures designed for submerged conditions to either contain or hold out liquids including groundwater such as process basins, basements, flow channels, galleries, etc. shall be polysulfide material. Sonneborn "Sonolastic - Two-Part," Tamms Industries "Hornflex," or approved equal.
2. Sealants for non-submerged conditions are as specified in Joint Sealants Section 079200.

E. The joint fillers shall be compatible as a back-up material, with regard to the sealant not bonding to or being stained by the backup. If the joint filler is a material that will bond to the sealant, polyethylene tape or backing rods shall be used to cover the backup. The polyethylene and backing rod material shall be of a type that will not bond to the sealant.. Construction joints for interruptions in slabs on grade concrete placements shall be fabricated from 18 gage galvanized steel shaped to form a tongue-and-groove mechanical key joint. Preformed knock-out holes shall be provided. The unit shall be the same depth as the concrete. "Vulco Screed Joint II" (free flow) as made by Vulcan, "Tongue & Groove" joint #95 as made by Heckmann, "Keyed Kold Joint" as made by Burke, or approved equal.

F. Construction joints for interruptions in concrete placement in mat foundations, beam and slab systems, and walls shall be made from lumber with custom cut holes or slots to pass all

reinforcing through and with standard keyway and waterstop. These "bulkheads" are to be securely fastened to the deck, wall, and/or beam forms. They shall be the same depth as the concrete section and produce dense, clean, sharp edges (top, bottom and side) when stripped.

G. A dowel and sleeve combination shall be provided at expansion joints in concrete slabs or walls as shown on the Drawings. Smooth steel dowels shall be provided with a close fitting sleeve of pipe or conduit. The plain steel dowel shall conform to ASTM A572 or A588 with 50 ksi yield strength. One end of the sleeve shall be sealed against concrete intrusion by capping, plugging or crimping. The sleeve shall provide positive means to assure l-inch free travel of the dowel after installation. The dowel shall be lubricated with grease just prior to installation of the sleeve.

2.5 BAR SUPPORTS

A. Bar supports shall be a non-bleeding and non-staining material where concrete surfaces remain exposed. Plastic tipped or stainless steel protected bar supports shall be used for this purpose.

B. Bar supports bearing on grade, insulation, or soft material shall be continuous runner type supplied with continuous welded-on plates to assure proper support of reinforcing. Individual high chair supports will not be considered adequate.

C. The use of brick or block support for reinforcement shall not be permitted.

2.6 VAPOR BARRIER

A. Characteristics

1. Type: Polyethylene sheets, minimum thickness 10 mils.

2.7 MEMBRANE WATERPROOFING

A. Membrane waterproofing shall be liquid applied polyurethane elastomer.

2.8 OTHER ACCESSORIES

A. As shown or required.

PART 3 - EXECUTION

3.1 GENERAL

A. Unless otherwise shown or specifies, install concrete accessories in accordance with Section 031113 and Section 033100.

B. Install factory fabricated products in accordance with manufacturer’s printed instructions.

© 2026 CDM Smith
All Rights Reserved

3.2 CHAMFER STRIPS

A. Install chamfer strips on external corners.

3.3 VAPOR BARRIER

A. Do not lay vapor barrier sheeting until immediately prior to placing of reinforcing and concrete.

B. Use the greatest widths and lengths practicable to eliminate joints wherever possible.

C. Seal all vapor barrier seams as recommended by the manufacturer.

D. Patch and seal all vapor barrier breaks as recommended by the manufacturer.

E. Do not place concrete over vapor barrier until all breaks have been patched and sealed.

F. Concrete placement must not damage vapor barrier. Place a 2-inch layer of approved damp compactable fill over vapor barrier before placing concrete.

3.4 WATERSTOPS

A. Installation

1. Waterstops shall be installed at the locations shown to form a continuous water-tight diaphragm.
2. Adequate provision shall be made to support and completely protect the waterstops during the progress of the work. Waterstops shall be wire tied to the steel reinforcement. Any waterstop punctured or damaged shall be repaired or replaced. Exposed waterstops shall be protected during application of form release agents to avoid being coated. Suitable guards shall be provided to protect exposed projecting edges and ends of partially embedded waterstops from damage when concrete placement has been discontinued.
3. Splices shall be made by certified trained personnel using approved equipment and procedures.
4. All waterstops shall have a minimum of 2 inches of cover.

B. PVC Waterstop Splices

1. Splices shall be made by heat sealing the adjacent waterstop edges together using a thermoplastic splicing iron utilizing a non-stick surface specifically designed for waterstop welding.
2. The correct temperature shall be used to sufficiently melt without charring the plastic.
3. The spliced area, when cooled, shall show no signs of separation, holes, or other imperfections when bent by hand in as sharp an angle as possible.
4. Edge welding will not be permitted.
5. Centerbulbs shall be compressed or closed when welding to non-centerbulb type.
6. Waterstop splicing defects which are unacceptable include, but are not limited to the following:

    a. Tensile strength less than 80 percent of parent section.

b. Free lap joints.
c. Misalignment of centerbulb, ribs, and end bulbs greater than 2 mm 1/16 inch.
d. Misalignment which reduces waterstop cross section more than 15 percent.
e. Bond failure at joint deeper than 2 mm 1/16 inch or 15 percent of material thickness.
f. Misalignment of waterstop splice resulting in misalignment of waterstop in excess of 13 mm in 3 m 1/2 inch in 10 feet.
g. Visible porosity in the weld area, including pin holes.
h. Charred or burnt material.
i. Bubbles or inadequate bonding.
j. Visible signs of splice separation when cooled splice is bent by hand at a sharp angle.

C. Hydrophilic Waterstop Splices

1. Ends to be joined shall be miter cut with sharp knife or shears. The ends shall be adhered with cyanacryiate (super glue) adhesive.
2. When joining hydrophilic type waterstop to PVC waterstop, the hydrophilic waterstop shall be positioned as shown on the drawings. A liberal amount of a single component hydrophilic sealant shall be applied to the junction to complete the transition.

3.5 CONSTRUCTION JOINTS FOR SLABS ON GRADE

A. Construction joints are placed in the slab where the concreting operations are concluded for the day in conformity with a predetermined joint layout (i.e., at location of control or isolation joints).

B. If concreting is interrupted long enough at any time for the placed concrete to harden, a construction joint shall be used, the location of which shall be approved by the Engineer.

C. If possible, construction joints should not be located nearer than 5 feet from any other joint to which they are parallel.

D. NOTE: Foundation mats are not slabs on grade.

3.6 CONSTRUCTION JOINTS FOR SUPPORTED MEMBERS

A. Construction joints shall be located near the middle third of spans of slabs, beams, or girders, unless a beam intersects a girder at the location, in which case joints in the girders shall be offset a distance equal to twice the width of the beam.

B. Provisions shall be made for transfer of shear and other forces through construction joints by means of ledges, extended bars, dowels, etc.

C. Construction joints in supported slabs shall be arranged such that the slab dimensions do not exceed a 2:1 length to width ratio. Beams, girders, or slabs supported by concrete columns or walls shall not be cast or erected until concrete in the vertical support members has an age of at least 12 hours. Beams, girders, column capitals, and haunches shall be considered as part of a slab system and shall be placed monolithically therewith

© 2026 CDM Smith
All Rights Reserved

3.7 EXPANSION JOINTS

A. Expansion joints shall be provided as shown on the Drawings.

B. Reinforcement or other fixed items embedded or bonded into the concrete shall not be run through expansion joints.

C. Provide appropriate expansion dowels as shown.

D. Install waterstop.

E. Dress edges of concrete corners to provide a smooth, uniform edge.

3.8 ISOLATION JOINTS FOR SLABS ON GRADE

A. The floor shall be separated structurally from other building elements to accommodate differential movement.

B. Isolation joints shall be used at junctions with walls, columns, foundations, and footings, or other points of restraint, such as drain pipes, chimneys, sumps, stairways, etc.

C. Joint material shall be removed to the depth required for installation of the sealant.

3.9 CONTROL JOINTS IN SLABS ON GRADE

A. Control Joints in Slabs on Grade shall be provided as shown on the Drawings.

B. In the event none are shown or are only partially shown, no slab larger than 5 feet shall be constructed without a control joint.

C. Joints shall be formed either with a premolded joint insert.

D. The width of the premolded joint insert or saw cut shall be a minimum of 1/4-inch and a depth of 1-1/2 inches.

E. The joints shall be filled with sealant.

F. NOTE: Foundation mats with two layers of reinforcement are not slabs on grade.

3.10 CONTROL/CONSTRUCTION JOINTS IN WALLS

A. Wall control/construction Joints shall be placed at locations as shown on the Drawings or at maximum intervals of 30 feet.

B. Locate control joints to line up with masonry control joints as shown on the architectural drawings.

C. Wall control joints require special V-strip chamfers on both faces as detailed on the Drawings and interruption of 50 percent of the horizontal reinforcement. The top two bars in a wall shall be uninterrupted through the joint.

D. The joint layout shall be shown on the reinforcing shop drawings, in exposed areas carefully incorporated in the concrete finish work.

E. When wall placements must be terminated, construction joints shall be installed in advance of the day's placement.

F. Waterstops shall be installed at all control/ construction joints in tanks, flow channels, basements, roof decks, etc., which are intended to hold liquid or keep areas dry.

G. It is the Contractor's responsibility to layout the waterstops and assure continuity of intended design.

H. All construction joints shall be wetted immediately before new concrete placement.

I. Joints shall be thoroughly vibrated during concrete placement.

J. The control/construction joints shall be filled with sealant.

3.11 SEALANT

A. Where joint filler is flush with the adjacent concrete, enough filler material shall be removed so the joint can be sealed to the specified depth.

B. The sealant shall be installed in accordance with the manufacturer's instructions. Primer shall be applied as recommended by the manufacturer.

C. The sealant depth shall be controlled by the use of joint-fillers or back-up materials. The back-up material shall be non-impregnated and compressible; such as backer rod.

D. Backer rod shall be about 1/8-inch larger in diameter than the width of the joint to allow for compression.

E. Where the depth of the joint does not permit the use of backer rod, a bond breaker (polyethylene strip) must be used to prevent bonding to the back of the joint.

F. Sealant shall be applied to both sides of all joints where accessible.

G. Joint wide and sealant depth:

Joint Width Inches	Sealant Depth at Midpoint
0.25 to 0.50 inches	0.25 inches
0.50 to 1.00 inches	0.375 to 0.50 inches
1.0 to 2.0 inches	1.50 inches

SECTION 032100 - REINFORCING STEEL

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Reinforcing bars.
2. Reinforcement accessories.

B. Related Sections:

1. Section 031113 “Structural Cast-in-Place Concrete Forming”
2. Section 032100 “Reinforcing Steel”
3. Section 033100 “Welded Wire Fabric Reinforcing”
4. Section 033100 “Structural Concrete”
5. Section 031500 “Concrete Accessories”

1.2 REFERENCES

A. General Requirements:

1. Except as modified by governing codes and by this Specification, comply with the applicable provisions and recommendations of latest editions of the following.
2. Where the language in any of the documents referred to herein is in the form of a recommendation or suggestion, such recommendations or suggestions shall be deemed to be mandatory under this Contract unless otherwise directed by the Engineer.
3. Conflicts: Conform to requirements of cited standard unless specified otherwise. In case of apparent conflict between standards, or between standards and the specifications herein, the more stringent shall apply unless otherwise directed by the Engineer.

B. American Concrete Institute:

1. ACI 301 - Specifications for Structural Concrete.
2. ACI 315 Details and Detailing of Concrete Reinforcement
3. ACI 315R Manual of Engineering and Placing Drawings for Reinforced Concrete Structures
4. ACI 318 - Building Code Requirements for Structural Concrete.
5. ACI 350.4R-04 - Design Considerations for Environmental Engineering Concrete
6. ACI 350-06 - Code Requirements for Environmental Engineering Concrete Structures
7. ACI 530.1 - Specifications for Masonry Structures.
8. ACI SP-66 - ACI Detailing Manual.

C. ASTM International:

1. ASTM A82 - Standard Specification for Steel Wire, Plain, for Concrete Reinforcement

2. ASTM A184/A184M - Standard Specification for Fabricated Deformed Steel Bar Mats for Concrete Reinforcement.
3. ASTM A496 - Standard Specification for Steel Wire, Deformed, for Concrete Reinforcement.
4. ASTM A615/A615M - Standard Specification for Deformed and Plain Billet-Steel Bars for Concrete Reinforcement.
5. ASTM A704/A704M - Standard Specification for Welded Steel Plain Bar or Rod Mats for Concrete Reinforcement.
6. ASTM A767/A767M - Standard Specification for Zinc-Coated (Galvanized) Steel Bars for Concrete Reinforcement.

D. American Welding Society:

1. AWS D1.4 - Structural Welding Code - Reinforcing Steel.

E. Concrete Reinforcing Steel Institute:

1. CRSI - Manual of Standard Practice.
2. CRSI - Placing Reinforcing Bars.

1.3 SUBMITTALS

A. Section 013300 “Submittal Procedures”: Requirements for submittals.

B. Shop Drawings:

1. Prior to rebar detailing and fabrication, the Contractor shall submit his proposed joint locations and waterstop details for review. When the construction joint locations have been finalized, the Contractor shall provide the reinforcing steel fabricator with the locations of the joints and notify the steel fabricator to proceed with the reinforcing steel shop drawings.
2. Show locations of all construction, expansion, isolation, control and other joints in the concrete work.
3. Show detail layouts of jointing and reinforcement, including dimensions, bar sizes, openings and spacings, locations, types and and quantities of reinforcing steel, bending and cutting schedules, splicing, welds, stirrup spacing, supporting and spacing devices, and similar items required for the proper construction of the work.
4. Include the bar schedules, the individual weight of each bar, the total weight of each bar size, and the total weight on each schedule list.
5. Manufacturer’s specifications and other data required to demonstrate compliance with specific requirements.
6. A complete bill of materials list showing all items to be furnished and installed under this Section.

C. Certificates:

1. Submit AWS qualification certificates for welders employed on the Work.
2. Submit certified copies of mill test certificates of reinforcement materials analysis.

© 2026 CDM Smith
All Rights Reserved

1.4 QUALITY ASSURANCE

A. Perform Work in accordance with CRSI - Manual of Standard Practice

B. Prepare shop drawings in accordance with ACI SP-66.

1.5 QUALIFICATIONS

A. Welders: AWS qualified within previous 12 months.

1.6 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Section 016000 “Product Requirements”: Requirements for transporting, handling, storing, and protecting products.

1.7 COORDINATION

A. Coordinate with placement of formwork, formed openings and other Work.

PART 2 - PRODUCTS

2.1 REINFORCEMENT

A. General Requirements:

1. All reinforcement shall be as shown on the Contract Drawings and conform with the below listed requirements.

B. Deformed Reinforcement: ASTM A615/A615M; 60 ksi yield strength, steel bars:

1. Unfinished.

C. Deformed Reinforcement - Welded: ASTM A706/A706M; 60 ksi yield strength, steel bars:

1. Unfinished.

D. Deformed Bar Mats: ASTM A184/A184M; fabricated from ASTM A615/A615M 60 ksi yield strength, steel bars:

1. Unfinished.

E. Deformed Bar Mats - Welded: ASTM A184/A184M; fabricated from ASTM A706/A706M 60 ksi yield strength, steel bars:

1. Unfinished.

F. Stirrup Steel: ANSI/ASTM A82:

1. Unfinished

2.2 ACCESSORY MATERIALS

A. Tie Wire: Minimum 16 gage, annealed type, galvanized.

B. Chairs, Bolsters, Bar Supports, Spacers: Sized and shaped for strength and support of reinforcement during concrete placement conditions including load bearing pad on bottom to prevent vapor retarder puncture.

C. Special Chairs, Bolsters, Bar Supports, Spacers Adjacent to Weather Exposed Concrete Surfaces: Plastic tipped steel type; size and shape to meet Project conditions.

2.3 FABRICATION

A. Fabricate concrete reinforcement to shapes and dimensions indicated in accordance with CRSI Manual of Practice, ACI SP-66 and ACI 350-06.

B. Fabrication tolerances shall be in accordance with the CRSI “Manual of Standard Practice”

C. Bend reinforcement cold; heating of bars shall not be permitted.

D. Once bent, do not straighten or rebend bars; reject bars which show evidence of reduced cross-section or kinks.

E. Weld reinforcement in accordance with AWS D1.4.

F. Splices:

1. Provide standard reinforcement splices by lapping ends, placing bars in contact, and tightly wire tying.
2. Where welded splices are permitted, conform to AWS D1.4.
3. Locate reinforcement splices not indicated on Drawings, at point of minimum stress. Indicate location of splices on shop drawings.
4. Minimum lap for Grade 60 steel shall be as follows:

Bar Size	Top Bars in Beams and Slabs And Horizontal Wall Bars		All Other Bars
#4	2’-2”		2’-0”
#5	2’-8”		2’-0”
#6	3’-2”		2’-6”
#7	4’-8”		3’-6”
#8	5’-4”		4’-0”
#9	6’-0”		4’-0”
#10	6’-8”		5’-2”

G. Unacceptable materials: Reinforcement with any of the following defects will not be permitted in the work:

1. Bar lengths, depths, and bends exceeding specified fabrication tolerances.
2. Bends or kinks not indicated on the Contract Drawings or final Shop Drawings.
3. Bars with reduced cross-sections due to excessive rusting or other causes.

2.4 SOURCE QUALITY CONTROL

A. Make completed reinforcement available for inspection at manufacturer's factory prior to packaging for shipment. Notify the Engineer at least seven days before inspection is allowed.

B. When fabricator is approved by authority having jurisdiction, submit certificate of compliance indicating Work performed at fabricator's facility conforms to Contract Documents.

1. Specified shop tests are not required for Work performed by approved fabricator.

PART 3 - EXECUTION

3.1 PLACEMENT

A. Place reinforcement and embedded items as shown on the Contract Drawings, support and secure against displacement. Do not deviate from required position beyond specified tolerance.

B. Clean reinforcement to remove loose rust and mill scale, earth, and other materials which reduce or destroy the bond with concrete

C. Drill required holes for rebars into existing concrete and embed rebars using anchoring compound where required

D. Reinforcing supports:

1. Provide sufficient number of supports and of strength necessary to carry reinforcement.
2. Locate and support concrete reinforcement utilizing chairs, runners, bolsters, spacers, and hangers in accordance with CRSI "Manual of Standard Practice".
3. Do not use stones, brick, wood blocks, or pieces of broken concrete to support reinforcing steel.
4. Do not place reinforcing bars more than 2-inches beyond the last leg of any continuous bar support.
5. Do not use supports as bases for runways for concrete conveying equipment and similar construction loads.
6. Do not weld crossing reinforcement bars for assembly except as permitted by the Engineer.

E. Set ties so ends are directed into concrete, not toward exposed concrete surfaces.

F. Do not displace or damage vapor retarder.

G. Accommodate placement of formed openings.

H. Space reinforcement bars with minimum clear spacing in accordance with ACI 318.

1. Where bars are indicated in multiple layers, place upper bars directly above lower bars.

I. Maintain concrete cover around reinforcement as follows:

Reinforcement Location			Minimum Concrete Cover Inches
Concrete cast against and permanently exposed to earth			3
Concrete exposed to earth, weather or work mat slab	Slabs and Joists Beams and Columns-Stirrups, Spirals and Ties Walls Footings and Base Slabs-Formed Surfaces and Top of Footings and Base Slabs		2
	Beams and Columns-Primary Reinforcement		2.5
Concrete not exposed to earth or in contact with earth	Slabs and joists:	No. 14 and No 18 bars	1-1/2
		No. 11 and smaller	3/4
	Beams and Columns	Stirrups, Spirals and Ties	1-1/2
	Beams and Columns	Primary Reinforcement	2
	Walls	No. 11 and smaller	3/4
	Walls	No. 14 and No 18 bars	1-1/2
Concrete exposed to water or sewerage	Slabs, walls		3

J. Splice reinforcing where indicated on Drawings.

K. Bond and ground reinforcement in accordance with requirements of Section 260526.

L. Ensure reinforcement is clean and free of rust, scale, paint, grease, and other objectionable materials.

3.2 ERECTION TOLERANCES

A. Install reinforcement within the following tolerances for flexural members, walls, and compression members:

Reinforcement Depth	Depth Tolerance	Concrete Cover Tolerance
Greater than 8 inches	plus or minus 3/8 inch	minus 3/8 inch
Less than 8 inches	plus or minus 1/2 inch	minus 1/2 inch

B. Install reinforcement within the tolerances specified in ACI 530.1 for foundation walls.

3.3 FIELD QUALITY CONTROL

A. Provide free access to Work and cooperate with the Engineer.

B. Field inspection of reinforcing will be performed by the Engineer

C. Reinforcement Inspection:

1. Placement Acceptance: Specified material requirements and specified placement tolerances.
2. Welding: Inspect welds in accordance with AWS D1.1.
3. Periodic Placement Inspection: Inspect for correct materials, fabrication, sizes, locations, spacing, concrete cover, and splicing.
4. Weldability Inspection: Inspect for reinforcement weldability when formed from steel other than ASTM A706/A706M.
5. Continuous Weld Inspection: Inspect reinforcement as required by ACI 318
6. Periodic Weld Inspection: Other welded connections.

SECTION 032200 - WELDED WIRE FABRIC REINFORCING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Welded Wire Fabric Reinforcing

B. Related Sections:

1. Section 032100 “Reinforcing Steel”
2. Section 033100 “Structural Concrete”
3. Section 031500 “Concrete Accessories”
4. Section 031113 “Structural Cast-in-Place Concrete Forming”

1.2 REFERENCES

A. General Requirements:

1. Except as modified by governing codes and by this Specification, comply with the applicable provisions and recommendations of latest editions of the following.
2. Where the language in any of the documents referred to herein is in the form of a recommendation or suggestion, such recommendations or suggestions shall be deemed to be mandatory under this Contract unless otherwise directed by the Engineer.
3. Conflicts: Conform to requirements of cited standard unless specified otherwise. In case of apparent conflict between standards, or between standards and the specifications herein, the more stringent shall apply unless otherwise directed by the Engineer.

B. American Concrete Institute:

1. ACI 301 – Specifications for Structural Concrete.
2. ACI 318 – Building Code Requirements for Structural Concrete.
3. ACI 315 Details and Detailing of Concrete Reinforcement
4. ACI 315R Manual of Engineering and Placing Drawings for Reinforced Concrete Structures
5. ACI 350.1-01 / 350.1R-01 – Tightness Testing of Environmental Engineering Concrete Structures and Commentary
6. ACI 350.2R-04 – Concrete Structures for Containment of Hazardous Materials
7. ACI 350.3-06 – Seismic Design of Liquid-Containing Concrete Structures and Commentary
8. ACI 350.4R-04 – Design Considerations for Environmental Engineering Concrete
9. ACI 350-06 – Code Requirements for Environmental Engineering Concrete Structures
10. ACI SP-66 – ACI Detailing Manual.
11. ACI 506.2-13 – Specification for Shotcrete
12. ACI 506R-16 – Guide to Shotcrete

C. ASTM International:

1. ASTM A82 – Standard Specification for Steel Wire, Plain, for Concrete Reinforcement
2. ASTM A185/185M – Standard Specification for Steel Welded Wire Reinforcement, Plain, for Concrete
3. ASTM A496 – Standard Specification for Steel Wire, Deformed, for Concrete Reinforcement.
4. ASTM A497 – Standard Specification for Steel Welded Wire Fabric, Deformed, for Concrete Reinforcement.
5. ASTM A704/A704M – Standard Specification for Welded Steel Plain Bar or Rod Mats for Concrete Reinforcement.

1.6 COORDINATION

A. Coordinate with placement of formwork, formed openings and other Work.

PART 2 - PRODUCTS

2.1 REINFORCEMENT

A. Welded Steel Wire Fabric: ASTM A1022/A1022M, plain type; in flat sheets:

1. Unfinished

2.2 SOURCE QUALITY CONTROL

A. Make completed reinforcement available for inspection at manufacturer's factory prior to packaging for shipment. Notify the Engineer at least seven days before inspection is allowed.

PART 3 - EXECUTION

3.1 PLACEMENT

A. Install welded wire fabric in as long lengths as practicable. Lap adjoining pieces at least one full mesh.

B. Place as shown on the Contract Drawings, support and secure against displacement. Do not deviate from required position beyond specified tolerance.

C. Locate and support concrete reinforcement utilizing chairs, runners, bolsters, spacers, and hangers in accordance with CRSI "Manual of Standard Practice". Do not use stones, brick, wood blocks, or pieces of broken concrete to support reinforcing steel.

D. Set ties so ends are directed into concrete, not toward exposed concrete surfaces.

E. Do not displace or damage vapor retarder.

F. Accommodate placement of formed openings.

3.2 FIELD QUALITY CONTROL

A. Provide free access to Work and cooperate with the Engineer.

B. Field inspection will be performed by the Engineer.

16. ACI 350.3-06 - Seismic Design of Liquid-Containing Concrete Structures and Commentary
17. ACI 350.4R-04 - Design Considerations for Environmental Engineering Concrete
18. ACI 350-06 – Code Requirements for Environmental Engineering Concrete Structures

C. ASTM International:

1. ASTM C31/C31M - Standard Practice for Making and Curing Concrete Test Specimens in the Field.
2. ASTM C33 - Standard Specification for Concrete Aggregates.
3. ASTM C39/C39M - Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens.
4. ASTM C42/C42M - Standard Test Method for Obtaining and Testing Drilled Cores and Sawed Beams of Concrete.
5. ASTM C94/C94M - Standard Specification for Ready-Mixed Concrete.
6. ASTM C143/C143M - Standard Test Method for Slump of Hydraulic Cement Concrete.
7. ASTM C150 - Standard Specification for Portland Cement.
8. ASTM C172 - Standard Practice for Sampling Freshly Mixed Concrete.
9. ASTM C173/C173M - Standard Test Method for Air Content of Freshly Mixed Concrete by the Volumetric Method.
10. ASTM C227 – Potential Alkali Reactivity of Cement Aggregate Combinations (Mortar Bar Method)
11. ASTM C231 - Standard Test Method for Air Content of Freshly Mixed Concrete by the Pressure Method.
12. ASTM C294 – Standard Descriptive Nomenclature of Constituents of Concrete Aggregates
13. ASTM C295 – Standards Guide to Petrographic Examination of Aggregates for Concrete
14. ASTM C260 - Standard Specification for Air-Entraining Admixtures for Concrete.
15. ASTM C494/C494M - Standard Specification for Chemical Admixtures for Concrete.
16. ASTM C595 - Standard Specification for Blended Hydraulic Cements.
17. ASTM C618 - Standard Specification for Coal Fly Ash and Raw or Calcined Natural Pozzolan for Use as a Mineral Admixture in Concrete.
18. ASTM C666/C666M – Standard Test Method for Resistance of Concrete to Rapid Freezing and Thawing
19. ASTM C685/C685M - Standard Specification for Concrete Made By Volumetric Batching and Continuous Mixing.
20. ASTM C823/C823M - Standard Practice for Examination and Sampling of Hardened Concrete in Construction
21. ASTM C856 – Standard Practice for Petrographic Examination of Hardened Concrete
22. ASTM C989 - Standard Specification for Ground Granulated Blast-Furnace Slag for Use in Concrete and Mortars.
23. ASTM C1017/C1017M - Standard Specification for Chemical Admixtures for Use in Producing Flowing Concrete.

24. ASTM C1064/C1064M - Standard Test Method for Temperature of Freshly Mixed Hydraulic-Cement Concrete.
25. ASTM C1077 – Standard Practice for Laboratories Testing concrete and Concrete Aggregates for Use in Construction and Criteria for Laboratory Evaluation
26. ASTM C1157 - Standard Performance Specification for Hydraulic Cement.
27. ASTM C1218/C1218M - Standard Test Method for Water-Soluble Chloride in Mortar and Concrete.
28. ASTM C1222 – Practice for Evaluation of Laboratories Testing H\ydraulic Cement
29. ASTM C1240 - Standard Specification for Silica Fume Used in Cementitious Mixtures.
30. ASTM C1260 - Test Method for Potential Alkali Reactivity of Aggregates (Mortar Bar Method)
31. ASTM C1293 - Test Method for Concrete Aggregates by Determination of Length Change of Concrete Due to Alkali-Silica Reaction (Concrete Prism Test)
32. Standard Test Method for Determining the Potential Alkali-Silica Reactivity of Combinations of Cementitious Materials and Aggregate (Accelerated Mortar Bar Method).

D. New York State Department of Transportation Standard Specifications (NYSDOT-SS):

1. Section 501-2.03 - Concrete Batching Facility Requirements
2. Section 501-3.03 - Concrete Mixing, Transporting and Discharging
3. Section 703 - Aggregates

1.3 SUBMITTALS

A. Section 013300 “Submittal Procedures”: Requirements for submittals.

B. Product Data: Submit data for all materials and admixtures, including but not limited to the following as applicable:

1. Portland Cement: Brand and manufacturer’s name.
2. Fly ash: Brand and manufacturer’s name.
3. Aggregates: Name and location of source, and DOT test numbers

C. Concrete Mix Design Data:

1. Submit trial concrete mix designs, including slump, admixtures, air-entrainment, water-cement ratio, and results of 1-day, 3-day, 7-day or 28-day compressive strength tests for each concrete strength and type of concrete. Indicate what will be added at the batch plant and what will added to the mix at the site. Alternate sources of materials require separate individual mix designs.
2. When materials change or strengths change, additional mix designs will be submitted at the contractor’s cost.
3. Submit separate mix designs when admixtures are required for the following:

    a. Hot and cold weather concrete work.

4. Identify mix ingredients and proportions, including admixtures.
5. Identify chloride content of admixtures and whether or not chloride was added during manufacture.

D. Certification of Compatibility

1. Contractor shall provide certification that all materials and admixtures are compatible with each other.

E. Laboratory Test Data:

1. Laboratory test reports by the supplier of the aggregates containing data on the mineralogy (ASTM C295) and potential reactivity of the aggregates as specified in Section 2.01 herein.
2. Laboratory test reports by the supplier of the Portland Cement containing the alkali content of the cement in percent expressed as Na2O equivalent.
3. Laboratory test reports by the supplier of the pozzolanic material demonstrating compliance with the subsection 2.2.
4. Laboratory test reports by the supplier of chemical admixtures containing information on the chloride ion content and alkali content expressed as Na2O equivalent. Test reports are not required for air entraining admixtures used at dosages less than 130 ml per 100 kg (2 fl oz per 100 lb) or cement of nonchloride chemical admixtures used at maximum dosages less than 325 ml per 100 kg (5 fl oz per 100 lb). Both the chloride ion and total alkali content of the admixtures are to be expressed in percent by mass of cement for a stated or typical dosage of the admixture.
5. Laboratories supplying test reports or data shall provide evidence that the laboratory is properly equipped and qualified to perform the tests method(s) in conformance with ASTM C1077 and C1222.

F. Mill test certificates and test reports for cement indicating compliance with these specifications

G. Test results for aggregates, water and field tests

H. Concrete supplier, as well as location and type of batching plant

I. Detailed methods of placing concrete, including sequence of placement, type of equipment (pumps or chutes) and expected size of each placement.

J. Working drawings, showing number, location and details of construction joints, and concrete pour sequences, to scale

1.4 QUALITY ASSURANCE

A. Perform Work in accordance with ACI 301, 318 and 350 as applicable.

B. Conform to ACI 305 when concreting during hot weather.

C. Conform to ACI 306 when concreting during cold weather.

D. Acquire cement and aggregate from one source for Work.

1.5 SOURCE QUALITY CONTROL

A. Portland Cement - Mill test certificates identifying chemical and physical analysis.

B. Aggregates - Perform tests by an approved independent testing laboratory, prior to use, to show compliance with these specifications:

1. Such tests which have been made within six (6) months prior to the use of the aggregates will be acceptable.
2. Gradation tests shall be performed at the point of use.
3. The source of the material shall not be changed without retesting.
4. All aggregates shall be tested for compliance with the specifications at a minimum of one year intervals during the course of the work.
5. Coarse aggregates shall be obtained from a NYSDOT approved operating source.

C. Water - Questionable sources of water, as determined by the Engineer, shall be tested in accordance with AASHTO T26 and ACI 301.

1.6 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Section 016000 “Product Requirements”: Requirements for transporting, handling, storing, and protecting products.

1.7 COORDINATION

A. Coordinate placement of joint devices with erection of concrete formwork and placement of form accessories.

PART 2 - PRODUCTS

2.1 CONCRETE MATERIALS

A. Cement: ASTM C150, Type II - Moderate. Tricalcium aluminate (C3A) shall be limited to a maximum of seven (7) percent. Use only approved brands without change for the entire project. Cement used throughout the entire project shall be uniform in color so as not to detract from the appearance of the exposed concrete.

B. Fine Aggregate: Natural sand conforming to the requirements of ASTM C33.

1. Soundness of the aggregate shall conform to the following:

a. Sodium sulfate: Maximum seven (7) percent loss.

a. Magnesium sulfate: Maximum fifteen (15) percent loss.
b. Organic impurities shall not be allowed.
c. Sand exhibiting a color darker than the referenced color shall be rejected.

C. Coarse Aggregate: Crushed gravel or crushed stone meeting the requirements of ASTM C33 and NYSDOT specification 703.02. Gradation shall conform to the Table 703-4 of the NYSDOT specification with the maximum size aggregate for various types of work as follows:

1. No. 1A size with not more than ten (10) percent passing a #4 sieve:

a. Bond Beam Fill

2. No. 1 size:

a. Slabs less than seven (7) inches in depth

1) Beams, girders and columns less than twelve (12) inches in width

3. Use a mixture of No. 1 size and No. 2 size conforming to the following gradation for general work having a cross-sectional dimension of 12 inches or greater:

Primary Size	Percent Passing
1-1/2”	100
1”	90-100
¾”	60-90
½”	22-50
¼”	0-6

D. Water: ACI 318; potable, without deleterious amounts of chloride ions. Water from an unpotable source must be approved by the engineer prior ton use

2.2 AGGREGATE EVALUATION FOR ALKALI-SILICA REACTION POTENTIAL

A. Aggregates used in concrete shall conform to the requirements of ASTM C33. Testing and evaluation for alkali-silica reaction are summarized below:

1. Petrographic analysis in accordance with ASTM C295 shall identify the constituents of the fine and coarse aggregate. Fine and coarse aggregate containing more than the following quantities of constituents shall be considered potentially reactive:

a. Optically strained, microfractured, or microcrystalline quartz exceeding 5.0%.

1) Chert or chalcedony exceeding 3.0%
2) Tridymite or cristobalite exceeding 1.0%
3) Opal exceeding 0.5%
4) Natural volcanic glass in volcanic rocks exceeding 3.0%

2. Aggregates shall be screened by ASTM C1260. Aggregate sources which exhibit ASTM 1260 mean mortar bar expansion at 14 days exposure greater than 0.10% shall be considered potentially reactive.
3. Aggregates considered potentially reactive by 2.2.A .1 or 2.2.A.2 may be further evaluated by ASTM C1293. Aggregate sources which exhibit mean concrete prism expansion at one year greater than 0.04%, shall be considered potentially reactive. Aggregate sources exhibiting expansions no more than 0.04% and demonstrating no prior evidence of reactivity in the field shall be considered nonreactive.
4. Aggregates that have shown evidence of reactivity in service shall be considered potentially reactive regardless of the results of 2.2.A.1, 2.2.A.2, and 2.2.A.3. Determination of reactivity in structures must include:

a. Petrographic analysis of cores by ASTM C856

1) Visual examination of cracking and expansion of elements of the structure
2) Evaluation of available data, including construction records.

B. When aggregates are determined to be potentially reactive with alkalies, an evaluation of the effectiveness of the pozzolan in controlling the deleterious expansion of the design mix shall be determined in conformance with the requirements of 2.3.E below; or the aggregate shall not be used.

2.3 CONCRETE MIX

A. All mix designs shall be proportioned in accordance with Section 4.3 (Field Experience) or Section 4.4 (Trial Batches) of ACI 318-83, and ACI 350-06 Section 5.3 (Proportioning on the basis of field experience, trial mixtures, or both). If trial batches are used, they shall be established by an approved commercial testing laboratory employed by the Contractor. The proposed mix design shall be designed to achieve an average strength as follows .

28 Day Compressive Strength f'_c	Required Average Compressive Strength f'_{cr}
≤ 5000 psi	f'_c + 1200 psi
> 5000 psi	$1.10f'_c$ + 700 psi

B. Mix design submittals shall indicate the amounts of all ingredients including cement, admixtures and the weight of the aggregates stated in a saturated surface dry condition.

C. Concrete Class designations:

Class	28 Day Compressive Strength	Maximum Water to Cement Ratio (W/C) By Weight	
		Non-Air Entrained	Air Entrained
A	5,000 psi	0.42	0.35
B	4,000 psi	0.56	0.46
C	3,000 psi	0.68	0.58
D	2,500 psi	0.74	0.64

1. The various classes of concrete shall be designated as follows:
2. All concrete shall be Class “A” , Air Entrained and watertight unless otherwise noted below:

   a. Structural concrete for buildings shall be Class A cast-in place concrete.
   b. Concrete for buried thrust blocks shall be Class D.
   c. Concrete for bollards and fence posts shall be Class C.

D. In addition to the requirements above, these specific requirements shall be considered in the mix design:

1. All concrete slabs less than eight (8) inches in thickness, when placed in temperatures below 50°F, shall contain the specified non-chloride accelerator.
2. All concrete shall contain an approved water reducing admixture or an approved high range water reducing admixture (superplasticizer)
3. All pumped concrete, watertight concrete and concrete with a water to cement ratio below 0.50 shall contain the high range water reducing admixture
4. Cement contents shall be chosen to provide the minimum strengths for each class as shown in the Concrete Class Table above. The amount of cement content, however, shall not be less than the following:

    a. Class "A": 600 pounds per cubic yard
    b. Class "B": 550 pounds per cubic yard
    c. Class “C”: 515 pounds per cubic yards
    d. Toppings: 600 pounds per cubic yard (for Metal Pan Stairs)

5. All concrete exposed to weather, or water, or subject to freezing shall be air-entrained with an approved entraining admixture.
6. Concrete in contact with ductile iron or cast iron surfaces shall not contain fly ash.

E. When aggregates are determined to be potentially reactive with alkalies, an evaluation of the pozzolan cement combination in the proposed design mix shall be performed in conformance with ASTM C1567. Cementitious materials-aggregate combinations that exhibit ASTM C1567 mean mortar bar expansion at 14 days exposure of less than or equal to 0.10% shall be considered acceptable to control ASR expansion.

F. Slump

1. All concrete containing the high range water reducing admixture (superplasticizer) shall have a maximum slump of eight (8) inches unless otherwise directed by the Engineer. Prior to the addition of the superplasticizer, the concrete shall be tested at the job site and a slump of two (2) inches to three (3) inches shall be verified. The plasticizer may then be added to increase the slump to the approved level. No water shall be added after superplasticizer is added.
2. All concrete not containing a high range water reducing admixture (superplasticizer) shall conform to these maximum slump values, plus or minus one (1) inch:

    a. Reinforced concrete-general 4"
    b. Non-reinforced concrete 3"
    c. Pavements, sidewalks 3"
    d. Heavy mass concrete 3"
    e. Slabs on grade 3"
    f. Floor toppings 2"

3. The values listed above are specified as the "working limit." The average slump values shall be less than the "working limit."
4. Tolerances shall be as per ASTM C94 except that the plus tolerance shall be limited to the "working limit." A deviation of one (1) inch shall be allowed for such occasional batches of concrete that may inadvertently exceed the "working limit". Batches of concrete with slumps exceeding the "working limit" will be rejected if the Contractor fails to comply promptly with the Engineer’s instructions to reduce the slump of the concrete within the "working limit." The Contractor shall not increase mixing time, add

dry materials or otherwise modify a rejected batch for the purpose of conforming to slump limits.

5. Concrete that has been rejected for failure to meet the slump limits shall not be salvaged for use in the work. Rejected concrete shall be replaced at no additional cost to the Owner.
6. Concrete containing the high range water reducing admixture (superplasticizer) may be given additional superplasticizer only when approved by the Engineer. If a time delay has occurred wherein the slump has decreased to a level that is significantly below the maximum approved level, additional admixture may be added to increase the slump to the maximum level, but no additional water shall be added.

G. Air Content

1. Air content for air entrained concrete shall be controlled within the following limits:

a.	General Work	4% to 7%
b.	Concrete exposed to frost	4.5% to 7.5%
c.	Concrete exposed to salt	4.5% to 7.5%
d.	Concrete with maximum 3/4 inch aggregate	4.5% to 7.5%

H. Rate of Hardening

1. Concrete mixes shall be designed to produce the following rates of hardening:

a. General concrete with the following ambient temperatures:

1) 50° - 85° Fahrenheit - normal rate of hardening
2) 80° Fahrenheit - retarded rate of hardening
3) 50° Fahrenheit - accelerated rate of hardening

b. Mass concreting with following ambient temperature:

1) 40° Fahrenheit - retarded rate of hardening

2. Should the contractor feel it advantageous to use modified rates of hardening to improve workmanship or facilitate his work, consideration will be given by the Engineer

I. Mixing Water Control

1. The quantity of mixing water used in the concrete mix shall be determined by the Contractor with the amount used conforming to the various limits on specified slump. However, if the slump of the concrete should exceed the maximum specified slump, the Engineer will direct the Contractor to reduce the quantity of mixing water. Concrete consistency shall be uniform from batch to batch.
2. If deemed necessary by the Engineer during the course of the work, moisture determinations of the aggregates shall be made and aggregate weights and water requirements adjusted accordingly.
3. When concrete is transported in units approved for mixing, the addition of not more than ten percent (10%) of the total design water will be permitted at the job site to obtain the specified initial slump.

a. Any addition of water shall be followed by at least thirty (30) revolutions in the mixing speed range.

1) Not more than two (2) additions of water will be allowed at the point of deposition before discharge.
2) No retempering, defined as the addition of water after the mix has obtained its specified initial set, will be permitted.
3) No water shall be added to the mix after the addition of the superplasticizer.

J. Batching and Mixing

1. Batching

a. The Contractor shall have at his disposal a modern and dependable batch plant within a reasonable distance from the work.

1) The batch plant shall conform to the requirements of the NYSDOT specification 501-2.03 and shall be approved by the NYSDOT.
2) The batching and mixing shall conform to ACI 304 and to the NYSDOT specification 501-3.03.
3) The batching shall be done only with materials previously approved by the Engineer

2. Mixing Transporting and Discharging

a. Conform to ASTM C94 and to the NYSDOT specification 501-3.03.

1) Wastewater must be discharged and not used as mixing water for the next batch.
2) Maximum interval between successive truckloads of concrete discharged into the work shall not exceed thirty (30) minutes when the portion of the work being placed requires more than one load of concrete.

K. Average Compressive Strength Reduction: Not permitted.

L. Bag mixed or hand mixed concrete on site not permitted.

PART 3 - EXECUTION

3.1 PRE-CONCRETE CONFERENCE

A. At least 35 days prior to start of the concrete construction schedule, the Contractor shall conduct a meeting to review the proposed mix designs and to discuss the required methods and procedures to achieve the required concrete construction.

B. The Contractor shall require responsible representatives of every party who is concerned with the concrete work to attend the conference, including but not limited to the following:

1. Contractor's superintendent
2. Laboratory responsible for the concrete design mix.

3. Laboratory responsible for field quality control.
4. Concrete subcontractor.
5. Ready - mix concrete producer.
6. Admixture manufacturer (s).
7. Concrete pumping contractor.

C. Minutes of the meeting shall be recorded, typed and printed by the Contractor and distributed by him to all parties concerned within 5 days of the meeting. One copy of the minutes shall also be transmitted to the following for information purposes: Owner and Engineer.

D. The minutes shall include a statement by the admixture manufacturer(s) indicating that the proposed mix design and placing techniques can produce the concrete quality required by these specifications.

E. The Engineer will be present at the conference. The Contractor shall notify the Engineer at least 10 days prior to the scheduled date of the conference.

3.2 EXAMINATION

A. Verify requirements for concrete cover over reinforcement.

B. Verify anchors, seats, plates, reinforcement and other items to be cast into concrete are accurately placed, positioned securely, and will not interfere with placing concrete.

3.3 PREPARATION

A. Chip existing concrete surfaces where indicated to minimum ½" depth, or to the depth necessary to remove localized deterioration, and roughen the surfaces.

B. Apply epoxy bonding compound to existing concrete surfaces as follows:

1. Remove grit and dirt from surface by vacuuming or by means of an air jet.
2. Clean concrete surfaces, removing all grease, oil, dirt, foreign materials, and surface laitance, and expose the aggregate.
3. Mix and apply epoxy bonding compound in accordance with the manufacturer's instructions.

C. In locations where new concrete is doweled to existing work, drill holes in existing concrete, insert steel dowels and pack solid with non-shrink grout.

D. All surfaces that will be in contact with the poured concrete shall be free from standing water, mud, debris, frost, snow and ice.

E. Earth surfaces which are absorptive shall be moistened to a depth of one (1) inch.

F. When the ambient temperature is above 40° Fahrenheit, all subgrade surfaces shall be wetted down with cool water just prior to placement.

G. All reinforcing bars and/or embedded parts shall be cleaned of any coating of oil, grease, ice, dried mortar or any other foreign matter that will prevent bond with the concrete. Any reinforcing bars and/or embedded parts requiring cleaning shall be treated with a bonding agent.

H. Joints

1. Provide expansion and construction joints with planes normal to direction of pressure.
2. Joints shall be provided with suitable keys, waterstops and dowels.
3. Place joints as shown on the plans, the submitted pour sequence drawings, and in accordance with ACI 318 and 350.
4. Joints shall be as specified in Section 031500.

I. Reinforcement

1. Provide concrete reinforcement as shown on the plans and the submitted shop drawings.
2. Reinforcement shall be in conformance with the requirements of Section 032100 and 032200.

J. Formwork:

1. Provide formwork in accordance with the requirements of Section 031113.

K. The Contractor shall build into the concrete such items as reinforcing steel, inserts, sleeves, waterstops, etc., as shown on the Contract Drawings or as specified.

1. All embedded items shall be accurately located and securely fastened in place to prevent displacement during the placement of the concrete.
2. The Contractor shall cooperate with all other trades in permitting ample time for the placement of all necessary sleeves, inserts, conduits, hangers, etc. required for their trades.
3. If in the judgment of the Engineer, the embedded items are placed in such a manner to reduce the structural adequacy of the structure, the Contractor shall take the necessary corrective steps.

L. All anchor bolts for structural steel and mechanical equipment shall be carefully set as shown on the contract drawings and as shown on the fabricator's and manufacturer's reviewed anchor bolt setting plans.

M. All form work, embedded parts, reinforcements, foundation surfaces and joints involved in the work must be inspected by the Engineer.

3.4 PLACING CONCRETE

A. General Requirements

1. Place concrete in accordance with ACI 304.and with these specifications.
2. Conform to the requirements of ACI306R and 305R for placement of concrete in cold and hot weather respectively, and the applicable subsections below.
3. If pumping is used as a method of concrete placement, conform to the requirements of ACI 304, and the applicable subsection below.

4. Notify testing laboratory and the Engineer a minimum 24 hours prior to commencement of operations.
5. Place in dry and take precautions to prevent water from entering or lying in formwork where concrete is being placed or is setting.

    a. Do not place concrete on or next to frozen surfaces. Unless otherwise specified, do not add salts, chemicals or admixtures to the concrete.

        1) Transfer concrete from mixer to point of placement as rapidly as practical; prevent formation of cold joints.

6. Adequate manpower and equipment in the form of buckets, buggies, chutes, conveyors, or other approved means shall be provided and properly maintained by the Contractor to ensure continuous operations.
7. Utilize equipment and methods of placing which will permit rapid placing of concrete of the required consistency, preclude segregation and loss of water from the mix:

    a. Convey concrete by use of conveyors, pipes, chutes, or sprouts to a point not more than 3 feet from its final position.

        1) Do not change material proportions or consistency of concrete to facilitate mixing and placing.
        2) Do not use any pipes, chutes or other equipment made of aluminum.
        3) Deposit concrete vertically, using chutes, elephant trunks or other suitable devices to limit free fall to five (5) feet.

8. Regulate air entrainment and slump within specified limits.
9. Place concrete with the time limit stipulated by the epoxy bonding compound manufacturer. If such time limit should expire prior to placement of the concrete, remove the epoxy bonding compound and reapply.
10. Place formed concrete as nearly as practicable in its final position in continuous horizontal layers not more than eighteen (18) inches thick. When the time between successive layers exceeds one (1) hour, the specified water reducing, retarding admixture, Type "D", will be required to delay initial set so that proper consolidation of lifts can occur and cold joints are avoided.
11. When a column-slab combination or a wall-slab combination pour is scheduled, the column or wall shall have taken its initial set before concreting is continued on the slab. Beams, girders, brackets, column capitals and haunches shall be considered as part of the floor system and shall be placed integrally therewith.
12. Following a discontinuance or interruption in the placement of the concrete, all accumulations of mortar splashed upon the reinforcing steel and the surfaces of the forms shall be removed.
13. Dried mortar chips and dust shall not be puddled into the plastic concrete.
14. Avoid formation of laitance and accumulation of excessive water on surface of concrete as it is deposited. Remove accumulated water before placing additional concrete.
15. Ensure reinforcement, inserts, joints and other embedded elements are not disturbed during concrete placement.
16. The forms or formwork shall not be jarred or the exposed reinforcement disturbed in any manner after the concrete has taken its initial set.
17. Prepare concrete specimens required for tests. Cure and protect concrete cylinders at the site.

B. Pneumatic Placement

1. Pneumatic placement of concrete will be permitted only if authorized by the Engineer, in writing.
2. All Concrete Placement General Requirements above shall apply to the pneumatic placement of concrete as applicable.
3. The equipment shall be suitable in kind and adequate in capacity for the work.
4. The equipment shall be operated and placed so that no vibrations result which may damage freshly placed concrete.
5. The machine shall be located as close as practicable to the place of deposit.
6. The position of the discharge end of the line shall not be more than eight (8) feet from the point of deposit.
7. The discharge lines shall be horizontals or inclined upward from the machine.
8. At the conclusion of placement, the entire equipment shall be thoroughly cleaned.

C. Pumping

1. Pump placement of concrete will be permitted only if authorized by the Engineer, in writing.
2. All Concrete Placement General Requirements above shall apply to the pneumatic placement of concrete as applicable.
3. Pumping equipment shall be of a type designed to handle the type and volume of concrete to be conveyed without segregation.
4. The pumping distance shall be within the limits recommended by the pump manufacture.
5. The pump equipment shall be operated so that a continuous stream of concrete is produced without air pockets.
6. When pumping is completed, the concrete remaining in the pipeline, if it is to be used, shall be ejected in such a manner that will not produce contamination of the concrete or separation of the concrete ingredients.
7. Prior to starting the pumping operations, the equipment and pipeline shall be thoroughly lubricated with a cement slurry in a manner approved by the Engineer.
8. After the pumping operation has been completed, the entire equipment shall be thoroughly cleaned.

D. Interruption of Concreting

1. Should the placement of concrete be suspended or unavoidably interrupted, keyways and bulkheads shall be provided and steps taken to prevent feather edging when work is eventually resumed. Horizontal surfaces shall be roughened for bond. Joint preparation and bonding shall be in compliance with the Section 03 15 00. Areas with cold joints are unacceptable and shall be removed and redone at no additional cost to the Owner.

3.5 COLD WEATHER CONCRETING

A. All concreting operations in cold weather, when temperatures are at, or expected to be below 40° Fahrenheit, shall conform to ACI 306R and 306.1.

1. Special attention is drawn to the minimum required placing and curing temperatures.

B. Adequate equipment shall be provided for heating the concrete materials and protecting the concrete during freezing or near freezing weather.

C. No frozen materials nor materials containing ice shall be used.

D. Only the specified non-chloride accelerator may be used. Calcium chloride or admixtures containing more than one-tenth percent (0.1%) chloride ions are not permitted.

E. Concrete damaged by freezing shall be removed and replaced at the Contractor's expense.

3.6 HOT WEATHER CONCRETING

A. All concrete operations during hot weather shall conform to the requirements of ACI 305R and 305.1.

B. Care shall be taken to protect the concrete or to schedule operations to avoid problems with flash set or conditions that produce excessively rapid drying.

C. During hot weather, consideration shall be given to maintaining the temperature of the cement, aggregates and mixing water, such that the temperature of the concrete at the time of delivery to the job site in no case exceeds 90° Fahrenheit.

D. When the temperature of the concrete exceeds 80° Fahrenheit, the water reducing, retarding admixture, Type "D", may be required.

3.7 CONCRETE CONSOLIDATION

A. Concrete shall be consolidated during and immediately after depositing and worked into corners and around embedded elements, leaving no voids or honeycombed surfaces. The consolidation shall be in conformance with ACI 309 in all respects and shall be accomplished by mechanical vibration subject to the following conditions:

1. The vibration shall be internal, unless special authorization is given by the Engineer for external vibration.
2. Vibrators shall be capable of transmitting vibration to the concrete at frequencies recommended by ACI 309, "Guide for Consolidation of Concrete".
3. The intensity of the vibration shall be such as to visibly affect the mass of concrete by a slump of one (1) inch over a radius of eighteen (18) inches.
4. The Contractor shall supply a sufficient number of vibrators to properly consolidate each pour immediately after it is placed. Standby vibrators in good condition shall be readily available, if needed, during concrete placement.
5. Vibrators shall not be applied directly to the reinforcement or to the forms. They shall not be used to make the concrete flow in the forms over distances so great as to cause segregation.

B. Vibration shall be supplemented by spading as necessary to ensure smooth surfaces and well consolidated concrete. Form surfaces and corner locations that are difficult to consolidate with vibrators shall be consolidated by spading.

© 2026 CDM Smith
All Rights Reserved

3.8 CONCRETE FINISHING

A. Finish concrete surfaces in conformance with the requirements of Section 033500.

3.9 CURING AND FORM REMOVAL

A. Cure concrete in conformance with the requirements of Section 033900.

B. Concrete form removal shall be in conformance with the requirements of Section 031113.

3.10 FIELD QUALITY CONTROL

A. Field inspection and testing will be performed by the Engineer and the Owner's testing laboratory.

B. The Contractor shall provide facilities necessary to obtain and handle representative samples of materials to be tested and shall furnish all necessary cooperation and assistance as requested by the Engineer. The Contractor shall provide sufficient notification to the Owner and Engineer and shall plan and schedule his operations to allow adequate time for all required testing and inspection.

C. The Owner and/or Engineer will be responsible for the field control of all concrete and may reject batches for high slump, uncontrolled air entrainment or delays. Written reports will be issued after the testing is complete. However, if at any time the results are questionable, the Contractor will be notified immediately so that corrective steps may be taken. All tests and reports submitted for review will be only for those specific items used in the work.

D. The criteria for the acceptance of concrete shall be as detailed in ACI 318, Chapter 4; ACI350-06, Section 5.5 (Evaluation and acceptance of concrete); and include the following tests:

1. Strength Test Samples:

a. Sampling Procedures: ASTM C172.

1) Cylinder Molding and Curing Procedures: ASTM C31/C31M, cylinder specimens, standard cured.
2) Sample concrete and make one set of five (5) cylinders for each distinct structure:

a) Every 50 cu yds or less of each class of concrete placed each day and not less than one set for each 5,000 sf of surface area for slabs and walls
b) When volume of concrete for any class of concrete would provide less than 5 sets of cylinders, take samples from five randomly selected batches, or from every batch when less than 5 batches are used.
c) Make one additional cylinder during cold weather concreting, and field cure.

b. The making, pick-up and curing of the cylinders shall be the responsibility of the testing laboratory, however:

1) The Contractor shall be responsible for the curing of field cured cylinders.
2) The Contractor shall cooperate in protecting the cylinders and in notifying the testing lab of scheduled pours. The report shall indicate the mix proportions, air content, slump, batching time, placing time and a detailed description where the tested concrete was place in the structure. All items shall be completely filled in on each test report.

2. Field Testing:

a. Slump Test:

1) Slump tests shall be made for each batch/compressive strength sample and/or as frequently as directed.
2) Test Method: ASTM C143/C143M.

b. Air Content Testing:

1) Air content tests shall be made each time slump tests are taken of concrete required to be air entrained.
2) Test Method: ASTM C173/C173M (Volumetric Method) or ASTM C231 (Pressure Method).

c. Temperature Testing:

1) Measure temperature each time slump tests are taken.
2) Method: ASTM C1064/C1064M.
3) The Contractor shall provide two (2) infrared/laser hand-held temperature scanner/thermometers, for use by the Owner/Engineer.

d. Portland Cement Testing:

1) Cement stored at the job site or in storage at the concrete suppliers plant for over 60 days shall be subjected to complete tests to determine compliance with ASTM C150.

3. Cylinder Compressive Strength Testing:

a. Test Method: ASTM C39/C39M.
b. Test Acceptance: In accordance with ACI 350-06.
c. Test two (2) cylinders at seven (7) days.
d. Test two (2) cylinder at twenty-eight (28) days.
e. Test one (1) cylinder at forty (40) days or as directed by the Engineer.

E. Maintain records of concrete placement. Record date, location, quantity, air temperature and test samples taken.

F. Investigation of Low Strength Test Results

1. Low-strength cylinder test results shall be evaluated by obtaining and testing core samples as detailed in ASTM C42/C42M and ACI 318, Chapter 4, Section 4.7.4 - Investigation of Low-Strength Test Results.
2. Low-strength core test results shall be evaluated by performing load tests as detailed in ACI 318, Chapter 20.
3. A minimum of three (3) cores shall be obtained for each failed strength test from concrete represented by failed strength test.
4. Concrete work judged inadequate by structural analysis or by results of a load test shall be reinforced with additional construction if so directed by the Engineer, or shall be replaced, at the Contractor's expense.
5. The Contractor shall pay all costs incurred in providing the additional testing and/or analysis.

G. Delivery Tickets

1. The Engineer shall be provided with delivery tickets for each truckload of concrete delivered to the project site.
2. Delivery Tickets shall show information required by ASTM C94

3.11 PATCHING

A. Allow the Engineer to inspect concrete surfaces immediately upon removal of forms.

B. Excessive honeycomb or embedded debris in concrete is not acceptable. Notify the Engineer upon discovery.

C. Patch imperfections as directed by Engineer in accordance with ACI 318.

3.12 DEFECTIVE CONCRETE

A. Defective Concrete: Concrete not conforming to required lines, details, dimensions, tolerances or specified requirements.

B. Repair or replacement of defective concrete will be determined by the Engineer.

C. Do not patch, fill, touch-up, repair, or replace exposed concrete except upon express direction of the Engineer for each individual area.

SECTION 033500 - CONCRETE FINISHING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Finishes for concrete.

B. Related Sections:

1. Section 031113 “Structural Cast-in-Place Concrete Forming”
2. Section 031500 “Concrete Accessories”
3. Section 033900 “Concrete Curing.”
4. Section 030551 “Concrete Bonding Agents”
5. Section 030555 “Concrete Admixtures and Additives”
6. Section 079200 “Joint Sealants”
7. Section 033100 “Structural Concrete”

1.2 REFERENCES

A. General Requirements:

1. Except as modified by governing codes and by this Specification, comply with the applicable provisions and recommendations of latest editions of the following.
2. Where the language in any of the documents referred to herein is in the form of a recommendation or suggestion, such recommendations or suggestions shall be deemed to be mandatory under this Contract unless otherwise directed by the Engineer.
3. Conflicts: Conform to requirements of cited standard unless specified otherwise. In case of apparent conflict between standards, or between standards and the specifications herein, the more stringent shall apply unless otherwise directed by the Engineer.

B. American Concrete Institute:

1. ACI 301 - Specifications for Structural Concrete.
2. ACI 302 - Guide for Concrete Floor and Slab Construction
3. ACI 318 - Building Code Requirements for Structural Concrete.
4. ACI 318-08 - Building Code Requirements for Structural Concrete
5. ACI 350-06 – Code Requirements for Environmental Engineering Concrete Structures

1.3 SUBMITTALS

A. Section 013300 “Submittal Procedures”: Requirements for submittals.

B. Manufacturer’s specifications and other data required to demonstrate compliance with the specific requirements.

C. Manufacturer's recommended instructions and recommendations on mixing handling, placement, and appropriate uses for each type of material and product used in the work of this Section.

D. Material Safety Data Sheets.

E. Manufacturer's certification or test results identifying physical characteristics.

F. Test Panels:

1. The Contractor shall construct a 4' x 4' mockup cast-in-place panels of each concrete finish type to be provided for the approval of the Engineer. Panels shall be a minimum of 12" thick and provided with steel reinforcing.
2. Use form ties the same as those approved and with the form tie pattern similar to that approved.
3. Test panels shall include chamfer corner treatment and reveal rustication with form joints.
4. Plug the tie holes as specified to determine the correct mortar mixture to match the panel color. If required, remove and replace tie hole plugging mortar until an acceptable color match is obtained. After the sample panels have been approved, intentionally damage and patch portions of the finish surface of the panels for the purpose of determining the correct mixture for patching mortar and patching technique to match the original panel color and surface.
5. The approved mock-up panels shall remain in place during construction as the standard of workmanship for the project.
6. The mock-up panels shall be removed at the direction of the Engineer.

1.4 QUALITY ASSURANCE

A. Perform Work in accordance with ACI 301, ACI 302 and ACI 318.

1.5 QUALIFICATIONS

A. Throughout the progress of the work of this Section, provide at least one person who shall be thoroughly familiar with the specified requirements, completely trained and experienced in the necessary skills and who shall be present at the site and direct all work under this Section.

B. In the execution of the work of this Section, use an adequate number of skilled workmen who are thoroughly ACI trained and experienced in the requirements of this Section.

C. In acceptance or rejection of the work performed under this Section, the Engineer will make no allowance for lack of skill on the part of the workmen.

1.6 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Section 016000 "Product Requirements": Requirements for transporting, handling, storing, and protecting products.

B. General:

1. Conform to ACI 301, ACI 302 and ACI 318.

C. Delivery of Materials

1. Deliver materials in manufacturer's original unopened and undamaged containers, with information accurately representing container contents.
2. Include the following information on the label:

   a. Name of material and supplier.
   b. Installation, handling and protection requirements.

3. Deliver materials in sufficient quantities to allow uninterrupted continuity of the work.

D. Storage of Materials

1. Store materials in original, undamaged containers with manufacturer's labels and seals intact.
2. Store all materials in a dry, enclosed area, off the ground and away from all possible contact with water and in a location where temperature can be constantly maintained between 60F and 75F and out of direct sunlight.
3. Prevent damage to materials during storage primarily by minimizing the amount of time they are stored at the job-site before being incorporated into construction systems

E. Protection:

1. Use all means necessary to protect the materials of this Section before, during and after installation to protect the work and materials of all other trades.

F. Replacement:

1. In the event of damage, immediately, make all repairs and replacements necessary to the satisfaction of the Engineer

1.7 COORDINATION

A. Section 013000 “Administrative Requirements”: Coordination and project conditions.

B. Coordinate this Section with other sections of work, requiring attachment of components to formwork.

PART 2 - PRODUCTS

2.1 CONCRETE FLOOR SEALER

A. Acceptable Products

1. Sonoglaze HS by Sonneborn
2. Masterseal 330 by Master Builders
3. Eucothane by Euclid Chemical.

4. Or Approved Equal

2.2 CONCRETE FLOOR HARDENER

A. Acceptable Products – Liquid Floor Hardener

1. Lapidolith by Sonneborn
2. Pena-Lith by W.R. Meadows
3. Hornolith by Tamms
4. Surfhard by Euclid Chemical.
5. Or Approved Equal

B. Acceptable Products – Non-metallic Aggregate Floor Hardener

1. Harcol by Sonneborn
2. Maximent by Master Builders
3. Surflex by Euclid Chemica
4. Or Approved Equal

2.3 NON-SLIP SHAKE-ON AGGREGATE

A. Acceptable Products

1. Frictex NS by Sonneborn
2. A-H Alox by Anti-Hydro
3. Non-Slip by Euclid Chemical.
4. Or Approved Equal

2.4 BITUMINOUS WALL DAMPPROOFING

A. Acceptable Products

1. Asphalt emulsion per ASTM D1227, Type 4
2. Sealtight Sealmastic Emulsion – Type 2
3. Karnak Corporation Karnak 220A
4. Or Approved Equal

2.5 CONCRETE REPAIR MATERIALS

A. Concrete repair materials are specified in part 3

2.6 CURING

A. For limited use, to cure the grout used in a Type V finish, liquid curing compound shall be used.

© 2026 CDM Smith
All Rights Reserved

2.7 PATCHING MORTAR

A. Acceptable Products

1. Harris Specialty Chemicals "Waterplug"
2. Tamms Industries "Speed Plug"
3. Or Approved Equal

PART 3 - EXECUTION

3.1 FINISHES ON FORMED CONCRETE SURFACES

A. After removal of forms, the finishes described below shall be applied in accordance with Section 3.5 Concrete Finish Schedule. Unless the finish schedule, Contract Drawings, or Specifications specifies otherwise, all surfaces shall receive at least a Type I finish. The Engineer shall be the sole judge of acceptability of all concrete finish work.

1. Type I Rough or Board Form Finish: All fins, burrs and other projections left by the forms shall be removed. All holes left by removal of ties, and all other holes, depressions, or voids shall be filled solid with cement grout after first being thoroughly wetted. Honeycombs shall be chipped back to solid concrete as directed, prior to patching with cement grout. Holes shall be filled with a small tool that will permit packing the hole solidly with cement grout. Cement grout shall consist of one-part cement to three parts sand, and the amount of mixing water shall be as little as consistent with the requirements of handling and placing. Color of cement grout shall match the adjacent wall surface. The surface shall be thoroughly cleaned of all stains or discolorations that will interfere with the final finish.
2. Type II Smooth Form Finish: Concrete shall be cast against forms constructed of plywood, preformed steel, glass fiber reinforced plastic, sheet steel, or boards (lumber forms) lined with tempered hardboard, or other approved materials.

    a. Form material shall not have torn grain, worn edges, patches of holes from previous use, or other defects which would impair the texture of the concrete surface.
    b. Form material shall utilize sheets as large as practicable in an orderly and symmetric configuration.
    c. Other aspects of the finish shall conform to the requirements of the rough form finish.

3. Type III Grout Cleaned: Where this finish is required, it shall be applied after completion of Type II finish. After the concrete has been pre-dampened, a slurry consisting of one-part cement (including an appropriate quantity of white cement in order to produce a color matching the surrounding concrete) and 1-1/2 parts sand passing the No. 30 sieve, by damp loose volume, shall be spread over the surface with clean burlap pads or sponge rubber floats and scrubbed into the surface using a rotary motion. Any surplus material shall be removed by scraping and then rubbing with clean burlap. The finish shall be kept damp for at least 36 hours after application.
4. Type IV Rubbed: Where this finish is required, it shall be applied after the completion of the Type II finish no later than four (4) hours following form removal. No rubbing shall

be done before the concrete is thoroughly hardened and the mortar used for patching is firmly set. A smooth, uniform surface shall be obtained by wetting the surface and rubbing it with a carborundum stone to eliminate irregularities. Unless the nature of the irregularities require it, the general surface of the concrete shall not be cut into. Corners and edges shall be slightly rounded by the use of the carborundum stone. Brush finishing or painting with grout or neat cement will not be permitted.

5. Three (3) categories of rubbed finish shall be provided as defined below:

Type "IVA":	Surfaces shall be rubbed until all marks are obliterated and a uniformly smooth finish is obtained
Type "IVB":	Surfaces shall be rubbed until they are uniformly smooth, but complete obliteration of all marks is not required.
Type "IVC":	All fins, burrs, and projections shall be removed. Any honeycomb or tie-holes shall be filled and patched.

   a. Begin rubbing within four (4) hours of the removal of the formwork and expedite to completion as rapidly as practicable.
   b. Rub surfaces with carborundum and water until all fins, bubbles, hollows and other defects are removed.
   c. Do not use grout or mortar in the rubbing process. Plastering of surfaces will not be allowed.
   d. Use power tools with hand work limited to inaccessible corners or small areas.
   e. After the rubbing is completed and the surface has dried, rub the surface with burlap to remove all loose powder.
   f. All expansion joints in the completed work shall be left carefully tooled and free of all mortar and concrete.

6. Type V Textured: Use textured forms or textured form liners of plastic, wood, or sheet metal. Secure liner panels in forms by cementing or stapling, not by methods which will permit impressions of nail heads, screw heads, washers, or the like to be imparted to the surface of the concrete. Seal edges of textured panels to each other or to divider strips to prevent bleeding of cement paste. Use a sealant that will not stain the concrete surface.
7. Type VI Aggregate transfer: Produce aggregate transfer and other special finished that duplicate mock-ups or sample panels prepared in advance and accepted.
8. Type VII Exposed Aggregate: Expose aggregate using one of the following methods. Provide a concrete surface that will duplicate a mock-up or a sample panel prepared in advance and accepted

   a. For a scrubbed finish, cast concrete against form faces which have been coated with a chemical retarder used in accordance with the manufacturers recommendations. Wet the partially hardened concrete surface thoroughly and scrub with fiber or wire brushes, using water freely until the surface mortar is removed and the aggregate is uniformly exposed. Then rinse the surface with clear water. If portions of the surface have become too hard to permit uniform aggregate exposure, use dilute hydrochloric acid (one part commercial muriatic acid diluted with 4 to 10 parts water) to remove the excess surface mortar after the concrete is at least 2 weeks old. Remove the acid from the finished surface with clean water within 15 minutes after application.
   b. For a blast finish, sandblast or waterblast the concrete surface to a degree sufficient to expose fine aggregates with occasional exposure of coarse aggregate, and to produce a uniform color with a maximum reveal of 1/16 inch unless specified

otherwise in the Contract Documents. All surfaces with the same specified blast finish shall be done at approximately the same time after placing co concrete. Use stainless steel or plastic reinforcement supports and spacers near concrete surfaces to be blasted. Protect adjacent materials and inserts during blasting operations.

c. For a tooled finish, dress the thoroughly cured concrete surface with electric, air, or hand tools to a uniform texture removing surface mortar as specified in the Contract Documents. Then provide the surface with a hand tooled, rough or fine pointed, crandalled, or bush-hammered surface texture, as specified by Contract Documents.

9. Type VIII Applied: When finishes of stucco, cementitious coatings, or similar troweled materials are required or permitted, prepare the surface of the concrete to ensure permanent adhesion of the finish. If the concrete is less than 24 hours old, roughen it with a heavy wire brush or scoring too. If the concrete is older, roughen the surface mechanically or by acid etching. After roughening, wash the surface free of all dust, acid, chemical retarder, and other foreign material before any final finish is applied.

3.2 SLAB AND FLOOR FINISHES

A. The finishes described below shall be applied to floors, slabs, flow channels and top of walls in accordance with Section 3.5 - Concrete Finish Schedule. The Engineer shall be the sole judge of acceptability of all such finish work.

1. Type “A” - Screeded: This finish shall be obtained by placing screeds at frequent intervals and striking off to the surface elevation required.
2. Type “B” - Scratched: Following completion of Type “A” finish, roughen the surface with stiff brushes or rakes before final set.
3. Type “C” - Floated: Following completion of Type “A” finish, do not work the concrete further until it is ready for floating. Begin floating with a hand float, a bladed power float equipped with float shoes, or a powered disc float as soon as the water sheen had disappeared, and the surface has stiffened sufficiently to permit the operation. During or after the first floating, check flatness of surface with a 10 ft straightedge applied in two or more directions. Eliminate high spots and low spots during this procedure to produce a conventional, straightedge finish, then refloat the slab immediately to a uniform texture.
4. Type “D” - Troweled: Following completion of a Type “C” finish and sufficient hardening of the concrete to prevent excess fine material from working to the surface, the surface shall be compacted and smoothed with a power trowel. Following the power trowel, hand trowel to provide a smooth, dense surface, free from defects, trowel marks, and blemishes. For surfaces exposed to wear as indicated in the Contract Documents, continue hand troweling until a ringing sound is produced as the floor is troweled.
5. Type “E” - Broom or Belt: This finish shall provide the surface with a transverse scored texture by drawing a broom or burlap belt across the surface immediately after completion of a Type “C” finish.
6. Type “F” - Liquid Hardened Finish: Liquid hardened finish shall be provided by application of a liquid floor hardener. Floors to receive this finish shall have previously received a Type “D” finish. Liquid hardener shall be applied between 30 to 60 days after concrete placement. Surface to be treated shall be dry, clean and free of all loose dust, dirt, oil, wax, sealers and curing compounds. Application procedure shall be in accordance with manufacturer's instructions and shall consist of a three-coat treatment.

7. Type “G” - Dry Shake Hardened Finish: Aggregate hardened finish shall be provided by applying an aggregate floor hardener concurrently with the application of a Type “D” finish. Application procedure shall be in accordance with manufacturer's instructions.
8. Type “H” - Non-Slip Finish: This finish shall be provided by applying a non-slip shake-on aggregate concurrently with the application of a Type “D” finish. Application procedure shall be in accordance with manufacturer's instructions.

3.3 SEALING OF CONCRETE

A. After installation of all equipment and piping, and after completion of other related construction activities, all floor slabs which are to remain unpainted and not intended to be immersed, and all equipment pads, shall be sealed with a floor sealer unless the slab has had liquid hardener applied or stated otherwise. Remove all dirt, droppage, oil, grease, asphalt or other foreign matter with caustics and detergents as required prior to application. Sealer shall be applied in accordance with the manufacturer's recommendations.

3.4 FINISHES ON EQUIPMENT PADS

A. Formed surfaces of equipment pads shall receive a Type IVC finish.

B. Top surfaces of equipment pads, except those surfaces subsequently required to receive non-shrink grout and support equipment bases, shall receive a Type "D" finish, unless otherwise noted. Surfaces which will later receive non-shrink grout shall, before the concrete takes its final set, be made rough by removing the sand and cement that accumulates on the top to the extent that the aggregate will be exposed with irregular indentations in the surface up to 1/2 inch deep.

3.5 CONCRETE FINISH SCHEDULE

A. The Type of finish to be used shall be as indicated or scheduled on the Contract Drawings. Where the type of finish is not shown or scheduled, the finish shall be as indicated below:

Item	Finish Type
All unexposed concrete surfaces	I
All exposed concrete surfaces: including utility and process areas unless otherwise noted.	IVB
Interior walls of tanks	IVB
Surfaces to be painted	III
Architectural finish	V, VI, VII, or VIII as indicated in the contract documents
Surfaces to receive bonded cementitious mixtures	B
Drives, interior stairs, surfaces to receive waterproofing, roofing insulation, or terrazzo,	C
Floors for walking surfaces in manufacturing,	D

© 2026 CDM Smith
All Rights Reserved

Item	Finish Type
storage, and warehousing areas, floors to receive coverings, floors of tanks, and bottoms of channels	
Sidewalks	E
Garage and storage area floors	F or G
Exterior stairs, platforms, landings and ramps and interior ramps	E or H

SECTION 033900 - CONCRETE CURING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Concrete curing and protection during cold weather conditions.
2. Concrete curing and protection during hot weather conditions.
3. Wet curing and protection for all slabs and walls during normal weather conditions.

B. Related Sections:

1. Section 031113 “Structural Cast-in-Place Concrete Forming”
2. Section 033100 “Structural Concrete”
3. Section 031500 “Concrete Accessories”
4. Section 033500 “Concrete Finishing”

1.2 REFERENCES

A. General Requirements:

1. Except as modified by governing codes and by this Specification, comply with the applicable provisions and recommendations of latest editions of the following.
2. Where the language in any of the documents referred to herein is in the form of a recommendation or suggestion, such recommendations or suggestions shall be deemed to be mandatory under this Contract unless otherwise directed by the Engineer.
3. Conflicts: Conform to requirements of cited standard unless specified otherwise. In case of apparent conflict between standards, or between standards and the specifications herein, the more stringent shall apply unless otherwise directed by the Engineer.

B. American Concrete Institute:

1. ACI 301 – Specifications for Structural Concrete.
2. ACI 302 – Guide for Concrete Floor and Slab Construction
3. ACI 305R – Hot Weather Concreting
4. ACI 306R – Cold Weather Concreting
5. ACI-308.1 – Standard Specification for Curing Concrete
6. ACI-308R – Guide to Curing Concrete
7. ACI 318 – Building Code Requirements for Structural Concrete.
8. ACI 350.4R-04 – Design Considerations for Environmental Engineering Concrete
9. ACI 350.4R-04 – Design Considerations for Environmental Engineering Concrete
10. ACI 350-06 – Code Requirements for Environmental Engineering Concrete Structures

C. ASTM International:

1. ASTM C171 – Standard Specification for Sheet Materials for Curing Concrete.

2. ASTM C309 – Standard Specification for Liquid Membrane-Forming Compounds for Curing Concrete

1.3 SUBMITTALS

A. Section 013300 “Submittal Procedures”: Requirements for submittals.

B. Manufacturer’s specifications and other data required to demonstrate compliance with the specific requirements.

C. Manufacturer’s recommended instructions for:

1. Curing compound application.

D. Material Safety Data Sheets.

E. Test results from independent testing laboratories showing compliance with these specifications. Sworn affidavits or statements from suppliers are not acceptable.

F. Furnish manufacturer's certification or test results identifying physical characteristics.

G. Proposed curing methods and procedures.

1.4 QUALITY ASSURANCE

A. Perform Work in accordance with ACI 301, ACI 302, ACI 308.1, ACI 308R, ACI 318 and ACI 347.

B. Quality Control Data

1. Curing Compound:

a. Manufacturer’s Certification of Compliance, to include statement that product meets ASTM C 309.
b. Permeability requirement.
c. Coverage.

2. Curing method, procedures and method of application to be used shall be in compliance with the requirements of this Specification.

1.5 QUALIFICATIONS

A. Products used in the work of this section shall be produced by manufacturer’s who are regularly engaged in the manufacturer and/or supply of similar items for at least five (5) years and which have a history of successful production, acceptable to the Engineer.

© 2026 CDM Smith
All Rights Reserved

1.6 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Section 016000 “Product Requirements”: Requirements for transporting, handling, storing, and protecting products.

B. Delivery:

1. Deliver materials to site in manufacturer’s original, unopened containers and packaging.
2. Packaging shall be provided, with labels clearly identifying product name and manufacturer.

C. Storage:

1. Store materials in a clean, dry area in accordance with manufacturer’s instructions
2. Keep containers sealed until ready for use.

D. Handling:

1. Protect materials during handling and application to prevent damage or contamination.

PART 2 - PRODUCTS

2.1 CURING AND SEALING COMPOUNDS

A. Characteristics:

1. Curing compounds shall be used only during cold weather conditions.
2. Curing compounds shall be dissipating, VOC-compliant, water-based, liquid membrane-forming, including a fugitive dye.
3. Compounds shall conform to ASTM C309, Type 1.
4. Compounds shall have a minimum thirty (30) percent solids content
5. Maximum moisture loss shall be 0.03 grams per square centimeter when applied at a coverage rate of 300 square feet per gallon

B. Acceptable Manufacturers

1. SYMONS Corporation Resi-Chem Clear Cure lD,
2. Tamms Industries Horncure WB 300,
3. Or Approved Equal.

PART 3 - EXECUTION

A. PREPARATION All freshly placed concrete shall be protected from adverse weather elements and from defacement. As soon as the concrete has been placed and horizontal top surfaces have received their required finish, provision shall be made for providing sufficient water for hydration and preventing loss of moisture from the concrete for at least a seven-day period.

B. The requirements of hot and cold weather concreting being taken into account.

3.2 HOT WEATHER CURING AND PROTECTION

A. The Contractor shall conform to ACI 305R when concreting during hot weather except as modified below.

B. Definition of Hot Weather - When air temperatures exceed 85 degrees F, or when extremely dry conditions exist even at moderate temperatures, particularly if accompanied by high winds, the Contractor and his concrete supplier shall exercise precautionary measures in preparing, delivering, placing, finishing, curing, and protecting the concrete.

C. Curing and protection of the concrete shall begin immediately after completion of the finishing operation.

D. Wet curing shall be used for all slab and wall concrete.

E. Formwork may be left in place during the entire seven-day curing period, provided that the. forms remain tight and soaker hoses are placed on top of the exposed concrete surfaces. If the formwork is either loosened or removed prior to the end of the seven-day curing period, the concrete must be continuously wetted down and covered with white polyethylene.

3.3 COLD WEATHER CURING AND PROTECTION

A. The Contractor shall conform to ACI 306R when concreting during cold weather except as modified below.

B. Definition of Cold Weather - A period when for more than three consecutive days the mean daily temperature drops below 40 degrees F. When temperatures above 50 degrees F occur during more than half of any 24-hour period, the concrete shall no longer be regarded as cold weather concrete.

C. The methods of protecting the concrete shall be such as will prevent drying. Labor, equipment, and materials necessary for winter protection and heating shall be on the site in sufficient quantity before the work begins.

D. Definition of protection period. The length and intensity of the protection period for each type of structural member shall be as determined in the table below.

1. Cold Weather Concrete Protection Period

Type of Member	Service Category	Temperature Range	Type I or II Cement (Days)	Type III Cement (Days)
Fill Concrete	2	50°F - 70°F	3	2
Slab on Grade	3	50°F - 70°F	6	4
Slab on Deck	3	50°F - 70°F	6	4
Columns	3	50°F - 70°F	6	4
Walls	3	50°F - 70°F	6	4
Walls (note 1.)	4 (note 2.)	50°F - 70°F	21 (note 4.)	14 (note 4.)
Beams	4 (note 2.)	50°F - 70°F	21 (note 4.)	14 (note 4.)
Slabs(other)(note 4.)	4 (note 2.)	50°F - 70°F	21 (note 4.)	14 (note 4.)

(1) Refers to walls that are to be service loaded (water tested or backfilled) soon after concrete placement.

(2) Formwork shall remain in place until the end of the protection period for Service Category 4 structural members.
(3) All other structural slabs supported by temporary formwork.
(4) Protection period could be shortened based on concrete achieving at least 75 percent of the required design strength as determined by testing of field-cured cylinder.

E. Suitable means shall be provided for maintaining the deposited concrete within the temperature range as defined above. Heating may be provided by using a vented heating unit, insulated blankets, or a combination of both.

1. If blankets are to be used, they should be applied to the concrete as specified in ACI 306R, Chapter 7, Charts 7.3.1-7.3.4. Special attention should be given to corners and edges of concrete members which could require about three times the thickness of insulation to maintain concrete temperature, as might be required for interior spaces. Also note, that excessive amounts of blankets could raise the temperature of the concrete too high which could cause an increase of thermal shrinkage and cause cracking due to thermal shock.
2. Where heated enclosures are provided, vent flue gases from combustion heating units to the outside of the enclosure. Place and direct heaters to avoid areas of overheating or drying of the concrete surface. Exposed concrete surfaces must be protected and cured. Where continuous moist curing is not practical, tightly adhered polyethylene or curing compounds shall be used.

F. Interruptions to the Curing and Protection Period

1. Measures shall be taken to assure the concrete temperatures will not drop below 32 degrees F.
2. Interrupted time must be made up in accordance with ACI 306R-88, Section 7.7 on a degree-hour basis.

G. After the required protection period listed in the above table, concrete shall have curing coverings removed and be allowed to gradually dry out prior to lowering temperatures to freezing as described in the table below:

Maximum Concrete Temperature Drops at End of Protection Period

Least Dimension of Section, Inches	Minimum Gradual Decrease in Surface Temperature During any 24 hour Period of Protection, degrees F
Less than 12	50
12 to less than 36	40
36 to 72	30
Greater than 72	20

H. Complete removal of curing compounds will be required prior to application of coatings or other toppings. A light abrasive blast or other mechanical means will be required.

I. Monitoring of Concrete Temperatures

1. In order to better follow the Contractor's cold weather procedures, various thermometers (supplied and maintained by the Contractor) shall be placed along concrete members that are undergoing cold weather protection, particularly at corners and edges of concrete members where it is more difficult to maintain the required temperature.

2. Contractor monitoring of these temperatures must be done throughout the day so that the Contractor can make timely adjustments to maintain an even temperature.
3. Access to these thermometers must be made available for the inspector to perform spot-checking of the Contractor's effectiveness to achieve proper cold weather protection.
4. The Contractor shall provide the proper type and sufficient quantity of thermometers to determine the temperature of the concrete.

3.4 NORMAL WEATHER CURING AND PROTECTION

A. Definition of Normal Conditions - All conditions not defined as either hot or cold weather.

B. Slabs, Curbs, Sidewalks, Toppings, and other Flatwork:

1. After finishing and immediately after the concrete surface has hardened enough to prevent dilution of the cement paste, provide continuous moist curing for at least the first 24 hours.
2. After the initial 24-hour period, cover for an additional six days with waterproof paper or white polyethylene.
3. Wet burlap coverings may be used but must be kept wet by continuous sprinkling with water. Lap the cover material at least 12 inches, covering the top and sides of the concrete. The covering shall be weighted down to prevent it from blowing off.
4. If cover material is not used, the concrete surfaces shall be kept continuously wet by spraying or other approved methods.

C. Walls and Columns

1. Immediately after the concrete surface has hardened enough to prevent dilution of the cement paste, provide continuous moisture at the top of the formed surface for at least the first 24 hours.
2. If forms are left in place for the 7-day cure, the forms shall be loosened only after 24 hours to allow water to soak the sides of the concrete continuously over the next remaining 6 days.
3. If forms are removed in less than seven days, all vertical surfaces shall be:

    a. Sprayed with water and tightly sealed with white polyethylene or
    b. Covered with burlap combined with a continuous water spray.
    c. If forms are removed, either a. or b. shall be followed for the remainder of the seven-day period.

10. ASTM C939 – Test Method for Flow of Grout for Preplaced-Aggregate Concrete (Flow cone Method).
11. ASTM C1107 – Packaged Dry, Hydraulic Cement Grout (Non-Shrink)

C. U. S. Army Corps of Engineers Concrete Research Division (CRD):

1. CRD C621 - Non-Shrink Grout.

1.3 SUBMITTALS

A. Section 013300 “Submittal Procedures”: Requirements for submittals.

B. Provide a complete materials list of items to be furnished under this Section.

C. For each type grout used submit the following:

1. Sufficient data to demonstrate compliance with the specified requirements, including product data, material certifications and technical data sheets.
2. Manufacturer’s instructions for mixing, handling, surface preparation, placement and appropriate uses.
3. Material Safety Data Sheets (MSDS).
4. Certified test results verifying the compressive strength, shrinkage and expansion requirements specified herein. Certifications or affidavits will not be acceptable.

1.4 QUALITY ASSURANCE

A. Field Tests

1. Compression test specimens will be taken during construction from the first placement of each type of grout and at intervals thereafter as selected by the Engineer to insure continued compliance with these Specifications.

    a. Compression tests and fabrication of specimens for cement grout and non-shrink grout will be performed as specified in ASTM C109 at intervals during construction as selected by the Engineer. A set of three specimens will be made for testing at seven days, 28 days and any additional time period as appropriate.
    b. Compression tests and fabrication of specimens for epoxy grout will be performed as specified in ASTM C579, Method B, at intervals during construction as selected by the Engineer. A set of three specimens will be made for testing at seven days and any other time period as appropriate.

B. Grout which has already been placed and which fails to meet the requirements of these Specifications, is subject to removal and replacement by the Contractor at no additional cost to the Owner.

C. The Contractor shall provide the services of a qualified manufacturer's technical representative who shall instruct the Contractor's personnel in the mixing, proper use and application of the non-shrink grout and epoxy grout.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Section 016000 “Product Requirements”: Requirements for transporting, handling, storing, and protecting products.

B. Deliver grout in manufacturer's unopened containers with proper labels intact.

C. Store grout in a dry shelter, protect from moisture.

PART 2 - PRODUCTS

2.1 PORTLAND CEMENT GROUT

A. Portland cement grout shall be composed of Portland cement, sand and water. The sand to be used shall be selected to suit the spacing for placement. Where sand is not usable, the grout shall be composed of cement and water only.

B. The Alkali-Silica Reaction Potential of aggregates used in Portland cement grout shall be evaluated in conformance with the requirements of Specification Section 033100 Subsection 2.2 – Aggregate Evaluation for Alkali-Silica Reaction Potential. When aggregates are determined to be potentially reactive with alkalies, the aggregate shall not be used.

C. Portland Cement: ASTM C150, Type II.

D. Water:

1. Potable; containing no impurities, suspended particles, algae or dissolved natural salts in quantities capable of causing:

    a. Corrosion of steel.
    b. Volume change increasing shrinkage cracking.
    c. Efflorescence.
    d. Excess air entraining.

E. Fine Aggregate:

1. Washed natural sand conforming to the requirements of ASTM C33
2. Free from injurious amounts of organic impurities as determined by ASTM C40.

F. Mix Design

1. Gradation of sand and mix proportioning shall be in accordance with the following table for grouts using natural sands and having a minimum 28-day compressive strength of 4,000 psi. For higher strength grouts or those using manufactured sands, strength shall be established by trial mixes.

a. Gradation for Natural Sand:

Sieve Size	Spaces less than one (1) inch	Spaces one (1) inch or more
Passing 3/8		100
Passing 4	100	95-100
Passing 8	95-100	80-100
Passing 16	70-100	50-85
Passing 30	40-75	25-60
Passing 50	10-35	10-30
Passing 100	2-15	2-10
Passing 200	--	--

b. Mix Proportioning:

By Weight	Non-Air Entrained Grouts (Maximum 4 Percent Entrapped Air)		Air Entrained Grouts (Air 8 Percent to 10 Percent)	
	Spaces less THAN ONE (1) inch	SPACES ONE (1) inch or more	Spaces less than one (1) inch	Spaces one (1) inch or more
Cement (bags)	10.8	10.5	11.3	11.0
Sand (lb)	2150	2240	1930	1990
Maximum water (gals)	59.5	57.8	57.5	55.8
Maximum water (gals per bag)	5.5	5.5	5.1	5.1
By Volume	Non-Air Entrained Grouts (Maximum 4 Percent Entrapped Air)		Air Entrained Grouts (Air 8 Percent to 10 Percent)	
	Spaces less THAN ONE (1) inch	SPACES ONE (1) inch or more	Spaces less than one (1) inch	Spaces one (1) inch or more
Cement	1	1	1	1
Sand (dry rodded)	1.85	2.10	1.6	1.7
Sand (damp & loose)	2.30	2.35	2.0	2.1

By Weight	Non-Air Entrained Grouts (Maximum 4 Percent Entrapped Air)		Air Entrained Grouts (Air 8 Percent to 10 Percent)	
	Spaces less THAN ONE (1) inch	SPACES ONE (1) inch or more	Spaces less than one (1) inch	Spaces one (1) inch or more
Maximum water (gals per bag)	5.5	5.5	5.1	5.1

2. Water shall be kept to a minimum, the amounts noted in the preceding table are the maximum for grout. Proportioning by volume shall be limited to small quantities mixed at the job site.
3. White Portland cement shall be mixed with the Portland cement as required to match the color of adjacent concrete
4. Do not use ferrous aggregate or staining ingredients in grout mixes.

2.2 RAPID CURING EPOXY GROUT

A. High strength, three component epoxy grout formulated with thermosetting resins and inert fillers. Rapid-curing, high adhesion, and resistant to ordinary chemicals, acids and alkalies.

B. The Alkali-Silica Reaction Potential of aggregates used in epoxy grout shall be evaluated in conformance with the requirements of Specification Section 033100 Subsection 2.2 – Aggregate Evaluation for Alkali-Silica Reaction Potential. When aggregates are determined to be potentially reactive with alkalies, the aggregate shall not be used.

C. Epoxy grout shall conform to the following properties:

Property	Test	Result
Compressive Strength	ASTM C579	12,000 psi at 7 days
Tensile Strength	ASTM C307	2,000 psi minimum
Coefficient of Expansion	ASTM C531	30x10-6 in per degree F
Shrinkage	ASTM C827	None

D. Acceptable Products and Manufacturers:

1. Sikadur 42 Grout-Pak - Sika Chemical Co.
2. E^3-HP – Euclid Chemical Co.
3. Masterflow MP – Master Builders
4. Or Approved Equal

2.3 NON-SHRINK GROUT

A. General Requirements:

1. Non-shrink grout shall be non-metallic, non-shrink, non-gas forming, pre-mixed and ready-for-use requiring only the addition of water at the job site.
2. Grouts depending on oxidation to limit shrinkage shall not be used.
3. Grout shall contain no metals nor rust of corrosion promoting agents, or gypsum
4. The addition of set control agents or water reducers shall not be permitted
5. The grout manufacturer shall furnish test data from an independent laboratory indicating that the grout when placed at a fluid consistency shall achieve 95% bearing under a 4' x 4' base plate.
6. When high fluidity and/or increased placing time is required use high flow grout. The highflow grout manufacturer shall furnish test data from an independent laboratory indicating that the grout when placed at a fluid consistency shall achieve 95% bearing under a 18" x 36" base plate.

B. Non-shrink grout shall conform to the following properties

Property	Test	Time	Result
Setting Time	ASTM C191	Initial	45 minutes (Min.)
		Final	3 hours (Approx.)
Shrinkage			
- Below Placement Volume	ASTM C827		0%
- Drying	CRD 588-76		0%
Expansion	CRD 588-76		0.4% (Max.)
Compressive Strength (Flowable Consistency)	CRD-C621	1 day	3,000 psi
		7 days	6,000 psi
		28 days	9,000 psi (Min.)
Pull-Out Strength	#5 bar grouted 6” deep in a 7/8” dia. Hole in saturated surface dried concrete		10,000 lb

C. Acceptable Products and Manufacturers:

1. Standard Non-Shrink Grout

   a. NS Grout – Euclid Chemical Co.
   b. Masterflow 713 Plus – Master Builders
   c. Sikagrout 212 – Sika Chemical Co.
   d. Or Approved Equal

2. High Flow Grout

   a. Hi-Flow Grout – Euclid Chemical co.
   b. Masterflow 928 – Master Builders
   c. Or Approved Equal

2.4 DRY PACK

A. Dry pack (to be packed or tamped in place) shall be made at no slump consistency

B. When mixing the batch, only enough water shall be added to the dry materials to produce a rather stiff mixture, then additions of water may be made in small increments until the desired consistency is obtained.

C. Dry pack grout shall conform to the following properties:

Property	Test	Time	Result
Expansion	CRD 588-76		0.4% (Max.)
Compressive Strength	CRD-C621	1 day	3,000 psi
		7 days	6,000 psi
		28 days	9,000 psi (Min.)

D. Acceptable Products and Manufacturers:

1. Dry Pack Grout – Euclid Chemical Co.
2. Sikagrout 212 – Sika Chemical Co.
3. L&M Dry Pack Grout – L&M Construction Chemicals
4. Or Approved Equal

2.5 FORMWORK

A. Refer to Section 031113 for formwork requirements.

2.6 CURING

A. Curing for cement grout shall be as specified in Section 033900.

B. Prevent rapid loss of water from grout in accordance with manufacturer’s written instructions.

PART 3 - EXECUTION

3.1 GROUT USES

A. The different types of grout shall be used for the applications stated below unless noted otherwise in the Specifications or on the Contract Drawings. Where grout is called for in the Specifications or on the Contract Drawings which does not fall under any of the applications stated below, non-shrink grout shall be used.

1. Portland cement grout shall be used for grout toppings and for patching fresh concrete
2. Non-shrink grout shall be used for grouting beneath base plates of equipment and structural metal framing.

3.2 EXAMINATION

A. Verify areas to receive grout.

3.3 PREPARATION

A. Prepare all contact surfaces in accordance with manufacturer's recommendations.

B. Remove defective concrete, laitance, dirt, oil, grease and other foreign material from concrete surfaces by brushing, hammering, chipping or other similar means until sound, clean concrete surface is achieved.

C. Rough concrete lightly, but not enough to interfere with placement of grout.

D. Remove foreign materials from metal surfaces in contact with grout.

E. Align, level and maintain final positioning of components to be grouted.

F. Saturate concrete surfaces with clean water 12 to 24 hours prior to grouting. Before placing grout, remove all excess and free standing water.

3.4 INSTALLATION - FORMWORK

A. Construct leakproof forms anchored and shored to withstand grout pressures.

B. Install formwork with clearances to permit proper placement of grout.

3.5 MIXING

A. General Requirements

1. Measurements for grout shall be made accurately by weight or by volume using containers. All measurements shall be made in a manner satisfactory to the Engineer. Prepackaged grouts shall have ingredients measured by means recommended by the manufacturer.
2. The amount of water used should be the minimum quantity to produce the grout of the desired consistency.
3. Mix grout components in proximity to work area and transport mixture quickly and in manner not permitting segregation of materials

B. Portland Cement Grout:

1. Prepare grout with water to obtain consistency to permit placing and packing.
2. Mix water and grout in two steps; pre-mix using approximately 2/3 of water; after partial mixing, add remaining water to bring mix to desired placement consistency.
3. Mix only quantities of grout capable of being placed within 30 minutes after mixing.
4. Do not add additional water after grout has been mixed.

C. Rapid Curing Epoxy Grout

1. Mix and prepare rapid curing epoxy grout in accordance with manufacturer's instructions.

D. Non-Shrink Grout

1. Mix and prepare non-shrink grout in accordance with manufacturer's instructions.

3.6 PLACING GROUT

A. All work shall be done in strict accordance with manufacturer’s recommendations, including special procedures for hot and cold weather grouting.

B. At the request of the Engineer, the manufacturer’s representative shall be called to the job site for consultation regarding detailed use of the grout.

C. The consistency of grouts shall be that necessary to completely fill the space to be grouted for the particular application. Dry pack consistency shall be such that the grout is plastic and moldable but will not flow.

D. Grout shall be placed quickly and continuously, shall completely fill the space to be grouted, be thoroughly compacted and free of air pockets. The grout may be poured in place, pressure grouted by gravity, or pumped.

E. For grouting beneath base plates, grout shall be poured from one side only and shall flow across to the open side to avoid air-entrapment.

F. The use of pneumatic pressure or dry-packed grouting requires approval of the Engineer.

G. Do not vibrate placed grout mixture, or permit placement when area is being vibrated by nearby equipment.

H. Thoroughly compact final installation and eliminate air pockets.

I. Do not remove forms until after the grout has taken an initial set and will not slump. After removal, cut off excess grout and finish to a smooth surface.

J. Do not remove leveling shims for at least 48 hours after grout has been placed.

3.7 CURING

A. Immediately after placement, protect grout from premature drying, excessively hot or cold temperatures, and mechanical injury.

B. After grout has attained its initial set, keep damp for minimum of 3 days.

SECTION 038100 - CONCRETE CUTTING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Wall Sawing of Concrete
2. Flat Sawing or Concrete
3. Hand Sawing of Concrete

1.2 REFERENCES

A. General Requirements:

1. Except as modified by governing codes and by this Specification, comply with the applicable provisions and recommendations of latest editions of the following.
2. Where the language in any of the documents referred to herein is in the form of a recommendation or suggestion, such recommendations or suggestions shall be deemed to be mandatory under this Contract unless otherwise directed by the Engineer.
3. Conflicts: Conform to requirements of cited standard unless specified otherwise. In case of apparent conflict between standards, or between standards and the specifications herein, the more stringent shall apply unless otherwise directed by the Engineer.

B. American National Standards Institute (ANSI)

1. ANSI B7.1 – The Use, Care, and Protection of Abrasive Wheels
2. ANSI B175.4 – American National Standard for Outdoor Power Equipment - Portable, Handheld, Internal-Combustion-Engine-Driven Cut-Off Machines - Safety Requirements

C. Concrete Sawing & Drilling Association, Inc. (CSDA)

1. CSDA BP 001 – Slurry
2. CSDA BP 003 – Hazard Identification and Debris Removal
3. CSDA CS 109 – Chain Sawing
4. CSDA DB 112 – Diamond Blade
5. CSDA F 102 – Flat Sawing
6. CSDA HS 108 – Hand Sawing
7. CSDA W 104 – Track Mounted Wall Sawing
8. CSDA WS 106 – Wire Sawing.

D. International Association of Concrete Drillers and Sawyers (IASDS)

1. IASDS Standard 25007/1 – Basic Parameters for concrete Drilling and Sawing Equipment

E. Occupational Safety and Health Administration (OSHA)

F. All other applicable Federal, State and Municipal codes, rules and regulations

1.3 SUBMITTALS

A. Section 013300 “Submittal Procedures”: Requirements for submittals.

B. Product Data for Concrete Cutting Equipment including:

1. Manufacturer
2. Type of Unit (i.e. Wall Saw, Flat Saw, Hand Saw with Circular Blade or Chain)
3. Size of Saw including maximum cutting depth, horsepower and weight
4. Power Source (i.e. electric, combustion engine, hydraulic)

C. Cutting Procedures

D. Health and Safety Plan

E. Temporary bracing plans for wall and elevated slab removals prepared under the direction of and signed by a Professional Engineer registered in the State of New York.

1.4 QUALITY ASSURANCE

A. Throughout the process of the work of this Section, provide at least one person who shall be thoroughly familiar with the specified requirements, completely trained and experienced in the necessary skills and who shall be present at the site and direct the work performed under this Section.

B. In the performance of the work of this Section, use an adequate number of trained workmen experienced in the cutting of concrete.

1.5 COORDINATION

A. Coordinate the work of this Section with other sections of work and trades.

PART 2 - PRODUCTS

2.1 SAW CUTTING EQUIPMENT

A. Use diamond saw blades capable of making straight cuts.

B. Saws shall be equipped with cutting guides, blade guards, water cooling systems, dust controls, and cut depth control.

C. Where beveled saw cuts are required, use a cutting or grinding device attached to the saw blade, or a separate device following the saw.

2.2 SAW CUTTING TOLERANCES

A. Tolerances for the cutting of concrete walls and elevated slabs shall not exceed the following:

Parameter	Wall or Elevated Slab Thickness	
	< 12 in	12 – 24 in
Alignment accuracy	0.4 in from target line	0.4 in from target line
Angle accuracy	± 0.42 in/ft	± 0.85 in/ft
Directional accuracy in relation to specified dimension in longitudinal direction	± 0.12 in/ft	± 0.25 in/ft
Vertical	± 0.42 in/ft	± 1 in/ft
Horizontal	± 0.42 in/ft	± 1 in/ft
Surface rouging of cut surface	± 0.2 in	± 0.4 in
Cut width, deviation from specified dimension	± 10% from target value	± 10% from target value
Specified depth	± 0.4 in	± 0.6 in
* Tolerances are only valid for elevated slabs cuts if cuts are made from above.		

B. Tolerances for the cutting of concrete slabs on grade shall not exceed the following:

Parameter	Slab Thickness	
	< 4 in	4 – 24 in
Alignment accuracy	0.4 in from target line	0.4 in from target line
Angle accuracy	± 1 in/ft	± 1 in/ft
Directional accuracy in relation to specified dimension in longitudinal direction	± 0.18 in/ft	± 0.3 in/ft
Vertical	± 0.7 in/ft	± 1 in/ft

Parameter	Slab Thickness	
	< 4 in	4 – 24 in
Horizontal	-	-
Surface rouging of cut surface	± 0.2 in	± 0.4 in
Cut width, deviation from specified dimension	± 10% from target value	± 10% from target value
Specified depth	± 0.4 in	± 0.6 in

PART 3 - EXECUTION

3.1 SAFETY

A. Silica Dust

1. Saw cutting concrete produces silica dust.
2. The Contractor shall provide protection to all workers from exposure to hazardous levels of silica in accordance with 29 CFR 1926.55.
3. The Contractor shall identify and address silica health and safety in the written Project Health and Safety Plan.
4. The Contractor hall identify and implement worker training, engineering controls, and workplace practice controls to reduce worker exposure to silica prior to instituting a program based on respirators or protective clothing to protect workers.
5. Engineering controls shall include, but not be limited to dust suppression through the application of water or other methods, use of general or local ventilation, and containment/isolation.
6. Workplace practice controls shall include proper use and implementation of supervision, task procedures, employee training, signing, protective clothing, housekeeping, and personal hygiene.
7. If engineering controls and work practice controls cannot reduce exposures below the personal exposure limit, the contractor shall institute a respirator program.

B. Combustion Engine Driven Equipment

1. When sawing interior walls or slabs with internal combustion powered saws, provide adequate ventilation, air circulation that meets OSHA standards.

C. Work Zone Access Control

1. Define a safe work zone prior to the start of cutting operations
2. Provide barricades, cones, caution tape or other devices as appropriate to keep unauthorized personnel out of the work zone.

D. Cutting Operations

1. Do not cut with personnel directly in line with the blade or chain.
2. Plan the cutting sequence of wall cuts so that the bottom horizontal cut is not the last one to be completed.
3. Wall and elevated slab concrete sections to be removed shall be adequately braced to hold them in place prior to the start of cutting operations.
4. Areas below elevated slabs being cut shall be barricaded to keep personnel from entering the area.
5. Do not operate any cutting equipment without manufacturer supplied guards, covers, and other safeguards.
6. Do not operate any cutting equipment with damaged blades.

3.2 PROTECTION

A. The Contractor shall protect the work of other trades, Contractors and Subcontractors from damage during concrete cutting and removal operations.

B. The Contractor shall make provision for the protection of all existing and new structures, utilities, piping, equipment, and other objects that might be damaged in the course of concrete cutting and removal operations.

C. When cutting and removing concrete, every precaution shall be taken to ensure the continuous safe operation of the wastewater treatment facility. No interruption will be permitted and only such changes in the normal operating procedure as are approved by the Engineer will be permitted.

D. Care shall be taken to protect all utility lines, piping and conduit that are in the concrete cutting and removal area. The Contractor shall inform the Engineer of their location and notify the Engineer of any breaks immediately. In the event of break or other damage caused by concrete cutting and removal operations, the Contractor shall responsible to either immediately repair the lines at his own cost, or arrange for the appropriate utiity to make such repair at the Contractor’s cost.

3.3 EXAMINATION

A. Examine areas where concrete is to be cut and removed:

1. Determine scaffolding and work platform requirements
2. Determine and investigate hazards in and in close proximity to the area.
3. Identify and locate buried, embedded and surface mounted piping, conduit, utilities ductwork, and other items that may be damages or interfere with concrete cutting and removal operations.
4. Locate embedded items.
5. Locate cold joints.
6. Review reinforcing steel patterns and determine size, location and orientation of rebar; locate rebar where possible.
7. Determine method of slurry management and disposal.
8. Verify cutting operations will not impact structural integrity of the structure or slab.

9. Determine methods for protection of area below elevated slabs into which openings are to be cut.
10. Determine method for supporting the concrete to be removed during cutting operations.
11. Determine methods for lifting and removing concrete sections.
12. Determine the path for removing concrete sections for the work area.
13. Determine the weight limitations along the proposed removal path, adjust concrete section size as required.
14. Determine work zone safety requirements.

B. PREPARATION

1. Verify area to be cut
2. Verify cut depth
3. Layout cut lines.
4. If proposed cuts will cut through embedded objects, split rebar or lie adjacent to a cold joint; review the proposed cut location with the Engineer. Adjust cut location as permitted by the Engineer.
5. Verify all buried, embedded and surface mounted piping, conduit, utilities ductwork, and other items that may be damages or interfere with concrete cutting and removal operations have been removed or decommissioned.
6. Install required shoring and bracing.
7. Erect required work platforms and scaffolding.
8. Set-up slurry management.
9. Implements work zone safety requirements
10. Inspect concrete saw equipment, do not operate any cutting equipment without manufacturer supplied guards, covers, and other safeguards. Do not operate any cutting equipment with damaged blades.

C. CUTTING

1. Observe all safety requirements.
2. If chipping or spalling of concrete at the sawcut occurs, the Contractor shall stop the work and adjust cutting operations as required. If the chipping or spalling occurs in new concrete being cut, the Contractor shall stop the work until the concrete has cured sufficiently to be able to withstand damage from cutting operations
3. Unless otherwise noted, sawcuts shall be made normal to the concrete surface.
4. The Contractor shall be responsible for the collection and disposal of concrete slurry.
5. The Contractor shall repair any chips or spalls in the concrete surface.

SECTION 038200 - CONCRETE BORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Smooth Bore Drilling
2. Rotary Impact Drilling
3. Core Drilling

1.2 REFERENCES

A. General Requirements:

1. Except as modified by governing codes and by this Specification, comply with the applicable provisions and recommendations of latest editions of the following.
2. Where the language in any of the documents referred to herein is in the form of a recommendation or suggestion, such recommendations or suggestions shall be deemed to be mandatory under this Contract unless otherwise directed by the Engineer.
3. Conflicts: Conform to requirements of cited standard unless specified otherwise. In case of apparent conflict between standards, or between standards and the specifications herein, the more stringent shall apply unless otherwise directed by the Engineer.

B. American National Standards Institute (ANSI)

1. ANSI B7.1 – The Use, Care, and Protection of Abrasive Wheels
2. ANSI B175.4 – American National Standard for Outdoor Power Equipment - Portable, Handheld, Internal-Combustion-Engine-Driven Cut-Off Machines - Safety Requirements

C. Concrete Sawing & Drilling Association, Inc. (CSDA)

1. CSDA BP 001 – Slurry
2. CSDA BP 003 – Hazard Identification and Debris Removal
3. CSDA C 101 – Core Drilling

D. International Association of Concrete Drillers and Sawyers (IASDS)

1. IASDS Standard 25007/1 – Basic Parameters for Concrete Drilling and Sawing Equipment

E. Occupational Safety and Health Administration (OSHA)

F. All other applicable Federal, State and Municipal codes, rules and regulations

© 2026 CDM Smith

1.3 SUBMITTALS

A. Section 013300 “Submittal Procedures”: Requirements for submittals.

B. Product Data for Concrete Cutting Equipment including:

1. Manufacturer
2. Type of Unit
3. Size of Drill or Boring Machine including maximum drilling/boring diameter, maximum depth, horsepower and weight
4. Power Source (i.e. electric, combustion engine, hydraulic)

C. Drilling/Boring Procedures

D. Health and Safety Plan

E. Method for catching elevated slab cores. Where temporary bracing is proposed, bracing plans/procedures shall be prepared under the direction of, and signed by a Professional Engineer registered in the State of New York.

1.4 QUALITY ASSURANCE

A. Throughout the process of the work of this Section, provide at least one person who shall be thoroughly familiar with the specified requirements, completely trained and experienced in the necessary skills and who shall be present at the site and direct the work performed under this Section.

B. In the performance of the work of this Section, use an adequate number of trained workmen experienced in the cutting of concrete.

1.5 COORDINATION

A. Coordinate the work of this Section with other sections of work and trades.

PART 2 - PRODUCTS

2.1 DRILLING EQUIPMENT

A. Smooth Bore Drilling Equipment

1. Smooth bore drilling equipment shall be utilized for drilling small diameter holes in concrete, typically < 2-inches in diameter.
2. Use diamond or carbide tipped drill bits to provide a smooth bore hole.
3. Drill shall not require lubricant for drilling operations. Water is not considered a lubricant.

4. Drills shall be equipped with guides and guards.

B. Rotary Impact Drill

1. Rotary impact drills shall be used to provide a "rough" walled hole in concrete as required for doweling rebar into existing concrete and bonded anchor systems. Rotary impact drills shall not be used for work closer than 6 inches from a concrete edge. For work closer than 6 inch, core drill and subsequently roughen hole wall.
2. Rotary impact drills shall not require lubricant for drilling operations. Water is not considered a lubricant.
3. Drills shall be equipped with guides and guards.

C. Core Drilling Equipment

1. Core drilling equipment shall be utilized to provide large diameter smooth bore circular holes in concrete, typically from ½-inch to 60-inches in diameter.
2. Use diamond core drilling bits capable of making smooth, straight cored holes in concrete.
3. Core drillings machines shall not require lubricant for drilling operations. Water is not considered a lubricant.
4. Core drilling machines shall be equipped with guides, guards, and depth control.
5. Machines used for large diameter drilling shall be equipped with water cooling systems and dust control.

2.2 DRILLING TOLERANCES

A. Holes less than 12-inches in Diameter: Tolerances for the drilling of holes less than 12-inches in diameter in concrete walls and slabs shall not exceed the following:

Parameter	Hole Depth	
	< 40 in	≥ 40 in
Alignment accuracy	±0.2 in from target center plus 2.5% of hole diameter	
Angle accuracy	± 1 in/ft	
Directional accuracy in oblique drilling	± 0.7 in/ft	
Vertical	± 0.7 in/ft	
Horizontal	± 0.7 in/ft	
Surface rouging drilled hole (eveness)	± 0.2 in	± 0.6 in
Diameter deviation from specified dimension	± 0.12 in	± 0.6 in
Specified depth for pocket hole	± 0.4 in	± 0.6 in

B. Holes between 12-inches and 40-inches in Diameter: Tolerances for the drilling of holes between 12-inches and 40-inches in diameter in concrete walls and slabs shall not exceed the following:

Parameter	Hole Depth	
	< 40 in	≥ 40 in
Alignment accuracy	±0.2 in from target center plus 2.5% of hole diameter	
Angle accuracy	± 1 in/ft	
Directional accuracy in oblique drilling	± 0.7 in/ft	
Vertical	± 0.7 in/ft	
Horizontal	± 0.7 in/ft	
Surface rouging drilled hole (eveness)	± 0.4 in	± 0.8 in
Diameter deviation from specified dimension	± 0.4 in	± 0.8 in
Specified depth for pocket hole	± 0.4 in	± 0.8 in

PART 3 - EXECUTION

3.1 SAFETY

A. Silica Dust

1. Drilling/coring holes in concrete produces silica dust.
2. The Contractor shall provide protection to all workers from exposure to hazardous levels of silica in accordance with 29 CFR 1926.55.
3. The Contractor shall identify and address silica health and safety in the written Project Health and Safety Plan.
4. The Contractor hall identify and implement worker training, engineering controls, and workplace practice controls to reduce worker exposure to silica prior to instituting a program based on respirators or protective clothing to protect workers.
5. Engineering controls shall include, but not be limited to dust suppression through the application of water or other methods, use of general or local ventilation, and containment/isolation.
6. Workplace practice controls shall include proper use and implementation of supervision, task procedures, employee training, signing, protective clothing, housekeeping, and personal hygiene.
7. If engineering controls and work practice controls cannot reduce exposures below the personal exposure limit, the contractor shall institute a respirator program.

B. Combustion Engine Driven Equipment

1. When drilling/coring interior walls or slabs with internal combustion powered saws, provide adequate ventilation, air circulation that meets OSHA standards.

C. Work Zone Access Control

1. Define a safe work zone prior to the start of cutting operations
2. Provide barricades, cones, caution tape or other devices as appropriate to keep unauthorized personnel out of the work zone.

D. Drilling/Coring Operations

1. Drilling/coring equipment requiring water coolant shall not be operated without water.
2. Never permit drilling/coring equipment to operate unattended
3. Plan the cutting sequence of wall cuts so that the bottom horizontal cut is not the last one to be completed.
4. Provide a means to catch/retain cores from dropping though when coring elevated slabs.
5. Areas below elevated slabs being drilled/cored shall be barricaded to keep personnel from entering the area.
6. Do not operate any drilling/coring equipment without manufacturer supplied guards, covers, and other safeguards.
7. Do not operate any drilling/coring equipment with damaged birs/blades.

3.2 PROTECTION

A. The Contractor shall protect the work of other trades, Contractors and Subcontractors from damage during concrete drilling/coring operations.

B. The Contractor shall make provision for the protection of all existing and new structures, utilities, piping, equipment, and other objects that might be damaged in the course of concrete drilling/coring operations.

C. When drilling/coring concrete, every precaution shall be taken to ensure the continuous safe operation of the wastewater treatment facility. No interruption will be permitted and only such changes in the normal operating procedure as are approved by the Engineer will be permitted.

D. Care shall be taken to protect all utility lines, piping and conduit that are in the concrete drilling/coring area. The Contractor shall inform the Engineer of their location and notify the Engineer of any breaks immediately. In the event of break or other damage caused by concrete drilling/coring operations, the Contractor shall responsible to either immediately repair the lines at his own cost, or arrange for the appropriate utility to make such repair at the Contractor’s cost.

3.3 EXAMINATION

A. Examine areas where concrete is to be cut and removed:

1. Determine scaffolding and work platform requirements

2. Determine and investigate hazards in and in close proximity to the area.
3. Identify and locate buried, embedded and surface mounted piping, conduit, utilities ductwork, and other items that may be damages or interfere with concrete cutting and removal operations.
4. Locate embedded items.
5. Locate cold joints
6. Review reinforcing steel patterns and determine size, location and orientation of rebar; locate rebar where possible.
7. Determine method of slurry management and disposal.
8. Verify cutting operations will not impact structural integrity of the structure or slab.
9. Determine methods for protection of area below elevated slabs into which openings are to be cut.
10. Determine method for supporting the concrete to be removed during cutting operations.
11. Determine methods for lifting and removing concrete sections.
12. Determine the path for removing concrete sections for the work area.
13. Determine the weight limitations along the proposed removal path, adjust concrete section size as required.
14. Determine work zone safety requirements.

B. Preparation

1. Verify location to be drilled/cored.
2. Verify drill/core diameter and depth.
3. Layout hole.
4. If proposed hole will cut through embedded objects, split rebar or lie adjacent to a cold joint; review the proposed cut location with the Engineer. Adjust hole location as permitted by the Engineer.
5. Verify all buried, embedded and surface mounted piping, conduit, utilities ductwork, and other items that may be damages or interfere with concrete drilling/coring operations have been removed or decommissioned.
6. Install required means to catch or retain cores in elevated slabs
7. Erect required work platforms and scaffolding.
8. Set-up slurry management.
9. Implements work zone safety requirements.
10. Inspect concrete drilling/coring equipment, do not operate any equipment without manufacturer supplied guards, covers, and other safeguards. Do not operate any requiring cooling water without water, or with damaged bits or blades.

C. Drilling/Coring

1. Observe all safety requirements.
2. If chipping or spalling of concrete at the drilling/coring occurs, the Contractor shall stop the work and adjust drill/coring machine operations as required. If the chipping or spalling occurs in new concrete being cut, the Contractor shall stop the work until the concrete has cured sufficiently to be able to withstand damage from drilling/coring operations.
3. Unless otherwise noted, holes shall be made normal to the concrete surface.
4. The Contractor shall be responsible for the collection and disposal of cooling water/concrete slurry.

All Rights Reserved

5. The Contractor shall repair any chips or spalls in the concrete surface.
6. When reinforcing steel is encountered drilling a hole with a rotary impact drill, the reinforcing steel shall be cut with and removed by means of a core drill, and the remainder of the drilling done by rotary impact drill.

SECTION 051200 - STRUCTURAL STEEL FRAMING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Structural shapes.
2. Channels and angles.
3. Hollow structural sections.
4. Structural pipe.
5. Structural plates and bars.
6. Fasteners, connectors, and anchors.

B. Related Sections:

1. Section 036000 “Grout”
2. Section 055000 “Metal Fabrications and Anchorage”
3. Section 099123 “Interior Painting”
4. Section 099679 “Atmospheric Protection and Plant Service Areas Coatings”

1.2 REFERENCES

A. General Requirements:

1. Except as modified by governing codes and by this Specification, comply with the applicable provisions and recommendations of latest editions of the following.
2. Where the language in any of the documents referred to herein is in the form of a recommendation or suggestion, such recommendations or suggestions shall be deemed to be mandatory under this Contract unless otherwise directed by the Engineer.
3. The duties and responsibilities of the Owner, Engineer and Contractor shall not be altered by any standard referenced.
4. Conflicts: Conform to requirements of cited standard unless specified otherwise. In case of apparent conflict between standards, or between standards and the specifications herein, the more stringent shall apply unless otherwise directed by the Engineer.

B. American Institute of Steel Construction:

1. Design, Fabrication, and Erection: “Specification for Structural Steel Buildings, Allowable Stress Design and Plastic Design”, June 1, 1989, by the American Institute of Steel Construction (AISC Specification).
2. AISC 303 - Code of Standard Practice for Steel Buildings and Bridges.
3. AISC 341 - Seismic Provisions for Structural Steel Buildings.
4. AISC 360 - Specification for Structural Steel Buildings.

C. ASTM International:

1. ASTM A6 – Standard Specification for General Requirements for Rolled Structural Steel Bars, Plates, Shapes, and Sheet Piling
2. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.
3. ASTM A572, Grade 50 Standard Specification for High-Strenght Low-Alloy Columbium-Vanadium Structural Steel
4. ASTM A992, Grade 50 Standard specification for Structural Steel Shapes
5. ASTM A53/A53M – Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-coated, Welded and Seamless
6. ASTM A307 - Standard Specification for Carbon Steel Bolts and Studs, 60 000 PSI Tensile Strength.
7. ASTM A325 - Standard Specification for Structural Bolts, Steel, Heat Treated, 120/105 ksi Minimum Tensile Strength.
8. ASTM A501 – Standard Specification for hot-formed Welded and Seamless Carbon Steel Structural Tubing.
9. ASTM A992/A992M - Standard Specification for Structural Steel Shapes.
10. ASTM F1554 - Standard Specification for Anchor Bolts, Steel, 36, 55, and 105-ksi Yield Strength.

D. American Welding Society:

1. AWS A2.4 - Standard Symbols for Welding, Brazing, and Nondestructive Examination.
2. AWS D1.1 - Structural Welding Code - Steel.

E. Research Council on Structural Connections:

1. RCSC - Specification for Structural Joints Using ASTM A325 or ASTM A490 Bolts.

F. SSPC: The Society for Protective Coatings:

1. SSPC - Steel Structures Painting Manual.

G. New York State Department of Transportation, Office of Structures:

1. Steel Construction Manual

1.3 REQUIREMENTS FOR CONNECTIONS

A. General:

1. Except where Type 1 (rigid-frame) or Type 3 (semi-rigid framing) connections are indicated, the design has been prepared on the basis of Type 2 (simple or unrestrained) connections, complying with the provisions of Section A2.2 of the AISC Specification.
2. Do not use connection details which depend upon sharing the stress between any combination of high-strength bolts in bearing-type connections and welds.
3. Size connections for the loads indicated on the Drawings. If the loads are not indicated, use a connection whose capacity is half the total uniform load capacity shown in the “Allowable uniform loads in kips for beams laterally supported” tables in the AISC Manual for the given shape, span, and steel specification of the beam in question, unless otherwise indicated.
4. All bolted connections shall have a minimum of two bolts.

B. Shop Connections: Unless otherwise indicated, all shop connections shall be welded or high strength bolted. Field connections required to be welded or fully-tensioned high-strength bolted shall meet the same requirements when fabricated in the shop.

C. Field Connections:

1. The following field connections shall be welded or fully-tensioned high-strength bolted.

   a. Column splices.
   b. Column bracing.
   c. Connections for supports of machinery.
   d. All connections of eave struts, eave purlins, first interior purlins, ridge beams, and ridge purlins to rigid frames and trusses.

2. All other bolted field connections need only be tightened to the snug tight condition.
3. When steel members of any cross section are to be spliced by welding in the field, a detailed welding procedure shall be submitted to the Engineer for approval. The procedure shall be detailed on shop drawings, submitted and approved prior to the fabrication of structural steel. The detailed field welding procedure shall include the method of supporting members during welding. All field welded splices shall be subject to non-destructive testing, Radiographic Testing (RT), or Ultrasonic Testing (UT), as determined by the Engineer. Field splice locations, when specifically shown on contract documents, shall not be relocated nor shall splices be added without written approval of the Director.

D. Standard Beam Connections:

1. Unless otherwise shown on the Drawings or required in the Specifications, all beam connections shall be framed in accordance with Part 4 of the AISC Manual, with sizes and lengths of angles and welds and with fastener spacings as shown therein.
2. Standard beam connections shown on the Drawings shall be fabricated as detailed. Substitutions will not be approved.

E. Special Beam Connections:

1. Where special conditions make it impracticable to provide connections complying with Paragraphs A thru D, and no details for such connections are shown on the Drawings, special connections shall be used. Such special connections shall, in general, comply with the provisions of the AISC Manual.
2. Typical details of proposed special connections shall be shown on the job standards.
3. Special connections shown on the Drawings shall be fabricated as detailed. Substitutions will not be approved.

1.4 SUBMITTALS

A. Section 013300 “Submittal Procedures”: Requirements for submittals.

B. Product Data:

1. Producers or manufacturer’s specifications and installation instructions for all products supplied including but not limited to the following. Include laboratory test reports and other data to show compliance with specified requirements.

    a. Structural steel shapes, channels, angles, hollow structural sections, structural pipe, structural plates, structural bars and related fabrications.(each type).
    b. Bolts (each type), including nuts and washers.
    c. Surface Preparation and Shop Paint
    d. Reports of ladle analysis for all steel.
    e. Reports of tensile properties and bend tests.
    f. Certificates of conformance.
    g. Reports of tensile properties.
    h. Reports of mechanical properties of headed stud type shear connectors.
    i. Reports of mechanical tests.
    j. Bolts (each type), including nuts and washers.
    k. Description of each type of welding stud and arc shield.
    l. Field Paint

C. Shop Drawings:

1. Submit shop drawings and bills of materials including complete details and schedules for fabrication and shop assembly of members, and details, schedules, procedures and diagrams showing the sequence of erection. Information to be provided includes:

    a. Details of the location, type, size, etc., of bolts and welds.
    b. Details of cuts, connections, camber, holes, and other pertinent data.
    c. Indicate welds by standard AWS A2.4 welding symbols. Show size, length, and type of each weld.
    d. Setting drawing templates and directions for installation of anchor bolts and other anchorages
    e. Identify details to sheet and detail number on the drawings.
    f. Structural calculations

2. Elements of fabricated items inadvertently omitted on contract drawings shall be detailed by the fabricator and indicated on the shop drawings.
3. Drawings which accompany the Contract Documents are designated Contract Drawings. Contract Drawings shall not serve as shop drawings. The Contractor shall draw and originate his own erection plans, anchor bolt plans, details and any other drawings necessary for his work. The Engineer's drawings shall not be reproduced, copied, traced or reused for erection or detail shop drawings.
4. Match Marks: Provide a diagram showing the match marks for connecting structural parts assembled in the shop for the purpose of erecting structures true and plumb, and/or for connections.
5. Design of details and connections, calculations shall be signed, stamped, and sealed by a Professional Engineer registered in the State of New York.
6. Architectural Clearances: No part of the steel work, such as seat stiffeners, brackets, bracing, etc. shall be permitted to interfere with architectural clearances.

D. Erection Procedures:

1. Accompanying the Shop Drawings, submit descriptive data to illustrate the structural steel erection procedure, including the sequence of erection and temporary staying and bracing.
2. Erection drawings shall show the identifying marks of all members.

E. Welding Procedure: Submit written description as required to illustrate each welding procedure to be performed in the specified work.

F. Field Welding Equipment: Submit descriptive data for field welding equipment, including type, voltage and amperage.

G. Welders Certificates: Certify welders employed on the Work, verifying AWS qualification within previous 12 months.

H. Mill Test Reports: Submit indicating structural strength, destructive and non-destructive test analysis,

I. Alignment Certificate: Submit certification and survey data attesting that alignment requirements have been complied with following erection.

1.5 QUALITY ASSURANCE

A. Perform Work in accordance with the following:

1. Structural Steel: AISC 303.
2. High Strength Bolted Connections: RCSC Specification for Structural Joints Using ASTM A 325 or A 490 Bolts.

1.6 QUALIFICATIONS

A. Fabricator: Company specializing in performing Work of this section with minimum 5 years documented experience.

B. Erector: Company specializing in performing Work of this section with minimum 5 years experience.

C. Shop Painter: Company specializing in performing Work of this section with minimum 5 years experience.

D. Welders and Welding Procedures: AWS D1.1 qualified within previous 12 months.

1.7 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Section 016000 “Product Requirements”: Requirements for transporting, handling, storing, and protecting products.

B. General Requirements

1. Deliver materials to site at such intervals to insure uninterrupted progress of work.

2. Deliver anchor rods and anchorage devices, which are to be embedded in cast-in-place concrete or masonry, in ample time not to delay that work.

C. Delivery of Materials to be Installed Under Other Sections

1. Anchors bolts and other anchorage devices which are embedded in cast-in-place concrete or masonry construction shall be delivered to the project site in time to be installed before the start of cast-in-place concrete operations or masonry work.
2. Provide setting drawings, templates, and directions for the installation of the anchor bolts and other devices.

D. Storage of Materials

1. Store materials to permit easy access for inspection and identification.
2. Structural steel members which are stored at the project site shall be above ground on platforms, skids or other supports.
3. Steel shall be protected from corrosion.
4. Other materials shall be stored in a weathertight and dry place, until ready for use in the work.
5. Packaged materials shall be stored in their original unbroken package or container.

E. Materials which fail to comply with specified requirements, either at the shop or project site, shall be promptly removed from the site and replaced with acceptable material, without additional cost to the Owner, and without causing delay in work.

PART 2 - PRODUCTS

2.1 STRUCTURAL STEEL

A. Structural steel members, except for angles, shall comply with ASTM A572 or ASTM A992, Grade 50, high strength steel, new and unused, except where other type of steel is indicated.

B. Steel angles shall comply with ASTM A36/A36M, new and unused, except where other type of steel is indicated.

C. Round Hollow Structural Sections: ASTM A500/A500M, Grade C.

D. Square and Rectangular Hollow Structural Sections: ASTM A500/A500M, Grade C.

E. Structural Pipe: ASTM A53/A53M, Type E or S, Grade B.

1. Finish: Black except where indicated to be galvanized.

F. Stainless Steel: ASTM A276 Type 316

2.2 FASTENERS, CONNECTORS, AND ANCHORS

A. Anchor Bolts: ASTM A307; Grade A or ASTM A36.

1. Finish: Unfinished.

B. High Strength Bolts and Nuts: ASTM A325; Type 1.

1. Finish: Unfinished.

C. Nuts: ASTM A563 heavy hex type.

1. Finish: Unfinished.

D. Washers: ASTM F436; Type 1, circular.

1. Finish: Unfinished.

E. Anchor Rods: ASTM F1554; Grade 36.

2.3 WELDING MATERIALS

A. Welding Materials: AWS D1.1; type required for materials being welded.

2.4 ACCESSORIES

A. Shop Primer: Compatible with Finish Paint. See Section 099123 and Section 099679.

B. Touch-Up Primer: Match shop primer.

2.5 FABRICATION

A. Shop Fabrication and Assembly:

1. Fabricate and assemble structural assemblies in shop to greatest extent possible.
2. Fabricate items of structural steel in accordance with AISC Specifications and as indicated on final shop drawings.
3. Properly mark and match-mark materials for field assembly and for identification as to structure and site for which intended.
4. Fabricate for delivery sequence which will expedite erection and minimize field handling of materials.
5. Where finishing is required, complete assembly, including welding of units, before start of finishing operations. Provide finish surfaces of member exposed in final structure free of markings, burrs, and other defect.
6. Develop required camber for members.

B. Connections:

1. All connections that are not specifically detailed on the drawings shall be properly designed for the standard end loads of the members to be connected, as tabulated for uniform load in the AISC Steel Construction Manual.
2. Fabricate connections for bolt, nut, and washer connectors.
3. All shop connections shall be welded.

4. All field connections shall be bolted using A325 hexagonal bolts and nuts except where welding may be required or as otherwise noted on the drawings.

    a. All thread area shall be excluded from shear planes.
    b. Minimum size bolt shall be 3/4-inch diameter.
    c. High strength bolted connections shall conform to the AISC Specifications

C. Welded Construction

1. Welding shall conform to AWS "Code for Welding in Building Construction" and to the AISC specifications.
2. Assemble and weld built-up sections by methods which will produce true alignment of axes without warp.
3. Continuously seal joined members by continuous welds. Grind exposed welds smooth.
4. Complete visual inspection shall be provided by the Contractor prior to welding, during welding and on completed weldments.
5. Necessary equipment, tools and gauges to be used for quality control of fabrication, construction and erection shall be made available for use by the Engineer during inspection.

D. Bolts:

1. Anchor bolts shall be provided with double nuts and washers for leveling.
2. All unfinished bolts shall be provided with lock washers.

E. Bearing Plates:

1. Provide bearing plates for all open web joists, beams or girders bearing on concrete piers or walls.
2. Bearing plates shall be loose or attached as applicable.

F. Holes for Other Work:

1. Provide holes required for securing other work to structural steel framing, and for passage of other work through steel framing members, as shown on final shop drawings.
2. Provide threaded nuts welded to framing and other specialty items as indicated to receive other work.
3. Cut, drill, or punch holes perpendicular to metal surfaces. Do not flame cut holes or enlarge holes by burning. Drill holes in bearing plates.

2.6 FINISH

A. Shop Painting

1. Shop prime structural steel members in accordance with the requirements of Section 099123 and Section 099679.
2. Shop coat shall be omitted in areas to be field welded, on contact surfaces of high strength bolted connections, on all surfaces to be permanently embedded in concrete, fireproofed, or galvanized.
3. Do not omit shop paint at piece marks on otherwise painted pieces.

B. Galvanizing:

1. In addition to members indicated on the Drawings and/or specified; all exterior exposed steel, all loose lintels in exterior walls; and all nuts, washers and the top 12 inches of exterior anchor bolts shall be hot-dip galvanized, after fabrication, in accordance with the requirements of the applicable specifications and other requirements listed below
2. ASTM A123/A123M; hot dip galvanize after fabrication.
3. Galvanizing for Fasteners, Connectors, and Anchors:

    a. Hot-Dipped Galvanizing: ASTM A153/A153M.
    b. Mechanical Galvanizing: ASTM B695; Class 50 minimum.

2.7 SOURCE QUALITY CONTROL AND TESTS

A. General: The fabricator shall perform the following inspection and testing:

1. Inspect high-strength bolted connections, visually inspect welded connections, perform required tests and inspections and prepare test reports.
2. Submit test reports to the Engineer
3. Review mill test reports, verify identity of steel with respect to mill test reports and, if found to comply with the specification requirements, so certify to the Engineer.
4. If steel is not accompanied by test reports, or test reports fail to verify compliance, perform additional tests in compliance with procedures specified in the appropriate ASTM Specifications and prepare test reports.
5. Conduct and interpret the tests and state in each report whether the test specimens comply with specification requirements.
6. Inspect structural steel at the plant before shipment, however, the engineer reserves the right, at any time before final acceptance, to reject material not complying with specified requirements.
7. Verify dry mil thickness of shop prime coat.
8. Perform any additional tests as may be necessary to reconfirm any noncompliance of the original work, and as may be necessary to show compliance of corrected work.

B. Shop Bolted Connections:

1. Inspect in accordance with AISC 303.
2. Visually inspect all bolted connections.

C. Shop Welding:

1. Inspect and test during fabrication of structural steel assemblies as follows:

    a. Certify welders and conduct inspections and tests as required. Record types and locations of defects found in work. Record work required and performed to correct deficiencies.
    b. Visually inspect all welds.

D. Access:

1. Provide access for the Engineer to the place where structural steel work is being fabricated or produced so that the required inspection and testing can be witnessed.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Erector must examine areas and conditions under which structural steel work is to be installed, and notify the Engineer in writing of conditions detrimental to proper and timely completion of work.

1. Do not proceed with work until unsatisfactory conditions have been corrected in a manner acceptable to the Engineer.
2. Execution of the work under this section constitutes acceptance of the base or adjoining work and other conditions as satisfactory in every respect.

B. Verify bearing surfaces are at correct elevation.

C. Verify anchors rods are set in correct locations and arrangements with correct exposure for steel attachment.

3.2 PREPARATION

A. Furnish templates for installation of anchor rods and embedments in concrete and masonry work.

3.3 ERECTION

A. All structural steel shall be erected in accordance with the AISC "Specification for the Design, Fabrication and Erection of Structural Steel for Buildings" and the "Code of Standard Practice for Steel Buildings and Bridges".

B. Allow for erection loads, and for sufficient temporary bracing to maintain structure safe, plumb, and in alignment until completion of erection and installation of permanent bracing.

C. Erecting equipment shall be adequate for the work and safety and no existing work shall be damaged or defaced.

D. Any members damaged during the erection of steel shall be repaired in the shop or replaced at the expense of the Contractor as directed by the Engineer.

E. Plumbing and Leveling:

1. Set structural frames accurately to lines and elevations indicated. Align and adjust various members forming a part of a complete frame or structure before permanently fastening.

2. All work shall be set level and plumb with individual members of structure within specified AISC tolerances. All work shall be within a tolerance of 1:500 for design slope, level or plumb except elevator shafts which shall conform to manufacturers requirements.
3. Level and/or plumb shall be checked to the satisfaction of the Engineer using leveling instrument and plumb-bob, or other acceptable means before permanent connections are made.
4. Base and bearing plates which require grouting with a non shrinking material shall be supported at the designated level by means of adjusting nuts on the anchor bolts
5. All discrepancies in plumbs and levels shall be reported to the Engineer and corrected.

F. Field Holes, Reaming and Drifting

1. No burning of holes for any purpose will be allowed.
2. Field holes shall be drilled.
3. Light drifting will be permitted to draw the parts together by drift pinning to enlarge holes or to match unfair holes will not be permitted.
4. Any enlargement of holes shall be done by reaming with twist drills.
5. After steel work is erected, the Contractor shall see that no one is allowed to burn holes in the steel members, except as approved in writing by the Engineer.

G. Temporary Bracing

1. Provide temporary shoring and bracing members with connections of sufficient strength to bear imposed loads. Remove temporary members and connections when permanent members are in place and final connections are made. Provide temporary guide lines to achieve proper alignment of structures as erection proceeds.
2. During erections, steel cables with turnbuckles shall be installed in sufficient number to prevent distortion or damage to the framework due to wind or erection forces.
3. These cables shall be used to plumb and line columns before final bolting and shall be left in place until sufficient masonry bracing has been placed to insure the lateral stability of the structure.

H. Anchor Bolts and Column Base Plates

1. Anchor bolts and other required anchorage items shall be verified for proper size and accurate location prior to erection of structural steel work.
2. Column baseplates shall be supported and aligned on steel wedges or shims. After supported members have been plumbed and positioned and the anchor nuts tightened, the entire bearing area under each base plate shall be packed solidly with grout as specified under Section 036000 “Grout”.
3. Wedges and shims shall be cut-off flush with edges of plate and shall be left in place.
4. Moist cure grout.
5. Remove forms after grout is set. Trim grout edges to from smooth surface, splayed 45 degrees.
6. Tighten anchor bolts after grout has cured for a minimum of 3 days.

I. Field Connections

1. Installation, tension control and wrenches used for high strength bolting shall conform to the SISC "Specifications for Structural Joints using ASTM A325 Bolts" as approved by the Research Council on Riveted and Bolted Structural Joints

2. Tightening of nuts shall be accomplished with properly calibrated wrenches or by the "Turn-of-Nuts" method, at the Contractor's option.
3. Calibrated wrenches shall be checked for accuracy at least once daily.
4. Bolts completely tightened shall be marked with an identifying symbol.
5. Common bolts shall be drawn up tight and the threads set after the work has been plumbed and leveled.
6. Field welding shall be performed in accordance with AWS D1.1 - Structural Welding Code – Steel.

J. Exposed erection bolt holes shall be plug welded and ground smooth.

K. Steel members exposed to the exterior view shall have all integrally raised letters ground off smooth.

L. Do not field cut or alter structural members without approval of Architect/Engineer.

M. After erection, touch up welds and abrasions to match shop finishes.

3.4 FIELD PAINTING

A. Field painting shall include painting of bolts, field welds, abrasions and places where the shop coat has been broken or omitted.

B. Paint shall be the same as used for the shop coat and shall be supplied by the steel fabricator.

C. Before the touch-up paint is applied, the area to be coated shall be sandblasted to a commercial finish in accordance with SSPC-SP6.

D. At welds, all flux and scale shall be removed.

E. Final full field coat shall be as specified in Section 099123 and Section 099679.

3.5 FIELD QUALITY CONTROL

A. Bolted Connections: Inspect in accordance with AISC 303.

1. Visually inspect all bolted connections.

B. Welding: Inspect welds in accordance with AWS D1.1.

1. Certify welders and conduct inspections and tests as required. Record types and locations of defects found in work. Record work required and performed to correct deficiencies.
2. Visually inspect all welds.

C. Correct defective bolted connections and welds.

END OF SECTION 051200

SECTION 051400 - STRUCTURAL ALUMINUM

PART 1 - PART 1 GENERAL

1.1 DESCRIPTION

A. Furnish all equipment, labor, materials, and services required to provide all structural aluminum work in accordance with the Contract Documents. The term "structural aluminum" shall include items as defined in the Aluminum Association "Specifications for Aluminum Structures".

1.2 REFERENCES

A. Without limiting the generality of other requirements of the Specifications, all work specified herein shall conform to the applicable requirements of the following documents. All referenced specifications, codes, and standards refer to the most current issue available at the time of the Bid.

1. 2006 Maryland Building Performance Standards
2. Aluminum Association "Specifications for Aluminum Structures"
3. AWS D1.2 - "Structural Welding Code".

B. Related Sections

1. Section 036000 – Grout
2. Section 055000 - Metal Fabrications and Anchorage

1.3 SUBMITTALS

A. Submit the following in accordance with Section 01 33 00, Submittals, of the Standard Specifications.

1. Certified Mill Test Reports
2. Affidavit of Compliance with grade specified
3. Shop Drawings which include the following:

    a. Layout drawings indicating all structural shapes, sizes, and dimensions.
    b. Beam and column schedules.
    c. Detailed drawings indicating jointing, anchoring and connection details.

1.4 QUALITY ASSURANCE

A. The Contractor shall give ample notice to the Engineer prior to the beginning of any fabrication work so that inspection may be provided. The Contractor shall furnish all facilities for the inspection of materials and workmanship in the shop and the inspectors shall be allowed free access to the necessary parts of the work. Inspectors shall have the authority to reject any materials or work which do not meet the requirements of these Specifications. Inspection at the shop is intended as a means of facilitating the work and avoiding errors, but is expressly understood that it will in no

way relieve the Contractor from his responsibility for furnishing proper materials or workmanship under this Specification.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Structural aluminum shall comply with Section 05 12 00, Structural Steel Framing.

B. Fasteners for structural aluminum shall be in accordance with Section 05 12 00, Structural Steel Framing.

C. Electrodes for welding shall be in accordance with Section 05 12 00, Structural Steel Framing.

PART 3 - INSTALLATION

3.1 MEASUREMENT

A. The Contractor shall verify all dimensions and shall make any field measurements necessary and shall be fully responsible for accuracy and layout of work. The Contractor shall review the Drawings and any discrepancies shall be reported to the Engineer for clarification prior to starting fabrication.

3.2 FABRICATION

A. Fabrication shall be in accordance with the Aluminum Association "Specifications for Aluminum Structures". Fabrication shall begin only after Shop Drawing approval.

B. Except where otherwise noted on the Drawings or in this Specification, all shop connections shall be welded.

C. All holes in structural aluminum members required for anchors, anchor bolts, bolt holes, or other members or for attachment of other work shall be provided by the fabricator and detailed on the Shop Drawings.

D. All materials shall be properly worked and match-marked for field assembly.

3.3 DELIVERY, STORAGE AND HANDLING

A. Structural members shall be loaded in such a manner that they may be transported and unloaded without being over-stressed, deformed or otherwise damaged.

B. Structural aluminum members and packaged materials shall be protected from corrosion and deterioration. Material shall be stored in a dry area and shall not be placed in direct contact with the ground. Materials shall not be placed on the structure in a manner that might cause distortion or

damage to the members or the supporting structures. The Contractor shall repair or replace damaged materials or structures as directed.

3.4 ERECTION

A. All temporary bracing, guys and bolts as may be necessary to ensure the safety of the structure until the permanent connections have been made shall be provided by the Contractor.

B. Structural members shall be set accurately to the lines and elevations indicated. The various members shall be aligned and adjusted to form a part of a complete frame or structure before being permanently fastened.

C. No cutting of structural aluminum members in the field will be allowed except by the written approval of the Engineer.

D. Bearing surfaces and other surfaces which will be in permanent contact shall be cleaned before assembly.

E. Field welding shall not be permitted unless specifically indicated in the Drawings or approved in writing by the Engineer. All field welding shall comply with Section 05 05 23, Metal Fastening.

F. All bolted connections shall comply with Section 05 05 23, Metal Fastening.

G. All field connections shall be accurately fitted up before being bolted. Drifting shall be only such as will bring the parts into position and shall not be sufficient to enlarge the holes or to distort the metal. All unfair holes shall be drilled or reamed.

H. Misfits at Bolted Connections

1. Where misfits in erection bolting are encountered, the Engineer shall be immediately notified. The Contractor shall submit a method to remedy the misfit for review by the Engineer. The Engineer will determine whether the remedy is acceptable or if the member must be refabricated.
2. Incorrectly sized or misaligned holes in members shall not be enlarged by burning or by the use of drift pins. The Contractor shall notify the Engineer immediately and shall submit a proposed method of remedy for review by the Engineer.
3. Where misalignment between anchor bolts and bolt holes in aluminum members are encountered, the Engineer shall be immediately notified. The Contractor shall submit a method to remedy the misalignment for review by the Engineer.

I. Grouting of Base Plates and Bearing Plates

1. The bottom surface of the plates shall be cleaned of all foreign materials, and concrete or masonry bearing surface shall be cleaned of all foreign materials and roughened to improve bonding.
2. Accurately set all base and bearing plates to designated levels with steel wedges or leveling plates.
3. Baseplates shall be grouted with non-shrink grout to assure full uniform bearing. Grouting shall be done prior to placing loads on the structure. Non-shrink grout shall conform to Section 03 60 00 – Grout.

4. Anchor bolts shall be tightened after the supported members have been positioned and plumbed and the non-shrink grout has attained its specified strength.

J. Where finishing is required, assembly shall be completed including bolting and welding of units before start of finishing operations.

3.5 PAINTING

A. Painting shall be performed according to Section 099679 Atmospheric Protection and Plant Service Areas Coatings.

B. Aluminum surfaces in contact with concrete or dissimilar metals shall be thoroughly protected with two coats of epoxy paint with a minimum total thickness of 16 mils or other approved isolating material in accordance with the requirements of Section 099679 Atmospheric Protection and Plant Service Areas Coatings.

END OF SECTION 051400

SECTION 055000 - METAL FABRICATIONS AND ANCHORAGE

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. All metal fabrications and miscellaneous metal items which are not included on the drawings, in the specifications or in other areas of the Contract Documents.
2. Shop fabricated ferrous and non-ferrous metal items which, in general, includes bollards, lintels, shelf angles, bearing plates, overhead door frames, ladders, access hatches, checkered floor plate, wall brackets, specialty pipe supports, crane support columns and beams, trash racks, etc.
3. Anchorage

B. Related Sections:

1. Section 036000 “Grout”
2. Section 051200 “Structural Steel Framing”

1.2 REFERENCES

A. Materials and installation shall be in accordance with the latest revisions of the following codes, standards and specifications, except where more stringent requirements are specified herein:

1. ANSI A14.3 – Ladders, Fixed, Safety Requirement
2. ASTM A992 – Grade 50 Structural Steel
3. ASTM A572 – Grade 50 Structural Steel
4. ASTM A53 – Pipe, steel, black and hot-dipped, zinc-coated welded and seamless
5. ASTM A123 – Zinc (Hot-Galvanized) Coatings on Products Fabricated From Rolled, Pressed and Forged Steel Shapes, Plates, Bars, and Strip
6. ASTM A153 – Zinc (Hot-Galvanized) Coatings on Iron and Steel Hardware
7. ASTM A276 – Stainless and Heat-Resistant Steel Bars and Shapes
8. ASTM A283 – Low and Intermediate Tensile Strength Carbon Steel Plates
9. ASTM A307 – Carbon Steel Bolts and Studs, 60,000 psi Tensile Strength
10. ASTM A325 – Structural Bolts, Heat Treated, 120/105 ksi Tensile Strength
11. ASTM A489 – Carbon Steel Eyebolts
12. ASTM A500 – Cold-Formed welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes
13. ASTM A501 – Structural Tubing
14. ASTM A536 – Ductile Iron Castings
15. ASTM B209 – Aluminum-Alloy Sheet and Plate
16. ASTM B221 – Aluminum-Alloy Extruded Bars, Rods, Wire, Shapes, and Tubes
17. ASTM B308 – Aluminum-Alloy 6061-T6 Standard Structural Shapes
18. ASTM B632 – Aluminum Tread Plate
19. American Welding Society (AWS)

a. AWS A2.0 – Standard Welding Symbols.
b. AWS D1.1 – Structural Welding Code - Steel.
c. AWS D1.2 – Structural Welding Code - Aluminum.

20. Steel Structures Painting Council (SSPC)
21. "Construction Manual Series, Section 1, Specifications for Aluminum Structures, December, 1986", by the Aluminum Association, Incorporated (AAI Specification).

1.3 SUBMITTALS

A. Shop Drawings: Indicate profiles, sizes, connection attachments, reinforcing, anchorage, size and type of holes and fasteners, and all accessories. Include detailed fabrication and erection drawings, elevations, bill of materials, finishes, and details where applicable.

1. Indicate welded connections using standard AWS A2.4 welding symbols. Indicate net weld lengths.

B. Shop drawings shall be signed and sealed by the licensed in State of New York Professional Engineer who performed the design.

C. Manufacturer’s product data, samples for selection of finish, color, texture, and other properties.

D. Anchorage:

1. Sizing Calculations
2. Load Ratings
3. Material Schedule
4. Performance Specifications
5. Installation procedures.

1.4 QUALITY ASSURANCE

A. Finish joints in accordance with NOMMA Guideline 1.

B. Design of all load supporting systems shall be performed under the direct supervision of a Professional Engineer experienced in design of the Work and licensed in State of New York.

C. Weld procedures and welder personnel shall be AWS certified. Certifications shall be submitted prior to performing the related work.

D. All anchors shall be a product from a manufacturer regularly engaged in the manufacture and supply of similar items for at least 5 years.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Structural Steel Sections: ASTM A992 or A572; Grade 50.

B. Steel Channel, Angle and Plate: ASTM A36.

C. Steel Plates to be Bent or Cold-Formed: ASTM A 283, Grade C.

D. Steel Bars and Bar-Size Shapes: ASTM A 675, Grade 70; or ASTM A 36.

E. Merchant Quality Steel Bars: ASTM A 575, grade as selected by fabricator.

F. Cold-Finished Steel Bars: ASTM A 108, grade as selected by fabricator.

G. Hot-Rolled Carbon Steel Sheet and Strip: ASTM A 569, pickled and oiled.

H. Cold-Rolled Carbon Steel Sheet: ASTM A 366, oiled.

I. Galvanized Steel Sheet: ASTM A 526, with G90 hot-dip process zinc coating complying with ASTM A 525.

J. Hollow Structural Sections: ASTM A500/A501, Grade C.

K. Cold-Drawn Steel Tubing: ASTM A 512, buttwelded, cold-finished carbon steel tubing, sink drawn and stress relieved.

L. Cast Iron Castings: ASTM A 48, gray iron castings, Class 30.

M. Malleable Iron Castings: ASTM A 47, grade as selected by fabricator.

N. Steel Castings: ASTM A 27, grade and class as required by use of item.

O. Steel Pipe: ASTM A53, Grade B, Schedule 40.

P. Rolled Steel Floor Plate, Raised Pattern: ASTM A 786; raised herringbone pattern unless otherwise indicated.

Q. Aluminum Pipe: Aluminum Alloy 6061-T6.

R. Aluminum Sections: ASTM B308, Alloy 6061-T6. Use Aluminum Association Shapes.

S. Aluminum Checkered Floor Plate: ASTM B632, Alloy 6061-T6.

T. Stainless Steel Angles and Plates: ASTM A276. Type 316.

U. Stainless Steel: Type 302/304; ASTM A 666 for plate, sheet and strip; ASTM A 276 for bars and shapes; ASTM A 269 for tubing.

V. Fasteners: Except where shown or specified, select fasteners of type, size, style, grade, and class required for secure installation of metal fabrications. For exterior use and where built into exterior walls, fasteners shall be galvanized.

1. Standard Bolts and Nuts: ASTM A 307, Grade A, regular hexagon head.
2. Machine Bolts: ASME B18.5 or ASME B18.9, Type, Class, and Form as required.
3. Machine Screws: ASME B18.6.3.
4. Lag Screws: ASME B18.2.1.

5. Wood Screws: Flat head, ASME B18.6.1.
6. Plain Washers: Round, ASME B18.22.1.
7. Lock Washers: Helical, spring type, ASME B18.21.1.
8. Toggle Bolts: Spring Wing Type; Wing AISI 1010, Trunion Nut AISI1010 or Zamac Alloy, Bolt Carbon Steel ANSI B18.6.3.

W. Bolts, Nuts and Washers

1. Stainless Steel: ASTM A276 Type 316 Stainless Steel, With Raised Letter Indicating Manufacturer.
2. Steel Bolts: ASTM A325 galvanized to ASTM A153.
3. Steel Anchor Bolts: ASTM A36 or ASTM A307 galvanized to ASTM A153.
4. Steel Eyebolts: ASTM A489

X. Sheet Steel: ASTM A653/A653M, Grade 33 Structural Quality galvanized to ASTM A153

Y. Galvanized Items: ASTM A 36; or ASTM A 675, Grade 70.

Z. High-Strength Bolts: ASTM A 325, galvanized.

AA. Common Bolts: ASTM A 307, galvanized.

BB. Stainless Steel Fasteners:

1. Bolts: 316 alloy, ASTM F 593.
2. Nuts: 316 alloy, ASTM F 594.
3. Plain Washers: 316 alloy, FS FF-W-92, round, general assembly grade, Class B.
4. Lock Washers: 316 alloy, FS FF-W-84, helical spring type, Class C, Style 2.

CC. Weld Filler Metal: ER5356 filler metal complying with AWS Specification A5.10.

DD. Shielding Gas: Argon.

EE. Cold Galvanizing Compound: Single component compound giving 93 percent pure zinc in the dried film, and meeting the requirements of DOD-P-21035A (NAVY).

FF. Shop Paint for Galvanized Steel: FS TT-P-641, Type II.

GG. Shop Paint (General): Primer selected from the following:

1. TNEMEC Series 15 (color as selected by the Director's Representative).
2. Rust-Oleum 5781 (Gray) or 5769 (Red).
3. Valspar 13-W-11.

HH. Surface Etching Solution for Shop Paint (General):

1. As recommended by the manufacturer of the paint selected.

II. Bituminous Mastic: Cold applied asphalt mastic; SSPC - Paint 12.

JJ. Shrink-Resistant Grout (Non-Staining): Factory-packaged, non-ferrous mortar grouting compound selected from the following:

1. Masterflow 713 by Master Builders.
2. Sonogrout by Sonneborn.
3. Five Star Grout by U.S. Grout Corporation.
4. Crystex by L&M Construction Chemicals.
5. Non-Corrosive, Non-Shrink Grout by A.C. Horn.

2.2 GENERAL REQUIREMENTS FOR ANCHORAGE

A. Anchorage specified herein is for anchorage of hangers, brackets, equipment, piping, electrical, HVAC, plumbing, and miscellaneous metals.

B. Provide anchorage suitable for the design loadings times a minimum safety factor of 4.

C. Existing concrete shall be assumed to have a compressive strength of 3000 psi.

D. Install all anchorage in strict accordance with manufacturer's installation instructions.

E. Anchors, washers, and nuts to be installed in wet, corrosive, or exterior locations shall be Type 316 stainless steel.

F. Anchors, washers, and nuts to be installed in interior, enclosed, dry, temperature controlled, humidity controlled environments shall be carbon steel hot dipped galvanized, in accordance with ASTM A153.

G. Anchors, washers, and nuts shall not be used to resist vibratory loads in tension zones of concrete members.

H. Anchors not shown or indicated on the drawings shall be adhesive anchors, unless otherwise specified herein.

I. Testing of anchorage shall be as specified herein.

2.3 ANCHOR BOLTS

A. Anchor bolts shall be used for structural anchoring and anchoring items to new concrete floors and equipment pads.

B. All anchor bolts shall be solidly cast-in-place anchors.

C. Provide equipment anchorage utilizing anchor bolts per equipment manufacturer's recommendations.

2.4 UNDERCUT ANCHORS

A. Undercut anchors shall be used for overhead support into existing concrete, and all installations in cracked concrete.

B. Undercut anchors shall be of an undercut style with brazed tungsten carbides on the embedded end that perform the self undercutting process.

C. Undercut portion of anchor shall have a minimum projected bearing area equal to or greater than 2.5 times the nominal bolt area.

D. The bolt shall conform to ISO 898 class 8.8 strength requirements.

E. Product: HDA as manufacturered by Hilti, or approved equal.

2.5 ADHESIVE ANCHORS

A. Adhesive anchors shall not be used to support overhead piping larger than 4 inch diameter, or in cracked concrete.

B. Adhesive anchors shall be used to anchor items to new and existing walls.

C. All adhesive anchors shall be made of Type 316 stainless steel.

D. Injectable adhesive shall be used for installation of all reinforcing steel dowels or threaded anchor rods and inserts into new or existing concrete.

E. Adhesive shall be furnished in containers which keep the two components separate.

F. Injection adhesive shall be formulated to include resin and hardener to provide optimal curing speed as well as high strength and stiffness.

G. Injection adhesive shall be HIT-HY 150 or HIT-ICE, as manufactured by Hilti, or approved equal.

H. Anchor rods shall be furnished with chamfered ends so that either end will accept a nut and washer.

I. Anchor rods shall be in accordance with the following:

1. ISO 898 Class5.8
2. ASTM A193, Grade B7 (High strength carbon steel)
3. AISI 316 stainless steel, ASTM F 593, Condition CW

J. Use only manufacturer recommended injection tools and mixing nozzles

2.6 EXPANSION ANCHORS

A. Expansion anchors shall not be used to support overhead piping larger than 2 inch diameter, or in cracked concrete. Expansion anchors shall only be used overhead when anchoring to interior new concrete.

B. Expansion anchors shall not be used to anchor items to new or existing walls, unless otherwise approved by the Engineer.

C. Expansion anchors shall be in accordance with Federal specification A-A 1923A, Type 4.

D. The anchor shall bear a length identification mark embossed into the impact section or dog point, of the anchor identifying the anchor.

E. Product: Kwik Bolt 3, as manufactured by Hilti, or approved equal.

2.7 ACCESSORIES

A. Welding Materials: AWS D1.1 and AWS D1.2: type required for materials being welded.

B. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.

C. Backpaint aluminum surfaces in contact with concrete or masonry with bituminous paint. Cold-applied asphalt emulsion complying with ASTM D 1187.

D. Fasten aluminum with Type 316 stainless steel bolts.

E. Bollards: 6 Inch ASTM A53, Schedule 40 Steel Pipe, Concrete Filled. Cover with Safety Yellow PVC sleeve and cap.

F. Galvanized Steel Shelf Angles: For support of masonry, prime paint before installation and finish paint exposed surfaces per paint specification.

G. Shop Primer: Conform to Paint Specification.

H. Touch-Up Primer: Match shop primer.

2.8 FABRICATION

A. General:

1. All dimensions shall be field verified prior to fabrication.
2. Fit and shop assemble items in largest practical sections, for delivery to site.
3. Continuously seal joined members by continuous welds.
4. Grind exposed joints flush and smooth with adjacent finish surface. Make exposed joints butt tight, flush, and hairline. Ease exposed edges to small uniform radius.
5. Exposed Mechanical Fastenings: Flush countersunk screws or bolts, consistent with design of component.
6. Supply components required for anchorage of fabrications. Fabricate anchors and related components of same material and finish as fabrication.

B. Miscellaneous Framing and Supports

1. Fabricate metal framing and supports, which are not a part of the structural steel framework, to support related items required by the Work.
2. Fabricate units to the sizes, shapes, and profiles indicated or, if not indicated, of required dimensions to receive adjacent Work to be retained by the framing. Except as otherwise indicated, fabricate from structural steel shapes, plates, and bars, of all welded construction, with mitered corners, necessary brackets and splice plates, and a minimum

number of joints for field connection. Punch, drill, and tap units to receive hardware and similar items to be anchored to the Work.

3. When required to be built into masonry or cast-in-place concrete, equip units with integrally welded anchor straps. Unless otherwise indicated, anchors shall be minimum 1-1/4 x 1/4 x 8 inch steel straps, spaced 2 feet oc.
4. Galvanize exterior steel framing and supports.

C. Miscellaneous Steel Trim

1. Fabricate trim of shapes, sizes, and profiles shown. Fabricate units from steel shapes, plates, and bars, with continuously welded joints and smooth exposed edges, unless otherwise indicated. Use concealed field splices wherever possible. Furnish cutouts, fittings, and anchorages as required for assembly and installation.
2. Galvanize exterior steel trim.

D. Fixed Ladders

1. Fabricate ladders to span between elevations at locations indicated. Comply with the requirements of ANSI A 14.3 unless otherwise shown or specified.

    a. Side Rails: Continuous, structural steel, flat solid bars with eased edges.

2. Rungs: Structural steel, round solid bars, spaced 12 inches oc.
3. Non-slip Surface: The top of each rung shall have a non-slip surface, achieved either by coating the rung with aluminum oxide grit set in epoxy resin adhesive or by use of manufactured rung filled with aluminum oxide grout.
4. Fit rungs into punched holes in centerline of side rails, plug weld and grind welds smooth on outer face of rails.
5. Supports: Locate supports for each side rail near top rung, at bottom of ladder, and at intermediate points spaced not more than 5’-0” oc. Use welded or bolted steel brackets or straps for wall anchors, designed for adequate support and anchorage to hold the ladder 6 inches clear of the wall surface and other obstructing construction.
6. Except for ladders terminating at a hatch, extend side rails 3’-6” minimum above top rung and return rails to wall or structure; if construction does not extend above the top rung, goose-neck the extended rails back to the structure. Flare out side rails for through ladder extensions. For side-step ladders, continue the rungs also in the extension.
7. Galvanize exterior ladders and supports.
8. Safety Chain: ASTM A 666; Type 316 stainless steel, straight link individually welded, 3/8 inch trade size.
9. Eye Bolts: Drop forged stainless steel, shoulder pattern, threaded, 1/4 inch diameter.
10. Snap Eye Bolts: Chrome plated, 5/8 inch swivel loop, 3/8 inch snap opening.

E. Loose Bearing Plates

1. Steel plates fabricated flat, free from warp or twist, and of required thickness and bearing area. Drill plates as required for anchor bolts and for grouting access. Furnish bearing plates where shown and where required for steel items bearing on masonry or concrete construction.

F. Loose Lintels

1. Structural steel shape lintels, fabricated for openings and recesses in masonry walls and partitions as indicated. Loose lintels bearing on masonry or concrete shall have a minimum end bearing length of 6 inches at each end, unless otherwise shown. Galvanize lintels to be installed in exterior walls.

G. Shelf Angles

1. Galvanized structural steel shelf angles of sizes shown, fabricated for attachment to concrete framing. Angles shall have slotted holes, to receive 3/4 inch bolts, spaced not more than 6 inches from ends and not more than 24 inches oc, unless otherwise shown. Furnish wedge-type concrete inserts and fasteners for attachment of shelf angles to cast-in-place concrete.

2.9 FINISHES

A. Prepare surfaces in accordance with the Paint Specification. Clean surfaces of rust, scale, grease, and foreign matter prior to finishing.

B. Shop prime items in accordance with the Paint Specification and the reviewed paint shop drawings.

C. Galvanizing: ASTM A123/A123M; hot dip galvanize after fabrication.

D. Galvanizing for Fasteners, Connectors, and Anchors:

1. Hot-Dipped Galvanizing: ASTM A153/A153M.
2. Mechanical Galvanizing: ASTM B695; Class 50 minimum.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify field conditions are acceptable and are ready to receive Work.

3.2 PREPARATION

A. Make provisions for erection stresses. Install temporary bracing to maintain alignment, until permanent bracing and attachments are installed.

B. Supply items required to be cast into concrete or embedded in masonry with setting templates, to appropriate sections.

3.3 INSTALLATION

A. Install items plumb and level, accurately fitted, free from distortion or defects.

B. Provide for erection loads and provide temporary bracing to maintain indicated alignment until completion of erection and installation of permanent attachments.

C. Field weld components indicated on Drawings and/or reviewed shop drawings. Perform field welding in accordance with AWS D1.1 and AWS D1.2.

D. Obtain approval prior to site cutting.

E. After erection, touch up welds, abrasions, and damaged finishes with prime paint or galvanizing repair paint to match shop finishes.

3.4 INSTALLATION OF ANCHORAGE

A. Install all anchorage in strict accordance with Manufacturer's installation procedures.

B. Finish paint anchors in accordance with Section 099123.

3.5 ANCHORAGE TESTING

A. Field test random selection of minimum 10% of installed anchorage of each type for floor and wall anchorage, and 20% of installed anchorage of each type for ceiling anchorage. Testing shall be performed at 100% of the minimum pullout loadings for the anchor. Testing shall be performed by an independent testing agency.

B. The Engineer shall determine if the results of the testing reveals unsatisfactory results. If the results are unsatisfactory, the Contractor shall provide a full scale pullout testing program.

C. Pullout Testing Program: Contractor shall perform full scale pullout testing program if the results of anchorage testing are unsatisfactory to the Engineer. The program shall serve to ascertain the cause of the unsatisfactory strength test results and verify the suitability of the anchoring system. The pullout test –to rated capacity- shall be performed on a selection of minimum 50% of installed anchorage of each type. Pullout testing shall be performed by an independent testing agency. Testing shall conform to the requirements of ASTM E488

3.6 FIELD QUALITY CONTROL

A. Welding: Inspect welds in accordance with AWS D1.1 and AWS D1.2.

SECTION 055117 - PRE-ENGINEERED ALUMINUM STAIRS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Contractor shall provide all labor, materials, equipment and incidentals as shown, specified and required to design, furnish and install pre-engineered aluminum stairs including surface preparation and shop priming.
2. The extent of pre-engineered aluminum stairs shall be as shown.
3. The Work also includes:

    a. Providing openings in and attachments to pre-engineered aluminum stairs to accommodate the Work under this and other Sections and providing for the pre-engineered aluminum stairs all items such as anchor bolts, studs and all items required for which provision is not specifically included under other Sections.
    b. Providing openings in and attachments to pre-engineered aluminum stairs to accommodate the work under other contracts, and assisting other contractors in building on or attaching to the pre-engineered aluminum stairs all items such as anchor bolts, studs and all items required for which provision is not specifically included under other contracts.

B. Coordination:

1. Review installation procedures under this and other Sections and coordinate the installation of items that must be installed with, or before the pre-engineered aluminum stairs Work.
2. Notify other contractors in advance of the installation of the pre-engineered aluminum stairs to provide them with sufficient time for the installation of items included in their contracts that must be installed with, or before, the pre-engineered aluminum stairs Work.

C. Related Sections:

1. Section 05 50 00 – Metal Fabrication and Anchorage
2. Section 05 52 15 – Aluminum Handrails and Railings
3. Section 05 53 00 – Metal Grating.
4. Section 05 54 00 – Metal Floor Plates
5. Section 09 91 00 – Painting.

1.2 REFERENCES

A. Aluminum Association (AA), Specification for Aluminum Structures.

B. American Society for Testing and Materials, (ASTM).

1. ASTM B 209, Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
2. ASTM B 211, Specification for Aluminum and Aluminum-Alloy Bar, Rod and Wire.

3. ASTM B 221, Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles and Tubes.
4. ASTM B 308/B 308M, Specification for Aluminum-Alloy 6061-T6 Standard Structural Profiles.
5. ASTM B 429, Specification for Aluminum-Alloy Extruded Structural Pipe and Tube.
6. ASTM F 593, Specification for Stainless Steel Bolts, Hex Cap Screws and Studs.
7. ASTM F 594, Specification for Stainless Steel Nuts.

C. American Welding Society, (AWS).

1. AWS D1.2/D1.2M, Structural Welding Code-Aluminum.

D. National Association of Architectural Metal Manufacturers, (NAAMM).

1. NAAMM, Metal Stairs Manual and Metal Finishes Manual.

1.3 SUBMITTALS

A. Section 01 33 00 – Submittal Procedures: Requirements for submittals.

B. Samples: Submit the following:

1. Representative samples of materials including nosings, tread material, and others items as requested by the Engineer. Review will be for type only. Compliance with all other requirements is exclusive responsibility of Contractor.

C. Shop Drawings and Calculations: Submit the following:

1. Erection and detailed Shop Drawings, which show the plan location, elevation and details for the fabrication and erection of the pre-engineered aluminum stair Work. Show anchorage and accessory items. Include details of all connections between all materials.
2. Provide signed and sealed Shop Drawings and calculations, which are prepared by a Registered Professional Engineer licensed in the State in which the pre-engineered aluminum stairs will be installed.

1.4 QUALITY ASSURANCE

A. Manufacturer’s Qualifications:

1. Manufacturer shall have a minimum of five years experience producing substantially similar equipment and shall be able to show evidence of at least five installations in satisfactory operation for at least five years.

B. Component Supply and Compatibility:

1. Obtain all products included in this Section regardless of the component manufacturer from a single pre-engineered aluminum stair manufacturer.
2. The pre-engineered aluminum stair manufacturer to review and approve or to prepare all Shop Drawings and other submittals for all components furnished under this Section.

3. All components shall be specifically constructed for the specified service conditions and shall be integrated into the overall assembly by the pre-engineered aluminum stair manufacturer.

C. Codes: Comply with the applicable requirements of the New York State Building Codes.

D. Source Quality Control: Contractor shall be responsible for entire design, fabrication and installation of pre-engineered aluminum stair Work.

E. The Shop Drawings and calculations shall be prepared by a Registered Professional Engineer licensed in the State in which the pre-engineered aluminum stairs will be installed and is a recognized expert in the type of Work shown and specified.

1.5 DELIVERY, STORAGE AND HANDLING

A. Section 01 65 00 – Product Delivery, Storage and Handling Requirements: Requirements for transporting, handling, storing and protection products.

1.1 JOB CONDITIONS

B. Conform to applicable OSHA and the New York State Building Codes.

PART 2 - PRODUCTS

2.1 DESIGN CRITERIA

A. Pre-engineered aluminum stairs shall comply with the requirements of the NAAMM, "Metal Stairs Manual".

B. Sizes of miscellaneous items such as carrier angles and platform stiffeners, and design stresses shall be as recommended in Section 4 of the "Metal Stairs Manual", unless otherwise shown.

C. All required stair loadings and other stair related requirements shall comply with the governing building code in which the pre-engineered aluminum stairs will be installed.

2.2 FABRICATION

A. General:

1. Use welding for joining pieces together, unless otherwise shown or specified. Welding to comply with the applicable provisions of AWS D1.2/D1.2M. Fabricate units so that bolts and other fastenings do not appear on finish surfaces. Make joints true and tight, and make connections between parts light-proof tight. Provide continuous welds, ground smooth where exposed.
2. Construct stair units to conform to sizes and arrangements as shown. Provide pre-engineered aluminum framing, hangers, columns, struts, clips, brackets, bearing plates and other components for the support of pre-engineered aluminum stairs and platforms. Erect pre-

engineered aluminum stair Work to line, plumb, square, and true with runs registering level with floor and platform levels.

3. Provide brackets and bearing surfaces as detailed and as required to anchor and contain the pre-engineered aluminum stairs on the supporting structure.
4. Where masonry walls support the pre-engineered aluminum stair Work, provide temporary supporting struts, designed for the erection of stair components before installation of masonry.
5. Finish: Provide Architectural mill finish as specified in the NAAMM Manual.
6. Protection of Aluminum from Dissimilar Materials: Coat all surfaces of aluminum in contact with dissimilar materials, such as concrete, masonry and steel as specified in Section 09 91 00.

B. Stair Framing:

1. Fabricate stringers of structural aluminum channels, or plates, or a combination thereof, as shown. Provide closures for exposed ends of stringers.
2. Construct platforms of structural aluminum channel headers and miscellaneous framing members, as shown. Bolt or weld headers to stringers. Bolt or weld framing members to strings and headers.

C. Aluminum Floor Plate, Treads and Platforms:

1. Provide raised pattern aluminum floor plate. Provide pattern shown or, if not shown, as selected from manufacturer's standard patterns.
2. Form treads of 3/8-inch thick aluminum floor plate with integral nosing and back edge stiffener. Weld aluminum supporting brackets to stringers and bolt treads to brackets. Provide closed tread and riser at egress stairs.
3. Fabricate platforms of aluminum floor plate of thickness shown. Provide nosing matching that on treads at all landings. Secure floor plates to platform framing members with bolts.

D. Aluminum Grating Treads and Platforms:

1. For aluminum grating and treads, refer to Section 05 53 00 and Section 05 54 00.
2. Fabricate grating treads with abrasive nosing on one edge and with aluminum angle or aluminum plate carrier at each end for stringer connections. Secure treads to stringers with bolts. Provide grating treads at non-egress stairs only.
3. Fabricate grating platforms, with nosing matching that on grating treads, at all landings. Provide toe-plates at open-sided edges of floor grating fastened to platform framing members.
4. Provide platforms 3/8-inch minimum thick with solid abrasive surface matching that on treads. Secure platforms to platform framing members with bolts.

E. Stair Aluminum Railing:

1. Aluminum railings shall conform to the requirements of Section 05 52 15.

© 2026 CDM Smith
All Rights Reserved

PART 3 - EXECUTION

3.1 INSPECTION

A. Contractor shall examine the conditions under which the Work is to be installed and notify the Engineer, in writing, of conditions detrimental to the proper and timely completion of the Work. Do not proceed with the Work until unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Provide concrete inserts, anchor bolts and miscellaneous items having integral anchors, which are to be embedded in concrete or masonry construction.

3.3 INSTALLATION

A. Fastening to In-Place Construction:

1. Provide anchorage devices and fasteners where necessary for securing pre-engineered aluminum stairs to in-place construction; including, threaded fasteners for concrete and masonry inserts, toggle bolts, through bolts and other connectors as required. The anchorage devices and fasteners shall be Type 316 stainless steel.

B. Cutting, Fitting and Placement:

1. Perform cutting, drilling and fitting required for the installation of the pre-engineered aluminum stairs. Set the pre-engineered aluminum stairs accurately in location, alignment and elevation, plumb, level, true and free of rack, measured from established lines and levels. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry or similar construction.
2. Fit exposed connections accurately together to form tight hairline joints. Weld connections that are not to be left as exposed joints, but cannot be shop welded because of shipping size limitations. Grind joints smooth and touch-up shop paint coat. Do not weld, cut or abrade the surfaces of exterior units that have been hot-dip galvanized after fabrication and are intended for bolted or screwed field connections.

SECTION 055215 - ALUMINUM HANDRAILS AND RAILINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Contractor shall provide all labor, materials, tools, equipment, and incidentals as shown, specified, and required to furnish and install aluminum handrail and railing systems. The Work also includes:

   a. Providing openings in, and attachments to, aluminum handrail and railing systems to accommodate the Work under this and other Specification Sections. Provide all items for aluminum handrails and railings, including anchorages, fasteners, studs, and other items required for which provision for is not specifically included under other Sections.
   b. Provide openings in and attachments to aluminum handrails and railings to accommodate work under other contracts. Assist other contractors in building on or attaching to aluminum handrails and railings all items such as fasteners and other items required for which provision is not specifically included under other contracts.

2. Aluminum handrails and railings Work shall include components and features shown and specified, and all components and features available from specified manufacturers required for providing complete aluminum handrail and railing system in accordance with the Contract Documents.

B. Coordination:

1. Review installation procedures under this and other Sections and coordinate installation of items to be installed with or before aluminum handrails and railings Work.
2. Notify other contractors in advance of installing aluminum handrail and railings to provide them with sufficient time to install items included in their contracts that are to be installed with or before aluminum handrails and railings Work.
3. Aluminum handrail and railing locations shall conform with Laws and Regulations.

1.3 SUBMITTALS

A. Section 013300 “Submittal Procedures”: Requirements for submittals.

B. Action Submittals: Submit the following:

1. Shop Drawings:

a. Drawings for fabrication and installation of aluminum handrail and railing systems with sizes of members, pipe wall thickness, information on components, and anchorage devices. Show all anchorages. Provide details drawn at scale of 1.5-inch equal to one foot.
b. Indicate required location of posts.
c. Indicate locations and details of all expansion joints, if any.
d. Indicate locations and details of gaps across seismic joints, if any.
e. Profile drawings of aluminum handrail and railing system components.
f. Custom detail drawings. Details of forming, jointing, sections, connections, internal supports, trim and accessories. Provide details drawn at scale of 1.5-inch equal to one foot.

2. Product Data:

a. Manufacturer’s specifications, standard detail drawings, and installation instructions for aluminum handrail and railing systems.
b. Manufacturer’s catalogs showing complete selection of standard and custom components and miscellaneous accessories for selection by Engineer.

3. Delegated Design Submittals:

    a. Design Data:

        1) Design computations or complete structural analysis of handrail and railing systems, signed and sealed by professional engineer. Professional engineer's seal shall be clearly legible, including state of registration, registration number, and name on seal.
        2) Certification by professional engineer that professional engineer has performed design of aluminum handrail and railing systems in accordance with performance and design criteria stated in the Contract Documents, and that design conforms to all local, state, and federal Laws and Regulations, and to prevailing standards of practice.

4. Samples:

    a. Full-size Sample, 2.0 feet long, of assembled railing system at post and rail intersections. Sample shall have all associated components including typical connections, mounted toeboard and sleeve, and handrail at wall return, complete with mounting brackets, all with specified controlled uniform metal finish.
    b. Color Samples: Maximum range of clear anodized aluminum that shall appear in finished Work. Prepare range Samples, to show highest level of color control feasible for actual handrail and railing systems, as determined by licensor of finishing process specified, on actual extrusions and castings of the Work.
    c. Samples will be reviewed for finish, color, joint tolerances, workmanship, and general component assembly only. Compliance with other requirements is the responsibility of the Contractor.

5. Test Procedure: Submit detailed description of proposed shop testing procedures. Do not perform shop testing until Engineer approves shop test procedure:

C. Informational Submittals: Submit the following:

1. Certificates:

    a. Certification on source of supply, as specified in Article 1.3 of this Section.
    b. Manufacturer certification specified in Article 1.3 of this Section.

2. Source Quality Control Submittals:

    a. Manufacturer's load testing report in accordance with ASTM E935 for completed aluminum handrail and railing systems, demonstrating compliance with applicable requirements of building codes, safety codes, and other Laws and Regulations.

3. Qualifications Statements: Submit qualifications for the following:

    a. Manufacturer, when requested by Engineer.
    b. Professional engineer.
    c. Installer, when requested by Engineer. Qualifications statement shall include record of experience with references specified.

D. Closeout Submittals: Submit the following:

1. Maintenance Manuals: Furnish detailed maintenance manuals that include the following:

a. Product name and number.
b. Detailed procedures for routine maintenance and cleaning, including cleaning materials, application methods and precautions in use of products that may be detrimental to finish when improperly applied.
c. Handrail and railings systems manufacturer's current catalog including individual parts.

2. Guarantee: Provide in maintenance manual the guarantee specified.

E. Maintenance Material Submittals: Submit the following:

1. Extra Stock Materials:

a. After completing installation, deliver to Owner 5 percent of actual quantity of each handrail and railing system component used in the Work.
b. Label each piece or sealed container with name and product number.

1.4 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer:

a. Manufacturer shall be able to document at least five years successful experience in fabricating aluminum handrail and railing systems of scope and type similar to that required.
b. Manufacturer shall be able to capable of providing custom detail drawings for the products required.

2. Professional Engineer:

a. Contractor or handrail and railing manufacturer shall retain a registered professional engineer legally qualified to practice in same state as the Site. Professional engineer shall have at least five years experience designing aluminum handrails and railings.
b. Responsibilities include:

1) Reviewing aluminum handrail and railing system performance and design criteria stated in the Contract Documents.
2) Preparing written requests for clarifications or interpretations of performance or design criteria for submittal to Engineer by Contractor.
3) Preparing or supervising preparation of design calculations verifying compliance of aluminum handrail and railing system with requirements of the Contract Documents.
4) Signing and sealing all calculations.
5) Certifying that:

a) Design of aluminum handrail and railing system was performed in accordance with performance and design criteria stated in the Contract Documents, and
b) Design conforms to all applicable local, state, and federal Laws and Regulations, and to prevailing standards of practice.

3. Installer Qualifications:

a. Retain a single installer trained and with record of successful experience in installing aluminum handrail and railing systems.
b. Installer shall have record of successfully installing aluminum handrail and railing systems in accordance with recommendations and requirements of manufacturer, or shall provide evidence of being acceptable to the manufacturer.
c. Installer shall employ only tradesmen with specific skill and successful experience in the type of Work required.
d. When requested by Engineer, submit name and qualifications of installer with the following information for at least three successful, completed projects:

1) Names and telephone numbers of owner and architect or engineer responsible for each project.
2) Approximate contract cost of the aluminum handrail and railing systems for which installer was responsible.
3) Amount (linear feet) of aluminum handrail and railing installed.

B. Component Supply and Compatibility:

1. Obtain all products included in this Section regardless of component manufacturer, from a single aluminum handrail and railing system manufacturer.
2. Aluminum handrail and railing system manufacturer shall review and approve or prepare all Shop Drawings and other submittals (except for delegated design submittals, when professional engineer is retained by other than handrail and railing manufacturer) for all components furnished under this Section.
3. Components shall be specifically constructed for specified service conditions and shall be integrated into overall assembly by aluminum handrails and railings manufacturer.

C. Regulatory Requirements: Conform to Laws and Regulations including:

1. OSHA Part 1910.23, Guarding Floor and Wall Openings and Holes.

D. Certifications:

1. Furnish certification, signed by authorized officer of manufacturer and notarized, stating that handrail and railing systems conform to the design prepared by the professional engineer.
2. Furnish certification, signed by authorized officer of Contractor and notarized, stating that all components and fittings are furnished by the same manufacturer.

1.5 DELIVERY, STORAGE AND HANDLING

A. Section 016000 “Product Requirements”: Requirements for transporting, handling, storing and protection products.

B. Handling of Products:

1. Do not subject handrail and railing products to bending or stress.
2. Do not damage edges or handle products in a manner that will cause scratches, warping, or dents.
3. Protect handrails and railings by paper or coating as acceptable to handrail and railing manufacturer, against scratching, splashes of mortar, paint, and other marring during transportation, handling, and erection. Protect until completion of adjacent work.

C. Coordinate deliveries to avoid conflict with the Work and conditions at Site, and to accommodate the following:

1. Work of other contractors, or Owner.
2. Limitations of storage space.
3. Availability of equipment and personnel for handling products.
4. Owner's use of premises.

D. Have products delivered to Site in manufacturer's original, unopened, labeled containers. Keep Engineer informed of delivery of all products to be incorporated in the Work.

E. Clearly mark partial deliveries of component parts of equipment to identify the equipment, to permit easy accumulation of parts and to facilitate assembly.

F. Immediately on delivery, inspect shipment to ensure:

1. Product complies with requirements of Contract Documents and reviewed submittals.
2. Quantities are correct.
3. Containers and packages are intact, labels are legible.
4. Products are properly protected and undamaged.

G. Promptly remove damaged products from the Site and expedite delivery of new undamaged products, and remedy incomplete or lost products to provide that specified, so as not to delay progress of the Work.

1.6 JOB CONDITIONS

A. Conform to applicable OSHA and the New York State Building Codes.

1.7 WARRANTY

A. Section 016000 "Product Requirements": Requirements for warranties.

B. Guarantee: Manufacturer shall provide written warranty of availability of replacement parts and components for period of at least five years after completion of the Project.

© 2026 CDM Smith
All Rights Reserved

PART 2 - PRODUCTS

2.1 SYSTEM PERFORMANCE

A. System Description: Aluminum handrail and railing system shall consist of equally spaced horizontal rails with totally concealed mechanical fasteners, internally threaded tubular rivets and components fastened to posts spaced no more than 5.0 feet on centers and system of handrails supported from adjacent construction by mounting brackets spaced at no more than 5.0 feet on centers.

B. Design Criteria and Performance Criteria:

1. Design, fabricate, and install aluminum handrail and railing systems to withstand the most critical effects resulting from the following loads (loads listed below do not act concurrently):

a. Uniform Load: 50 pounds per foot, applied at top in any direction.
b. Concentrated Load: 200 pounds single load, applied at any point along the top in any direction.
c. Components: Intermediate rails (all rails except the handrail), balusters, and panel fillers, if any, shall withstand horizontally-applied normal load of 50 pounds on an area equal to one square foot, including openings and space between rails. Reactions due to this loading are not required to be superimposed to loading specified for main supporting members of handrails and railings.
d. Conform to requirements of AA Aluminum Design Manual for determining allowable stresses and safety factors for aluminum structural components.
e. Limit deflection in each single span of railing and handrail to 1.5-inch maximum, and to 1.4-inch maximum on railing posts. Applied loads shall not produce permanent deflection in the completed Work when loads are removed.

2. Thermal Control: Provide adequate expansion within fabricated systems that allows for thermal expansion and contraction caused by material temperature change of 140 degrees F to -20 degrees F without warp or bow of system components. Distance between expansion joints shall be based on providing 1/4-inch wide joint at 70 degrees F, which accommodates movement of 150 percent of calculated amount of movement for specified temperature range.
3. Where handrail and railing systems cross expansion joints in the building or structure, provide expansion joints in handrail and railings systems.
4. For posts located at or near end of runs as shown, uniformly space intermediate posts as required to conform to loading and deflection criteria specified, at intervals no greater than maximum post spacing specified. Where posts are shown for handrails along both sides of walkways and other similar locations, locate posts opposite each other; do not stagger post locations.

2.2 MANUFACTURERS

A. Provide the following railing system at all locations except as defined below:

1. Products and Manufacturers: Provide one of the following:

a. Custom Fabricated Series 500 Non-Welded Aluminum Pipe Aluminum handrails and railing systems by Superior Aluminum Products, Inc.
b. Or Approved Equal.

B. Provide the following railing system at Outfall Chamber deck and Sludge Processing Building roof locations:

1. Products and Manufacturers: Provide one of the following:

a. Custom Fabricated Connectorail System Non-Welded Aluminum Pipe Aluminum handrails and railing systems by Julius Blum & Co., Inc.
b. Or Approved Equal.

2.3 MATERIALS

A. Extruded Aluminum Architectural and Ornamental Shapes: ASTM B221, Alloy 6063-T52.

B. Aluminum Forgings: ASTM B247.

C. Extruded or Drawn Aluminum Pipe and Tube:

1. ASTM B429 or ASTM B241/B241M, Alloy 6063-T5, 6063-T52, or 6063-T832 as required by loadings, deflections, and post spacing specified.
2. Provide Schedule 40 pipe, minimum, unless conditions of detail and fabrication require extra-heavy pipe to comply with Specifications. Rails and posts shall have minimum outside diameter of 1.90 inches.

D. Reinforcing Bars: Solid, circular profile, 24 inches long, 6061-T6 aluminum reinforcing bars with same outside diameter as inside diameter of post.

E. Anchors and Fastenings:

1. For anchors and fasteners, use Type 316 stainless steel; minimum 0.5-inch diameter.
2. Provide minimum of four bolt fasteners per post where surface-mounted posts are shown. Components shall be in accordance with manufacturer's recommendations and as approved or accepted (as applicable) by Engineer on submittals.
3. Anchors: As specified in Section 054500.

F. Castings:

1. Provide high-strength aluminum alloy brackets, flanges, and fittings suitable for anodizing as specified.
2. Aluminum alloy sand castings: ASTM B26/B26M.

G. Connector Sleeves: Schedule 40, 5.0-inch long by 1.610-inch diameter.

H. Perforated Panel: Provide ¼-inch perforated round hole aluminum panels at railings, as shown on drawings. Panel shall be .050 gauge aluminum, 3/8-inch staggered pattern, and 'U' edges. Finish to match railing system.

1. Panels shall be attached to the lowest horizontal rail, vertical post and second highest railing. Attachment shall be by tapping the railing and providing stainless steel screws with 1-inch spacer, gaskets and washers.
2. Products and Manufacturers: Provide one of the following:

    a. McNichols Perforated Panel
    b. Or Approved Equal.

I. Sockets: Provide six-inch deep by 2.5-inch outside diameter aluminum sockets with 3.5-inch wide socket cover on bottom of each socket and on top and bottom of removable post sockets.

J. Chain, Snaps, and Eye Bolts: Provide oblong 0.250-inch welded link, Type 316 stainless steel chain weighing 57 pounds per cubic foot, each link 1.25-inch by 7/16-inch. Provide Type 316 stainless steel eyebolts, 1/4-inch stainless steel threaded quick links and heavy-duty swivel snaps with spring loaded latch.

K. Gates: For each gate in handrail or railing system, provide the following:

1. Hinges: Two-self closing aluminum hinges.
2. Latches and Stops: One latch and stop with rubber bumper and one-inch diameter plastic knobs.

L. Custom Cover Flanges: 1/4-inch high by 4.0-inch diameter, aluminum.

M. Adhesive: Two-part waterproof epoxy-type as recommended by handrail and railing systems manufacturer.

N. Non-shrink Grout: Refer to Section 036213.

O. Toeboards:

1. Provide extruded Alloy 6063-T5 or T52 aluminum alloy toeboards, unless railing is mounted on curbs or other construction of sufficient height and type to conform to OSHA 1910.23. Bars or plates are not acceptable.
2. Unless otherwise specified, toeboards shall conform to requirements of OSHA 1910.23, Section (e).

P. System Components and Miscellaneous Accessories: Provide complete selection of manufacturer's standard and custom aluminum handrail and railing systems components and miscellaneous accessories required. Show type and location of all such items on Shop Drawings and other submittals as applicable.

2.4 FABRICATION

A. General: Unless otherwise shown or specified, provide typical non-welded construction details and fabrication techniques recommended in NAAMM/AMP Pipe Railing Manual and NAAMM/AMP AMP 501.

B. Fabricate handrail and railing systems true to line and level, with accurate angles surfaces and straight edges. Fabricate corners without using fittings. Provide bent-metal corners to smallest

radius possible without causing grain separation or otherwise impairing the Work. Form elbow bends and wall returns to uniform radius, free from buckles and twists, with smooth finished surfaces, or use prefabricated bends. Provide not less than four-inch outside radius.

C. Provide chains across openings in railings where shown. Attach one end of each chain to an eyebolt in post and other end attached by means of swivel eye snap hook to similar eyebolt in opposite post.

D. Remove burrs from exposed edges.

E. Close aluminum pipe ends by using prefabricated fittings.

F. Weep Holes:

1. Fabricate joints that will be exposed to weather to exclude water.
2. Provide 15/64-inch diameter weep holes at lowest possible point on each post in handrail and railing systems.
3. Provide pressure relief holes at closed ends of handrail and railing systems.

G. Toeboards:

1. Provide manufacturer's standard toeboard, which accommodates movement caused by thermal change specified without warping or bowing toeboards.
2. Provide manufacturer's standard toeboard, which accommodates storage for removable socket covers.
3. Coordinate and cope toeboard as required to accommodate cover flanges at posts.
4. Toeboards shall follow curvature of railing. Where railing is shown to have curved contours at corners, or other locations, toeboard shall likewise be curved to follow line of railing system.

H. Reinforcing Bars: Provide reinforcing bar friction-fitted at each post in railing system. Extend reinforcing bars of tubes six inches into cast-in-place sleeves or other types of supporting brackets.

I. At all locations except at noted in Section 2.2 B. - Mechanically Fitted Component Pipe Handrail and Railing System:

1. Use non-welded pipe handrail and railing system with posts, top and intermediate rail(s), and flush joints.
2. Provide top and one intermediate horizontal rail(s), equally spaced.
3. Do not use blind rivets, pop rivets, or other exposed fastening devices in the Work. Fasteners used for side-mounting fascia flanges where shown or specified may be exposed in the Work. Provide internal threaded aluminum rivets, stainless steel through-bolts with lock nuts, stainless steel sheet metal screws with lock washers, and epoxy adhesive for fastening components of the Work.

J. At locations indicated in Section 2.2 B. - Mechanically Fitted Component Pipe Handrail and Railing System:

1. Use non-welded pipe handrail and railing system with posts, top and intermediate rail(s), and flush joints.

2. Provide top and five intermediate horizontal rail(s), equally spaced. Intermediate rails shall be 1.66 inch outside diameter. Top rail shall be 1.9 inch outside diameter.
3. Do not use blind rivets, pop rivets, or other exposed fastening devices in the Work. Fasteners used for side-mounting fascia flanges where shown or specified may be exposed in the Work. Provide internal threaded aluminum rivets, stainless steel through-bolts with lock nuts, stainless steel sheet metal screws with lock washers, and epoxy adhesive for fastening components of the Work.

2.5 FINISHES

A. General:

1. Prepare surfaces for finishing in accordance with recommendation of aluminum producer and the finisher or processor.
2. Adjust and control direction of mechanical finishes specified to achieve best overall visual effect in the Work.
3. Color and Texture Tolerance: Provide uniform color and continuous mechanical texture for aluminum components. Engineer reserves the right to reject aluminum materials because of color or texture variations that are visually objectionable, but only where variation exceed range of variations established by manufacturer prior to fabrication, by means of range of Samples approved by Engineer.
4. Anodize aluminum components.

B. Mechanically finish aluminum by wheel or belt polishing with aluminum oxide grit of 180 to 220 size, using peripheral wheel speed of 6,000 feet per minute; AA Designation - M32 Medium Satin Directional Texture.

1. Hand Rubbed Finish: Where required to complete the Work and provide uniform, continuous texture, provide hand-rubbed finish to match medium satin directional texture specified to even out and blend satin finishes produced by other means.

C. Provide non-etching chemical cleaning by immersing aluminum in inhibited chemical solution, as recommended by coating applicator, to remove lard oil, fats, mineral grease, and other contamination detrimental to providing specified finishes.

1. Clean and rinse with water between steps as recommended by aluminum manufacturer.

D. Exposed Aluminum Anodic Coating: Provide anodic coatings as specified that do not depend on dyes, organic or inorganic pigments, or impregnation processes to obtain color. Apply coatings using only the alloy, temperature, current density, and acid electrolytes to obtain specified colors in compliance with designation system and requirements of NAAMM/AMP Pipe Railing Manual and NAAMM/AMP AMP 501. Comply with the following:

1. Provide Architectural Class I high density anodic treatment by immersing the components in tank containing solution of 15 percent sulfuric acid at 70 degrees F with 12 amperes per square foot of direct current for minimum of sixty minutes; AA Designation A41 Clear.
2. Physical Properties:

    a. Anodic Coating Thickness, ASTM B244: Minimum of 0.7-mils thick.
    b. Anodic Coating Weight, ASTM B137: Minimum of 32 mg/sq. in.

c. Resistance to Staining, ASTM B136: No stain after five minutes dye solution exposure.
d. Salt Spray, ASTM B117: 30,000 hours exposure with no corrosion or shade change.

3. Seal finished anodized coatings using deionized boiling water to seal pores and prevent further absorption.
4. Products and Manufacturers: Provide one of the following:

a. Alumilite 215 Clear by Aluminum Company of America, Inc.
b. Or Approved Equal.

2.6 SOURCE QUALITY CONTROL

A. Allowable Tolerances:

1. Limit variation of cast-in-place inserts, sleeves and field-drilled anchor and fastener holes to the following:

a. Spacing: Plus-or-minus 3/8-inch.
b. Alignment: Plus-or-minus 1/4-inch.
c. Plumbness: Plus-or-minus 1/8-inch.

2. Minimum Handrails and Railings Systems Plumb Criteria:

a. Limit variation of completed handrail and railing system alignment to 1/4-inch in 12.0 feet with posts set plumb to within 1/16-inch in 3.0 feet.
b. Align rails so variations from level for horizontal members and from parallel with rake of stairs and ramps for sloping members do not exceed 1/4-inch in 12.0 feet.

3. Provide “pencil-line” thin butt joints.

B. Factory Testing:

1. Perform load test on completed handrail and railing systems. Extent of handrail and railing systems to be factory-tested shall be as shown and specified.
2. Load test completed handrail and railing systems in accordance with requirements of ASTM E935. Provide written report to Engineer identifying and documenting testing methods used, magnitude and location of loads superimposed, and results of such tests on actual completed handrail and railing systems, including all anchors and fasteners to be used in the Work. Testing setup shall simulate actual conditions of installation to be used in the Work.
3. Do not ship products from factory until Engineer accepts load testing report.

PART 3 - EXECUTION

3.1 INSPECTION

A. Examine conditions under which Work is to be performed and notify Engineer, in writing of conditions detrimental to proper and timely completion of the Work. Do not proceed with installation until unsatisfactory conditions are corrected.

B. Verify to Engineer gauge of aluminum pipe railing posts and rails brought to the Site by actual measurement of on-Site material in presence of Engineer.

3.2 INSTALLATION

A. Section 017000 “Execution and Closeout”: Requirements for installation.

B. General:

1. Do not erect components that have become scarred, dented, chipped, discolored, otherwise damaged or defaced. Remove from Site railing and handrail system components that have holes, cuts, gouges, deep scratches, or dents of any kind. Repairs to correct such Work will not be accepted. Remove and replace with new material.
2. Comply with installation and anchorage recommendations of NAAMM/AMP Pipe Railing Manual and NAAMM/AMP AMP 501 in addition to requirements specified and approved or accepted (as applicable) submittals.

C. Fastening to In-Place Construction:

1. Remove protective plastic immediately before installing.
2. Adjust handrails and railings prior to securing in place, to ensure proper matching at butting joints and correct alignment throughout their length. Plumb posts in each direction. Secure posts and rail ends to building or structure as follows:

    a. Anchor posts in concrete by means of sockets set and anchored into concrete floor slab. Provide closure secured to bottom of sleeve. Before installing posts, remove debris and water from sleeves. Verify that reinforcing bars or tubes have been inserted into posts before installation. Do not install posts without reinforcing bar. For all non-removable handrail and railing systems sections, after posts have been inserted into sockets, fill annular space between posts and sockets solid with grout as specified in Section 03 62 0. Crown the grout and slope grout to drain away from posts.
    b. Anchor posts to stair stringers with stringer or support flanges, angle type or floor type as required by conditions, shop-connected to posts and bolted to steel supporting members. Flanges shall be as recommended by manufacturer. Verify that reinforcing bars have been inserted into posts before installation. Do not install posts without reinforcing bar.
    c. Side-mount posts by fastening them securely in brackets attached to steel or concrete fascia as shown and in accordance with approved or accepted (as applicable) submittals.
    d. Provide removable railing sections where shown. Removable railing system posts shall be provided with friction fitted reinforcing bar in each post. Provide sockets with socket covers stored in extruded toeboard. Provide aluminum pipe collars for all removable posts. Accurately locate sleeves to match post spacing.
    e. Posts set in concrete shall be provided with an aluminum floor cover flange.

3. Use devices and fasteners recommended by handrail and railing systems manufacturer and as shown on approved or accepted (as applicable) submittals.

D. Cutting, Fitting and Placement:

1. Perform cutting, drilling and fitting required for installation. Set the Work accurately in location, alignment, and elevation, plumb, level, true, and free of rack, measured from established lines and levels.
2. Fit exposed connections accurately together to form tight hairline joints. Do not cut or abrade surfaces of units that have been finished after fabrication, and are intended for field connections.
3. Make permanent field splice connections using manufacturer's recommended epoxy adhesive and 5.0-inch minimum length connector sleeves. Tight press-fit field splice connectors and install in accordance with manufacturer's written instructions. Follow epoxy manufacturer's recommendations for requirements of installation and conditions of use.
4. Make splices as near as possible to posts, but not exceeding 12.0 inches from nearest post.
5. Field welding is not allowed. Make splices using pipe splice lock employing a single allen screw to lock joint.
6. Provide hinged gates as shown.
7. Provide chain sections as shown. Provide one chain length with fastening accessories for top and each intermediate rail.
8. Secure handrails to walls with wall brackets and end fittings as shown. Drill wall plate portion of the bracket to receive one bolt, unless otherwise shown for concealed anchorage. Locate brackets as shown or, if not shown, at no more than 5.0 feet on centers. Provide flush type wall return fittings with same projection shown for wall brackets. Secure wall brackets and wall return fittings to building or structure. Refer to Section 054500.
9. Securely fasten toeboards in place with not more than 1/4-inch clearance above floor level.
10. Drill one 15/64-inch diameter weep hole not more than 1/4-inch above top of location of solid reinforcing bar or tube in each post.

E. Fastening to Existing Construction:

1. Provide heavy-duty floor flange and anchorage devices and fasteners where necessary for securing handrail and railing systems components to existing construction; including stainless steel threaded fasteners for concrete and masonry inserts, toggle bolts, through-bolts, lag bolts and other connectors as required. Refer to Section 054500.
2. Use devices and fasteners recommended by handrail and railing systems manufacturer and as shown on approved or accepted (as applicable) submittals.

F. Expansion Joints:

1. Provide slip joint with internal sleeve extending 2.0-inch minimum, beyond joint on each side.
2. Construct expansion joints as for field splices, except fasten internal sleeve securely to one side of rail only.
3. Locate joints within six inches of posts.

G. Seismic Joints:

1. Discontinue handrails and railings on each side of seismic joints where handrails and railings cross over seismic joints in structure.
2. Comply with details shown.

H. Protection from Dissimilar Materials:

1. Coat aluminum surfaces in contact with dissimilar materials such as concrete, masonry, and steel, in accordance with Section 099123.
2. Do not extend coating beyond contact surfaces. Remove coating where exposed-to-view in the finished Work.

3.3 FIELD QUALITY CONTROL

A. Section 014000 “Quality Requirements”: Requirements for manufacturer’s field services.

3.4 CLEANING AND REPAIRING

A. Cleaning: Installer shall clean exposed surfaces of handrail and railing systems after completing installation. Comply with recommendations of both handrail and railing system manufacturer and finish manufacturer. Do not use abrasives or unacceptable solvent cleaners. Test cleaning techniques on an unused section of railing before employing cleaning technique.

1. Remove stains, dirt, grease, and other substances by washing handrails and railings systems thoroughly using clean water and soap; rinse with clean water.
2. Do not use acid solution, steel wool, or other harsh abrasives.
3. If stain remains after washing, remove defective sections and replace with new material meeting requirements of this Section.

B. Handrails and railings shall be free from dents, burrs, scratches, holes, and other blemishes. Replace damaged or otherwise defective Work with new material that conforms with this Section at no additional cost to Owner.

C. At Substantial Completion, replace adjacent work marred by the Work of this Section.

SECTION 055300 - METAL GRATING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Aluminum Gratings
2. Galvanized Steel Gratings
3. Stainless Steel Gratings
4. Grating Frames
5. Structural Supports

B. Related Sections:

1. Section 051200 “Structural Steel Framing”
2. Section 055000 “Metal Fabrications”
3. Section 055117 “Pre-Engineered Aluminum Stairs”
4. Section 055215 “Aluminum Handrails and Railings”

1.2 REFERENCES

A. General Requirements:

1. Except as modified by governing codes and by this Specification, comply with the applicable provisions and recommendations of latest editions of the following.
2. Where the language in any of the documents referred to herein is in the form of a recommendation or suggestion, such recommendations or suggestions shall be deemed to be mandatory under this Contract unless otherwise directed by the Engineer.
3. Conflicts: Conform to requirements of cited standard unless specified otherwise. In case of apparent conflict between standards, or between standards and the specifications herein, the more stringent shall apply unless otherwise directed by the Engineer.
4. All exterior gratings, gratings in wash down areas and gratings in process & pumping areas shall have a non slip abrasive surface.

B. American Society for Testing and Materials (ASTM):

1. ASTM 6 - 09 Standard Specification for General Requirements for Rolled Structural Steel Bars, Plates, Shapes, and Sheet Piling
2. ASTM A36 - Standard Specification for Carbon Structural Steel
3. ASTM A123 - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products
4. ASTM A167 - Standard Specification for Stainless and Heat-Resisting Chromium-Nickel Steel Plate, Sheet, and Strip
5. ASTM A276 - Standard Specification for Stainless Steel Bars and Shapes

6. ASTM307 - Standard Specification for Carbon Steel Bolts and Studs, 60 000 PSI Tensile Strength
7. ASTM A325 - Standard Specification for Structural Bolts, Steel, Heat Treated, 120/105 ksi Minimum Tensile Strength
8. ASTM A480 - Standard Specification for General Requirements for Flat-Rolled Stainless and Heat-Resisting Steel Plate, Sheet, and Strip
9. ASTM A502 - Standard Specification for Rivets, Steel, Structural
10. ASTM A576 - Standard Specification for Steel Bars, Carbon, Hot-Wrought, Special Quality
11. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar
12. ASTM A675 - Standard Specification for Steel Bars, Carbon, Hot-Wrought, Special Quality, Mechanical Properties
13. ASTM A1011 - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength
14. ASTM B221 Standard Specification for Aluminum and Aluminum Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes
15. ASTM F593 - Standard Specification for Stainless Steel Bolts, Hex Cap Screws, and Studs
16. ASTM F594 - Standard Specification for Stainless Steel Nuts

C. Aluminum Association, Inc. (AA)

D. American Welding Society (AWS):

1. AWS D1.1 – Structural Welding Code – Steel
2. AWS D1.2 – Structural Code - Aluminum

E. US Dept. of Labor - Occupational Safety & Health Administration (OSHA):

1. 29 CFR 1910.23 Guarding Floor and Wall Openings and Holes

F. The National Association of Architectural Metal Manufacturers (NAAMM)

1. MBG 531-00 Metal Bar Grating Manual
2. MBG 532-00 Heavy Duty Metal Bar Grating Manual
3. MBG 533-89 Welding Specifications for Fabrication of Steel, Aluminum and Stainless Steel Bar Grating
4. MBG 534-94 Metal Bar Grating Engineering Design Manual

G. The Society for Protective Coatings (SSPC)

1. SSPC – Steel Structures Painting Manual
2. SSPC SP1 – Solvent Cleaning
3. SSPC SP 10 – Near White Blast Cleaning

1.3 PERFORMANCE REQUIREMENTS

A. Unless otherwise indicated on the Contract Drawings, gratings, grating frames and grating supports shall conform to the following minimum requirements:

GRATING TYPES AND DESIGN REQUIREMENTS

	Description	Design Conditions		Fabrication	Material
A	Light Duty	Uniform Load	150 psf	P, W or R	Aluminum, Galvanized Steel, or Stainless Steel
		Concentrated Load	300 lb		
		Maximum Deflection (Grating and Grating Supports)	1/240 span, ¼-inch max.		
		ANSI/NAAMM Design Standard		MBG 531	
B	Medium Duty	Uniform Load	300 psf	W or R	Galvanized Steel, or Stainless Steel
		Concentrated Load	2000 lb		
		Maximum Deflection (Grating and Grating supports)	1/240 span, ¼-inch max.		
		ANSI/NAAMM Design Standard		MBG 532	
C	Heavy Duty I (5 Ton Forklift)	Vehicle Wt	14,400 lb	W or R	Galvanized Steel, or Stainless Steel
		Loading	10,000 lb		
		Total Load	24,400 lb		
		Wheel Load	13,480		
		Load Distribution Area			
		- Parallel to Axle	11”		
		- Perpendicular to Axle	11” + 2s		
		Maximum Deflection Grating and Grating Supports)	1/240 span, ¼-inch max.		
		ANSI/NAAMM Design Standard		MBG 532	
D	Heavy Duty II (AASHTO H20)	Axle Load (Dual Wheel)	32,000 lb	W or R	Galvanized Steel, or Stainless Steel
		Wheel Load	20,800 lb		
		Load Distribution Area			
		- Parallel to Axle	20”		
		- Perpendicular to Axle	20” + 2s		
		Maximum Deflection (Grating and Grating Supports)	1/240 span, ¼-inch max.		
		ANSI/NAAMM Design Standard		MBG 532	

Notes:
1. Grating Types: W = Welded (Steel Only), P = Pressure Locked, R = Riveted
2. Wheel Load = ½ of Axle Load + 30% Impact
   Forklifts assume 85% drive axle load.
3. Load Distribution: s = bearing bar spacing, center-to-center

B. Unless otherwise indicated, the design load for gratings shall be equivalent to or greater than that of the adjacent floor area, but not less than a uniform load of 150 pounds per square foot (psf) or a concentrated load pounds distributed over a 12-inch square area at the center of the grating span, whichever produces the greatest stress.

C. Gratings in areas subject to vehicular traffic shall be designed for the maximum vehicle weight that can access the area. Forklifts or other similar wheeled vehicles shall have maximum wheel loads as defined by the vehicle manufacturer but not less than those specified in 1.3.A above.

D. The maximum allowable deflection due to dead plus live load shall not exceed 1/240th to the grating span, but shall not be more than ¼ inch.

E. Gratings shall be designed in accordance with the design criteria specified herein and NAAMM specifications unless otherwise noted on the Contract Drawings or required by Code.

1.4 SUBMITTALS

A. Section 013300 “Submittal Procedures”: Requirements for submittals.

B. Manufacturer's specifications and product data demonstrating compliance with specific requirements. Including:

1. Span and Deflection Tables

C. Complete fully dimensioned and detailed layout drawings of all gratings showing:

1. Area to be covered.
2. Location and dimensions of all cutouts and openings.
3. Direction of bearing bars.
4. Layouts, sizes, materials and fabrication details of supports and framing.
5. Location of all welded anchorages, saddle clips and weld lugs.
6. Sizes and types of gratings.
7. Location, size and type of all grating banding
8. All critical dimensions and clearances including:

a. Grating panel dimensions.
b. Clearance between ends of cross bars of adjacent rectangular grating panels.
c. Clearance between rivet heads of adjacent riveted grating panels.
d. Clearance between bearing bars of adjacent grating panels.
e. All other applicable standards installation clearances as defined in the NAAMM publications “MBG 531-00 Metal Bar Grating Manual” and “MBG 532-00 Heavy Duty Metal Bar Grating Manual”.

D. Details of fastening system for attachment of grating to supports.

E. Submit calculations certified by a Professional Engineer registered in the State of New York for all gratings and supports.

F. Welding:

1. All welds, both shop and field shall be indicated by AWS “Welding Symbols” A2.0
2. Welding Procedure: Submit written description as required to illustrate each welding procedure to be performed in the specified work.
3. Field Welding Equipment: Submit descriptive data for field welding equipment, including type, voltage and amperage.

4. Welders Certificates: Certify welders employed on the Work, verifying AWS qualification within previous 12 months

G. Samples of each size and type grating and fastening device shall be submitted to the Engineer for review.

1.5 QUALITY ASSURANCE

A. Perform Work in accordance with all applicable Federal, State and Municipal codes and regulations including revisions to date of contract.

1.6 QUALIFICATIONS

A. Manufacturer: Products used in the work of this Section shall be produced by those who are regularly engaged in the manufacture and/or supply of similar items for at least five (5) years and which has a history of successful production, acceptable to the Engineer.

B. Installers: Use adequate number of skilled workmen who are thoroughly trained and experienced in the specified requirements and the methods needed for proper performance of the work of this Section.

C. Grating and grating support design shall be under the direct supervision of a Professional engineer registered in the State of New York.

1.7 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication after all piping and equipment are set in place.

B. Prepare templates were required for location and size of openings and cutouts.

1.8 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Section 016000 “Product Requirements”: Requirements for transporting, handling, storing, and protecting products.

B. Use all means necessary to protect the materials of this Section before, during and after installation and to protect installed work and materials of all other trades.

C. Gratings stored at the jobsite shall be covered or under roof.

D. In the event of damage, immediately make all repairs and replacement necessary to the approval of the Engineer and at no additional cost to the Owner.

1.9 WARRANTY

A. Section 016000 “Product Requirements”: Requirements for warranties.

© 2026 CDM Smith
All Rights Reserved

1.10 COORDINATION

A. Coordinate the work of this Section with the work of other Sections, Contractors and subcontractors.

PART 2 - PRODUCTS

2.1 TYPES OF GRATINGS

A. Type of Gratings

1. Unless otherwise shown or specified, gratings shall be one of the four (4) types as specified in Subsection 1.3.A above.
2. Type A Grating shall consist of metal bar grating consisting of an open grid of metal bars. The bearing bars shall be held in place at regular spacing by either:

a. Straight, sinuous or corrugated bars having their longitudinal axes perpendicular to the bearing bars and being connected to them by welding, forging or mechanical locking, or by
b. Bent connecting bars alternately contacting adjacent bearing bars and riveted to them at regular intervals.

3. Types B, C and D Grating shall consist of metal bar grating consisting of an open grid of metal bars. The bearing bars shall have a cross-sectional depth of not less than two times their width. The bearing bars shall be held at regular parallel spacing, either by:

a. Straight, sinuous or corrugated bars having their longitudinal axes perpendicular to the bearing bar and being connected to them by welding, or by
b. Reticuline bars alternately contacting adjacent bearing bars and riveted to them at regular intervals.

2.2 MATERIALS AND COMPONENTS

A. Manufacturer:

1. Gratings shall be the product of one manufacturer unless otherwise permitted by the Engineer.
2. Acceptable Manufacturers

a. IKG Industries
b. Borden Metal Products
c. Ohio Gratings, Inc.
d. Approved Equal

B. Materials

1. General Requirements

a. All grating shall be constructed of bars smooth and free of surface blemishes, including pitting, seam marks, trade names, and roughness.
b. Grating components shall comply with applicable ASTM, AA, NAAM, and other applicable standards and requirements.

2. Aluminum Gratings

a. Bearing bars shall be either alloy 6061-T6 or alloy 6063-T6, conforming to ASTM B 221.
b. Cross bars and bent connecting bars shall be of alloy 6061 or 6063 conforming to ASTM B221 or alloy 3003 conforming to ASTM B210.
c. Rivets shall be made of aluminum wire or alloy 6053-T61 conforming to ASTM B316.

3. Steel Gratings

a. Type A Steel Gratings

1) Steel used in bearing bars, cross bars and connecting bars of rectangular section shall conform to ASTM A110 Co0mmercial Steel (Type 2) for hot rolled carbon steel sheet and strip.
2) Cross bars made of wire shall conform to ASTM A510 for carbon steel wire rods and coarse round wire, except permissible tolerance on diameter of coarse round wire shall be ± 0.005 in.
3) Rivets shall be of steel, ¼ inch minimum diameter, flat head type.

b. Types B, C and D Steel Gratings.

1) Steel used in bearing bars, cross bars and reticuline bars of rectangular section shall conform to ASTM A1011, Commercial Steel (SC Type 2) for hot rolled carbon steel sheet and strip and ASTM A36 for structural steel bars.
2) Cross bars made of wire rod shall conform to ASTM 510 for carbon steel wire rods and coarse round wire, except permissible tolerance on diameter of coarse round wire shall be ± 0.005 in.
3) Rivets shall be of a steel as prescribed in ASTM A575, ¼ inch minimum diameter, flat head type.

4. Stainless Steel Gratings

a. Type A Stainless Steel Grating

1) Bearing bars, cross bars, and connecting bars shall be Type 316L alloy conforming to ASTM A666.
2) Rivets shall be Type 300 series alloy as prescribed in ASTM A493.

b. Types B, C and D Gratings

1) Stainless steel used in bearing bars, cross bars and reticuline bars shall be Type 316L alloy confirming to ASTM A666.
2) Rivets shall be Type 300 series alloy as prescribed in ASTM A493.

© 2026 CDM Smith
All Rights Reserved

2.3 MINIMUM SIZE OF MEMBERS

A. Type A Grating:

1. Bearing Bars: Size of bearing bars shall conform to the tolerances shown in the Minimum Standard Section of the Metal Bar Grating Manual (NAAMM MBG 531-00), but not less than 1-1/4 inch x 3/16 inch.
2. Cross Bars: Minimum dimensions of cross bars shall be in conformance with the Minimum Standard Section of the Metal Bar Grating Manual (NAAMM MBG 531-00) but shall not be less than 3/16 inch for welded members and 1/8 inch for mechanically interlocked members
3. Banding Bars: Banding bars shall have a minimum thickness equivalent to the bearing bars to which they are attached.
4. All banding bars shall be the full depth of the grating except where banding bars will bear on a grating support. The bottom of banding bars at grating supports shall be ¼ inch above the bottom of the bearing bars to permit drainage.

B. Type B, C and D Grating

1. Bearing Bars: All bearing bars shall be of a minimum nominal size as shown in the Load Tables of the Heavy duty Metal Bar Grating Manual (NAAMM MBG 532-00), but not less than 1 ¼ inch x ¼ inch.
2. All materials shall be in accordance with ASTM A6 tolerances.
3. Banding Bars: Banding bars shall have a minimum thickness equivalent to the bearing bars to which they are attached.
4. All banding bars shall be the full depth of the grating except where banding bars will bear on a grating support. The bottom of banding bars at grating supports shall be ¼ inch above the bottom of the bearing bars to permit drainage.

2.4 GRATING FABRICATION

A. General:

1. Gratings shall be accurately fabricated, free from warps, twists or other defects that affect appearance and serviceability.
2. The tops of grating bearing, cross and reticuline bars shall be in the same plane.
3. All welds shall be ground smooth and conform to the requirements of NAAMM MBG 533 - Welding Specifications for Fabrication of Steel, Aluminum and Stainless Steel Bar Grating, and Section 051200.

B. Grating Depth

1. Minimum: 1-1/4 inches.
2. Maximum 3 inches.

C. Bar and Rivet Spacing

1. Type A Grating:

a. Bearing Bars: Not more than 1 3/16 inches on center

b. Cross Bar or Rivets: Not more than 4 inches on center.

2. Type B, C and D Grating

a. Bearing Bars: Not more than 1 ½ inches on center.
b. Cross Bar or Rivets: Not more than 4 inches on center.

D. Serrated Grating:

1. Serrated grating shall be provided where shown on the Contract Drawings.
2. Depth of serrated grating shall not be less than ¼ inch greater than required for standard bar grating

E. Grating Panel Weight

1. Grating panels shall be sized to conform the following grating panel weight limitations unless otherwise indicated on the Contract Drawings, specified or otherwise permitted by the Engineer:

a. Type A Grating: Shall not exceed 50 pounds.
b. Type B Grating: Shall not exceed 50 pounds.
c. Type C Grating: Shall not exceed 100 pounds
d. Type D Grating: Shall not exceed 100 pounds

F. Cutouts and Openings:

1. Cutouts and openings shall be provided in grating for the passage of pipes, valve stems, columns and similar work.
2. All cutouts and openings shall be banded.

a. Where more than 4 bearing bars are included in the cutout or opening, banding bars shall be of the same dimensions as the bearing bars and welded to the components of the grating.
b. Banding for Type C and D grating shall be designed for the effects of impact and fatigue from vehicular loading.

3. Structural support shall be provided for all cutout and openings in Type C and D gratings.
4. Two separate section of grating, each with a banded hole of the proper size shall be provided for the passage of each pipe, valve stem, column, etc. passing through the grating unless otherwise directed by the Engineer.
5. Openings and cutouts shall be at least 2 inches larger than the obstruction.

G. Grating Supports

1. The grating supports shall be Type 316L stainless steel.
2. The maximum deflection of grating and the grating supports shall not exceed those specified in subsection 1.3A above.

H. Grating Embedded Frames.

1. Grating frames embedded in concrete shall be of the same material as the grating.

I. Grating Bearing

1. All grating bearing bars shall be provided with the minimum bearing surface:

   a. Bearing Bars ≤ 2-1/4 inches: 1 inch
   b. Bearing Bars > 2-1/4 inches: 2 inches

J. Grating Anchorage

1. All grating panels shall be provided with weld lugs for bolting grating in place, saddle clips shall not be permitted.
2. Weld lug locations shall be in conformance with the recommendations of NAAMM MBG 531 – Metal Bar Grating Manual and NAAMM MBG 532 – Heavy Duty Metal Bar Grating Manual, and the following:

   a. All grating panels shall be provided with a minimum of one (1) weld lug at each corner
   b. A minimum of four (4) weld lugs shall be provided for each grating panel.
   c. Where grating panels exceed six (6) feet in length, additional weld lugs shall be provided at the midpoint of the sides in excess of six (6) feet.
   d. Where grating panel lengths exceed eight (8) feet in length, additional weld lugs shall be provided to limit spacing between weld lugs to four (4) feet.
   e. A minimum of one (1) weld lug shall be provided at the center of each intermediate support.
   f. Weld lugs shall be a minimum of ¼ inch thick and provided with a hole as required for accepting the anchor bolts or studs.

3. The final grating installation shall be free of any unnecessary movement.

K. Hinged Panels

1. Hinged panels of grating shall be provided where shown on the Drawings
2. All hinged grating shall conform to the requirements listed above, and shall be provided with extra heavy duty 316L stainless steel hinges, hinged pins and fastenings attached to the grating frame, forming a flush surface. A minimum of two (2) hinges shall be provided for each hinged panel.
3. Exterior hinged panels shall have a recessed hasp to accept a padlock.

L. Fabrication Tolerances

1. Grating fabrication tolerances shall be within the limits set by:

   a. Type A Grating: NAAMM MBG 531 – Metal Bar Grating Manual
   b. Type B,C and D Grating: NAAMM MBG 532 – Heavy Duty Metal Bar Grating Manual

2.5 FINISHES

A. Aluminum and stainless steel gratings and frames shall be provided with a mill finish unless otherwise noted on the Contract Drawings or specified.

B. Steel gratings shall be hot dipped galvanized after fabrication with a coating of not less than 1.8 oz/sq ft of coated surface

C. All aluminum in contact with concrete, masonry or dissimilar metals shall be catholically protected by painting, according to the methods outlined in Section 099123.

PART 3 - EXECUTION

3.1 GRATING TYPE AND MATERIAL

A. Design Criteria: Unless otherwise shown on the Contract Drawings or specified, grating type and design criteria shall be as specified in subsection 1.3 Performance Requirements above.

B. Material:

1. General Service: Aluminum or Steel
2. Corrosive and Chemical Handling Areas: Stainless Steel.

3.2 EXAMINATION

A. Examine the areas and conditions under which work of this Section will be installed. Conditions detrimental to the proper and timely completion of the work shall be corrected. Do not proceed until unsatisfactory conditions have been corrected

3.3 PREPARATION

A. Furnish setting drawings, diagrams, templates, instructions and other directions for the installation of anchorages, such as concrete inserts, anchor bolts, and other miscellaneous items having integral anchors, which are to be embedded in concrete construction.

B. Coordinate delivery of such items to the project site.

3.4 INSTALLATION

A. Install grating and supports in strict accordance with the manufacturer’s detailed instructions and the reviewed shop drawings.

B. Perform all cutting, fitting, and drilling required for the installation of the grating.

C. Set the grating accurately in their proper location.

D. Gratings shall be installed with each section readily removable and replaceable.

E. Adjacent grating panels shall be neatly fitted together

F. The maximum installed gratings clearances shall be as specified in:

1. Type A Grating: NAAMM MBG 531 – Metal Bar Grating Manual
2. Type B, C and D Grating: NAAMM MBG 532 – Heavy Duty Metal Bar Grating Manual

G. Tops of gratings shall be set flush with surrounding construction

H. Gratings shall be set with a full and uniform end bearing on the frame and grating supports to preclude rocking movement. Wedges or similar shimming devices shall not be used. The final grating installation shall be free of any unnecessary movement.

I. Anchorage

1. Gratings shall be anchored in place using the provided weld lugs.
2. Gratings panels shall be used as a template for locating hoes or studs.
3. Bolts, studs or nuts shall not protrude above the surface of the grating
4. Anchor bolts and studs shall be installed in accordance with manufacturer's instructions.

J. All aluminum grating shall be isolated from contact dissimilar metals with a HDPE or neoprene pad between grating and underlying steel.

3.5 FIELD WELDING

A. Comply with the latest revision of the AWS code for any necessary field welding.

END OF SECTION 055300

SECTION 061000 - ROUGH CARPENTRY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Wood products.
2. Wood-preservative-treated lumber.
3. Fire-retardant-treated lumber.
4. Dimension lumber framing.
5. Miscellaneous lumber.
6. Plywood backing panels.

B. Related Requirements:

1.3 DEFINITIONS

A. Boards or Strips: Lumber of less than 2 inches nominal size in least dimension.

B. Dimension Lumber: Lumber of 2 inches nominal size or greater but less than 5 inches nominal size in least dimension.

C. Exposed Framing: Framing not concealed by other construction.

1. NeLMA: Northeastern Lumber Manufacturers' Association.
2. NLGA: National Lumber Grades Authority.
3. SPIB: The Southern Pine Inspection Bureau.
4. WCLIB: West Coast Lumber Inspection Bureau.
5. WWPA: Western Wood Products Association.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.

1. Include data for wood-preservative treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Indicate type of preservative used and net amount of preservative retained.

2. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Include physical properties of treated materials based on testing by a qualified independent testing agency.
3. For fire-retardant treatments, include physical properties of treated lumber both before and after exposure to elevated temperatures, based on testing by a qualified independent testing agency in accordance with ASTM D5664.
4. For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.

1.5 INFORMATIONAL SUBMITTALS

A. Material Certificates:

1. For dimension lumber specified to comply with minimum allowable unit stresses. Indicate species and grade selected for each use and design values approved by the ALSC Board of Review.
2. For preservative-treated wood products. Indicate type of preservative used and net amount of preservative retained.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Stack wood products flat with spacers beneath and between each bundle to provide air circulation. Protect wood products from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Not Used

2.2 MATERIALS / EQUIPMENT

A. General: All natural wood lumber used in the Work shall be verified as obtained from a certified sustainable natural wood lumber source using sustainable forest management practices.

B. Rough Carpentry: Lumber for rough carpentry such as nailers, grounds, blocking and framing shall be of Sustainably Managed Construction Grade, thoroughly seasoned dry No. 1 white fir, ponderosa pine, spruce or hem-fir.

C. Preservative Treatment: All lumber for rough carpentry which is incorporated into the finished structures shall be pressure-treated lumber complying with the requirements as shown on the Contract Drawings, specified in Section 06 05 73.33 - Preservation Wood Treatment or required for the Work. All lumber shall be seasoned lumber with a maximum moisture content of 19 percent at time of dressing. Water-borne preservative shall be as specified in Section 06 05 73.33 - Preservation Wood Treatment. All lumber shall be branded accordingly.

D. Fire Retardant Treatment: All wood designated on the Contract Drawings or specified to be fire-retardant treated shall be pressure impregnated with flame-proofing as specified in Section 06 05 73.33 - Preservation Wood Treatment.

E. Code Conformance: Materials shall conform to the requirements of the National Design Specification for Wood Construction as recommended by the American Wood Council, unless otherwise indicated.

F. Plywood Standards: Plywood shall conform to the requirements of the American Plywood Association.

G. Grading: Each panel of plywood shall be identified with the appropriate DFPA grade mark of the American Plywood Association.

H. Exterior Plywood Uses: Exterior type plywood shall be installed where plywood is used for roof sheathing or decking, or in areas where it may be exposed to moisture.

I. Temporary Protection: Exterior type southern yellow pine plywood, APA Grade C, plugged fir shall be used for temporary protection.

J. Accessories

1. Anchors, connectors, and fastenings, not indicated or specified otherwise, shall be provided and installed and shall be of the type, size and spacing necessary to suit the conditions encountered and as recommended by National Forest Products Association. Sizes, types, and spacing of nails, screws, or bolts for installation of manufactured building materials shall be as recommended by the product manufacturer, unless indicated or specified otherwise.
2. Steel rough hardware exposed to the weather shall be zinc-electroplated unless indicated otherwise. Zinc-electroplated steel bolts, nuts, washers, hangers, and straps, and all other rough hardware embedded in, or in contact with exterior walls or slabs, and located in humid areas, shall be provided and installed, except as indicated otherwise.
3. Rough hardware shall be formed and punched before coating. Common steel wire nails, bright finish, shall be used, unless specified otherwise.
4. Bolt heads and nuts bearing on wood shall be provided with standard steel washers.
5. Galvanized fasteners for treated wood shall be in accordance with the requirements contained in Section 05 05 13.01 - Galvanizing.

2.3 FABRICATION / ASSEMBLING / FINISHES

A. Not Used

2.4 SOURCE QUALITY CONTROL / SHOP TESTS

A. Not Used

© 2026 CDM Smith
All Rights Reserved

PART 3 - EXECUTION

3.1 EXAMINATION / PREPARATION

A. The Contractor shall verify that areas to receive rough carpentry which is to be incorporated into the finished Work are properly prepared and completed to final elevations.

3.2 INSTALLATION

A. General: Rough carpentry shall be installed in accordance with the manufacturer's recommendations and approved shop drawings.

B. Erection: All carpentry shall be correctly laid out. All items of woodwork, hardware, and any other work in connection with carpentry shall be carefully fit and erected, accurately located, and shall be plumb, level, and properly aligned, and rigidly secured in place.

C. Blocking: Blocking shall be furnished and installed where required for the attachment of copings, roof ventilators, ducts and other sheet metal work. Wood grounds for other work shall be provided and installed and as shown and required.

D. Securing Finished Work: Wood blocks, strips, plugs and similar items shall be provided and installed as required to secure finished work to concrete and masonry.

E. Centers: Centers shall be provided, where required, for brick and other masonry at the exterior and interior openings.

F. Protection of other Work: Jambs of finished door frames and finished masonry openings shall be protected to a height of 6 feet above the floor. Protection shall be erected in a manner to facilitate cleaning, painting and similar work without damage to finished work.

G. Preservative Coating: All field-cut edges and surfaces of treated lumber shall be liberally coated with a concentrated solution of preservative.

3.3 FIELD TESTING / QUALITY CONTROL

A. Not Used

3.4 STARTUP / DEMONSTRATION

A. Not Used

3.5 ADJUSTING / PROTECTION / CLEANUP

A. Adjusting

1. System components which are dislodged, damaged, expanded, broken, penetrated or crushed by subsequent installation operations or by detrimental weather shall be

immediately replaced with undamaged material in compliance with the Sections and properly protected as specified.

B. Protection

1. All components of the work shall be protected from detrimental weather and damage until construction operations are completed.
2. Work which cannot be covered with complete construction systems before the onset of weather detrimental to the work shall be completely covered and protected in such a manner as to deflect water and weather from the installation without damaging adjacent work.
3. Rough carpentry shall be protected from all damage and abuse until Final Acceptance by the City.

SECTION 066100 - FIBERGLASS REINFORCED PLASTICS (FRP) FABRICATIONS PULTRUDED TUBE GUARDRAIL AND HANDRAIL

PART 1 - GENERAL

1.1 SCOPE OF WORK

A. This specification is for a pultruded fiberglass railing system in compliance with 2012 IBC, and OSHA 1910.23.

1.2 REFERENCES

A. The publications listed below (latest revision applicable) form a part of this specification to the extent referenced herein. The publications are referred to within the text by the designation only.
   1. AMERICAN SOCIETY FOR TESTING AND MATERIALS (ASTM) Test Methods:
   2. ASTM D-638-Tensile Properties of Plastics
   3. ASTM D-790-Flexural Properties of Unreinforced and Reinforced Plastics
   4. ASTM D-2344-Apparent Interlaminar Shear Strength of Parallel Fiber Composites by Short Beam Method
   5. ASTM D-495-High Voltage, Low-Current, Dry Arc Resistance of Solid Electrical Insulation
   6. ASTM D-696-Coefficient of Linear Thermal Expansion for Plastics
   7. ASTM E-84-Surface Burning Characteristics of Building Materials
   8. INTERNATIONAL CODE COUNCIL, INC.
   9. The International Building Code, 2012
   10. THE OCCUPATIONAL HEALTH AND SAFETY ADMINISTRATION
   11. Code of Federal Regulations (CFR), Title 29, Section 1910.23

1.3 SUBMITTALS

A. The CONTRACTOR shall furnish shop drawings of all fabricated railings and accessories in accordance with the provisions of this Section.

B. The CONTRACTOR shall furnish manufacturer's shop drawings clearly showing material sizes, types, styles, part or catalog numbers, complete details for the fabrication of and erection of components including, but not limited to, location, lengths, type and sizes of fasteners, clip angles, member sizes, and connection details.

C. The CONTRACTOR shall submit the manufacturer’s published literature including structural design data, structural properties data, corrosion resistance tables, certificates of compliance, test reports as applicable, and design calculations for systems not sized or designed in the contract documents, sealed by a Professional Engineer.

© 2026 CDM Smith
All Rights Reserved

D. The CONTRACTOR may be requested to submit sample pieces of each item specified herein for acceptance by the ENGINEER as to quality and color. Sample pieces shall be manufactured by the method to be used in the WORK.

1.4 QUALITY ASSURANCE

A. All items to be provided under this Section shall be furnished only by manufacturers having a minimum of ten (10) years experience in the design and manufacture of similar products and systems. Additionally, if requested, a record of at least five (5) previous, separate, similar successful installations in the last five (5) years shall be provided.

B. Manufacturer shall offer a 3 year limited warranty on all FRP products against defects in materials and workmanship.

C. Manufacturer shall be certified to the ISO 9001 standard.

D. Manufacturer shall provide proof of certification from at least two other quality assurance programs for its facilities or products (DNV, ABS, USCG, AARR).

1.5 PRODUCT DELIVERY AND STORAGE

A. Delivery of Materials: Manufactured materials shall be delivered in original, unbroken pallets, packages, containers, or bundles bearing the label of the manufacturer. Adhesives, resins and their catalysts and hardeners shall be crated or boxed separately and noted as such to facilitate their movement to a dry indoor storage facility.

B. Storage of Products: All materials shall be carefully handled to prevent them from abrasion, cracking, chipping, twisting, other deformations, and other types of damage. Adhesives, resins and their catalysts are to be stored in dry indoor storage facilities between 70 and 85 degrees Fahrenheit (21 to 29 degrees Celsius) until they are required.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Guardrail and/or Handrail system to be Dynarail® as manufactured by

1. Fibergrate Composite Structures Inc.
   5151 Belt Line Road, Suite 1212
   Dallas, Texas 75254-7028 USA
   (800) 527-4043 Phone (972) 250-1530 Fax

   Website: fibergrate.com
   E-mail: info@fibergrate.com

© 2026 CDM Smith
All Rights Reserved

2.2 GENERAL

A. All posts and rails are to be DYNAFORM® FRP structural shapes manufactured by the pultrusion process. The structural shapes shall be composed of fiberglass reinforcement and resin in qualities, quantities, properties, arrangements and dimensions as necessary to meet the design requirements and dimensions specified in the Contract Documents.

B. Fiberglass reinforcement shall be a combination of continuous roving, continuous strand mat, and surfacing veil in sufficient quantities as needed by the application and/or physical properties required.

C. Resins shall be {DYNAFORM® *ISOFR, fire retardant isophthalic polyester used to produce NSF Standard 61 certified shapes, or VEFR, fire retardant vinyl ester used to produce NSF Standard 61 certified shapes*, (*choose one*)} with chemical formulation necessary to provide the corrosion resistance, strength and other physical properties as required.

D. All finished surfaces of FRP items and fabrications shall be smooth, resin-rich, free of voids and without dry spots, cracks, crazes or unreinforced areas. All glass fibers shall be well covered with resin to protect against their exposure due to wear or weathering.

E. All pultruded structural shapes shall be further protected from ultraviolet (UV) attack with 1) integral UV inhibitors in the resin, 2) a synthetic surfacing veil to help produce a resin rich surface, and 3) an appropriate UV resistant coating for outdoor exposures.

F. All FRP products shall have a tested flame spread rating of 25 or less per ASTM E-84 Tunnel Test, (except for non-fire retardant isophthalic polyester and vinyl ester NSF Standard 61 certified shapes).

G. Top and bottom rails for guards are to be 1.75" x 0.125" (44.4 mm x 3.2 mm) wall square tube, the posts are to be 2.125" x 0.1875" (53.9 mm x 4.8 mm) wall square tube and kick plate is to be ½" deep x 4" wide with two reinforcing ribs. Offset rail used as handrail to be 1.5” x 0.25” (38.1 mm x 6.4 mm) wall round tube.

H. The completed railing installation shall meet the following load requirements with a minimum factor of safety of 2.0:

1. Concentrated Load: 200 lb (891 N) applied in any direction at any point on the rail.
2. Uniform Load: 50 lb/lf (730.5 N/m) applied in any direction on the rail.
3. Loads are assumed not to act concurrently.

I. All rails, posts, and kick plates are to be integrally pigmented yellow.

J. Pultruded structural shapes used in the railing systems are to have the minimum longitudinal mechanical properties listed below:

Property	**ASTM Method**	**Value**	**Units**
Tensile Strength	D-638	30,000 (206)	psi (MPa)
Tensile Modulus	D-638	2.5 x 10^6 (17.2)	psi (GPa)
Flexural Strength	D-790	30,000 (206)	psi (MPa)

© 2026 CDM Smith
All Rights Reserved

Property	ASTM Method	Value	Units
Flexural Modulus	D-790	1.8×10^6 (12.4)	psi (GPa)
Flexural Modulus (Full Section)	N/A	2.8×10^6 (19.3)	psi (GPa)
Short Beam Shear (Transverse)	D-2344	4,500 (31)	psi (MPa)
Shear Modulus (Transverse)	N/A	4.5×10^5 (3.1)	psi (GPa)
Coefficient of Thermal Expansion	D-696	4.1×10^{-6} (7.4×10^{-6})	in/in/°F (cm/cm/°C)
Flame Spread	E-84	25 or less	N/A

K. All fasteners used in the railing system are to be 316 SS. Rivets to be 18-8 SS.

PART 3 - EXECUTION

3.1 FABRICATION

A. The post/rail connection for guards is to be fabricated such that the rails are unbroken and continuous through the post without the use of packs or splices. The bottom rail is to be installed through the post at a prepared hole made to fit the outside dimensions of the rail. The top rail is to fit into a machined, u-shaped pocket formed into top of the post such that the rail is located at the center of the post. All exposed post corners are to be radiused to eliminate sharp edges. The rails are to be joined to the post through a combination of bonding and riveting. The offset handrail is to be fabricated such that the rail is continuous with the use of connectors and splices. No sharp, protruding edges are to remain after assembly of the railing system. Spacing of the posts and offset handrail supports shall not exceed 6'-0" (1.83 m).

B. The bases of the posts are to be attached according to the contract drawings. The bases of the posts are to be reinforced to a height of 8.5" (254 mm). The offset handrails are to be attached to guards or walls with brackets.

C. When required, rails for guards are to be spliced using a 10" (152.4 mm) length of 1.5" x 1/8" (38.1 mm x 3.2 mm) FRP square tube bonded and riveted into place using epoxy adhesive. Rail for offset handrail to be spliced using a 5” (127 mm) length of 1” (25.4 mm) FRP round rod.

D. To avoid embrittlement at cold temperatures and loss of strength at high temperatures, PVC or CPVC connectors should not be used as a load carrying component of the railing system.

E. All shop fabricated cuts are to be sealed to provide maximum corrosion resistance. Field cuts are to be similarly coated by the contractor in accordance with the manufacturer’s instructions.

SECTION 072100 - THERMAL INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Extruded polystyrene foam-plastic board insulation.
2. Molded (expanded) polystyrene foam-plastic board insulation.
3. Graphite-polystyrene foam-plastic board insulation.
4. Polyisocyanurate foam-plastic board insulation.

B. Related Requirements:

1. Section 061600 "Sheathing" for foam-plastic board sheathing installed directly over wood or steel framing.
2. Section 075216 "Styrene-Butadiene-Styrene (SBS) Modified Bituminous Membrane Roofing" for insulation specified as part of roofing construction.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1.4 INFORMATIONAL SUBMITTALS

A. Installer's Certification: Listing type, manufacturer, and R-value of insulation installed in each element of the building thermal envelope.

1. For blown-in or sprayed fiberglass and cellulosic-fiber loose-fill insulation, indicate initial installed thickness, settled thickness, settled R-value, installed density, coverage area, and number of bags installed.
2. Sign, date, and post the certification in a conspicuous location on Project site.

B. Product Test Reports: For each product, for tests performed by a qualified testing agency.

C. Research Reports: For foam-plastic insulation, from ICC-ES.

© 2026 CDM Smith
All Rights Reserved

1.5 DELIVERY, STORAGE, AND HANDLING

A. Protect insulation materials from physical damage and from deterioration due to moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.

B. Protect foam-plastic board insulation as follows:

1. Do not expose to sunlight except to necessary extent for period of installation and concealment.
2. Protect against ignition at all times. Do not deliver foam-plastic board materials to Project site until just before installation time.
3. Quickly complete installation and concealment of foam-plastic board insulation in each area of construction.

PART 2 - PRODUCTS

2.1 Manufacturers

A. Provide one of the following:

1. FOAMULAR NGX as manufactured by:

a. Owens Corning Foam Insulation LLC, Toledo OH.
b. Or approved equal.

2.2 Materials / Equipment

A. Fire Safing Insulation: Provide the following:

1. Mineral Fiber Insulation: Un-faced, semi-rigid, non-asbestos, non-combustible blankets composed of compounds of spun mineral fiber felt, complying with ASTM C665, Type I, and FS HH-I-558B, Type 1 and 2.
2. Physical Properties: Provide the following:

a. Thermal Conductivity (k), ASTM C518: 0.25 Btu/in./hr./sf/°F.
b. Density, Manufacturer's Certified Test: 4 pcf.
c. Flame Spread, ASTM E84: 15 maximum.
d. Smoke Developed, ASTM E84: 0.
e. Fire Resistance Rating, ASTM E119: 3 hours.
f. Thickness: 4-inches
g. Width: 24-inches

B. Fire-Stop Sealants and Other Fire-Stop System Components: Provide the following:

1. Complete selection of fire stop manufacturer's recommended silicone rubber fire stop systems. Provide complete systems complying with UL 1479 with a two or three hour fire rating. Provide equal fire protection as provided by fire-rating of construction penetrated.

2. Provide multiple component systems coordinated to meet actual conditions encountered in the Work and as recommended by the fire stop manufacturer. In addition to providing fire-resistance the fire stop systems shall also be gas and watertight.

C. Miscellaneous Materials and Accessories: Provide the following:

1. Adhesive for Bonding Insulation: The type recommended by the insulation manufacturer, and complying with fire-resistance requirements.
2. Mechanical Anchors: Type and size shown or, if not shown, as recommended by the insulation manufacturer for the type of application shown and condition of substrate.
3. Protection Board: Fiberboard sheathing or heavy duty asphaltic panels as recommended by the insulation manufacturer.
4. Adhesive Tapes: Complete selection of insulation manufacturer's recommended taping materials.
5. Bitumen: Asphalt, ASTM D449

2.3 Fabrication / Assembling / Finishes

1. Contractor shall verify that foamed-in-place cementitious insulation shall be mixed using the quantities, proportions and the pressures required in the manufacturer’s written specifications and comply with the intended use.

2.4 Source Quality Control / Shop Tests

1. Not Used

PART 3 - EXECUTION

3.1 PREPARATION

A. Clean substrates of substances that are harmful to insulation, including removing projections capable of puncturing insulation or vapor retarders, or those that interfere with insulation attachment.

3.2 INSTALLATION, GENERAL

A. Comply with insulation manufacturer's written instructions applicable to products, applications and applicable codes.

B. Install insulation that is undamaged, dry, and unsoiled and that has not been left exposed to ice, rain, or snow at any time.

C. Install insulation with manufacturer's R-value label exposed after insulation is installed.

D. Extend insulation to envelop entire area to be insulated. Fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.

E. Provide sizes to fit applications and selected from manufacturer's standard thicknesses, widths, and lengths. Apply single layer of insulation units unless multiple layers are otherwise shown or required to make up total thickness or to achieve R-value.

3.3 INSTALLATION OF BOARD INSULATION

A. Install board insulation in accordance with manufacturer's written instructions per project applications and conditions.

3.4 INSTALLATION OF REFLECTIVE AND RADIANT BARRIERS INSULATION

A. Install sheet reflective insulation in accordance with ASTM C727.

B. Install sheet radiant barriers in accordance with ASTM C1744.

C. Install interior radiation control coating system in accordance with ASTM C1321.

3.5 INSTALLATION OF VACUUM INSULATION

A. Install vacuum insulation panels in accordance with manufacturer's written instructions.

3.6 PROTECTION

A. Protect installed insulation from damage due to harmful weather exposures, physical abuse, and other causes.

B. Provide temporary coverings or enclosures where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

END OF SECTION 072100

SECTION 075216 – STYRENE-BUTADIENE-STYRENE (SBS) MODIFIED BITUMINOUS MEMBRANE ROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Styrene-butadiene-styrene (SBS)-modified bituminous membrane roofing.
2. Hybrid roofing system that combines built-up ply sheets with styrene-butadiene-styrene (SBS)-modified bituminous cap sheet.
3. Substrate board.
4. Vapor retarder.
5. Roof insulation.
6. Cover board.
7. Walkways.

B. Related Requirements:

1. Section 061000 "Rough Carpentry" for wood nailers, curbs, and blocking.
2. Section 072100 "Thermal Insulation" for insulation beneath the roof deck.
3. Section 076200 "Sheet Metal Flashing and Trim" for metal roof flashings and counterflashings.
4. Section 077100 "Roof Specialties" for counterflashings.
5. Section 079200 "Joint Sealants" for joint sealants, joint fillers, and joint preparation.

1.3 DEFINITIONS

A. Roofing Terminology: Definitions in ASTM D1079 and glossary of NRCA's "The NRCA Roofing Manual: Membrane Roof Systems" apply to Work of this Section.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: Include plans, sections, details, and attachments to other work, including the following:

1. Layout and thickness of insulation.
2. Base flashings and membrane terminations.

3. Flashing details at penetrations.
4. Tapered insulation, including slopes.
5. Roof plan showing orientation of steel roof deck and orientation of roof membrane, fastening spacings, and patterns for mechanically fastened roofing system.
6. Crickets, saddles, and tapered edge strips, including slopes.
7. Insulation fastening patterns for corner, perimeter, and field-of-roof locations.
8. Tie-in with adjoining air barrier.

C. Samples for Verification: For the following products:

1. Cap Sheet: Samples of manufacturer's standard colors for selection by Architect
2. Flashing Sheet: Samples of manufacturer's standard colors for selection by Architect
3. Aggregate surfacing material in gradation and color required.
4. Walkway Pads or Rolls: Samples of Manufacturer's standard colors for selection by Architect

D. Wind Uplift Resistance Submittal: For roofing system indicating compliance with wind uplift performance requirements.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For installer and manufacturer.

B. Manufacturer Certificates:

1. Performance Requirement Certificate: Signed by roof membrane manufacturer certifying that roofing system complies with requirements specified in "Performance Requirements" Article.

a. Submit evidence of complying with performance requirements.

2. Special Warranty Certificate: Signed by roof membrane manufacturer, certifying that all materials supplied under this Section are acceptable for special warranty.

C. Product Test Reports: For roof membrane and insulation, tests performed by a qualified testing agency, indicating compliance with specified requirements.

D. Evaluation Reports: For components of membrane roofing system, from ICC-ES.

E. Field Test Reports:

1. Concrete internal relative humidity test reports.
2. Fastener-pullout test results and manufacturer's revised requirements for fastener patterns.

F. Field quality-control reports.

G. Sample Warranties: For manufacturer's special warranties.

© 2026 CDM Smith
All Rights Reserved

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For roofing system to include in maintenance manuals.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: A qualified manufacturer that is UL listed for roofing system identical to that used for this Project.

B. Installer Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's special warranty.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.

B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer.

1. Protect stored liquid material from direct sunlight.
2. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.

C. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources.

1. Store in a dry location.
2. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.

D. Handle and store roofing materials, and place equipment in a manner to avoid permanent deflection of deck.

1.9 FIELD CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

1.10 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of roofing system that fail in materials or workmanship within specified warranty period.

1. Special warranty includes roof membrane, base flashings, roof insulation, fasteners, cover boards, vapor retarder, substrate board, and other components of roofing system.
2. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 UL CLASS

A. UL Class A, 20 year build-up type, four or more plies to match existing or approved equal.

2.2 PERFORMANCE REQUIREMENTS

A. General Performance: Installed roofing system and flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Roof system and flashings shall remain watertight.

1. Accelerated Weathering: Roof membrane shall withstand 2000 hours of exposure when tested according to ASTM G152, ASTM G154, or ASTM G155.
2. Impact Resistance: Roof membrane shall resist impact damage when tested according to ASTM D3746/D3746M, ASTM D4272/D4272M, or the "Resistance to Foot Traffic Test" in FM Approvals 4470.

B. Material Compatibility: Roofing materials shall be compatible with one another and adjacent materials under conditions of service and application required, as demonstrated by roof membrane manufacturer based on testing and field experience.

C. Wind Uplift Resistance: Design roofing system to resist the following wind uplift pressures when tested according to FM Approvals 4474, UL 580, or UL 1897:

2.3 MANUFACTURERS

A. Source Limitations: Obtain components for roofing system from approved by roof membrane manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for opening configurations, penetrating items, substrates, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing system manufacturer's written instructions.

1. Remove sharp projections.

B. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction.

1. Remove roof-drain plugs when no work is taking place or when rain is forecast.

C. Prime surface of concrete deck with asphalt primer at a rate of 3/4 gal./100 sq. ft., and allow primer to dry.

D. Perform fastener-pullout tests according to roof system manufacturer's recommendations.

1. Submit test result within 24 hours of performing tests.

a. Include manufacturer's requirements for any revision to previously submitted fastener patterns required to achieve specified wind uplift requirements.

3.3 INSTALLATION OF ROOFING, GENERAL

A. Install roofing system according to roofing system manufacturer's written instructions, assembly requirements, and FM Global Property Loss Prevention Data Sheet 1-29.

B. Complete terminations and base flashings, and provide temporary seals to prevent water from entering completed sections of roofing system at the end of the workday or when rain is forecast.

1. Remove and discard temporary seals before beginning work on adjoining roofing.

C. Substrate-Joint Penetrations: Prevent roofing asphalt and adhesives from penetrating substrate joints, entering building, or damaging roofing system components or adjacent building construction.

3.4 INSTALLATION OF SUBSTRATE BOARD

A. Install substrate board with long joints in continuous straight lines, with end joints staggered not less than 24 inches in adjacent rows.

1. Locate end joints over crests of steel roof deck.
2. Tightly butt substrate boards together.
3. Cut substrate board to fit tight around penetrations and projections, and to fit tight to intersecting sloping roof decks.
4. Loosely lay substrate board over roof deck.

3.5 INSTALLATION OF VAPOR RETARDER

A. Polyethylene Film: Loosely lay polyethylene-film vapor retarder in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum of 2 and 6 inches, respectively.

1. Extend vertically up parapet walls and projections to a minimum height equal to height of the insulation and cover board.
2. Continuously seal side and end laps with tape adhesive.

B. Laminate Sheet: Loosely lay laminate-sheet vapor retarder in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum of 2 and 6 inches, respectively.

1. Extend vertically up parapet walls and projections to a minimum height equal to height of the insulation and cover board.
2. Continuously seal side and end laps with tape.

C. Self-Adhering-Sheet Vapor Retarder: Prime substrate if required by manufacturer. Install self-adhering-sheet vapor retarder over area to receive vapor retarder, side and end lapping each sheet a minimum of 3-1/2 and 6 inches, respectively.

1. Extend vertically up parapet walls and projections to a minimum height equal to height of the insulation and cover board.
2. Seal laps by rolling.

D. Completely seal vapor retarder at terminations, obstructions, and penetrations to prevent air movement into roofing system.

3.6 INSTALLATION OF INSULATION

A. Coordinate installing roofing system components, so insulation is not exposed to precipitation or left exposed at the end of the workday.

B. Comply with roofing system and insulation manufacturer's written instructions for installing roof insulation.

C. Insulation Cant Strips: Install and secure preformed 45-degree insulation cant strips at junctures of roofing system with vertical surfaces or angle changes greater than 45 deg F.

D. Installation Over Metal Decking:

1. Install base layer of insulation with joints staggered not less than 24 inches in adjacent rows.

    a. Staggered end joints within each layer not less than 24 inches in adjacent rows.

E. Installation Over Concrete Decks:

1. Install base layer of insulation with joints staggered not less than 24 inches in adjacent rows.

a. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
b. Make joints between adjacent insulation boards not more than 1/4 inch in width.
c. At internal roof drains, slope insulation to create a square drain sump, with each side equal to the diameter of the drain bowl plus 24 inches.

1) Trim insulation, so that water flow is unrestricted.

d. Fill gaps exceeding 1/4 inch with insulation.
e. Cut and fit insulation within 1/4 inch of nailers, projections, and penetrations.

3.7 INSTALLATION OF COVER BOARDS

A. Install cover boards over insulation with long joints in continuous straight lines, with end joints staggered between rows. Offset joints of insulation below a minimum of 6 inches in each direction.

1. Trim cover board neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
2. At internal roof drains, conform to slope of drain sump.

a. Trim cover board, so that water flow is unrestricted.

3. Cut and fit cover board tight to nailers, projections, and penetrations.
4. Adhere cover board to substrate using adhesive according to manufacturer’s written instructions and FM Global Property Loss Prevention Data Sheet 1-29, as follows:

a. Set cover board in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.

3.8 INSTALLATION OF ROOFING MEMBRANE, GENERAL

A. Install roofing system according to roofing system manufacturer's written instructions and applicable recommendations in ARMA/NRCA's "Quality Control Guidelines for the Application of Polymer Modified Bitumen Roofing."

B. Coordinate installation of roofing system so insulation and other components of the roofing system not permanently exposed are not subjected to precipitation or left uncovered at the end of the workday or when rain is forecast.

1. Provide tie-offs at end of each day's work to cover exposed roofing sheets and insulation with a course of coated felt set in roofing cement or hot roofing asphalt, with joints and edges sealed.
2. Complete terminations and base flashings, and provide temporary seals to prevent water from entering completed sections of roofing system.
3. Remove and discard temporary seals before beginning work on adjoining roofing.

3.9 INSTALLATION OF BASE SHEET

A. Before installing, unroll base sheet, cut into workable lengths, and allow to lie flat for a time period recommended by manufacturer for the ambient temperature.

B. Installation of SBS-Modified Bitumen Polyester and Fiberglass-Mat Base Sheet:

1. Install base sheet according to roofing manufacturer's written instructions, starting at low point of roofing system.
2. Extend roofing sheets over and terminate above cants.
3. Install base sheet in a shingle fashion.
4. Adhere to substrate in a uniform coating of cold-applied adhesive.

5. Install base sheet without wrinkles, rears, and free from air pockets.
6. Laps: Accurately align roofing sheets, without stretching, and maintain uniform side and end laps.

    a. Lap side laps as recommended by roof membrane manufacturer but not less than 3 inches.
    b. Lap end laps as recommended by roof membrane manufacturer but not less than 12 inches.
    c. Stagger end laps not less than 18 inches.
    d. Completely bond and seal laps, leaving no voids.
    e. Roll laps with a 20-pound roller.

7. Repair tears and voids in laps and lapped seams not completely sealed.
8. Apply pressure to the body of the base sheet according to manufacturer's instructions, to remove air pockets and to result in complete adhesion of base sheet to substrate.

C. Installation of Vented Base Sheet:

1. Spot or strip mop to substrate with hot roofing asphalt vented base sheet with vented side down.

    a. Fasten vented base sheet according to manufacturer’s written requirements
    b. Fasten vented base sheet to resist uplift pressure at corners, perimeter, and field of roof.

3.10 INSTALLATION OF INTERPLY SHEETS

A. Install two ply sheets, starting at low point of roofing.

1. Align ply sheets without stretching.
2. Shingle side laps of ply sheets uniformly to achieve required number of plies throughout thickness of roofing membrane.

    a. Shingle in direction to shed water.

3. Extend ply sheets over and terminate above cants.

3.11 INSTALLATION OF SBS-MODIFIED BITUMINOUS CAP SHEET

A. Before installing, unroll cap sheet, cut into workable lengths, and allow to lie flat for a time period recommended by manufacturer for the ambient temperature at which cap sheet will be installed.

B. Install modified bituminous roofing cap sheet according to roofing manufacturer's written instructions, starting at low point of roofing system.

1. Extend cap sheet over and terminate above cants.
2. Install cap sheet in a shingle fashion.
3. Install cap sheet as follows:

    a. Adhere to substrate in cold-applied adhesive.

4. Install cap sheet without wrinkles or tears, and free from air pockets.
5. Install cap sheet, so side and end laps shed water.

C. Laps: Accurately align roofing sheets, without stretching, and maintain uniform side and end laps.

1. Lap side laps as recommended by roof membrane manufacturer but not less than 3 inches.
2. Lap end laps as recommended by roof membrane manufacturer but not less than 12 inches.
3. Stagger end laps not less than 18 inches.
4. Heat weld laps, leaving no voids.
5. Roll laps with a 20-pound roller.
6. Repair tears and voids in laps and lapped seams not completely sealed.

D. Apply pressure to the body of the cap sheet according to manufacturer's instructions, to remove air pockets and to result in complete adhesion of base sheet to substrate.

E. Aggregate Surfacing: After installing and testing roofing, base flashing, and stripping, promptly apply flood coat to roof surface with 60 lb/100 sq. ft. of hot roofing asphalt. While flood coat is hot and fluid, cast the following average weight of aggregate in a uniform course:

3.12 INSTALLATION OF FLASHING AND STRIPPING

A. Install base flashing over cant strips and other sloped and vertical surfaces, at roof edges, and at penetrations through roof, and secure to substrates according to roofing system manufacturer's written instructions and as follows:

1. Prime substrates with asphalt primer if required by roofing system manufacturer.
2. Backer Sheet Application:

    a. Mechanically fasten backer sheet to walls or parapets.
    b. Adhere backer sheet over roofing membrane at cants in cold-applied adhesive.

3. Backer Sheet Application:

a. Adhere backer sheet to substrate in cold-applied adhesive.

4. Flashing Sheet Application: Adhere flashing sheet to substrate in cold-applied adhesive at rate required by roofing system manufacturer.

a. Perform torch application according to NFPA 241, including two-hour fire watch after torches have been extinguished.

B. Extend base flashing up walls or parapets a minimum of 8 inches above roofing membrane and 4 inches onto field of roofing membrane.

C. Mechanically fasten top of base flashing securely at terminations and perimeter of roofing.

1. Seal top termination of base flashing with a strip of glass-fiber fabric set in asphalt roofing cement.

D. Install liquid flashing system according to manufacturer's recommendations.

1. Extend liquid flashing not less than 3 inches in all directions from edges of item being flashed.
2. Embed granules, matching color of roof membrane, into wet compound.

3.13 INSTALLATION OF WALKWAYS

A. Walkway Cap Sheet Strips: Install walkway cap sheet strips over roofing membrane, using same application method as used for roofing cap sheet.

1. Install walkways strips at the following locations:

a. Between each rooftop unit location, creating a continuous path connecting rooftop unit locations.
b. Between each roof hatch and each rooftop unit location or path connecting rooftop unit locations.
c. Top and bottom of each roof access ladder.
d. Between each roof access ladder and each rooftop unit location or path connecting rooftop unit locations.
e. Locations indicated on Drawings.
f. As required by roof membrane manufacturer’s warranty requirements.

2. Provide 3-inch clearance between adjoining strips.

3.14 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to inspect substrate conditions, surface preparation, roof membrane application, flashings, protection, and drainage components, and to furnish reports to Engineer.

B. Perform the following tests:

1. Flood Testing: Flood test each roofing area for leaks, according to recommendations in ASTM D5957, after completing roofing and flashing but before overlying construction is placed. Install temporary containment assemblies, plug or dam drains, and flood with potable water.

    a. Perform tests before overlying construction is placed.
    b. Flood to an average depth of 2-1/2 inches with a minimum depth of 1 inch and not exceeding a depth of 4 inches .
    c. Maintain 2 inches of clearance from top of base flashing.
    d. Flood each area for 48 hours.
    e. After flood testing, repair leaks, repeat flood tests, and make further repairs until roofing and flashing installations are watertight.

        1) Cost of retesting is the responsibility of the Contractor.

    f. Testing agency shall prepare survey report indicating locations of initial leaks, if any, and final survey report.

2. Infrared Thermography: Testing agency shall survey entire roof area using infrared color thermography according to ASTM C1153.

    a. Perform tests before overlying construction is placed.
    b. After infrared scan, locate specific areas of leaks by electrical capacitance/impedance testing, or by nuclear hydrogen detection testing.
    c. After testing, repair leaks, repeat tests, and make further repairs until roofing and flashing installations are watertight.

        1) Cost of retesting is Contractor's responsibility.

    d. Testing agency shall prepare survey report of initial scan indicating locations of entrapped moisture if any.

3. Electrical Capacitance/Impedance Testing: Testing agency shall survey entire roof area for entrapped water within roof assembly according to ASTM D7954/D7954M.

    a. Perform tests before overlying construction is placed.
    b. After testing, repair leaks, repeat tests, and make further repairs until roofing and flashing installations are watertight.

        1) Cost of retesting is Contractor's responsibility.

    c. Testing agency shall prepare survey report indicating locations of entrapped moisture, if any.

4. Nuclear Hydrogen Detection Testing: Testing agency shall survey entire roof area for entrapped water within roof assembly according to ANSI/SPRI/RCI NT-1.

    a. Perform tests before overlying construction is placed.
    b. After testing, repair leaks, repeat tests, and make further repairs until roofing and flashing installations are watertight.

1) Cost of retesting is Contractor's responsibility.

c. Testing agency shall prepare survey report indicating locations of entrapped moisture, if any.

5. Low-Voltage Electrical Conductance Testing: Testing agency shall survey entire roof area and flashings to locate discontinuity in the roof membrane using an exposed metal electrical loop to create an electrical field tested with hand-held probes or a scanning platform having integral perimeter electrical loops creating a complete electrical field.

a. Perform tests before overlying construction is placed.
b. After testing, repair areas of discontinuities, repeat tests, and make further repairs until roofing and flashing installations are contiguous.

1) Cost of retesting is Contractor's responsibility.

c. Testing agency shall prepare survey report indicating locations of initial discontinuities, if any.

6. High-Voltage Spark Testing: Testing agency shall survey entire roof area, flashings, and parapet walls to locate discontinuity in the roof membrane using an electrically charged metal "broom head."

a. Perform tests before overlying construction is placed.
b. After testing, repair areas of discontinuities, repeat tests, and make further repairs until roofing and flashing installations are contiguous.

1) Cost of retesting is Contractor's responsibility.

7. Testing agency shall prepare survey report indicating locations of initial discontinuities, if any.

C. Test Cuts: Remove test specimens to evaluate problems observed during quality-assurance inspections of roofing membrane as follows:

1. Determine approximate quantities of components within roofing membrane according to ASTM D3617/D3617M.
2. Examine test specimens for interply voids according to ASTM D3617/D3617M and to comply with criteria established in Appendix 3 of ARMA/NRCA's "Quality Control Guidelines for the Application of Polymer Modified Bitumen Roofing."
3. Repair areas where test cuts were made according to roofing system manufacturer's written instructions.

D. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion, in presence of Engineer, and to prepare inspection report.

1. Notify Engineer and Owner 48 hours in advance of date and time of inspection.

E. Repair or remove and replace components of roofing system where inspections indicate that they do not comply with specified requirements.

F. Roofing system will be considered defective if it does not pass tests and inspections.

1. Additional testing and inspecting, at Contractor's expense, will be performed to determine if replaced or additional work complies with specified requirements.

3.15 PROTECTING AND CLEANING

A. Protect roofing system from damage and wear during remainder of construction period.

1. When remaining construction does not affect or endanger roofing, inspect roofing system for deterioration and damage, describing its nature and extent in a written report, with copies to Engineer and Owner.

B. Correct deficiencies in or remove roofing system that does not comply with requirements, repair substrates, and repair or reinstall roofing system to a condition free of damage and deterioration at time of Substantial Completion and according to warranty requirements.

C. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

3.16 ROOFING INSTALLER'S WARRANTY

A. WHEREAS _____ of _____, herein called the "Roofing Installer," has performed roofing and associated work ("work") on the following project:

1. Owner: <Insert name of Owner>.
2. Address: <Insert address>.
3. Building Name/Type: <Insert information>.
4. Address: <Insert address>.
5. Area of Work: <Insert information>.
6. Acceptance Date: _____.
7. Warranty Period: <Insert time>.
8. Expiration Date: _____.

B. AND WHEREAS Roofing Installer has contracted (either directly with Owner or indirectly as a subcontractor) to warrant said work against leaks and faulty or defective materials and workmanship for designated Warranty Period,

C. NOW THEREFORE Roofing Installer hereby warrants, subject to terms and conditions herein set forth, that during Warranty Period Roofing Installer will, at Roofing Installer's own cost and expense, make or cause to be made such repairs to or replacements of said work as are necessary to correct faulty and defective work and as are necessary to maintain said work in a watertight condition.

D. This Warranty is made subject to the following terms and conditions:

1. Specifically excluded from this Warranty are damages to work and other parts of the building, and to building contents, caused by:

a. lightning;
b. peak gust wind speed exceeding 90-120 mph;
c. fire;
d. failure of roofing system substrate, including cracking, settlement, excessive deflection, deterioration, and decomposition;
e. faulty construction of parapet walls, copings, chimneys, skylights, vents, equipment supports, and other edge conditions and penetrations of the work;
f. vapor condensation on bottom of roofing; and
g. activity on roofing by others, including construction contractors, maintenance personnel, other persons, and animals, whether authorized or unauthorized by Owner.

2. When work has been damaged by any of foregoing causes, Warranty shall be null and void until such damage has been repaired by Roofing Installer and until cost and expense thereof have been paid by Owner or by another responsible party so designated.
3. Roofing Installer is responsible for damage to work covered by this Warranty but is not liable for consequential damages to building or building contents resulting from leaks or faults or defects of work.
4. During Warranty Period, if Owner allows alteration of work by anyone other than Roofing Installer, including cutting, patching, and maintenance in connection with penetrations, attachment of other work, and positioning of anything on roof, this Warranty shall become null and void on date of said alterations, but only to the extent said alterations affect work covered by this Warranty. If Owner engages Roofing Installer to perform said alterations, Warranty shall not become null and void unless Roofing Installer, before starting said work, shall have notified Owner in writing, showing reasonable cause for claim, that said alterations would likely damage or deteriorate work, thereby reasonably justifying a limitation or termination of this Warranty.
5. During Warranty Period, if original use of roof is changed and it becomes used for, but was not originally specified for, a promenade, work deck, spray-cooled surface, flooded basin, or other use or service more severe than originally specified, this Warranty shall become null and void on date of said change, but only to the extent said change affects work covered by this Warranty.
6. Owner shall promptly notify Roofing Installer of observed, known, or suspected leaks, defects, or deterioration and shall afford reasonable opportunity for Roofing Installer to inspect work and to examine evidence of such leaks, defects, or deterioration.
7. This Warranty is recognized to be the only warranty of Roofing Installer on said work and shall not operate to restrict or cut off Owner from other remedies and resources lawfully available to Owner in cases of roofing failure. Specifically, this Warranty shall not operate to relieve Roofing Installer of responsibility for performance of original work according to requirements of the Contract Documents, regardless of whether Contract was a contract directly with Owner or a subcontract with Owner's General Contractor.

E. IN WITNESS THEREOF, this instrument has been duly executed this _____ day of _____, _____.

1. Authorized Signature: _____.
2. Name: _____.
3. Title: _____.

SECTION 076200 – SHEET METAL FLASHING AND TRIM

PART 1 - GENERAL

1.1 SUMMARY

A. This Section describes the general requirements for sheet metal flashing and trim for a complete water- and weather-tight installation complying with all governing codes and standards.

B. The Contractor shall provide all labor, materials, equipment and incidentals necessary to perform the work of this Section as shown on the Contract Drawings, specified herein or required otherwise for a complete installation.

C. The Contractor shall implement practices and procedures to meet the project's sustainability goals as identified in the Contract Documents. The Contractor shall ensure that the sustainability requirements of this Section are implemented to the fullest extent.

D. The following index of this Section is presented for convenience:

1.2 PAYMENT

A. No separate payment shall be made for performing any Work required under this section. All costs for work required by this Section shall be included in the applicable lump sum, unit price(s), or allowance(s) as set forth in Section 01 27 00 – Measurements and Payments.

1.3 RELATED SECTIONS

A. Section 075216 “Styrene-Butadiene Styrene (SBS) Modified Bituminous Membrane Roofing”.

B. Section 079200 “Joint Sealants”.

1.4 REFERENCES

A. BCNY - Building Code of New York

B. ASTM A666 - Specification for Annealed or Cold-Worked Austenitic

1. Stainless Steel Sheet, Strip, Plate and Flat Bar

C. ASTM B32 - Standard Specification for Solder Metal

D. FM 1-49 FM - Global Property Loss Prevention Data Sheet,

1. Perimeter Flashing

E. SMACNA - Sheet Metal and Air Conditioning Contractors National

1. Association, Incorporated, Architectural Sheet Metal Manual

1.5 DESCRIPTION

A. Sheet metal flashing and trim to be provided under this Section shall include complete systems of flashing and counterflashing at penetrations in roofing; interlocking, mechanically-keyed, 3-way ribbed stainless steel metal masonry cavity wall flashing and miscellaneous system components such as cast-in-place and built-in-place reglets and other accessory components; miscellaneous flashings not supplied under the work of other Sections; miscellaneous accessories, fasteners and incidental system components.

B. Installation of the systems shall meet the requirements of FM Approval Rating Class 1-90 construction, without relying upon sealants or other non-metallic detailing and fabricating techniques to achieve weather- and water tightness.

C. Performance Criteria:

1. Sheet metal flashing and trim shall be permanently watertight, and not deteriorate in excess of manufacturers’ published limitations.
2. Comply with fabrication details recommended by SMACNA and the sheet metal flashing and trim manufacturers, as approved by Engineer at time of Shop Drawing submission.

3. Provide completely weather- and watertight wall and single-ply roofing metal flashing systems. Contractor shall provide only the highest quality materials and methods of construction and installation as recommended by sheet metal flashing and trim manufacturers in compliance with governing authorities and as approved by Engineer at time of Shop Drawing submission.
4. Provide Working Drawings showing the coordination of the Work with Paragraph 1.03, Related Sections, of this Section. Provide detailed Working Drawings showing all profiles of sheet metal flashing and trim systems to be used in the Work, fully dimensioned, located, quantified, and presented such that sequence of installation is acceptable to each interfacing material supplier

D. Sustainable Design Requirements

1. Recycled Content of Steel-Sheet Flashing and Trim: Postconsumer recycled content plus one-half of preconsumer recycled content shall not be less than 25 percent.
2. Low Emitting Materials: All adhesives and sealants used onsite and within the building's weatherproofing system shall meet the VOC content limits for the work as specified in the Contract Documents.

E. Project-specific system/design requirements will be provided (if necessary) in the Contract in order to update the requirements given herein or to supplement other requirements given in the Contract Drawings.

F. Scheduling:

1. Coordinate ribbed metal cavity wall flashings with other Work to ensure secure anchorage and watertight seals, and to minimize exposure to puncture or other damage from the work of other trades. Refer to Sections 04 22 23.23 – Prefaced Concrete Unit Masonry and 07 55 56.13 – Hot-Applied Rubberized Asphalt Protected Membrane Roofing.
2. Deliver materials to the site in sufficient quantities to ensure uninterrupted progress of the Work.
3. Do not proceed with the sheet metal flashing and trim Work until curb and substrate construction, blocking, and other construction to receive the Work is completed.
4. Schedule the installation of sheet metal flashing and trim Work to coincide with the installation of roofing, waterproofing, drains, piping, blocking, nailers, framing at openings, curbs, Concrete Unit Masonry and other adjoining and substrate work.
5. Proceed with and complete the work only when materials, equipment and knowledgeable tradesmen required for the installation of sheet metal flashing and trim systems are at the site and are ready to follow and integrate the work of this Section with work requiring the installation of sheet metal flashing and trim.

1.6 QUALITY ASSURANCE

A. Engage installers skilled, trained and with successful experience in the detailing, fabrication and installation of each type of sheet metal flashing and trim work required who are recognized sheet metal contractors, equipped to perform workmanship in accordance with the Contract Documents and approved Shop Drawings so that there will be undivided responsibility for the performance of each flashing and trim component of the work.

© 2026 CDM Smith
All Rights Reserved

1.7 SUBMITTALS

A. The Contractor shall submit the following to the Engineer for review and approval:

1. Installer Qualifications: Submit names and qualifications to Engineer along with the following information on a minimum of three successful projects:

a. Names and telephone numbers of owners, architects or engineers, responsible for the projects.
b. Approximate contract prices for sheet metal flashing and trim.
c. Size of area installed

2. Samples:

a. Typical examples of sheet metal flashing and trim profiles, 12-inches long with all fasteners, clips, and supports required for the Work. 12-inch by 12-inch sheet of each item specified and 6-inch long pieces of each required system component to be used in the work.
b. Each fastener type required marked as to type of material and with their intended purpose in the work.

3. Shop Drawings:

a. Copies of manufacturers' specifications, installation instructions and recommendations for sheet metal flashing and trim requirements.
b. Manufacturer's data substantiating that the materials comply with the requirements.
c. Shop Drawings showing the coordination of the Work with Sections 04 22 23.23 – Prefaced Concrete Unit Masonry and 07 55 56.13 – Hot-Applied Rubberized Asphalt Protected Membrane Roofing.
d. Detailed Shop Drawings showing all profiles of sheet metal flashing and trim systems to be used in the work, fully dimensioned, located, quantified and presented such that sequence of installation is acceptable to each interfacing material supplier.
e. Large scale isometric drawings of all sheet metal and trim intersections and transitions, include all fastener locations and materials, cleats and other miscellaneous accessories necessary to complete the Work as specified.

B. Sustainable Design Submittals:

1. The Contractor shall report information pertaining to the sustainable procurement, regional sourcing, and/or recycled content of new materials to be procured during the Work, in accordance with Section 01 35 63 – Sustainability Certification Report Requirements. The Contractor shall coordinate with their vendor on sustainable product requirements as stipulated by the Contractor's approved New Materials Sustainable Implementation Plan, in accordance with Section 01 35 63 – Sustainability Certification Report Requirements . The Contractor shall submit vendor shop drawings for review by the Engineer that clearly illustrate the vendor is meeting the requirements as approved in the Contractor's New Materials Sustainable Implementation Plan.

All Rights Reserved

1.8 DELIVERY, STORAGE, AND HANDLING

A. Delivery of Materials:

1. Deliver materials in manufacturers' original, unopened and undamaged containers and rolls, with labels intact and legible and with information accurately representing container contents as approved by Engineer at time of Shop Drawing submission.
2. Items delivered in broken, damaged, rusted, or unlabeled condition shall immediately be removed from project site and not offered again for approval by Engineer.

B. Storage of Materials:

1. Store materials in an area protected from all construction traffic not associated with the work of this Section.
2. Store materials off the ground and in same package in which they were shipped, and on platforms protected from dirt and other contamination.
3. Store under cover and in a manner which does not permit water to remain on units.

C. Handling of Materials:

1. Protect all sheet metal flashing and trim work from dents, scratches, warps and bends.
2. Immediately after installation of each system component, remove all strippable protective films.
3. Comply with manufacturer's instructions for handling and installation of the ribbed metal cavity wall flashing materials, except where more stringent requirements are shown or specified.

1.9 SPARE PARTS, SPECIAL TOOLS, AND SUPPLIES

A. Not Used

1.10 SPECIAL WARRANTY PROVISIONS / GUARANTEE PERIODS

A. The Contractor shall obtain from the manufacturer and provide to DEP the manufacturer's standard warranty, in an acceptable form, warranting against defects in design, materials, abnormal aging, and workmanship.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Stainless Steel Flashing and Counter Flashing System

1. Cheney Flashing Company, Inc.; Cheney Flashing – Trenton, NJ.
2. Or approved equal.

B. Reglets:

1. Cheney Flashing Company, Inc., Trenton, NJ.
2. Or approved equal

2.2 MATERIALS / EQUIPMENT

A. Stainless Steel Flashing & Counterflashing System Associated with work of this Section:

1. Provide deformed sheet, stainless steel, Type 316 complying with ASTM A666 for all Work with No. 2D finish.
2. Stainless Steel Flashing & Counterflashing System Associated with wok of this Section: Provide deformed sheet, stainless steel, Type 316 complying with ASTM A666 for all Work with No. 2D finish.
3. Provide thickness of twenty-six (26) gage. Termination bar units of type, material, and profile indicated, formed to provide secure interlocking of separate reglet and counterflashing pieces, and compatible with flashing indicated with factory- mitered and -welded corners and junctions.
4. Material: Stainless steel, one-eighth (1/8)-inch thick.
5. Surface-Mounted Type: Provide with slotted holes for fastening to substrate, with neoprene or other suitable weatherproofing washers, and with channel for sealant at top edge.
6. Counterflashing Wind-Restraint Clips: Provide clips to be installed before counterflashing to prevent wind uplift of counterflashing lower edge.
7. Solder for Stainless Steel: ASTM B32, Lead-free; 96.5% Sn, 3.45% Cu, 1% Sb, 0.05% Ag used with an acid flux of the type recommended by the stainless steel manufacturer. Use a non-corrosive rosin flux over tinned surfaces.
8. Stainless Welding Rods: Type recommended by stainless steel sheet manufacturer for the type of metal sheets furnished.
9. Nails, Screws and Rivets: Same material as flashing sheet, or as recommended by manufacturer of flashing sheet.
10. Cleats: Same metal and gage as sheet being anchored, two (2) inches wide, punched for two (2) anchors.

2.3 FABRICATION / ASSEMBLING / FINISHES

A. Fabricated Metal Flashing and Trim: Shop fabricate sheet metal flashing and trim to comply with profiles and sizes shown, and to comply with manufacturer's recommended details. Except as otherwise shown or specified, provide soldered flat-lock seams, and fold back metal to form a hem on the concealed side of exposed edges. Comply with metal producers' recommendations for tinning, soldering and cleaning flux from metal.

B. On all metal base and counterflashing, and trim provide completely shop-fabricated corners and special flashings; arc welded to insure watertight joints. Grind welds smooth so as to be indistinguishable from adjacent surfaces

2.4 SOURCE QUALITY CONTROL / SHOP TESTS

A. Not Used

© 2026 CDM Smith
All Rights Reserved

PART 3 - EXECUTION

3.1 EXAMINATION / PREPARATION

A. Examination

1. The Contractor shall examine the substrate and the conditions under which the sheet metal flashing and trim work is to be performed, and notify Engineer in writing of unsatisfactory conditions. Do not proceed with the work until unsatisfactory conditions have been corrected in a manner acceptable to Engineer.

B. Preparation

1. Clean the substrate of dust, debris, substances and interferences detrimental to the Work and prepare substrates as recommended by the sheet metal manufacturer.
2. Before installing flashing and trim, verify shapes, and dimensions to be covered.

3.2 INSTALLATION

A. General:

1. Separate dissimilar metals from substrates and from each other by painting each metal surface in the area of contact with a 15-mil thick application of bituminous coating, as recommended by the manufacturers of the dissimilar metals. Comply with manufacturer's recommendations for other forms of protection of the stainless steel and aluminum against corrosion.
2. Provide thermal expansion for running trim, flashing and other items exposed for more than 15 feet - 0 inch continuous length. Maintain a watertight installation at expansion seams. Locate expansion seams at 15 feet - 0 inch intervals, and 2 feet - 0 inch each side of corners and intersections.
3. Fabricate and install the work with lines and corners of exposed units true and accurate. Form exposed faces flat and free of buckles, excessive waves and avoidable tool marks, considering the temper and reflectivity of the metal. Provide uniform, neat double-locked seams with cleats rolled into the seam and with minimum exposure of solder, welds and sealant. Except as otherwise shown, fold back the sheet metal to form a hem on the concealed side of exposed edges. All exposed edges of all sheet metal flashing shall be hemmed not less than 1/2-inch wide.
4. Conceal fasteners and expansion provisions wherever possible in exposed work, and locate so as to minimize the possibility of leakage. Cover and seal work as required for a watertight installation.
5. Provide cleat-type anchorages for metal flashings and trim wherever practical, arranged to relieve stresses from building movement, and thermal expansion and contraction.
6. On vertical surfaces lap 2-piece flashings a minimum of 4 inches.
7. On sloping surfaces, for slopes of not less than 6 inches in 12 inches, lap unsealed flashings a minimum of 6 inches. For slopes less than 6 inches in 12 inches, use soldered flat-locked seams.
8. For embedment of metal flashing flanges in single ply roofing or flashing or stripping, extend flanges for a minimum of 6 inches embedment.

9. Flashing to be inserted into reglets shall be installed to the full depth of the reglet with the top flange of the flashing edge turned forward to form a hook. Caulk flashing into reglets using stainless steel wedges. Fill reglet with sealant specified in Section 07 90 00 - Joint Protection.

B. Installation of Stainless Steel Flashing and Trim:

1. Tin the edges of plain stainless steel to be soldered, for a width of 1-1/2 inches, using solder for stainless steel and acid flux. Remove every trace of acid flux residue from the metal promptly after tinning or soldering.
2. Provide welded joints. Provide upturned, 1/2-inch wide hooked flanges, and weld between adjoining sheets; lay seam flat.

C. Installation of Ribbed Metal Cavity Wall Flashing:

1. Build ribbed metal through-wall masonry flashing work into Concrete Unit Masonry construction as construction work progresses. Work performed without built-in flashings shall be stopped, removed and rebuilt at no additional expense to DEP, even if discovered only after walls and other materials are in-place and completed.
2. Install all flashings in a split bed of mortar, increasing the thickness of the bed if required to achieve full mortar coverage on top and bottom of flashings.
3. Coordinate the installation of flashing materials and associated work so as to provide a complete system complying with the combined recommendations of manufacturers and installers involved in the work.
4. Use only installation techniques approved by the ribbed metal cavity wall flashing manufacturer

3.3 FIELD TESTING / QUALITY CONTROL

A. Field Quality Control for Cavity Wall Flashing

1. Field test ribbed metal cavity wall flashing after installation. After building three courses of concrete unit masonry above area of ribbed cavity wall flashing, tape weep vents closed and fill cavity with water.
2. Water leaking from the wall below the area of the ribbed metal cavity wall flashing shall be evidence that the ribbed metal cavity wall flashing was improperly installed.
3. Remove concrete unit masonry and improperly installed ribbed cavity wall flashing and install new ribbed cavity wall flashing. Repeat this process until the wall does not shown evidence of leakage beneath ribbed cavity wall flashing. All such remedial work shall be at no additional expense to DEP.
4. Remove tape from weep vents and all mortar and other debris from cavity and demonstrate free flow of water from the cavity at conclusion of test

3.4 STARTUP / DEMONSTRATION

A. Not Used

3.5 ADJUSTING / PROTECTION / CLEANUP

A. Provide continuous protection of materials against damage primarily by storing materials under cover and above ground and away from all construction traffic.

B. Do not permit workmen, or others, to step directly on flashing sheets in place, or to place or move equipment over flashing and trim surfaces. Protect surfaces during installation of permanent covering work and adjoining work.

C. Coordinate metal wall flashings with other Work to ensure secure anchorage and watertight seals, and to minimize exposure to puncture or other damage from the Work of other trades.

D. Neutralize excess flux as work progresses with five percent to ten percent washing soda solution and rinse thoroughly.

E. Clean exposed surfaces of every substance which is visible or might cause corrosion or prevent uniform oxidation of the metal surfaces. Exercise extreme care to remove fluxes and ferrous metal particles, including welding splatter and grinding dust.

F. Do not leave metal debris and discarded materials at the site of the work. Clean each site of the work as the work progresses on a daily basis.

SECTION 077100 - ROOF SPECIALTIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Copings.
2. Roof-edge specialties.
3. Roof-edge drainage systems.
4. Reglets and counterflashings.

B. Related Requirements:

1. Section 055000 "Metal Fabrications" for downspout guards and downspout boots.
2. Section 061000 "Rough Carpentry" for wood nailers, curbs, and blocking.
3. Section 079200 "Joint Sealants" for field-applied sealants between roof specialties and adjacent materials.

1.3 SUBMITTALS

A. Contractor shall submit Shop Drawings for approval of the Engineer. Submittals shall include, but not be limited to:

1. Samples of each material listed
2. Manufacturers Literature

B. Each submittal shall be identified by the Specification Section Number.

C. Each submittal shall be complete in all respects, incorporating all information and data listed herein and all additional information required for evaluation of the proposed materials compliance with the Contract Documents.

D. Partial, incomplete or illegible submissions will be returned to the Contractor without review for resubmission.

E. Samples shall include finish and color samples for all items.

F. Shop Drawings shall include, but not be limited to:

1. Complete layout and installation drawings with clearly marked dimensions and schedules including sizes, weights, gages of metal and spacing.
2. Details of all attachments.

G. Design Test Reports:

1. Submit copies of design test reports for each of the performance testing standards listed in Article 1.05 herein.
2. Test reports shall be performed by independent, International Accreditation Service, Inc. (IAS) accredited testing laboratory, and shall bear the seal of a licensed and registered professional engineer in New York.

H. Engineering Calculations:

1. Submit engineering wind pressure calculations specific to this Project.
2. Calculations shall be prepared and sealed by a professional engineer that is a full time employee of the system manufacturer.
3. Calculations shall clearly demonstrate that the system is capable of resisting the calculated design wind pressure(s) after the application of the safety factor specified herein in accordance with the requirements of ANSI/SPRI ES-1 and the building code.

I. Installer Qualifications:

1. Engage a single installer skilled, trained and with successful experience in the installation of roof specialties systems and with successful experience in the erection of the types of materials required; and who agrees to employ only tradesmen with specific skill and experience in this type of work. Submit names and qualifications to the Engineer for approval along with the following information on a minimum of three successful projects:

    a. Names and telephone numbers of owners, architects or engineers responsible for projects.
    b. Approximate contract cost of the system.
    c. Amount of area installed.

J. Sustainable Design Submittals:

1. Environmental Materials Reporting Form (EMRF) Recycled Content. Provide the following information:

    a. Name of Product and Manufacturer.
    b. Material cost breakdowns. Cost breakdowns must include total material-only cost (excluding installation, labor and equipment).

K. The percentage (by weight) of post-consumer and pre-consumer recycled content in the submitted product(s), if applicable.

© 2026 CDM Smith
All Rights Reserved

1.4 QUALITY ASSURANCE

A. The workmanship of sheet metal work, method for forming joints, anchoring, cleating, and provisions for expansion shall conform to the standard details and recommendations of the Copper Development Association and the Architectural Sheet Metal Manual published by SMACNA. Workmanship shall be in accordance with the best trade practice and recommendations and specifications of the Sheet Metal and Air Conditioning Contractors National Association, Incorporated.

1. Uplift requirements shall match the requirements for adjacent membrane roofing as specified in Section 07 22 16 – Roof Board Insulation, Section 07 32 13 – Terra Cotta Roof Tiles, and Sections 07 55 56.13 - Hot-Applied Rubberized Asphalt Protected Membrane Roofing, and
2. Wind resistance calculation shall be designed specifically for this project. The Contractor shall calculate and certify that the perimeter roof specialties systems furnished meet the anticipated design pressure as specified in the Detailed Specifications when tested in accordance with SPRI Test Methods RE-2 and RE-3.

B. The forming and assembling of sheet metal components shall be performed using methods that will not void any manufacturer’s warranty.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver all materials in factory packed unopened cartons and crating bearing the manufacturer's labels.

B. Store materials in clean, dry and protected areas in such manner to preclude damage of any nature.

C. Handle all materials with proper care to avoid denting, marring, warping or other distortions during delivery, storage and handling.

1.6 FIELD CONDITIONS

A. Field Measurements: Verify profiles and tolerances of roof-specialty substrates by field measurements before fabrication, and indicate measurements on Shop Drawings.

B. Coordination: Coordinate roof specialties with flashing, trim, and construction of parapets, roof deck, roof and wall panels, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.7 WARRANTY

A. The Contractor shall obtain from the manufacturer and provide to the City the manufacturer’s standard warranty, in an acceptable form, warranting against defects in design, materials, abnormal aging, and workmanship.

B. The Contractor shall furnish to the City a fifteen (15) year written Manufacturer's Warranty covering materials and workmanship for the entire "Coping System", including repair and

replacement of components which are deemed faulty or in disrepair during the warranty period. Such items in disrepair shall be repaired at no cost to the City. These guarantees shall cover both labor and materials necessary to effect water tightness, including that required to repair leaks caused by defective material and/or workmanship, without limit as to amount required to effect water tightness.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

1. Copings:

    a. "Permasnap" as manufactured by OMG Roofing Products, Agawam, MA
    b. Or approved equal

2. Roof curbs:

    a. Custom Solutions Roofs and Metal Products, Cedar Rapids, IA.
    b. Or approved equal

3. Fascia and gravel stops:

    a. "Type AP" (gravel stops) and “Type SP” (fascia) as manufactured by Architectural Products Company, Hebron, KY
    b. Or approved equal

2.2 MATERIALS / EQUIPMENT

A. Copings:

1. Coping units over parapet walls to be 22 ga., or as noted on the Contract Drawings.
2. Units to be of size and profiles shown on the Contract Drawings.
3. Provide coping units with mitered welded corners, splice plates and joint trim, retainer clips, compression pads, fasteners and other accessories required to make a complete installation, in accordance with the manufacturer's recommendations.
4. Finish on all exposed surfaces of stainless steel copings and accessories to be 304-2B.
5. Sealants for installation of copings shall be of an approved type acceptable to the manufacturers of materials herein specified.
6. Fastenings shall be concealed type, stainless steel or cadmium plated. Self-tapping screws to be stainless steel of sizes recommended by the manufacturers.
7. Seed clips to be stainless steel.

B. Roof curbs shall be fabricated of Stainless Steel: 0.028 inch thick with continuous mitered and welded corner seams, integral base plates, factory installed pressure treated wood nailed, and insulated with 1½ inch thick rigid fiberglass insulation. Profile shall be as shown on the Contract Drawings.

C. Gutters shall be manufactured of 22 ga. type 304-2B stainless steel. Provide gutters in 10 feet lengths, tapered and notched to provide telescoping lap joints. Gutters shall be installed to

provide for thermal movement, in accord with the SMACNA. Provide profiles of gutters and support brackets as indicated on the Contract Drawings.

D. Downspouts shall be manufactured of 22 ga. type 304-2B stainless steel. Provide telescoping joint design for expansion. Elbows shall be welded construction, and shall match the finish and color of the downspout. Provide brackets and downspout profiles as indicated on the Contract Drawings.

E. Scupper Drains and Flashing: Thru wall scupper flashing in walls and parapets shall be constructed of 1/8-inch thick stainless steel. All joints shall be welded, and inlet shall be installed as indicated on the Contract Drawings.

F. Fascia and gravel stops shall be fabricated of 22 ga. type 304-2B stainless steel 5005-H34 alloy.

G. Fascia and gravel stops shall consist of complete assemblies, composed of hold down clips, joint covers, preformed mitered welded covers and other accessories required for a complete installation in accordance with the manufacturer's recommendation.

H. Manufacturer's Standards: In addition to the standards listed above, the flashing products and their installation shall be in accordance with the manufacturer's published recommendations and specifications.

2.3 FABRICATION / ASSEMBLING / FINISHES

A. Not Used

2.4 SOURCE QUALITY CONTROL / SHOP TESTS

A. Not Used

PART 3 - EXECUTION

3.1 EXAMINATION / PREPARATION

A. Examination:

1. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, system supports, and other conditions affecting performance of the Work.
2. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work. Any work needed to correct unsatisfactory conditions need to be submitted to the Engineer for approval prior to the work being done.
3. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Preparation:

1. Dissimilar metals shall be separated from each other by painting each metal surface in contact with a coating as specified in Specification 09 91 00 – Painting.

2. Clean substrates of substances harmful to insulation, including removing projections capable of interfering with insulation attachment.
3. Establish straight, side and crosswise benchmarks.
4. Use proper size and length fastener for strength requirements.
5. All surfaces shall be checked for square and straightness.
6. Measure the wall lengthwise and crosswise to confirm lengths, widths, and clearances of roof specialties system components and verify clearances for thermal movement.

3.2 INSTALLATION, GENERAL

A. General:

1. Unless otherwise specified, all roof specialties shall be installed in accordance with the manufacturer's instructions to provide a complete watertight and weatherproof construction, free from bends and buckles and as shown on the Contract Drawings. Ample provision shall be made for expansion and contraction. Repair or replace all materials that have been damaged during installation.

B. Sheet Underlayment:

1. Apply primer if required by manufacturer. Comply with temperature restrictions of underlayment manufacturer for installation. Apply over entire parapet or roof-wall edge, wrinkle free, in shingle fashion to shed water, and with end laps of not less than 6 inches (150 mm) staggered 24 inches (610 mm) between courses. Overlap side edges not less than 3-1/2 inches (90 mm). Roll laps with roller. Cover underlayment within 90 days.

C. Gutters and Downspouts:

1. Install gutters with a maximum slope of 1/4 inch/40 feet. Install support brackets as indicated on the Contract Drawings. Do not install brackets directly behind downspouts. Provide sealants and fasteners as recommended by the SMACNA for joining gutter sections. Install inside brackets at 30 inches o.c. alternating with support brackets. Do not fasten gutter in a manner that would restrain thermal movement of the product. Provide expansion joints as recommended. Install end caps at all end terminations, fasten and seal. Provide stainless steel outlets. Fasteners shall be compatible to the materials being fastened.

D. Copings:

1. Install copings true and straight. Fasten as recommended by manufacturer. Seal and flash in accordance to primary roofing manufacturer's recommendations.
2. Install in manufacturers standard lengths with anchor plates and concealed joint cover at each joint. All screws shall be of stainless steel. Mitered and welded corners shall be used for all changes in direction.

E. Roof Curbs:

1. Center curbs over openings.
2. Anchor to wood blocking installed under Section 06 10 00 - Rough Carpentry.

F. Leave units ready to receive flashing provided herein and to be installed as the membrane roofing is installed.

3.3 FIELD TESTING / QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect roof specialties system installation, including accessories. Report results in writing.

B. Remove and replace applications of roof specialties system where inspections indicate that they do not comply with specified requirements.

C. Additional inspections, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.4 FIELD TESTING / QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect roof specialties system installation, including accessories. Report results in writing.

B. Remove and replace applications of roof specialties system where inspections indicate that they do not comply with specified requirements.

C. Additional inspections, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.5 START UP / DEMONSTRATION

A. Not Used

3.6 ADJUSTING / PROTECTION / CLEANUP

A. Check levels and adjust as necessary after roofing and flashing is complete.

B. Protect materials from damage by other trades. Remove protective coatings at completion of project as directed by the Engineer.

SECTION 078413 – PENETRATION FIRESTOPPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Provide firestopping at all penetrations and juncture joints of fire-rated walls, floors and ceilings in accordance with the requirements of the NYC Building Code.

B. Firestopping and Smoke Seals shall be provided, but not limited to the following specific locations:

1. Penetrations for the passage of duct, cable, cable tray, conduit, piping and electrical busways and raceways through fire-rated vertical barriers (walls and partitions), horizontal barriers (floor slabs and floor/ceiling assemblies), and vertical service shafts.
2. Openings between structurally separate sections of walls or floors.
3. Construction Joints between the top of walls and floor or roof slab and steel deck assemblies, or, concrete floor or roof slab.
4. Vertical service shafts at each floor level.
5. Expansion joints in walls and floors.
6. Openings and penetrations in fire-rated partitions or walls containing fire doors.
7. Locations shown specifically on the Drawings.
8. Where firestopping will be exposed to public view, select firestopping material/assembly that can be painted as permitted by the assembly. Paint shall be as approved by the manufacturer and color shall match adjoining painted areas.

1.3 DEFINITIONS

A. Penetration: Any opening or foreign material passing through or into a fire-rated barrier.

B. Fire-Rated: Have the ability to withstand the effects of a standard fire exposure for a specified time period, as determined by qualified testing.

C. Fire-Rated Barrier: A floor, wall, partition or floor-ceiling assembly able to withstand a standard fire and hose stream test without failure.

D. Fire resistance rating: The ability of a structure to act as a barrier to the spread of fire and to confine it to the area of origin. Ratings are expressed in hours and apply to beams, columns, floors, ceilings, roofs, walls and partitions.

E. Firestopping: A means of sealing openings in fire-rated barriers to preserve or restore the fire resistance rating.

F. Firestop System: A material, or combination of materials, installed to retain the integrity of fire-rated construction by maintaining an effective barrier against the spread of flame, smoke or gases through penetrations in fire-rated barriers.

G. F Rating: The time period that the through-penetration firestop system limits the spread of fire through the penetration when tested in accordance with ASTM E814.

H. T Rating: The time period that the penetration firestop system, including the penetrating item, limits the maximum temperature rise to 325°F (163°C) above its initial temperature through the penetration on the non-fire side when tested in accordance with ASTM E814.

1.4 DESIGN REQUIREMENT

A. Technical Requirements

1. Firestopping materials shall be UL Classified as “Fill, Void or Cavity Material” for use in Through-Penetration Firestop Systems.
2. Firestop Systems shall provide a fire resistance rating at least equal to the hourly resistance rating of the fire-rated barrier and resist passage of smoke and other gases.

B. General Considerations

1. Firestop Systems do not re-establish the structural integrity of load bearing partitions. The Contractor shall consult the Authority's Representative prior to penetrating any load bearing assembly.
2. Firestop systems are not intended to support live loads or traffic. Contractor shall consult the Authority's Representative if there is reason to believe these limitations may be violated.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Product Schedule: For each penetration firestopping system. Include location, illustration of firestopping system, and design designation of qualified testing and inspecting agency.

1. Engineering Judgments: Where Project conditions require modification to a qualified testing and inspecting agency's illustration for a particular penetration firestopping system, submit illustration, with modifications marked, approved by penetration firestopping system manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly. Obtain approval of authorities having jurisdiction prior to submittal.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Product Test Reports: For each penetration firestopping system, for tests performed by a qualified testing agency.

1.7 CLOSEOUT SUBMITTALS

A. Installer Certificates: From Installer indicating that penetration firestopping systems have been installed in compliance with requirements and manufacturer's written instructions.

1.8 QUALITY ASSURANCE

A. Installer Qualifications: A firm that has been approved by FM Approval according to FM Approval 4991, "Approval Standard for Firestop Contractors," or been evaluated by UL and found to comply with its "Qualified Firestop Contractor Program Requirements."

1.9 PROJECT CONDITIONS

A. Environmental Limitations: Do not install penetration firestopping system when ambient or substrate temperatures are outside limits permitted by penetration firestopping system manufacturers or when substrates are wet because of rain, frost, condensation, or other causes.

B. Install and cure penetration firestopping materials per manufacturer's written instructions using natural means of ventilations or, where this is inadequate, forced-air circulation.

1.10 COORDINATION

A. Coordinate construction of openings and penetrating items to ensure that penetration firestopping systems can be installed according to specified firestopping system design.

B. Coordinate sizing of sleeves, openings, core-drilled holes, or cut openings to accommodate penetration firestopping systems.

C. Notify testing agency at least seven days in advance of penetration firestopping installations; confirm dates and times on day preceding each series of installations.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics:

1. Perform penetration firestopping system tests by a qualified testing agency acceptable to authorities having jurisdiction.
2. Test per testing standards referenced in "Penetration Firestopping Systems" Article. Provide rated systems complying with the following requirements:

a. Penetration firestopping systems shall bear classification marking of a qualified testing agency.

1) UL in its "Fire Resistance Directory."
2) Intertek Group in its "Directory of Listed Building Products."

3) FM Approval in its "Approval Guide."

2.2 PENETRATION FIRESTOPPING SYSTEMS

A. Penetration Firestopping Systems: Systems that resist spread of fire, passage of smoke and other gases, and maintain original fire-resistance rating of construction penetrated. Penetration firestopping systems shall be compatible with one another, with the substrates forming openings, and with penetrating items if any.

B. Penetrations in Fire-Resistance-Rated Walls: Penetration firestopping systems with ratings determined per ASTM E814 or UL 1479, based on testing at a positive pressure differential of 0.01-inch wg.

1. F-Rating: Not less than the fire-resistance rating of constructions penetrated.

C. Penetrations in Horizontal Assemblies: Penetration firestopping systems with ratings determined per ASTM E814 or UL 1479, based on testing at a positive pressure differential of 0.01-inch wg.

1. F-Rating: At least one hour, but not less than the fire-resistance rating of constructions penetrated.
2. T-Rating: At least one hour, but not less than the fire-resistance rating of constructions penetrated except for floor penetrations within the cavity of a wall.
3. W-Rating: Provide penetration firestopping systems showing no evidence of water leakage when tested according to UL 1479.
4. Horizontal assemblies include floor/ceiling assemblies
5. L-Rating: Not exceeding 5.0 cfm/sq. ft. of penetration opening at and no more than 50-cfm cumulative total for any 100 sq. ft at both ambient and elevated temperatures.

D. Exposed Penetration Firestopping Systems: Flame-spread and smoke-developed indexes of less than 25 and 450, respectively, per ASTM E84.

E. Manufactured Piping Penetration Firestopping System: Penetration firestopping systems with ratings determined per ASTM E814 or UL 1479, based on testing at a positive pressure differential of 0.01-inch wg.

1. F-Rating: At least one hour, but not less than the fire-resistance rating of constructions penetrated.
2. T-Rating: At least one hour, but not less than the fire-resistance rating of constructions penetrated except for floor penetrations within the cavity of a wall.
3. W-Rating: Provide penetration firestopping systems showing no evidence of water leakage when tested according to UL 1479.
4. Sleeve: Molded-PVC plastic, of length to match slab thickness and with integral nailing flange on one end for installation in cast-in-place concrete slabs.
5. Stack Fitting: ASTM A48/A48M, gray-iron, hubless-pattern wye branch with neoprene O-ring at base and gray-iron plug in thermal-release harness. Include PVC protective cap for plug.
6. Special Coating: Corrosion resistant on interior of fittings.

F. Accessories: Provide components for each penetration firestopping system that are needed to install fill materials and to maintain ratings required. Use only those components specified by penetration firestopping system manufacturer and approved by qualified testing and inspecting agency for conditions indicated.

1. Permanent forming/damming/backing materials.
2. Substrate primers.
3. Collars.
4. Steel sleeves.
5. Temporary forming materials.
6. Masking Tape: Type recommended by firestopping manufacturer or width required by project conditions.

2.3 FILL MATERIALS

A. Cast-in-Place Firestop Devices: Factory-assembled devices for use in cast-in-place concrete floors and consisting of an outer sleeve lined with an intumescent strip, a flange attached to one end of the sleeve for fastening to concrete formwork, and a neoprene gasket.

B. Latex Sealants: Single-component latex formulations that do not re-emulsify after cure during exposure to moisture.

C. Firestop Devices: Factory-assembled collars formed from galvanized steel and lined with intumescent material sized to fit specific diameter of penetrant.

D. Intumescent Composite Sheets: Rigid panels consisting of aluminum-foil-faced intumescent elastomeric sheet bonded to galvanized-steel sheet.

E. Intumescent Putties: Nonhardening, water-resistant, intumescent putties containing no solvents or inorganic fibers.

F. Intumescent Wrap Strips: Single-component intumescent elastomeric sheets with aluminum foil on one side.

G. Mortars: Prepackaged dry mixes consisting of a blend of inorganic binders, hydraulic cement, fillers and lightweight aggregate formulated for mixing with water at Project site to form a nonshrinking, homogeneous mortar.

H. Pillows/Bags: Reusable heat-expanding pillows/bags consisting of glass-fiber cloth cases filled with a combination of mineral-fiber, water-insoluble expansion agents, and fire-retardant additives. Where exposed, cover openings with steel-reinforcing wire mesh to protect pillows/bags from being easily removed.

I. Silicone Foams: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.

J. Silicone Sealants: Single-component, silicone-based, neutral-curing elastomeric sealants.

2.4 MIXING

A. Penetration Firestopping Materials: For those products requiring mixing before application, comply with penetration firestopping system manufacturer's written instructions for accurate proportioning of materials, water (if required), type of mixing equipment, selection of mixer speeds, mixing containers, mixing time, and other items or procedures needed to produce products of uniform quality with optimum performance characteristics for application indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for opening configurations, penetrating items, substrates, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Cleaning: Before installing penetration firestopping systems, clean out openings immediately to comply with manufacturer's written instructions and with the following requirements:

1. Remove from surfaces of opening substrates and from penetrating items foreign materials that could interfere with adhesion of penetration firestopping materials.
2. Clean opening substrates and penetrating items to produce clean, sound surfaces capable of developing optimum bond with penetration firestopping materials. Remove loose particles remaining from cleaning operation.
3. Remove laitance and form-release agents from concrete.

B. Prime substrates where recommended in writing by manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.

C. Masking Tape: Use masking tape to prevent penetration firestopping from contacting adjoining surfaces that will remain exposed on completion of the Work and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove stains. Remove tape as soon as possible without disturbing firestopping's seal with substrates.

3.3 INSTALLATION

A. General: Install penetration firestopping systems to comply with manufacturer's written installation instructions and published drawings for products and applications.

B. Install forming materials and other accessories of types required to support fill materials during their application and in the position needed to produce cross-sectional shapes and depths required to achieve fire ratings.

1. After installing fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not forming permanent components of firestopping.

C. Install fill materials by proven techniques to produce the following results:

1. Fill voids and cavities formed by openings, forming materials, accessories and penetrating items to achieve required fire-resistance ratings.
2. Apply materials so they contact and adhere to substrates formed by openings and penetrating items.
3. For fill materials that will remain exposed after completing the Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.4 IDENTIFICATION

A. Wall Identification: Permanently label walls containing penetration firestopping systems with the words "FIRE AND/OR SMOKE BARRIER - PROTECT ALL OPENINGS," using lettering not less than 3 inches high and with minimum 0.375-inch strokes.

1. Locate in accessible concealed floor, floor-ceiling, or attic space at 15 feet from end of wall and at intervals not exceeding 30 feet .

B. Penetration Identification: Identify each penetration firestopping system with legible metal or plastic labels. Attach labels permanently to surfaces adjacent to and within 6 inches (150 mm) of penetration firestopping system edge so labels are visible to anyone seeking to remove penetrating items or firestopping systems. Use mechanical fasteners or self-adhering-type labels with adhesives capable of permanently bonding labels to surfaces on which labels are placed. Include the following information on labels:

1. The words "Warning - Penetration Firestopping - Do Not Disturb. Notify Building Management of Any Damage."
2. Contractor's name, address, and phone number.
3. Designation of applicable testing and inspecting agency.
4. Date of installation.
5. Manufacturer's name.
6. Installer's name.

3.5 FIELD QUALITY CONTROL

A. Owner will engage a qualified testing agency to perform tests and inspections according to ASTM E2174.

B. Where deficiencies are found or penetration firestopping system is damaged or removed because of testing, repair or replace penetration firestopping system to comply with requirements.

C. Proceed with enclosing penetration firestopping systems with other construction only after inspection reports are issued and installations comply with requirements.

© 2026 CDM Smith
All Rights Reserved

3.6 CLEANING AND PROTECTION

A. Clean off excess fill materials adjacent to openings as the Work progresses by methods and with cleaning materials that are approved in writing by penetration firestopping system manufacturers and that do not damage materials in which openings occur.

B. Provide final protection and maintain conditions during and after installation that ensure that penetration firestopping systems are without damage or deterioration at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, immediately cut out and remove damaged or deteriorated penetration firestopping material and install new materials to produce systems complying with specified requirements.

SECTION 079200 - JOINT SEALANTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Silicone joint sealants.
2. Nonstaining silicone joint sealants.
3. Urethane joint sealants.
4. Immersible joint sealants.
5. Silyl-terminated polyether joint sealants.
6. Mildew-resistant joint sealants.
7. Polysulfide joint sealants.
8. Butyl joint sealants.
9. Latex joint sealants.

1.3 ACTION SUBMITTALS

A. Product Data: For each joint-sealant product.

B. Sustainable Design Submittals:

C. Samples for Initial Selection: Manufacturer's color charts consisting of strips of cured sealants showing the full range of colors available for each product exposed to view.

D. Samples for Verification: For each kind and color of joint sealant required, provide Samples with joint sealants in 1/2-inch wide joints formed between two 6-inch-long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.

E. Joint-Sealant Schedule: Include the following information:

1. Joint-sealant application, joint location, and designation.
2. Joint-sealant manufacturer and product name.
3. Joint-sealant formulation.
4. Joint-sealant color.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified testing agency.

B. Product Test Reports: For each kind of joint sealant, for tests performed by a qualified testing agency.

C. Preconstruction Laboratory Test Schedule: Include the following information for each joint sealant and substrate material to be tested:

1. Joint-sealant location and designation.
2. Manufacturer and product name.
3. Type of substrate material.
4. Proposed test.
5. Number of samples required.

D. Preconstruction Laboratory Test Reports: From sealant manufacturer, indicating the following:

1. Materials forming joint substrates and joint-sealant backings have been tested for compatibility and adhesion with joint sealants.
2. Interpretation of test results and written recommendations for primers and substrate preparation are needed for adhesion.

E. Preconstruction Field-Adhesion-Test Reports: Indicate which sealants and joint preparation methods resulted in optimum adhesion to joint substrates based on testing specified in "Preconstruction Testing" Article.

F. Sample Warranties: For special warranties.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

B. Product Testing: Test joint sealants using a qualified testing agency.

1. Testing Agency Qualifications: Qualified according to ASTM C1021 to conduct the testing indicated.

C. Mockups: Install sealant in mockups of assemblies specified in other Sections that are indicated to receive joint sealants specified in this Section. Use materials and installation methods specified in this Section.

1.6 PRECONSTRUCTION TESTING

A. Preconstruction Laboratory Testing: Submit to joint-sealant manufacturers, for testing indicated below, samples of materials that will contact or affect joint sealants.

1. Adhesion Testing: Use ASTM C794 to determine whether priming and other specific joint preparation techniques are required to obtain rapid, optimum adhesion of joint sealants to joint substrates.
2. Compatibility Testing: Use ASTM C1087 to determine sealant compatibility when in contact with glazing and gasket materials.

B. Preconstruction Field-Adhesion Testing: Before installing sealants, field test their adhesion to Project joint substrates as follows:

1. Locate test joints where indicated on Project or, if not indicated, as directed by Engineer.
2. Conduct field tests for each kind of sealant and joint substrate.
3. Notify Engineer seven days in advance of dates and times when test joints will be erected.

    a. Test Method: Test joint sealants according to Method A, Field-Applied Sealant Joint Hand Pull Tab, in Appendix X1.1 in ASTM C1193

        1) For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.

4. Report whether sealant failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. For sealants that fail adhesively, retest until satisfactory adhesion is obtained.
5. Evaluation of Preconstruction Field-Adhesion-Test Results: Sealants not evidencing adhesive failure from testing, in absence of other indications of noncompliance with requirements, will be considered satisfactory. Do not use sealants that fail to adhere to joint substrates during testing.

1.7 FIELD CONDITIONS

A. Do not proceed with installation of joint sealants under the following conditions:

1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer or are below 40 deg F .
2. When joint substrates are wet.
3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

1.8 WARRANTY

A. Special Installer's Warranty: Installer agrees to repair or replace joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.

1. Warranty Period: Two years from date of Substantial Completion.

B. Special Manufacturer's Warranty: Manufacturer agrees to furnish joint sealants to repair or replace those joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

C. Special warranties specified in this article exclude deterioration or failure of joint sealants from the following:

1. Movement of the structure caused by stresses on the sealant exceeding sealant manufacturer's written specifications for sealant elongation and compression.
2. Disintegration of joint substrates from causes exceeding design specifications.
3. Mechanical damage caused by individuals, tools, or other outside agents.
4. Changes in sealant appearance caused by accumulation of dirt or other atmospheric contaminants.

PART 2 - PRODUCTS

2.1 JOINT SEALANTS, GENERAL

A. Compatibility: Provide joint sealants, backings, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint-sealant manufacturer, based on testing and field experience.

B. Colors of Exposed Joint Sealants: As selected by Architect from manufacturer's full range.

2.2 MANUFACTURERS

A. Exterior and Interior Joints in Vertical Planes: Provide one of the following:

1. Dymeric 240FC as manufactured by Tremco Incorporated, an RPM Company, Beachwood, OH.
2. Sikaflex-2C NS by Sika Corporation, Lindhurst, NJ.
3. Or approved equal.

B. Exterior and Interior Joints in Horizontal Planes: Provide one of the following:

1. THC 900/ 901 by Tremco Incorporated, an RPM Company, Beachwood, OH.
2. Sikaflex-2C SL by Sika Corporation, Lindhurst, NJ.
3. Or approved equal.

C. Expandable Joint Sealers both standard and backer seal:

1. Emseal Corporation, Westborough, MA.
2. Schul International Company, Pelham, NH.
3. Or approved equal.

2.3 MATERIALS / EQUIPMENT

A. Performance Requirements:

1. Installed water resistance: No penetration at fifty percent (50%) compression.
2. Movement capability: One hundred percent (100%) compression and expansion, with one hundred percent (100%) recovery.

3. Water absorption: Maximum three percent (3%) of weight, when tested at fifty percent (50%) compression for one hundred (100) hours under six (6) feet (one-thousand eight hundred thirty [1,830] mm) of water.
4. Ultraviolet light resistant.
5. Mildew resistant.
6. Non-staining to adjacent materials.
7. Non-bleeding, at up to two-hundred twelve (212) degrees Fahrenheit (one hundred [100] degrees Celsius) and twenty percent (20%) compression.
8. Resistant to gasoline, diesel fuel, jet fuel, solvents, salts, anti-freeze, industrial cleaners, corrosive vapors, and acids.
9. Flammability (UL 94): VO, self-extinguishing.
10. Tensile strength (ASTM D3574): 21.8 psi (one-hundred fifty [150] kPa), min.
11. Compression set (ASTM D3574): Two percent (2%), max.
12. Shear strength: Eight (8) N/cu cm, min.
13. Resistance to aging (ASTM G53, Eight-hundred twenty-five [825] hours): No more than minor surface degradation.
14. Softening point (ASTM D816): Fifty (50) degrees Celsius, minimum.
15. Flash point: Five-hundred ninety (590) degrees Fahrenheit (three-hundred ten [310] degrees Celsius), min.

B. Pourable Sealer: Provide Pourable Sealer in locations specifically referred to on the Contract Drawings. Pourable sealer shall not be used with Work associated with Section 07 55 56.13 – Hot-Applied Rubberized Asphalt Protected Membrane Roofing. Pourable Sealer shall be a high-performance, single component, polyurethane-base, self-leveling pitch pan sealant. Pourable Sealer shall be self-priming and shall require no mixing. Provide "Flex Pourable Sealant" as produced by Sonneborn or approved equal with the following properties:

Property	**Test Method**	**Result**
Service temperature range		-40° F to 180° F
Expected life		Up to 20 years
Shrinkage		None
Movement capability	ASTM C 719	±25%
Tensile strength	ASTM D 412	350 psi
Ultimate elongation at break	ASTM D 412	800%
Lower temperature flexibility	ASTM C 746	-40° F
Hardness at standard Conditions/Shore A	ASTM C 661	25 ±2
Accelerated weathering	Atlas 6500 – watt xenon arc	Excellent

VOC Content: 75.2 g/L or 0.63 lbs. of V.O.S. per gallon of material.

C. Metal trim used for pourable sealant containment pan shall be twenty (20) gauge material to match wall panels and shall be compatible with existing wall panel system and match in color. Shape and size shall be as indicated on the Contract Drawings.

D. Lead tee provide seven-eighths (7/8)-inch wide by one-half (1/2)-inch high purity grade level coping stone joint cover as manufactured by LITSCO, Phone: 800-221-0101 or approved equal.

2.4 FABRICATION / ASSEMBLING / FINISHES

A. Comply with sealant manufacturer's written instructions for mixing of two (2)-component sealants.

B. Thoroughly mix components before use.

C. Add entire contents of activator can to base containers. Do not mix partial units.

D. Mix contents for a minimum of five (5) minutes or as recommended by the sealant manufacturer, until color and consistency are uniform.

PART 3 - EXECUTION

3.1 EXAMINATION / PREPARATION

A. The Contractor shall examine the joint surfaces, substrates, backing, and anchorage of units forming sealant rabbet, and the conditions under which the caulking and sealant Work is to be performed, and notify Engineer in writing of any condition detrimental to the proper and timely completion of the Work and the performance of the sealant systems. Do not proceed with the caulking and sealant Work until unsatisfactory conditions have been corrected in a manner acceptable to Engineer.

B. Clean joint surfaces immediately before installation of sealant compound. Remove dirt, insecure coatings, moisture, and other substances which would interfere with bonds of sealant compound as recommended by sealant manufacturer's written instructions.

C. Etch concrete and masonry joint surfaces to remove excess alkalinity, unless sealant manufacturer's written instructions indicate that alkalinity does not interfere with sealant bond and performance.

1. Etch with five percent (5%) solution of muriatic acid.
2. Neutralize with dilute ammonia solution.
3. Rinse thoroughly with water and allow to dry before sealant installation.

D. If necessary, clean porous materials such as concrete and masonry by grinding, abrasive blasting or mechanical abrading. Blow out joints with oil-free compressed air, or by vacuuming joints prior to application of primer or sealant.

E. Roughen joint surfaces on vitreous coated and similar non-porous materials, wherever sealant manufacturer's data indicates lower bond strength than for porous surfaces. Rub with fine abrasive cloth or wool to produce a dull sheen.

3.2 INSTALLATION

A. Comply with sealant manufacturer's written instructions except where more stringent requirements are shown or specified.

B. Prime or seal the joint surfaces wherever recommended by the sealant manufacturer. Do not allow prime or sealer to spill or migrate onto adjoining surfaces. Allow primer to dry prior to application of sealants.

C. Apply masking tape before installation of primer, in continuous strips in alignment with the joint edge to produce sharp, clean interface with adjoining materials. Remove tape immediately after joints have been sealed and tooled as directed.

D. Do not install sealants without backer rods or bond breaker tape.

E. Roll the back-up rod stock into the joint to avoid lengthwise stretching. Do not twist, braid, puncture or prime backer-rods.

F. Employ only proven installation techniques, which will ensure that sealants will be deposited in uniform, continuous ribbons without gaps or air pockets, with complete "wetting" of the joint bond surfaces equally on opposite sides. Except as otherwise indicated, fill sealant rabbet to a slightly concave surface, slightly below adjoining surfaces. Where horizontal joints are between a horizontal surface and a vertical surface, fill joint to form a slight cove, so that joint will not trap moisture and dirt.

G. Install sealants to depths as recommended by the sealant manufacturer but within the following general limitations, measured at the center (thin) section of the bead.

1. For horizontal joints in sidewalks, pavements and similar locations sealed with elastomeric sealants and subject to traffic and other abrasion and indentation exposures, fill joints to a depth equal to seventy-five percent (75%) of joint width, but not more than five-eighths (5/8)-inch deep or less than three-eighths (3/8)-inch deep.
2. For vertical joints subjected to normal movement and sealed with elastomeric sealants, but not subject to traffic, fill joints to a depth equal to fifty percent (50%) of joint width, but not more than one-half (1/2)-inch deep or less than one-quarter (1/4)-inch deep.

H. Remove excess and spillage of compounds promptly as the Work progresses.

I. Cure sealants and caulking compounds in compliance with manufacturer's instructions and recommendations, to obtain high early bond strength, internal cohesive strength and surface durability.

J. Provide entry panels at all round penetrations in interior and exterior wall on both sides. For fire rated assemblies, provide complete fire stopping assembly in accordance with Section 07 84 00 – Firestopping prior to installation of entry panel. Provide complete sealant seal at round penetrations and perimeter of entry panels.

K. Pourable Sealer shall be set into a metal form containment pan secured to a substrate. Maximum thickness of pourable sealant shall be three-eighths (3/8)-inch and shall pitch toward the exterior of the structure. Pourable sealant shall be installed in accordance with manufacturer’s requirements.

© 2026 CDM Smith
All Rights Reserved

3.3 FIELD TESTING / QUALITY CONTROL

A. Where questions of compatibility of sealants and substrate arise the sealant manufacturer shall test the substrate in question for compatibility with the specified sealant and report his findings, with recommendations, to the Engineer. Any required sealant change shall be at no additional expense to DEP.

B. Do not proceed with installation of elastomeric sealants over joint surfaces which have been painted, lacquered, waterproofed or treated with water repellent or other treatment or coating unless a laboratory test for durability (adhesion), in compliance with Paragraph 4.3.9 of ASTM C 920 has successfully demonstrated that sealant bond is not impaired by the coating or treatment. If laboratory test has not been performed, or shows bond interference, remove coating or treatment from joint surfaces before installing sealant.

C. After nominal cure of exterior joint sealants which are exposed to the weather, test for water leaks. Flood the joint exposure with water directed from a three-quarters (3/4)-inch garden hose, without nozzle, held perpendicular to wall face, two (2) feet from joint and connected to a water system with thirty (30) pounds per square inch minimum normal water pressure. Move stream of water along joint at an approximate rate of twenty (20) feet per minute.

D. Test approximately five percent (5%) of total joint system, in locations which are typical of every joint condition, and which can be inspected easily for leakage on opposite face. Conduct test in the presence of the Engineer, who will determine the actual percentage of joints to be tested and the actual period of exposure to water from the hose, based upon the extent of observed leakage, or lack thereof.

E. Where nature of observed leakage indicates the possibility of inadequate joint bond strength, Engineer may direct that additional testing be performed at a time when joints have been fully cured, followed by natural exposure through both extreme temperatures and returned to the lowest range of temperature in which it is feasible to conduct testing. Perform testing as directed at any time within twenty-four (24) months of installation date.

3.4 STARTUP / DEMONSTRATION

A. Not Used

3.5 ADJUSTING / PROTECTION / CLEANUP

A. Repair sealant installation at leaks or, if leakage is excessive, replace sealant installation as directed.

B. Clean adjacent surfaces of sealant or soiling resulting from the Work. Use solvent or cleaning agent recommended by the sealant manufacturer. Leave all finish Work in a neat clean condition.

C. Protect the sealants during the construction period so that they will be without deterioration, soiling, or damage at the time of DEP's Final Acceptance

SECTION 099123 - INTERIOR PAINTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Primers.
2. Water-based finish coatings.
3. Solvent-based finish coatings.
4. Floor sealers and paints.
5. Dry fall coatings.

B. Related Requirements:

1. Section 028319 “Lead-Based Paint Remediation” for removal and disposal of existing paint films containing lead-based paint.
2. Section 051200 "Structural Steel Framing" for shop priming structural steel.
3. Section 055000 "Metal Fabrications" for shop priming metal fabrications.
4. Section 055113 "Metal Pan Stairs" for shop priming metal pan stairs.
5. Section 055116 "Metal Floor Plate Stairs" for shop priming metal floor plate stairs.
6. Section 055119 "Metal Grating Stairs" for shop priming metal grating stairs.
7. Section 055213 "Pipe and Tube Railings" for pipe and tube railings.
8. Section 055313 "Bar Gratings” for shop priming metal gratings.
9. Section 099300 "Staining and Transparent Finishing" for surface preparation and the application of wood stains and transparent finishes on interior wood substrates.
10. Section 099600 "High-Performance Coatings" for tile-like coatings.

C. Surfaces not included as part of field-applied finish work, unless otherwise indicated:

1. Pre-finished Items: Do not include painting when factory-finishing or installer-finishing is specified for such items, such as but not limited to architectural woodwork and casework, metal roof edging systems, pre-finished partition systems, acoustic materials, toilet enclosures, elevator entrance doors, frames, and equipment, and mechanical and electrical equipment, including, fixtures, switchgear, distribution cabinets, and light fixtures.
2. Concealed Surfaces: Finishing of walls and ceilings in concealed and generally inaccessible areas, foundation spaces, furred areas, utility tunnels, pipe spaces, duct shafts and elevator shafts.
3. Finished Metal Surfaces: Metal surfaces of anodized aluminum, stainless steel, chromium plate, copper, bronze, and similar finished materials.

4. Operating Parts: Moving parts of operating units, mechanical and electrical parts, such as valve and damper operators, linkages, sensing devices, motors, and fan shafts.
5. Code-required Labels: Do not paint over Underwriters' Laboratories, Warnock-Hershey or Factory Mutual labels, or any equipment identification, performance rating, name, or nomenclature plates.

1.3 DEFINITIONS

A. MPI Gloss Levels: Following define gloss levels according to ASTM D 523:

1. MPI Gloss Level 5 - Traditional Semi-Gloss Finish: 35 to 70 units at 60 degrees.
2. MPI Gloss Level 6 - Traditional Gloss: 70 to 85 units at 60 degrees.

B. Paint: Various coating systems materials, including primers, emulsions, enamels, stains, sealers and fillers, and other applied materials, whether used as prime, intermediate or finish coats.

C. Finished Areas: Interior rooms, areas, and spaces in which exposed surfaces are finished by Work of this Section or other Sections. Non-exposed spaces above suspended ceilings are not to be included as part of painting Work, unless otherwise indicated.

D. Utility Areas: Exterior and interior rooms, areas, and spaces dedicated for plumbing, mechanical, electrical, communication, and safety equipment.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product. Include preparation requirements and application instructions.

B. Samples for Verification: For each type of paint system and in each color and gloss of topcoat.

1. Submit Samples on rigid backing, 8 inches square.
2. Apply coats on Samples in steps to show each coat required for system.
3. Label each coat of each Sample.
4. Label each Sample for location and application area.

C. Product List: Cross-reference to paint system and locations of application areas. Use same designations indicated on Drawings and in schedules. Include color designations.

1.5 CLOSEOUT SUBMITTALS

A. Coating Maintenance Manual: Upon conclusion of painting, Contractor, paint manufacturer, or supplier shall submit a coating maintenance manual, such as Sherwin-Williams "Custodian Project Color and Product Information" report or equal that includes:

1. Area Summary with finish schedule.
2. Area Detail designating where each product, color, and finish was used.
3. Product data pages and safety data sheets.
4. Care and cleaning instructions.
5. Touch-up procedures.

6. Color samples, 4 inches by 5 inches, of each color and finish.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Paint: 5 percent, but not less than 1 gal. of each material and color applied.

1.7 QUALITY ASSURANCE

A. Mockups: Apply mockups of each paint system indicated and each color and finish selected to verify preliminary selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Engineer will select one surface to represent surfaces and conditions for application of each paint system.

a. Vertical and Horizontal Surfaces: Provide samples of at least 100 sq. ft.
b. Other Items: Engineer will designate items or areas required.

2. Final approval of color selections will be based on mockups.

a. If preliminary color selections are not approved, apply additional mockups of additional colors selected by Engineer at no added cost to Owner.

3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Engineer specifically approves such deviations in writing.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 degrees F.

1. Maintain containers in clean condition, free of foreign materials and residue.
2. Remove rags and waste from storage areas daily.

1.9 FIELD CONDITIONS

A. Apply paints only when temperature of surfaces to be painted and ambient air temperatures are between 50 and 95 degrees F.

B. Do not apply paints when relative humidity exceeds 85 percent; at temperatures less than 5 degrees F above the dew point; or to damp or wet surfaces.

C. Lead Paint: Lead paint may be present in buildings and structures to be painted. A report on the presence of lead paint is on file for review and use. Examine report to become aware of locations where lead paint is present.

1. Do not disturb lead paint or items suspected of containing hazardous materials except under procedures specified in Section 028319 “Lead-Based Paint Abatement.”
2. Work associated with preparation for painting of substrates known to include lead paint and lead based paint abatement shall be provided in accordance with EPA Renovation, Repair and Painting Rule, additional requirements of authorities having jurisdiction, and as specified under provisions of Section 028319 “Lead-Based Paint Abatement.”

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

1. Benjamin Moore & Company (BMC).
2. PPG Paints (PPG).
3. The Sherwin-Williams Company (SWC).

B. Source Limitations: Obtain paint materials from single source from single listed manufacturer.

1. Manufacturer's designations listed on a separate color schedule are for color reference only and do not indicate prior approval.

2.2 PAINT PRODUCTS, GENERAL

A. Material Compatibility:

1. Materials for use within each paint system shall be compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
2. For each coat in a paint system, products shall be recommended in writing by topcoat manufacturers for use in paint system and on substrate indicated.

B. Colors: As indicated in a color schedule

2.3 MIXING

A. Coatings: Ready mixed, except field catalyzed coatings. Process pigments to a soft paste consistency, capable of being readily and uniformly dispersed to a homogenous coating with good flow and brushing properties, and capable of drying or curing free of streaks or sags.

B. Mix and prepare painting materials in accordance with manufacturer's directions.

C. Maintain containers used in mixing and application of paint in a clean condition, free of foreign materials and residue.

D. Stir materials before application to produce a mixture of uniform density and stir during application. Do not stir surface film into material. Remove film and strain material before using.

E. Do not thin painting materials unless recommended by manufacturer. When paint thinning is required, comply with manufacturer's printed instructions; use only thinners approved by paint manufacturer.

2.4 SOURCE QUALITY CONTROL

A. Testing of Paint Materials: Owner reserves the right to invoke the following procedure:

1. Owner will engage the services of a qualified testing agency to sample paint materials. Contractor will be notified in advance and may be present when samples are taken. If paint materials have already been delivered to Project site, samples may be taken at Project site. Samples will be identified, sealed, and certified by testing agency.
2. Testing agency will perform tests for compliance with product requirements.
3. Owner may direct Contractor to stop applying paints if test results show materials being used do not comply with product requirements. Contractor shall remove noncomplying paint materials from Project site, pay for testing, and repaint surfaces painted with rejected materials. Contractor will be required to remove rejected materials from previously painted surfaces if, on repainting with complying materials, the two paints are incompatible.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.

1. Verify suitability of substrates, including surface conditions and compatibility with existing finishes and primers.
2. Where acceptability of substrate conditions is in question, apply samples and perform in-situ testing to verify compatibility, adhesion, and film integrity of new paint application.
3. Report, in writing, conditions that may affect application, appearance, or performance of paint.

B. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:

1. Concrete: 12 percent.
2. Masonry (Clay and CMUs): 12 percent.
3. Wood: 15 percent.
4. Plaster: 12 percent.

C. Verify suitability of substrates, including surface conditions and compatibility, with existing finishes and primers.

1. Application of coating indicates acceptance of surfaces and conditions.
2. Repainting of Previously Painted Surfaces: Verify conditions and compatibility between new and existing painting products.

D. Proceed with coating application only after unsatisfactory conditions have been corrected. Application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

A. Comply with paint manufacturer's written preparation instructions and recommendations applicable to substrates and paint systems indicated.

B. Remove hardware, covers, plates, and similar items already in place that are removable and are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.

1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection if any.

C. Clean substrates of substances that could impair bond of paints, including dust, dirt, oil, grease, rust, scale, and incompatible paints and encapsulants.

1. Remove incompatible primers and reprime substrate with compatible primers or apply tie coat as required to produce paint systems indicated.
2. Remove mildew, efflorescence, deleterious films, and foreign material from surface by appropriate methods as recommended by manufacturer.

D. Concrete Substrates: Remove release agents, curing compounds, efflorescence, and chalk. Do not paint surfaces if moisture content or alkalinity of surfaces to be painted exceeds that permitted in manufacturer's written instructions.

1. Concrete Floors: Remove oil, dust, grease, dirt, and other foreign materials. Comply with SSPC-SP-13/NACE 6 or ICRI 03732.

E. Masonry Substrates: Remove efflorescence and chalk. Do not paint surfaces if moisture content or alkalinity of surfaces or mortar joints exceeds that permitted in manufacturer's written instructions.

F. Steel Substrates: Remove rust, loose mill scale, and shop primer, if any. Clean using methods recommended in writing by paint manufacturer but not less than the following:

1. SSPC-SP 11, "Power Tool Cleaning to Bare Metal."

G. Shop-Primed Steel Substrates: Clean field welds, bolted connections, and areas where shop paint is abraded. Paint exposed areas with the same material as used for shop priming to comply with SSPC-PA 1 for touching up shop-primed surfaces.

H. Galvanized-Metal Substrates: Remove grease and oil residue from galvanized sheet metal by mechanical methods to produce clean, lightly etched surfaces that promote adhesion of subsequently applied paints.

1. SSPC-SP 16, "Brush-Off Blast Cleaning of Coated and Uncoated Galvanized Steel, Stainless Steels, and Non-Ferrous Metals."

I. Aluminum Substrates: Remove loose surface oxidation.

J. Wood Substrates:

1. Scrape and clean knots, and apply coat of knot sealer before applying primer.
2. Sand surfaces that will be exposed to view, and dust off.
3. Prime edges, ends, faces, undersides, and backsides of wood.
4. After priming, fill holes and imperfections in the finish surfaces with putty or plastic wood filler. Sand smooth when dried.

K. All Substrates: Remove foreign materials, dust, dirt, and other deleterious films that impairs bond of paints to substrates.

L. Previously Finished Surfaces: Comply with paint manufacturer's specifications appropriate for substrate to be coated, for proper preparation of previously finished surfaces.

3.3 APPLICATION

A. Apply paints according to manufacturer's written instructions.

1. Use applicators and techniques suited for paint and substrate indicated.
2. Paint surfaces behind movable equipment and furniture same as similar exposed surfaces. Before final installation, paint surfaces behind permanently fixed equipment or furniture with prime coat only.
3. Paint front and backsides of access panels, removable or hinged covers, and similar hinged items to match exposed surfaces.
4. Do not paint over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
5. Primers specified in painting schedules may be omitted on items that are factory primed or factory finished if acceptable to topcoat manufacturers.
6. Comply with manufacturer's recommendations for drying time required between succeeding coats.

B. If undercoats or other conditions show through topcoat, apply additional coats until cured film has a uniform paint finish, color, and appearance.

C. Apply paints to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks.

D. Provide barrier coats over incompatible primers or remove and re-prime as required. Notify Engineer in writing of anticipated problems in using specified coating systems with substrates primed by others.

E. Painting Fire Suppression, Plumbing, HVAC, Electrical, Communication, and Electronic Safety and Security Work:

1. Paint the following work where exposed in equipment rooms:

a. Equipment, including panelboards and switch gear.
b. Uninsulated metal piping.
c. Uninsulated plastic piping.
d. Pipe hangers and supports.
e. Metal conduit.
f. Plastic conduit.
g. Duct, equipment, and pipe insulation having cotton or canvas insulation covering or other paintable jacket material.

2. Paint the following work where exposed in occupied spaces:

a. Equipment, including panelboards.
b. Uninsulated metal piping.
c. Uninsulated plastic piping.
d. Pipe hangers and supports.
e. Metal conduit.
f. Plastic conduit.
g. Duct, equipment, and pipe insulation having cotton or canvas insulation covering or other paintable jacket material.
h. Other items as directed by Engineer.

3. Paint portions of internal surfaces of metal ducts, without liner, behind air inlets and outlets that are visible from occupied spaces.

F. Film Thickness: Apply paint in wet film thickness (WFT) recommended by paint manufacturer to achieve specified dry film thickness (DFT) for each coat of paint. Since DFT varies among manufacturers, this reference is not included in Article “Interior Painting Schedule.”

3.4 FIELD QUALITY CONTROL

A. Dry Film Thickness Testing: Owner may engage the services of a qualified testing and inspecting agency to inspect and test paint for dry film thickness.

1. Contractor shall touch up and restore painted surfaces damaged by testing.
2. If test results show that dry film thickness of applied paint does not comply with paint manufacturer's written recommendations, Contractor shall pay for testing and apply additional coats as needed to provide dry film thickness that complies with paint manufacturer's written recommendations.

3.5 CLEANING AND PROTECTION

A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.

1. Do not clean equipment with free-draining water and prevent solvents, thinners, cleaners, and other contaminants from entering into waterways, sanitary and storm drain systems, and ground.
2. Dispose of contaminants in accordance with requirements of authorities having jurisdiction.
3. Allow empty paint cans to dry before disposal.
4. Collect waste paint by type and deliver to recycling or collection facility.

B. After completing paint application, clean spattered surfaces. Remove spattered paints by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.

C. Protect work of other trades against damage from paint application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by Engineer, and leave in an undamaged condition.

D. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces.

3.6 INTERIOR PAINTING SCHEDULE

A. Paragraphs below identify specific painting materials and appropriate specified painting system to be used on a particular substrate; actual substrate material surfaces for this Project shall be as indicated in this Interior Painting Schedule and as indicated on Drawings.

B. Concrete Substrates, Nontraffic Surfaces.

1. Latex System - Walls and Ceilings:

a. Prime Coat: Alkali resistant acrylic latex:

1) SWC: Loxon Concrete & Masonry Primer/Sealer, LX02-50 Series.
2) PPG: Perma-Crete Interior/Exterior Alkali Resistant Primer 4-603XI.
3) BMC: Ultra Spec 500 Interior Latex Primer N534.

b. Intermediate Coat: Latex, matching topcoat.
c. Topcoat: Acrylic latex enamel, semi-gloss finish (MPI Gloss Level 5):

1) SWC: ProMar 200 Zero VOC Latex Semi-Gloss, B31-12650 Series.
2) PPG: Speedhide Zero Interior Zero VOC Latex Semi-Gloss 6-4510XI.
3) BMC: Ultra Spec 500 Interior Semi-Gloss Finish N539.

d. Topcoat: Acrylic latex enamel, gloss finish (MPI Gloss Level 6):

1) SWC: ProMar 200 Zero VOC Latex Gloss, B21-12650 Series.
2) PPG: Speedhide Interior/Exterior Gloss 100% Acrylic 6-8534 Series.
3) BMC: Ultra Spec 500 Interior Gloss Finish N540.

2. Light Industrial Water Based System - Walls and Ceilings.

a. Prime Coat: Alkali resistant acrylic latex (MPI Gloss Level 1):

1) SWC: Loxon Concrete & Masonry Primer, LX02-50 Series.
2) PPG: Perma-Crete Interior/Exterior Alkali Resistant Primer 4-603XI.
3) BMC: Fresh Start Multi Purpose Primer 023.

b. Intermediate Coat: matching topcoat.
c. Topcoat: Acrylic epoxy enamel, semi-gloss finish (MPI Gloss Level 5):

1) SWC: Pro Industrial Pre-Catalyzed Waterbased Epoxy Semi-Gloss, K46-1150 Series.
2) PPG: Pitt-Glaze WB1 Interior Semi-Gloss Pre-Catalyzed Water-Borne Acrylic Epoxy 16-510 Series .
3) BMC: Corotech Pre-Catalyzed Waterborne Epoxy Semi- Gloss V341.

C. Concrete Substrates, Traffic Surfaces.

1. Concrete Stain System.

a. First Coat: Stain, interior, for concrete floors, matching topcoat.
b. Second Coat: Stain, interior, for concrete floors:

1) SWC: H&C Heavy Shield Water-Based Solid Color Concrete Stain
2) PPG: Perma-Crete Color Seal WB Acrylic Concrete Stain 4-4210 Series.
3) BMC: TuffCrete WB Acrylic Waterproofing Concrete Stain, CST-2XXX.

2. Clear Acrylic Sealer, Gloss Finish.

a. First Coat: Sealer, water-based, for concrete floors, matching topcoat.
b. Second Coat: Sealer, water-based, for concrete floors:

1) SWC: Clarishield Water-Based Wet-Look Sealer, 50.148154.
2) PPG: Perma-Crete Plex-Seal WB Int/Ext Clear Sealer, 4-6200.
3) BMC: TuffCrete Waterborne Acrylic Clear CST-2xxx.]

D. CMU Substrates.

1. Latex System - Walls:

a. Block Filler: Acrylic latex, interior/exterior:

1) SWC: PrepRite Block Filler, B25W25.
2) PPG: Speedhide Int/Ext Hi Fill Acrylic Latex Block Filler 6-15XI.
3) BMC: Corotech Acrylic Block Filler V114.

b. Primer: Alkali resistant, latex, flat:

1) SWC: Loxon Concrete & Masonry Primer, LX02-50 Series.
2) PPG: Perma-Crete Int/Ext Alkali Resistant Primer, 4-603XI.
3) BMC: Acrylic High-Build Masonry Primer, 609/K609.

c. Intermediate Coat: Latex, matching topcoat.
d. Topcoat: Acrylic latex enamel, semi-gloss finish (MPI Gloss Level 5):

1) SWC: ProMar 200 Zero VOC Interior Latex Semi-Gloss, B31-12650 Series.
2) PPG: Speedhide Zero Interior Zero VOC Latex Semi-Gloss 6-4510XI.
3) BMC: Ultra Spec 500 Interior Semi-Gloss Finish N539.

2. Light Industrial Water Based System - Walls:

a. Block Filler: Acrylic latex, interior/exterior:

1) SWC: Heavy Duty Block Filler - B42W46.
2) PPG: Speedhide Int/Ext Hi Fill Acrylic Latex Block Filler 6-15XI.
3) BMC: Corotech Acrylic Block Filler V114.

b. Primer: Alkali resistant, latex, flat.

1) SWC: Loxon Concrete & Masonry Primer, LX-50 Series.
2) PPG: Perma-Crete Int/Ext Alkali Resistant Primer, 4-603XI.
3) BMC: Acrylic High-Build Masonry Primer, 609/K609.

c. Intermediate Coat: Latex, matching topcoat.
d. Topcoat: Acrylic latex enamel, semi-gloss finish (MPI Gloss Level 5):

1) SWC: Pro Industrial Pre-Catalyzed Waterbased Epoxy Semi-Gloss, K46-1150 Series.
2) PPG: Pitt-Glaze WB1 Interior Semi-Gloss Pre-Catalyzed Water-Borne Acrylic Epoxy 16-510 Series.
3) BMC: Corotech Pre-Catalyzed Waterborne Epoxy Semi- Gloss V341.

3. High Performance, Two Component Water-Based Coating System - Walls:

a. Block Filler: Acrylic latex, interior/exterior:

1) SWC: Heavy Duty Block Filler, B42W46.
2) PPG: Speedhide Interior/Exterior Masonry Hi Fill Latex Block Filler, 6-15XI.
3) BMC: Corotech Waterborne Epoxy Block Filler V163.

b. Primer: Alkali resistant, latex, flat:

1) SWC: Loxon Concrete & Masonry Primer, LX02-50 Series.
2) PPG: Perma-Crete Int/Ext Alkali Resistant Primer, 4-603XI.
3) BMC: Fresh Start All Purpose Primer 023.

c. Intermediate Coat: Latex, matching topcoat.
d. Topcoat: Two component, water-based epoxy, eggshell finish (MPI Gloss Level 3):

1) SWC: Pro Industrial Waterbased Catalyzed Epoxy Eg-Shel, B73-360 Series.
2) PPG: Aquapon WB EP Two-Component Ultra Low VOC Water-Based Epoxy Semi-Gloss Coating 98E-1 / 98E-100 Series.
3) BMC: Corotech Pre-Catalyzed Waterborne Epoxy Eggshell V342.

e. Topcoat: Two component, water-based epoxy, gloss finish (MPI Gloss Level 6):

1) SWC: Pro Industrial Catalyzed Waterbased Epoxy Gloss, B73-300 Series.
2) PPG: Aquapon WB EP Two-Component Ultra Low VOC Water-Based Epoxy Gloss Coating 98E-1 / 98E-98 Series.
3) BMC: Corotech Waterborne Gloss Acrylic Epoxy V450.

E. Steel Substrates.

1. Latex System.

a. Prime Coat: Primer, rust-inhibitive, water-based:

1) SWC: Pro Industrial Pro-Cryl Universal Primer, B66-310 Series.
2) PPG: Pitt-Tech Plus 4020 Int/Ext Primer DTM Industrial Enamel.
3) BMC: Latex Metal Primer HP04.

b. Prime Coat: Primer, alkyd, quick dry, for metal.

1) SWC: Kem Bond HS Metal Primer, B50WZ series.
2) PPG: Multiprime 4360 Int/Ext Alkyd Industrial Primer.
3) BMC: Coronado Rust Scat Alkyd Metal Primer #35.

c. Prime Coat: Primer, alkyd, anti-corrosive, for metal.

1) SWC: Kem Bond HS Metal Primer, B50WZ series.
2) PPG: Multiprime 4360 Int/Ext Alkyd Industrial Primer.
3) BMC: Alkyd Metal Primer P06.

d. Prime Coat: Shop primer specified in Section where substrate is specified.
e. Intermediate Coat: Matching topcoat.
f. Topcoat: Latex, interior, semi-gloss finish (MPI Gloss Level 5).

1) SWC: ProMar 200 Zero VOC Latex Semi-Gloss, B31-12650 Series.
2) PPG: Speedhide Zero Interior Zero VOC Latex Semi-Gloss 6-4510XI Series.
3) BMC: Ultra Spec 500 Interior Semi-Gloss Finish N539.

g. Topcoat: Latex, interior, gloss finish (MPI Gloss Level 6).

1) SWC: ProMar 200 Zero VOC Latex Gloss, B21-12650 Series.
2) PPG: Speedhide Int/Ext Gloss 100% Acrylic 6-8534 Series.
3) BMC: Ultra Spec 500 Interior Gloss Finish N540.

2. Light Industrial Water Based Alkyd System:

a. Prime Coat: Primer, rust-inhibitive, water-based:

1) SWC: Pro Industrial Pro-Cryl Universal Primer, B66-310 Series.
2) PPG: Pitt-Tech Int/Ext WB Acrylic Primer DTM Industrial Enamel 90-712.
3) BMC: Acrylic Metal Primer HP04.

b. Prime Coat: Primer, epoxy, anti-corrosive, for metal:

1) SWC: Kem Bond HS Metal Primer, B50WZ series.
2) PPG: Multiprime 4360 Int/Ext Alkyd Industrial Primer.
3) BMC: Corotech Epoxy Mastic V160.

c. Prime Coat: Shop primer specified in Section where substrate is specified.
d. Intermediate Coat: Matching topcoat.
e. Topcoat: Waterbased alkyd, interior, light industrial, semi-gloss finish (MPI Gloss Level 5):

1) SWC: Pro Industrial Waterbased Alkyd Urethane Semi-Gloss, B53-1150 series.
2) PPG: Pitt-Tech Plus Int/Ext Semi-Gloss DTM Industrial Enamel 90-1210 Series.
3) BMC: Ultra Spec DTM Semi-Gloss HP29.

f. Topcoat: Waterbased alkyd, interior, light industrial, gloss finish (MPI Gloss Level 6):

1) SWC: Pro Industrial Waterbased Alkyd Urethane Gloss, B53-1050 series.
2) PPG: Pitt-Tech Plus Int/Ext High Gloss DTM Industrial Enamel 90-1310 Series.
3) BMC: Ultra Spec DTM Gloss HP28.

3. High Performance, Two component Water Based Coating System:

a. Prime Coat: Primer, rust-inhibitive, water-based:

1) SWC: Pro Industrial Pro-Cryl Universal Primer, B66-310 Series.
2) PPG: Pitt-Tech Plus 4020 Int/Ext Primer DTM Industrial Primer.
3) BMC: Acrylic Metal Primer HP04.

b. Prime Coat: Primer, epoxy, anti-corrosive:

1) SWC: Macropoxy 646 Fast Cure Epoxy, B58-600 series.
2) PPG: Pitt-Guard Rapid-Coat Direct-to-Rust Epoxy Mastic Coating 95-245 Series.
3) BMC: Corotech Epoxy Mastic V160.

c. Intermediate Coat: Matching topcoat.
d. Topcoat: Two component, water-based, gloss finish (Gloss Level 6).

1) SWC: Pro Industrial Waterbased Catalyzed Epoxy Gloss, B73-300 Series.
2) PPG: Aquapon WB EP Two-Component Ultra Low VOC Water-Based Epoxy Gloss Coating 98E-1 / 98E-98 Series.
3) BMC: Corotech Waterborne Gloss Acrylic Epoxy V450.

4. Water Based Dry-Fall System:

a. Prime Coat: Primer, rust-inhibitive, water-based:

1) SWC: Pro Industrial Pro-Cryl Universal Primer, B66-310 Series.
2) PPG: Pitt-Tech Plus 4020 Int/Ext Primer DTM Industrial Primer.
3) BMC: Acrylic Metal Primer HP04.

b. Prime Coat: Primer, alkyd, anti-corrosive, for metal:

1) SWC: Kem Bond HS Metal Primer, B50WZ series.
2) PPG: Multiprime 4360 Int/Ext Alkyd Industrial Primer.
3) BMC: Alkyd Metal Primer P06.

c. Prime Coat: Shop primer specified in Section where substrate is specified.
d. Topcoat: Dry fall, latex, semi-gloss finish (MPI Gloss Level 5):

1) SWC: Pro Industrial Waterbased Dryfall Semi-gloss, B42-83 series.
2) PPG: Speedhide Super Tech WB Interior 100% Acrylic Dry-Fog Semi-Gloss Latex 6-724XI.
3) BMC: Super Kote 5000 Latex Dry Fall Semi-Gloss 112.

F. Galvanized-Metal Substrates:

1. Modified Alkyd System: Light Industrial Water Based Alkyd System.

a. Prime Coat: Primer, galvanized, water-based:

1) SWC: Pro Industrial Pro-Cryl Universal Primer, B66-310 Series.
2) PPG: Pitt-Tech Plus 4020 WB Acrylic DTM Industrial Primer.
3) BMC: Latex Metal Primer HP04.

b. Intermediate Coat: Matching topcoat.
c. Topcoat: Water-based alkyd, interior, semi-gloss finish (MPI Gloss Level 5).

1) SWC: Pro Industrial Waterbased Alkyd Urethane Semi-Gloss, B53-1150.
2) PPG: Speedhide Interior/Exterior WB Alkyd Semi-Gloss Enamel 6-1510XI Series.
3) BMC: Advance Semi-Gloss Waterborne Alkyd 793.

d. Topcoat: Water-based alkyd, interior, gloss finish (MPI Gloss Level 6).

1) SWC: Pro Industrial Waterbased Alkyd Urethane Gloss, B53-1050 series.
2) PPG: Speedhide Interior/Exterior WB Alkyd Gloss Enamel 6-1610XI.
3) BMC: Advance High Gloss Waterborne Alkyd N794.

2. High Performance Two-Component Water Based Epoxy Coating System:

a. Prime Coat: Primer, galvanized, water-based:

1) SWC: Pro Industrial Pro-Cryl Universal Primer, B66-310 Series.
2) PPG: Pitt-Tech Plus 4020 WB Acrylic DTM Industrial Primer.
3) BMC: Acrylic Metal Primer HP04.

b. Intermediate Coat: Matching topcoat.
c. Topcoat: Two component water-based epoxy gloss finish (MPI Gloss Level 6).

1) SWC: Pro Industrial Waterbased Catalyzed Epoxy Gloss, B73-300 Series.
2) PPG: Aquapon WB EP Two-Component Ultra Low VOC Water-Based Epoxy Gloss Coating 98E-1 / 98E-98 Series.
3) BMC: Corotech Waterborne Gloss Acrylic Epoxy V450.

3. Water Based Dry-Fall System:

a. Prime Coat: Dry fall, water-based, for galvanized steel, matching topcoat.
b. Topcoat: Dry fall, water-based, for galvanized steel, flat (MPI Gloss Level 1).

1) SWC: Pro Industrial Waterbased Dryfall Flat, B42-81 series.
2) PPG: Speedhide Super Tech Interior Dry-Fog Flat Latex 6-725XI Series.
3) BMC: Super Kote 5000 Latex Dry Fall Flat N110.

G. Aluminum (Not Anodized or Otherwise Coated) Substrates:

1. Light Industrial Water Based Alkyd System:

a. Prime Coat: Primer, water-based for aluminum:

1) SWC: Pro Industrial Pro-Cryl Universal Primer, B66-310 Series.
2) PPG: Pitt-Tech Plus 4020 WB Acrylic DTM Industrial Primer.
3) BMC: Acrylic Latex Metal Primer HP04.

b. Intermediate Coat: Matching topcoat.
c. Topcoat: Water-based alkyd, interior, gloss finish (MPI Gloss Level 5):

1) SWC: Pro Industrial Waterbased Alkyd Urethane Gloss, B53-1050 series.
2) PPG: Speedhide Interior/Exterior WB Alkyd Gloss Enamel 6-1610XI Series.
3) BMC: Advance High Gloss Waterborne Alkyd N794.

2. High Performance, Two Component, Water Based Coating System:

a. Prime Coat: Primer, water-based for aluminum:

1) SWC: Pro Industrial Pro-Cryl Universal Primer, B66-310 Series.
2) PPG: Pitt-Tech Plus 4020 WB Acrylic DTM Industrial Primer.
3) BMC: Acrylic Latex Metal Primer HP04.

b. Intermediate Coat: Matching topcoat.
c. Topcoat: Two component, water-based epoxy, interior, gloss finish (MPI Gloss Level 6):

1) SWC: Pro Industrial Waterbased Catalyzed Epoxy Gloss, B73-300 Series.
2) PPG: Aquapon WB EP Two-Component Ultra Low VOC Water-Based Epoxy Gloss Coating 98E-1 / 98E-98 Series.
3) BMC: Corotech Waterborne Gloss Acrylic Epoxy V450.

H. Wood Substrates: Glued-laminated construction.

1. Latex over Latex Primer System:

a. Prime Coat: Primer sealer, latex, interior wood:

1) SWC: PrepRite ProBlock Int./Ext. Primer/Sealer, B51-620 series.
2) PPG: Seal Grip Interior/Exterior Acrylic Universal Primer/Sealer 17-921XI.
3) BMC: Sure Seal Latex Primer Sealer 027.

b. Intermediate Coat: Matching topcoat.
c. Topcoat: Acrylic latex, interior, semi-gloss finish (MPI Gloss Level 5):

1) SWC: ProMar 200 HP Zero VOC Latex Semi-Gloss, B31W1950 series.
2) PPG: Speedhide Zero Interior Zero VOC Latex Semi-Gloss 6-4510XI Series.
3) BMC: Ultra Spec 500 Interior Gloss, N539.

2. Light Industrial Water Based Alkyd System:

a. Prime Coat: Primer, acrylic latex, for interior wood:

1) SWC: PrepRite ProBlock Int./Ext. Primer/Sealer, B51-620 series.
2) PPG: Seal Grip Interior/Exterior Acrylic Universal Primer/Sealer 17-921XI.
3) BMC: Fresh Start All Purpose Primer 023.

b. Intermediate Coat: Matching topcoat.
c. Topcoat: Water-based alkyd, interior, semi-gloss finish (MPI Gloss Level 5):

1) SWC: Pro Industrial Waterbased Alkyd Urethane Semi-Gloss, B53-1150.
2) PPG: Speedhide Interior/Exterior WB Alkyd Semi-Gloss Enamel 6-1510XI Series.
3) BMC: Advance Semi-Gloss Waterborne Alkyd 793.

d. Topcoat: Water-based alkyd, interior, gloss finish (MPI Gloss Level 6):

1) SWC: Pro Industrial Waterbased Alkyd Urethane Gloss, B53-1050 series.
2) PPG: Speedhide Interior/Exterior WB Alkyd Gloss Enamel 6-1610XI Series.
3) BMC: Advance High Gloss Waterborne Alkyd N794.

I. Wood Substrates: Exposed framing.

1. Light Industrial Water Based Alkyd System:

a. Prime Coat: Primer, acrylic latex, for interior wood:

1) SWC: PrepRite ProBlock Int./Ext. Primer/Sealer, B51-620 series.
2) PPG: Seal Grip Interior/Exterior Acrylic Universal Primer/Sealer 17-921XI.
3) BMC: Fresh Start All Purpose Primer 023.

b. Intermediate Coat: Matching topcoat.
c. Topcoat: Water-based alkyd, interior, semi-gloss finish (MPI Gloss Level 5):

1) SWC: Pro Industrial Waterbased Alkyd Urethane Semi-Gloss, B53-1150.

2) PPG: Speedhide Interior/Exterior WB Alkyd Semi-Gloss Enamel 6-1510XI Series.
3) BMC: Advance Semi-Gloss Waterborne Alkyd 793.

d. Topcoat: Water-based alkyd, interior gloss finish (MPI Gloss Level 6):

1) SWC: Pro Industrial Waterbased Alkyd Urethane Gloss, B53-1050 series.
2) PPG: Speedhide Interior/Exterior WB Alkyd Gloss Enamel 6-1610XI Series.
3) BMC: Advance High Gloss Waterborne Alkyd N794.

J. Wood Substrates:

1. Latex over Latex Primer System:

a. Prime Coat: Primer sealer, acrylic latex, interior:

1) SWC: PrepRite ProBlock Int./Ext. Primer/Sealer, B51-620 series.
2) PPG: Seal Grip Interior/Exterior Acrylic Universal Primer/Sealer 17-921XI.
3) BMC: Fresh Start All Purpose Primer 023.

b. Intermediate Coat: Matching topcoat.
c. Topcoat: Acrylic latex, interior, semi-gloss finish (MPI Gloss Level 5):

1) SWC: ProMar 200 HP Zero VOC Latex Semi-Gloss, B31W1950 series.
2) PPG: Speedhide Zero Interior Zero VOC Latex Semi-Gloss 6-4510XI Series.
3) BMC: Ultra Spec 500 Interior Semi-Gloss Finish N539.

2. Light Industrial Water Based Alkyd System:

a. Prime Coat: Primer, acrylic latex, for interior wood:

1) SWC: PrepRite ProBlock Int./Ext. Primer/Sealer, B51-620 series.
2) PPG: Seal Grip Interior/Exterior Acrylic Universal Primer/Sealer 17-921XI.
3) BMC: Fresh Start All Purpose Primer 023.

b. Intermediate Coat: Matching topcoat.
c. Topcoat: Water-based alkyd, interior, semi-gloss finish (MPI Gloss Level 5):

1) SWC: Pro Industrial Waterbased Alkyd Urethane Semi-Gloss, B53-1150.
2) PPG: Speedhide Interior/Exterior WB Alkyd Semi-Gloss Enamel 6-1510XI Series.
3) BMC: Advance Semi-Gloss Waterborne Alkyd 793.

d. Topcoat: Water-based alkyd , interior, gloss finish (MPI Gloss Level 6).

1) SWC: Pro Industrial Waterbased Alkyd Urethane Gloss, B53-1050 series.
2) PPG: Speedhide Interior/Exterior WB Alkyd Semi-Gloss Enamel 6-1510XI Series.
3) BMC: Advance High Gloss Waterborne Alkyd N794.

K. Plastic Substrates:

1. Latex System:

a. Prime Coat: Primer, bonding, water-based:

1) SWC: Extreme Bond Primer, B51-150.
2) PPG: Seal Grip Interior/Exterior Acrylic Universal Primer/Sealer 17-921XI.
3) BMC: Stix Waterborne Bonding Primer SXA-110.

b. Intermediate Coat: Matching topcoat.
c. Topcoat: Latex, interior, semi-gloss finish (MPI Gloss Level 5):

1) SWC: ProMar 200 Zero VOC Interior Latex Semi-Gloss, B31-12650 Series.
2) PPG: Speedhide Zero Interior Zero VOC Latex Semi-Gloss 6-4510XI Series.
3) BMC: Ultra Spec 500 Interior Semi-Gloss Finish N539.

2. Light Industrial Water Based System:

a. Prime Coat: Primer, bonding, water-based:

1) SWC: Extreme Bond Primer, B51-150.
2) PPG: Seal Grip Interior/Exterior Acrylic Universal Primer/Sealer 17-921XI.
3) BMC: Stix Waterborne Bonding Primer SXA-110.

b. Intermediate Coat: Matching topcoat.
c. Topcoat: Acrylic epoxy, interior, semi-gloss finish (MPI Gloss Level 5):

1) SWC: Pro Industrial Pre-Catalyzed Waterbased Epoxy Semi-gloss, K46-1150 Series.
2) PPG: Pitt-Glaze WB1 Interior Semi-Gloss Pre-Catalyzed Water-Borne Acrylic Epoxy 16-510 Series.
3) BMC: Corotech Pre-Catalyzed Waterborne Epoxy Semi Gloss V341.

L. Gypsum Board Substrates:

1. Latex over Latex Sealer System:

a. Prime Coat: Primer sealer, latex, interior.

1) SWC: ProMar 200 Zero VOC Latex Primer, B28-2600.
2) PPG: Speedhide Zero Interior ZERO VOC Latex Sealer 6-4900XI.
3) BMC: Ultra Spec 500 Interior Primer N534.

b. Intermediate Coat: Matching topcoat.
c. Topcoat: Latex, interior, semi-gloss finish (MPI Gloss Level 5):

1) SWC: ProMar 200 Zero VOC Interior Latex Semi-Gloss, B31-12650 Series.
2) PPG: Speedhide Zero Interior Zero VOC Latex Semi-Gloss 6-4510XI Series.
3) BMC: Ultra Spec 500 Interior Semi-Gloss Finish N539.

2. Latex over Alkali Resistant Primer System - Plaster Only:

   a. Prime Coat: Primer sealer, alkali-resistant, interior:

      1) SWC: Loxon Concrete & Masonry Primer, LX02-50 series.
      2) PPG: Seal Grip Interior/Exterior Acrylic Universal Primer/Sealer 17-921XI.
      3) BMC: Fresh Start All Purpose Primer 023.

   b. Intermediate Coat: Matching topcoat.
      Topcoat: Latex, interior, semi-gloss finish (MPI Gloss Level 5):

      1) SWC: ProMar 200 Zero VOC Interior Latex Semi-Gloss, B31-12650 Series.
      2) PPG: Speedhide Zero Interior Zero VOC Latex Semi-Gloss 6-4510XI Series.
      3) BMC: Ultra Spec 500 Interior Semi-Gloss Finish N539.

3. Light Industrial Water Based System:

   a. Prime Coat: Primer sealer, interior:

      1) SWC: ProMar 200 Zero VOC Latex Primer, B28-2600.
      2) PPG: Speedhide Interior Latex Sealer 6-2.
      3) BMC: Ultra Spec 500 Interior Primer N534.

   b. Intermediate Coat: Matching topcoat.
   c. Topcoat: Acrylic epoxy, interior, semi-gloss finish (MPI Gloss Level 5):

      1) SWC: Pro Industrial Pre-Catalyzed Waterbased Epoxy Semi-gloss, K46-1150 Series.
      2) PPG: Pitt-Glaze WB1 Interior Semi-Gloss Pre-Catalyzed Water-Borne Acrylic Epoxy 16-510 Series.
      3) BMC: Ultra Spec 500 Interior Semi-Gloss Finish N539.

4. High-Performance, Two Component Water Based Coating System:

   a. Prime Coat: Primer sealer, latex, interior:

      1) SWC: ProMar 200 Zero VOC Latex Primer, B28-2600.
      2) PPG: Speedhide Interior Latex Sealer 6-2.
      3) BMC: Fresh Start All Purpose Primer 023.

   b. Intermediate Coat: Matching topcoat.
   c. Topcoat: Two component, interior, water-based epoxy, gloss finish (MPI Gloss Level 6).

      1) SWC: Pro Industrial Waterbased Catalyzed Epoxy Gloss, B73-300 Series.
      2) PPG: Aquapon WB EP Two-Component Ultra Low VOC Water-Based Epoxy Gloss Coating 98E-1 / 98E-98 Series.
      3) BMC: Corotech Waterborne Gloss Acrylic Epoxy V450.

3.7 INTERIOR MICROBICIDAL PAINTING SCHEDULE

A. Concrete Substrates, Nontraffic Surfaces:

1. Microbicidal Latex Finish System: With topcoat EPA registered No. 64695-1.

a. Prime Coat: Primer sealer, latex:

1) S-W Loxon Concrete & Masonry Primer Sealer, A24W8300.

b. First Coat: Microbicidal Latex, matching topcoat.
c. Topcoat: Microbicidal Latex, eggshell finish (MPI Gloss Level 3):

1) S-W Paint Shield Interior Latex Eg-Shel Microbicidal Paint, D12W51. Brush and roll application only.

B. CMU Substrates:

1. Microbicidal Latex Finish System: With topcoat EPA registered No. 64695-1.

a. Block Filler: Latex, interior/exterior, one or two coats as required:

1) S-W Loxon Block Surfacer, A24W200.

b. First Coat: Microbicidal Latex, matching topcoat.
c. Topcoat: Microbicidal Latex, eggshell finish (MPI Gloss Level 3):

1) S-W Paint Shield Interior Latex Eg-Shel Microbicidal Paint, D12W51. Brush and roll application only.

SECTION 099679 – ATMOSPHERIC PROTECTION AND PLANT SERVICE AREAS COATINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections apply to this Section.

1.2 SUMMARY

A. Section includes surface preparation and application of high-performance coating systems for water and wastewater treatment on the following substrates:

1. Interior Substrates:

a. Concrete vertical and horizontal surfaces.
b. Concrete masonry units CMUs.
c. Steel.
d. Ductile or cast iron.
e. Galvanized steel.
f. Plastic substrate.

B. Related Requirements:

1. Section 028319 “Lead-Based Paint Remediation” for removal and disposal of existing paint films containing lead-based paint.
2. Section 051200 "Structural Steel Framing for shop priming of structural steel with primers specified in this Section.
3. Section 055213 "Pipe and Tube Railings" for pipe and tube railings with coatings specified in this Section.
4. Section 099100 "Painting" for general field painting.
5. Section 099123 "Interior Painting" for general field painting.

1.3 DEFINITIONS

A. MPI Gloss Level 5 - Traditional Semi-Gloss Finish: 35 to 70 units at 60 degrees.

B. MPI Gloss Level 6 - Traditional Gloss: 70 to 85 units at 60 degrees.

C. Severe Exposure: An aggressively corrosive industrial or predominantly chemical environment with regular exposure to strong chemical fumes, mists, and dust is considered a severe environment. In an industrial setting, a severe environment is one with sustained exposure to high humidity and condensation that results in heavy development of mold and mildew. Frequent spilling and splashing of strong chemicals (acids, alkalis, oxidizers, and solvents) are also characteristic of a severe environment. Metal corrosion can be expected in a severe environment. Immersion conditions, marine environment with sustained exposure to saltwater

spray, and arctic environment with long periods of extremely low temperature are considered severe environments. These are areas where if no high-performance coatings are applied on steel or concrete, very early failure and structural damage will be evident.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product. Include preparation requirements and application instructions.

1. Indicate VOC content.

B. Samples for Initial Selection: For each type of topcoat product indicated.

C. Samples for Verification: For each type of coating system and each color and gloss of topcoat indicated.

1. Submit Samples on actual substrate material to be coated, 8 inches square.
2. Apply coats on Samples in steps to show each coat required for system.
3. Label each coat of each Sample.
4. Label each Sample for location and application area.

D. Product List: Use same designations indicated on Drawings and in Atmospheric Protection Coating Schedule and Plant Service Areas Coating Schedule. Include color designations and product runs (batch numbers).

1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials from the same production run (batch number), that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Coatings: 5 percent, but not less than 1 gal. of each material and color applied.

1.6 QUALITY ASSURANCE

A. Mockups: Apply mockups of each coating system indicated to verify preliminary selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.

1. Engineer will select one surface to represent surfaces and conditions for application of each coating system.

a. Wall and Ceiling Surfaces: Provide samples of at least 100 sq. ft.
b. Other Items: Engineer will designate items or areas required.

2. Final approval of color selections will be based on mockups.

a. If preliminary color selections are not approved, apply additional mockups of additional colors selected by Engineer at no added cost to Owner.

3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Engineer specifically approves such deviations in writing.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F.

1. Maintain containers in clean condition, free of foreign materials and residue.
2. Remove rags and waste from storage areas daily.
3. Deliver materials on site in factory sealed containers from the manufacturer. Do not use materials from previous jobs.

1.8 FIELD CONDITIONS

A. Apply coatings only when temperature of surfaces to be coated and ambient air temperatures are within the coatings manufacturer's recommendations.

B. Do not apply coatings when relative humidity exceeds 85 percent; at temperatures less than 5 deg F above the dew point and rising; or to damp or wet surfaces.

C. Lead Paint: Lead paint may be present in buildings and structures to be painted. A report on the presence of lead paint is on file for review and use. Examine report to become aware of locations where lead paint is present.

1. Do not disturb lead paint or items suspected of containing hazardous materials except under procedures specified in Section 028319 "Lead-Based Paint Abatement."
2. Work associated with preparation for painting of substrates known to include lead paint and lead based paint abatement shall be provided in accordance with EPA Renovation, Repair and Painting Rule, additional requirements of authorities having jurisdiction, and as specified under provisions of Section 028319 "Lead-Based Paint Abatement."

D. Do not apply exterior coatings in snow, rain, fog, mist, and in conditions that do not meet the manufacturer's recommendations.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

1. Carboline Company (CAR).
2. PPG Paints (PPG).
3. The Sherwin-Williams Company (SWC).
4. Tnemec Company, Inc. (TNE).

2.2 HIGH-PERFORMANCE COATINGS

A. Material Compatibility:

1. Each coating system within indicated substrates uses compatible material with one another, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
2. Topcoat manufacturer recommends products in writing for use in each coating system coat and on indicated substrate.

B. Colors: As indicated in color schedule.

2.3 SOURCE QUALITY CONTROL

A. Testing of Coating Materials: Owner reserves the right to invoke the following procedure:

1. Owner will engage services of a qualified testing agency to sample coating materials. Contractor will be notified in advance and may be present when samples are taken. If coating materials have already been delivered to Project site, samples may be taken at Project site. Samples will be identified, sealed, and certified by testing agency.
2. Testing agency will perform tests for compliance with product requirements.
3. Owner may direct Contractor to stop applying coatings if test results show materials being used do not comply with product requirements. Contractor shall remove noncomplying coating materials from Project site, pay for testing, and recoat surfaces coated with rejected materials. Contractor will be required to remove rejected materials from previously coated surfaces if, on recoating with complying materials, both coatings are incompatible.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.

B. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:

1. Concrete: 12 percent.
2. CMUs: 12 percent.

C. Verify suitability of substrates, including surface conditions and compatibility, with existing finishes and primers.

1. Application of coating indicates acceptance of surfaces and conditions.
2. Recoating of Previously Coated Surfaces: Verify conditions and compatibility between new and existing high-performance coating products.

D. Proceed with coating application only after unsatisfactory conditions have been corrected. Application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

A. Comply with manufacturer's written instructions applicable to substrates and coating systems indicated.

B. Remove hardware, covers, plates, and similar items already in place that are removable and are not to be coated.

1. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and coating.
2. After completing coating operations, use workers skilled in the trades involved to reinstall items that were removed.
3. Remove surface-applied protection if any.

C. Clean substrates of substances that could impair bond of coatings, including dust, dirt, oil, grease, and incompatible paints and encapsulants.

1. Remove incompatible primers and reprime substrate with compatible primers or apply tie coat as required to produce coating systems indicated.

D. Concrete Substrates: Remove release agents, curing compounds, efflorescence, and chalk. Do not paint surfaces if moisture content or alkalinity of surfaces to be painted exceeds that permitted in manufacturer's written instructions.

1. Concrete Floors: Remove oil, dust, grease, dirt, and other foreign materials. Comply with SSPC-SP-13/NACE 6 or ICRI 310.2R.
2. Prepare substrate with manufacturer’s recommended Concrete Surface Profile (CSP) based on coating system to be applied:

    a. High-build coatings, 10 to 40 mils: CSP 3 to CSP 5.
    b. Self-leveling toppings, 50 mils to 1/8-inch: CSP 4 to CSP 6.

E. Masonry Substrates: Remove efflorescence and chalk.

1. Do not coat surfaces if moisture content, alkalinity of surfaces, or alkalinity of mortar joints exceeds that permitted in manufacturer's written instructions.
2. Clean surfaces with pressurized water. Use pressure range of 100 to 600 psi at 6 to 12 inches.

F. Steel Substrates: Remove rust, loose mill scale, and shop primer if any. Clean using methods recommended in writing by manufacturer but not less than the following:

1. SSPC-SP 11, "Power Tool Cleaning to Bare Metal.”
2. NAPF 500-03, “Surface Preparation Standard for Ductile Iron Pipe and Cast Ductile Iron Fittings.”

G. Plastic Substrates: Solvent wipe per SSPC-SP1 to remove dirt, grease, and any other surface contamination. Lightly abrade entire surface and repeat solvent wipe process.

3.3 APPLICATION

A. Apply high-performance coatings in accordance with manufacturer's written instructions.

1. Use applicators and techniques suited for coating and substrate indicated.
2. Coat surfaces behind movable equipment and furniture same as similar exposed surfaces. Before final installation, coat surfaces behind permanently fixed equipment or furniture with prime coat only.
3. Coat backsides of access panels, removable or hinged covers, and similar hinged items to match exposed surfaces.
4. Do not apply coatings over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.

B. Tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of the same material are to be applied. Tint undercoats to match color of finish coat but provide sufficient difference in shade of undercoats to distinguish each separate coat.

C. If undercoats or other conditions show through final coat, apply additional coats until cured film has a uniform coating finish, color, and appearance.

D. Apply coatings to produce surface films without cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections. Produce sharp glass lines and color breaks.

E. Film Thickness: Apply paint in wet film thickness (WFT) recommended by high-performance manufacturer to achieve specified dry film thickness (DFT) for each coat of paint. Since DFT varies among manufacturers, this reference is not included in Article “Atmospheric Protection Coating Schedule and Plant Service Areas Coating Schedule.”

3.4 FIELD QUALITY CONTROL FOR CONCRETE AND CONCRETE MASONRY UNIT SUBSTRATES

A. General: Field quality control referenced in this Article includes testing of both pre-application quality assurance and post-application quality control of high-performance coatings. Employ approved testing and inspecting agency to perform quality assurance and quality control.

1. Perform Quality Control Testing in the order identified in the following subparagraph.

a. Testing Order: pH Testing, Surface Profile Testing, and Moisture Testing, followed by Dry Film Thickness Testing, Adhesion Testing, and Holiday Testing.
b. Repair substrate, touch up, and restore coated surfaces damaged by testing.
c. If test results show that dry film thickness, holiday, and pull-off strength of applied coating does not comply with coating manufacturer’s written instructions, pay for testing, and apply additional coats as needed to provide dry film thickness, pull-off strength that complies with coating manufacturer's written instructions.

B. Quality Assurance Testing:

1. Surface Preparation Testing:

a. Inspect and test condition of substrate for compliance with coating manufacturer's requirements.
b. Measure surface profile using International Concrete Repair Institute (ICRI) 310.2 Comparator Coupons.
c. Test concrete cleanliness by measuring the pH of the moisture in the concrete capillaries.

1) pH of New Concrete: 12 to 13.
2) pH of Concrete Subjected to Acid Attack: 9.0 minimum.

C. Quality Control Testing:

1. Dry Film Thickness Testing:

a. Inspect and test coatings for dry film thickness per ASTM D6132.

2. Adhesion Testing:

a. Field test pull-off strength of coatings on concrete using portable pull-off adhesion testers. Comply with ASTM D7234. Minimum adhesion of 200 psi with failure in the concrete substrate (concrete over 90 percent of the load fixture surface).

3. Holiday Testing:

a. Field test continuity verification of coatings applied to concrete substrates. Discontinuities include pinholes, internal voids, holidays, cracks, and conductive inclusions. Comply with ASTM D4787.

3.5 FIELD QUALITY CONTROL FOR STEEL, DUCTILE OR CAST IRON, GALVANIZED STEEL, AND PLASTIC SUBSTRATES

A. General: Field quality control referenced in this Article includes testing of both pre-application quality assurance and post-application quality control of high-performance coatings. Employ approved testing and inspecting agency to perform quality assurance and quality control.

1. Perform Quality Control Testing in the order identified in the following subparagraph.

a. Testing Order: Dry Film Thickness Testing, Adhesion Testing, then Holiday Testing.

2. Repair substrate, touch up, and restore coated surfaces damaged by testing.
3. If test results show that dry film thickness, holiday, and pull-off strength of applied coating does not comply with coating manufacturer's written instructions, pay for testing, and apply additional coats as needed to provide dry film thickness and pull-off strength that complies with coating manufacturer's written instructions.
4. Owner or Owner's representative will conduct random independent inspections and tests for the final acceptance or rejection of pipe coating.

B. Quality Assurance Testing:

1. Surface Preparation Testing:

a. Test surface profile of abrasive blasted surfaces with “Press-O-Film” tester tape or equivalent in accordance with NACE RP0287.
b. Provide tester tape suitable for the intended profile height.
c. Measure profile to a minimum tolerance of 0.1 mils, maximum.
d. Use electronic surface profilometers necessary to verify tester tape measurements.

C. Quality Control Testing:

1. Dry Film Thickness Testing:

a. Inspect and test coatings for dry film thickness per ASTM D7091 or ASTM D6132.

2. Adhesion Testing:

a. General:

1) Test a minimum of two pipes for adhesion from each lot of pipes to be coated up to 3,000 square feet of pipe. Conduct an additional adhesion test on every increment up to 2,000 square feet of pipe coated in excess of the first 3,000 square feet of pipe (i.e., if one workday of production is 7,000 square feet of pipe, four adhesion tests will be conducted on the pipe lot.). Conduct adhesion testing on not less than 50 percent of each pipe produced within a lot.
2) A pipe lot is defined as the quantity of pipe that is coated by a single crew within a work shift, but not exceeding 12 hours.
3) Perform adhesion tests not less than 24 hours after coating application. Tests conducted prior to 24 hours will be acceptable only if test meets or exceeds adhesion criteria specified and the test was requested by Owner.
4) Randomly select pipe for adhesion testing. Owner reserves the right to perform adhesion testing at any time or location.

b. Rejection of Coating:

1) If any coatings within a lot fails to meet test criteria specified for coating type, those coatings are considered rejected along with all other coatings within the lot. Each coating within the rejected pipe lot will then be individually tested and rejected on a pipe-by-pipe basis in conformance with test procedures and criteria specific for the coating type.
2) Rejected coatings shall have all coating removed from full pipe length, pipe abrasive blasted, and recoated.

3. Holiday Testing:

a. Conduct holiday tests on completed coatings after cure or 24-hours, whichever is less. Provide a high voltage testing equipment and test in accordance with NACE SP0274 and the Specifications.

b. Use actual coating thickness for holiday testing.
c. Provide holiday detector with an audible signal when contact is made between pipeline and electrode at coating holidays (defects). Provide a good ground and a low electrical resistance between pipeline and detector. Make only direct connections to uncoated areas or to pipe ends at holdback areas.
d. Clean and dry pipe surface when testing. Always keep electrode in motion and in firm contact with coated surface while test voltage is being applied. Move electrode evenly over the surface at approximately 0.5 to 1 fps. Do not exceed 1 fps of travel time.
e. Mark location of detected holidays for repair. Retest after making necessary repairs.

3.6 CLEANING AND PROTECTION

A. After completing coating application, clean spattered surfaces. Remove spattered coatings by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.

B. Protect work of other trades against damage from coating operation. Correct damage to work of other trades by cleaning, repairing, replacing, and recoating, as approved by Engineer, and leave in an undamaged condition.

C. At completion of construction activities of other trades, touch up and restore damaged or defaced coated surfaces.

3.7 ATMOSPHERIC PROTECTION COATING SCHEDULE

A. Exterior Weathering and Protection: Non-submerged and atmospheric service.

1. Concrete Substrates: Moderate to Severe Exposure.

a. High-Performance Epoxy Acrylic Polyurethane System:

1) Prime Coat:

a) PPG: Aquapon WB-EP.
b) SWC: Loxon Conditioner.
c) TNE: Series 66.

2) Intermediate Coat:

a) CAR: Carboguard 60.
b) PPG: Amerlock 2/2 VOC/400/600.
c) SWC: Macropoxy 646.
d) TNE: Series 66.

3) Topcoat: (MPI Gloss Level 6).

a) CAR: Carbothane 134 HG.
b) PPG: Pitthane Ultra.
c) SWC: Acrolon Ultra.

d) TNE: Series 1074.

2. Masonry Substrates: Mild to Moderate Exposure.

a. Acrylic Polyurethane over Epoxy System:

1) Prime Coat:

a) CAR: Sanitile 500.
b) PPG: 4-100XI.
c) SWC: Loxon Block Surfacer.
d) TNE: Series 130.

2) Intermediate Coat:

a) CAR: Carboguard 60.
b) PPG: Amerlock 2/2 VOC/400/600.
c) SWC: Macropoxy 646 FC.
d) TNE: Series 66.

3) Topcoat: (MPI Gloss Level 5 or 6).

a) CAR: Carbothane 134 series.
b) PPG: Pitthane Ultra.
c) SWC: Acrolon Ultra.
d) TNE: Series 1094.

3. Steel Substrates: Moderate to Severe Exposure.

a. Pigmented Polyurethane over Self-Priming Epoxy System:

1) Prime Coat:

a) CAR: Carboguard 60/Carboguard 635VOC.
b) PPG: Amerlock 2/2 VOC/400/600.
c) SWC: Macropoxy 646 PW.
d) TNE: Series 66.

2) Intermediate Coat:

a) CAR: Carboguard 60/Carboguard 635VOC.
b) PPG: Amerlock 2/2 VOC/400/600.
c) SWC: Macropoxy 646 PW.
d) TNE: Series 66.

3) Topcoat: (MPI Gloss Level 6).

a) CAR: Carbothane 134 UV Ultra.
b) PPG: Pitthane Ultra.
c) SWC: Acrolon 218.
d) TNE: Series 1094.

4. Ductile Iron or Cast-Iron Substrates: Moderate to Severe Exposure.

   a. Polyurethane over Epoxy System:

      1) Prime Coat:

         a) CAR: Carboguard 60/Carboguard 635VOC.
         b) PPG: Amerlock 2/2 VOC/400/600.
         c) SWC: Macropoxy 646 FC Epoxy.
         d) TNE: Series 66.

      2) Topcoat: (MPI Gloss Level 6).

         a) CAR: Carbothane 134 series.
         b) PPG: Pitthane Ultra.
         c) SWC: Acrolon 218.
         d) TNE: Series 1074.

   b. Polysiloxane System:

      1) Prime Coat:

         a) CAR: Carboguard 890.
         b) PPG: Amerlock 2/2 VOC/400/600.
         c) SWC: Macropoxy 646 FC Epoxy.
         d) TNE: Series 66.

      2) Topcoat: (MPI Gloss Level 6).

         a) CAR: Carboxane 2000 Series.
         b) PPG: PSX 700/805/ONE 750.
         c) SWC: Sher-Loxane 800.
         d) TNE: Series 740.

5. Galvanized Metal Substrates: Mild to Moderate Exposure.

   a. Pigmented Polyurethane over Epoxy System:

      1) Prime Coat:

         a) CAR: Carboguard 60/Carboguard 635VOC.
         b) PPG: Amerlock 2/2 VOC/400/600.
         c) SWC: Macropoxy 646.
         d) TNE: Series 66.

      2) Topcoat: (MPI Gloss Level 6).

         a) CAR: Carbothane 134 Series (Gloss) or Carbothane 133 Series (Satin).
         b) PPG: Pitthane Ultra.
         c) SWC: Acrolon Ultra.
         d) TNE: Series 1094.

b. Polysiloxane over Epoxy system:

1) Prime Coat:

a) CAR: Carboguard 890.
b) PPG: Amerlock 2/2 VOC/400/600.
c) SWC: Macropoxy 646.
d) TNE: Series 66.

2) Topcoat: (MPI Gloss Level 6).

a) CAR: Carboxane 2000 Series.
b) PPG: PSX 700/805/ONE 750.
c) SWC: Sher-Loxane 800.
d) TNE: Series 690.

6. Plastic Piping and, where scheduled to be painted, plastic components. Note: Provide UV and weather protection for plastic coating system.

a. Polyurethane over Epoxy System:

1) Prime Coat:

a) CAR: Carboguard 890.
b) PPG: Amerlock 2/400.
c) SWC: Macropoxy 646 FC Epoxy.
d) TNE: Series 66.

2) Topcoat: (MPI Gloss Level 6).

a) CAR: Carbothane 133HB.
b) PPG: Pitthane Ultra.
c) SWC: Acrolon 218.
d) TNE: Series 1094.

3.8 PLANT SERVICE AREAS COATING SCHEDULE

A. Miscellaneous Interior Process Support Areas, Non-submerged Surfaces, Mild to Moderate Exposure:

1. Concrete Substrates:

a. Water based Acrylic System:

1) Prime Coat:

a) PPG: Pitt-tech Plus EP Primer/Finish.
b) SWC: Loxon Conditioner.
c) TNE: Series 1254.

2) Intermediate Coat:

a) CAR: Sanitile 3359.
b) PPG: Pitt-tech Plus EP Primer/Finish.
c) SWC: Pro Industrial HP Acrylic.
d) TNE: Series 1028.

3) Topcoat: (MPI Gloss Level 5 or 6).

a) PPG: Pitt-Tech Plus.
b) SWC: Pro Industrial HP Acrylic.
c) TNE: Series 1028.

b. Cross-linked, Water Based Epoxy System:

1) Prime Coat:

a) PPG: Aquapon WB EP.
b) SWC: Loxon Conditioner.
c) TNE: Series 27WB.

2) Intermediate Coat:

a) PPG: Aquapon WB EP.
b) SWC: Pro Industrial Wb Cat Epoxy.
c) TNE: Series 27WB.

3) Topcoat: (MPI Gloss Level 6).

a) CAR: Carboseal 555.
b) PPG: Aquapon WB EP.
c) SWC: Pro Industrial Wb Cat Epoxy.
d) TNE: Series 114.

c. Modified Polyester- Polyurethane over Epoxy System:

1) Prime Coat:

a) CAR: Carboguard 60.
b) PPG: Amerlock 2/2 VOC/400/600.
c) SWC: Macropoxy 646.
d) TNE: Series 66.

2) Intermediate Coat:

a) CAR: Carboguard 60.
b) PPG: Amerlock 2/2 VOC/400/600.
c) SWC: Macropoxy 646.
d) TNE: Series 66.

3) Topcoat: (MPI Gloss Level 6).

a) PPG: Amershield VOC.
b) SWC: Polylon HP.

c) TNE: Series 290.

2. Masonry Substrates:

a. Cross-linked, Water Based Epoxy System:

1) Prime Coat:

a) PPG: 4-100XI.
b) SWC: Loxon Block Surfacer.
c) TNE: Series 1254.

2) Intermediate Coat:

a) PPG: Aquapon WB EP.
b) SWC: Pro Industrial Wb Cat Epoxy.
c) TNE: Series 114.

3) Topcoat: (MPI Gloss Level 5 or 6).

a) CAR: Carboseal 555.
b) PPG: Aquapon WB EP.
c) SWC: Pro Industrial Wb Cat Epoxy.
d) TNE: Series 114.

b. Polysiloxane System:

1) Prime Coat:

a) PPG: 4-100XI.
b) SWC: Loxon Block Surfacer.
c) TNE: Series 1254.

2) Topcoat: (MPI Gloss Level 6).

a) CAR: Carboxane 2000.
b) PPG: PSX700/805.
c) SWC: Sher-Loxane 800.
d) TNE: Series 740.

3. Steel Substrates:

a. Polyamide Epoxy System:

1) Prime Coat:

a) CAR: Carboguard 60.
b) PPG: Amerlock 600.
c) SWC: Macropoxy 646 FC Epoxy.
d) TNE: Series 66.

2) Topcoat: (MPI Gloss Level 5).

a) CAR: Carboguard 635 VOC.
b) PPG: Amerlock 600.
c) SWC: Macropoxy 646 FC Epoxy.
d) TNE: Series 66.

b. Polysiloxane System:

1) Prime Coat:

a) CAR: Carboguard 60.
b) PPG: Amerlock 2/2 VOC/400/600.
c) SWC: Macropoxy 646 FC Epoxy.
d) TNE: Series 66.

2) Topcoat: (MPI Gloss Level 6).

a) CAR: Carboxane 2000.
b) PPG: PSX 700/805/ONE 750.
c) SWC: Sher-Loxane 800.
d) TNE: Series 740.

4. Ductile Iron or Cast-Iron Substrates: Interior Atmospheric Pipe Exposure.

a. Epoxy System:

1) Prime Coat:

a) CAR: Carboguard 60.
b) PPG: Amerlock 2/2 VOC/400/600.
c) SWC: Macropoxy 646 FC Epoxy.
d) TNE: Series 66.

2) Topcoat: (MPI Gloss Level 5).

a) CAR: Carboguard 60.
b) PPG: Amerlock 2/2 VOC/400/600.
c) SWC: Macropoxy 646 FC Epoxy.
d) TNE: Series 66.

b. Urethane Over Epoxy System:

1) Prime Coat:

a) CAR: Carboguard 60.
b) PPG: Amerlock 2/2 VOC/400/600.
c) SWC: Macropoxy 646 FC Epoxy.
d) TNE: Series 66.

2) Topcoat: (MPI Gloss Level 6).

a) CAR: Carbothane 134 series.
b) PPG: Pitthane Ultra.

c) SWC: Acrolon 218.
d) TNE: Series 1094.

c. Polysiloxane System:

1) Prime Coat:

a) CAR: Carboguard 60/Carboguard 635.
b) PPG: Amerlock 2/2 VOC/400/600.
c) SWC: Macropoxy 646 FC Epoxy.
d) TNE: Series 66.

2) Topcoat: (MPI Gloss Level 6).

a) CAR: Carboxane 2000.
b) PPG: PSX 700/805/ONE 750.
c) SWC: Sher-Loxane 800.
d) TNE: Series 740.

5. Galvanized Metal Substrates:

a. Epoxy System:

1) Prime Coat:

a) CAR: Carboguard 60.
b) PPG: Amerlock 2/2 VOC/400/600.
c) SWC: Macropoxy 646.
d) TNE: Series 66.

2) Topcoat: (MPI Gloss Level 5).

a) CAR: Carboguard 60.
b) PPG: Amerlock 2/2 VOC/400/600.
c) SWC: Macropoxy 646.
d) TNE: Series 66.

b. Polysiloxane System:

1) Prime Coat:

a) CAR: Carboguard 60.
b) PPG: Amerlock 2/2 VOC/400/600.
c) SWC: Macropoxy 646.
d) TNE: Series 66.

2) Topcoat: (MPI Gloss Level 6).

a) CAR: Carboxane 2000.
b) PPG: PSX 700/805/ONE 750.
c) SWC: Sher-Loxane 800.
d) TNE: Series 740.

B. Interior Flooring, Non-submerged Surfaces: Flooring subject to corrosive fumes, washdown, and splashing from chemical leaks and spills. Mild to Moderate Exposure.

1. Concrete Substrates:

a. Self-leveling Epoxy System:

1) Prime Coat:

a) CAR: Carboseal 720 series.
b) PPG: PPG Flooring 912 LV.
c) SWC: GP3579.
d) TNE: Series 201.

2) Topcoat: (MPI Gloss Level 6).

a) CAR: Carboseal 745.
b) PPG: PPG Flooring 610 SL.
c) SWC: GP 4850.
d) TNE: Series 237.

SECTION 220523.14 - CHECK VALVES FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Bronze lift check valves.
2. Iron swing check valves with closure control.
3. Iron, grooved-end swing check valves.

1.3 DEFINITIONS

A. CWP: Cold working pressure.

B. EPDM: Ethylene propylene-diene terpolymer rubber.

C. NBR: Acrylonitrile-butadiene, Buna-N, or nitrile rubber.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of valve.

1. Certification that products comply with NSF 61 Annex G and NSF 372.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Prepare valves for shipping as follows:

1. Protect internal parts against rust and corrosion.
2. Protect threads, flange faces, grooves, and weld ends.
3. Set check valves in either closed or open position.

B. Use the following precautions during storage:

1. Maintain valve end protection.
2. Store valves indoors and maintain at higher-than-ambient-dew-point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.

C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR VALVES

A. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.

B. ASME Compliance:

1. ASME B1.20.1 for threads for threaded end valves.
2. ASME B16.1 for flanges on iron valves.
3. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
4. ASME B16.18 for solder joint.
5. ASME B31.9 for building services piping valves.

C. AWWA Compliance: Comply with AWWA C606 for grooved-end connections.

D. NSF Compliance: NSF 61 Annex G and NSF 372 for valve materials for potable-water service.

E. Bronze valves shall be made with dezincification-resistant materials. Bronze valves made with copper alloy (brass) containing more than 15 percent zinc are not permitted.

F. Valve Pressure-Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.

G. Valve Sizes: Same as upstream piping unless otherwise indicated.

H. Valve Bypass and Drain Connections: MSS SP-45.

2.2 BRONZE LIFT CHECK VALVES

A. Bronze Lift Check Valves with Bronze Disc, Class 125:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

a. Apollo Valves; a brand of Aalberts Integrated Piping Systems (Aalberts Industries).
b. Milwaukee Valve Company.
c. WATTS; A Watts Water Technologies Company.
d. Zurn; Zurn Elkay.

2. Description:

a. Standard: MSS SP-80, Type 1.

b. CWP Rating: 200 psig.
c. Body Design: Vertical flow.
d. Body Material: ASTM B61 or ASTM B62, bronze.
e. Ends: Threaded or soldered. See valve schedule articles.
f. Disc: Bronze.

2.3 IRON SWING CHECK VALVES WITH CLOSURE CONTROL

A. Iron Swing Check Valves with Lever- and Spring-Closure Control, Class 125:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

a. Apollo Valves; a brand of Aalberts Integrated Piping Systems (Aalberts Industries).
b. Milwaukee Valve Company.
c. WATTS; A Watts Water Technologies Company.
d. Zurn; Zurn Elkay.

2. Description:

a. Standard: MSS SP-71, Type I.
b. CWP Rating: 200 psig.
c. Body Design: Clear or full waterway.
d. Body Material: ASTM A126, gray iron with bolted bonnet.
e. Ends: Flanged or threaded. See valve schedule articles.
f. Trim: Bronze.
g. Gasket: Asbestos free.
h. Closure Control: Factory-installed exterior lever and weight.

2.4 IRON, GROOVED-END SWING CHECK VALVES

A. Iron, Grooved-End Swing Check Valves, 300 CWP:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

a. ASC Engineered Solutions.
b. Anvil; an ASC Engineered Solution.
c. Victaulic Company.

2. Description:

a. CWP Rating: 300 psig.
b. Body Material: ASTM A536, ductile iron.
c. Seal: EPDM.
d. Disc: Spring operated, ductile iron or stainless steel.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.

B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.

C. Examine threads on valve and mating pipe for form and cleanliness.

D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.

E. Do not attempt to repair defective valves; replace with new valves.

3.2 VALVE INSTALLATION

A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.

B. Locate valves for easy access and provide separate support where necessary.

C. Install valves in horizontal piping with stem at or above center of pipe.

D. Install valves in position to allow full stem movement.

E. Install check valves for proper direction of flow and as follows:

1. Swing Check Valves: In horizontal position with hinge pin level.
2. Lift Check Valves: With stem upright and plumb.

F. Install valve tags. Comply with requirements in Section 220553 "Identification for Plumbing Piping and Equipment" for valve tags and schedules.

3.3 ADJUSTING

A. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

3.4 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS

A. If valve applications are not indicated, use the following:

1. Pump-Discharge Check Valves:

a. NPS 2 and Smaller: Bronze swing check valves with bronze disc.
b. NPS 2-1/2 and Larger for Domestic Water: Iron swing check valves with lever and weight or spring; or iron, center-guided, metal-seat check valves.
c. NPS 2-1/2 and Larger for Sanitary Waste and Storm Drainage: Iron swing check valves with lever and weight or spring.

B. If valves with specified CWP ratings are unavailable, the same types of valves with higher CWP ratings may be substituted.

C. End Connections:

1. For Copper Tubing, NPS 2 and Smaller: Threaded or soldered.
2. For Copper Tubing, NPS 2-1/2 to NPS 4: Flanged or threaded.
3. For Copper Tubing, NPS 5 and Larger: Flanged.
4. For Steel Piping, NPS 2 and Smaller: Threaded.
5. For Steel Piping, NPS 2-1/2 to NPS 4: Flanged or threaded.
6. For Steel Piping, NPS 5 and Larger: Flanged.
7. For Grooved-End Steel Piping: Grooved.

SECTION 220523.15 - GATE VALVES FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Iron gate valves.
2. Chainwheels.

1.3 DEFINITIONS

A. CWP: Cold working pressure.

B. NRS: Nonrising stem.

C. OS&Y: Outside screw and yoke.

D. RS: Rising stem.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of valve.

1. Certification that products comply with NSF 61 Annex G and NSF 372.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Prepare valves for shipping as follows:

1. Protect internal parts against rust and corrosion.
2. Protect threads, flange faces, grooves, and weld ends.
3. Set gate valves closed to prevent rattling.

B. Use the following precautions during storage:

1. Maintain valve end protection.
2. Store valves indoors and maintain at higher-than-ambient-dew-point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.

C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR VALVES

A. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.

B. ASME Compliance:

1. ASME B1.20.1 for threads for threaded end valves.
2. ASME B16.1 for flanges on iron valves.
3. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
4. ASME B16.18 for solder joint.
5. ASME B31.9 for building services piping valves.

C. NSF Compliance: NSF 61 Annex G and NSF 372 for valve materials for potable-water service.

D. Bronze valves shall be made with dezincification-resistant materials. Bronze valves made with copper alloy (brass) containing more than 15 percent zinc are not permitted.

E. Valve Pressure-Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.

F. Valve Sizes: Same as upstream piping unless otherwise indicated.

G. RS Valves in Insulated Piping: With 2-inch stem extensions.

H. Valve Bypass and Drain Connections: MSS SP-45.

2.2 IRON GATE VALVES

A. Iron Gate Valves, NRS, Class 150:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

a. Apollo Valves; a brand of Aalberts Integrated Piping Systems (Aalberts Industries).
b. Jenkins Valves; a Crane Co. brand.
c. Wilkins; Zurn Elkay.

2. Description:

a. Standard: MSS SP-70, Type I.
b. CWP Rating: 200 psig.

c. Body Material: Gray iron with bolted bonnet.
d. Ends: Flanged.
e. Trim: Bronze.
f. Disc: Solid wedge.
g. Packing and Gasket: Asbestos free.

B. Iron Gate Valves, OS&Y, Class 125:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

a. Apollo Valves; a brand of Aalberts Integrated Piping Systems (Aalberts Industries).
b. Milwaukee Valve Company.
c. WATTS; A Watts Water Technologies Company.
d. Zurn; Zurn Elkay.

2. Description:

a. Standard: MSS SP-70, Type I.
b. CWP Rating: 200 psig.
c. Body Material: Gray iron with bolted bonnet.
d. Ends: Flanged.
e. Trim: Bronze.
f. Disc: Solid wedge.
g. Packing and Gasket: Asbestos free.

2.3 CHAINWHEELS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

1. Babbitt Steam Specialty Co.
2. Roto Hammer Industries; Rotork.
3. Trumbull Industries.

B. Description: Valve actuation assembly with sprocket rim, chain guides, chain, and attachment brackets for mounting chainwheels directly to hand wheels.

1. Sprocket Rim with Chain Guides: Ductile or cast iron, of type and size required for valve. Include zinc or epoxy coating.
2. Chain: Hot-dip galvanized steel, of size required to fit sprocket rim.

© 2026 CDM Smith
All Rights Reserved

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.

B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.

C. Examine threads on valve and mating pipe for form and cleanliness.

D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.

E. Do not attempt to repair defective valves; replace with new valves.

3.2 VALVE INSTALLATION

A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.

B. Locate valves for easy access and provide separate support where necessary.

C. Install valves in horizontal piping with stem at or above center of pipe.

D. Install valves in position to allow full stem movement.

E. Install chainwheels on operators for gate valves NPS 4 and larger and more than 96 inches above floor. Extend chains to 60 inches above finished floor.

F. Install valve tags. Comply with requirements in Section 220553 "Identification for Plumbing Piping and Equipment" for valve tags and schedules.

3.3 ADJUSTING

A. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

3.4 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS

A. Use gate valves for shutoff service only.

B. If valves with specified CWP ratings are unavailable, the same types of valves with higher CWP ratings may be substituted.

© 2026 CDM Smith
All Rights Reserved

C. For Grooved-End Steel Piping: Valve ends may be grooved.

SECTION 220529 - HANGERS AND SUPPORTS FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Metal pipe hangers and supports.
2. Metal framing systems.
3. Thermal hanger-shield inserts.
4. Fastener systems.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: Show fabrication and installation details and include calculations for the following:

1. Trapeze pipe hangers.
2. Metal framing systems.
3. Fiberglass strut systems.
4. Pipe stands.
5. Equipment supports.

C. Delegated-Design Submittal: For trapeze hangers indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Detail fabrication and assembly of trapeze hangers.
2. Include design calculations for designing trapeze hangers.

1.4 INFORMATIONAL SUBMITTALS

A. Welding certificates.

© 2026 CDM Smith
All Rights Reserved

1.5 QUALITY ASSURANCE

A. Structural-Steel Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M.

B. Pipe Welding Qualifications: Qualify procedures and operators according to 2015 ASME Boiler and Pressure Vessel Code, Section IX.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design trapeze pipe hangers and equipment supports.

B. Structural Performance: Hangers and supports for plumbing piping and equipment shall withstand the effects of gravity loads and stresses within limits and under conditions indicated according to ASCE/SEI 7.

1. Design supports for multiple pipes, including pipe stands, capable of supporting combined weight of supported systems, system contents, and test water.
2. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.

2.2 METAL PIPE HANGERS AND SUPPORTS

A. Carbon-Steel Pipe Hangers and Supports:

1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
2. Galvanized Metallic Coatings: Pregalvanized, hot-dip galvanized, or electro-galvanized.
3. Nonmetallic Coatings: Plastic coated or epoxy powder coated.
4. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
5. Hanger Rods: Continuous-thread rod, nuts, and washer made of stainless steel.

B. Stainless-Steel Pipe Hangers and Supports:

1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
2. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
3. Hanger Rods: Continuous-thread rod, nuts, and washer made of stainless steel.

2.3 METAL FRAMING SYSTEMS

A. MFMA Manufacturer Metal Framing Systems:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

    a. Thomas & Betts Corporation; A Member of the ABB Group.
    b. Atkore International (Unistrut).
    c. Eaton (B-line).

2. Description: Shop- or field-fabricated pipe-support assembly, made of steel channels, accessories, fittings, and other components for supporting multiple parallel pipes.
3. Standard: Comply with MFMA-4, factory-fabricated components for field assembly.
4. Channels: Continuous slotted stainless-steel, Type 304 channel with inturned lips.
5. Channel Width: Selected for applicable load criteria.
6. Channel Nuts: Formed or stamped nuts or other devices designed to fit into channel slot and, when tightened, prevent slipping along channel.
7. Hanger Rods: Continuous-thread rod, nuts, and washer made of stainless steel.

2.4 FASTENER SYSTEMS

A. Mechanical-Expansion Anchors

1. Fastening to Concrete Substrate: Zinc plated carbon steel wedge type anchors, complete with zinc plated nuts and washers, unless otherwise noted.
2. Submerged or Weather Exposed Substrates: ASTM A276 Type 316 stainless steel wedge type anchors, complete with Type 316 stainless steel nuts and washers, unless otherwise noted.
3. Meet ICC ES AC01 or ICC ES AC193.
4. Length: When length or anchor embedment is not indicated, provide length sufficient to place the wedge and expansion cone portion of the anchor at least 1 inch behind concrete reinforcing steel.
5. Basis-of-Design:

    a. Anchorage designs indicated are based on Hilti, Kwik-Bolt TZ, unless otherwise noted.
    b. Acceptable Anchors: Hilti Kwik-Bolt TZ; Simpson Strong-Tie Strong Bolt 2 Wedge Anchor; DeWalt Power-Stud+ SD1; DeWalt Power-Stud+ SD6 for stainless steel; or equal.

B. Adhesive Anchoring System

1. Fastening to Concrete Substrate: Manufactured system consisting of post installed threaded rods, nuts, washers, other anchoring hardware, and chemical dispenser for installation in hammer drilled holes.

    a. Anchors: Meet ICC ES AC308.
    b. Injection Adhesive: Two-component epoxy system consisting of a hardener and a resin, furnished in pre-measured side-by-side cartridges which keep both components separate.

c. Adhesive Cartridge: Side-by-side design to accept a static mixing nozzle which thoroughly blends both components and allows injection directly into a drilled hole.
d. Anchor: Type 316 stainless steel as indicated consisting of an all-thread anchor rod with nut and washer, of matching material to anchor rod.

1) Basis-of-Design:

a) Anchorage designs indicated are based on Hilti HIT- RE 500 V3, unless otherwise noted.
b) Acceptable Manufacturers: Hilti HIT- RE 500 V3; Simpson Strong Tie SET-3G; ITW Ramset Red Head Epcon G5+; or equal.

e. Reinforcing Bar Dowels: Reinforcing bar, per Section 033000.

1) Basis-of-Design:

a) Anchorage designs indicated are based on Hilti HIT- RE 500 V3, unless otherwise noted.
b) Acceptable Manufacturers: Hilti HIT- RE 500 V3; Simpson Strong Tie SET-3G; ITW Ramset Red Head Epcon G5; or equal.

2. Fastening to Hollow Concrete Block: Three-part threaded rod, screen tube, and chemical dispenser anchoring system.

a. Anchors: Meet ICC ES AC58.
b. Adhesive Cartridges: Contain pre-measured amounts of resin and hardener which are mixed and deposited in a screen tube by a dispenser.
c. Anchor: Type 316 stainless steel as indicated consisting of an all-thread anchor rod with nut and washer, of matching material to anchor rod.
d. Reinforcing Bar Dowel: Reinforcing bar, per Section 033000.
e. Basis-of-Design:

1) Anchorage designs indicated are based on Hilti HIT HY-70 System, unless otherwise noted; or equal.

2.5 MATERIALS

A. Aluminum: ASTM B221.

B. Carbon Steel: ASTM A1011/A1011M.

C. Structural Steel: ASTM A36/A36M carbon-steel plates, shapes, and bars; black and galvanized.

D. Stainless Steel: ASTM A240/A240M.

E. Grout: ASTM C1107/C1107M, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout; suitable for interior and exterior applications.

1. Properties: Nonstaining, noncorrosive, and nongaseous.
2. Design Mix: 5000-psi, 28-day compressive strength.

© 2026 CDM Smith
All Rights Reserved

PART 3 - EXECUTION

3.1 APPLICATION

A. Comply with requirements in Section 078413 "Penetration Firestopping" for firestopping materials and installation, for penetrations through fire-rated walls, ceilings, and assemblies.

B. Strength of Support Assemblies: Where not indicated, select sizes of components, so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination shall be weight of supported components plus 200 lb.

3.2 HANGER AND SUPPORT INSTALLATION

A. Metal Pipe-Hanger Installation: Comply with MSS SP-58. Install hangers, supports, clamps, and attachments as required to properly support piping from building structure.

B. Metal Framing System Installation: Arrange for grouping of parallel runs of piping, and support together on field-assembled metal framing systems.

C. Thermal Hanger-Shield Installation: Install in pipe hanger or shield for insulated piping.

D. Fastener System Installation:

1. Install powder-actuated fasteners for use in lightweight concrete or concrete slabs less than 4 inches thick in concrete, after concrete is placed and completely cured. Use operators that are licensed by powder-actuated tool manufacturer. Install fasteners according to powder-actuated tool manufacturer's operating manual.
2. Install mechanical-expansion anchors in concrete, after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.

E. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.

F. Install lateral bracing with pipe hangers and supports to prevent swaying.

G. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms, and install reinforcing bars through openings at top of inserts.

H. Load Distribution: Install hangers and supports, so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.

I. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and to not exceed maximum pipe deflections allowed by ASME B31.9 for building services piping.

J. Insulated Piping:

1. Attach clamps and spacers to piping.

a. Piping Operating Above Ambient Air Temperature: Clamp may project through insulation.
b. Piping Operating Below Ambient Air Temperature: Use thermal hanger-shield insert with clamp sized to match OD of insert.
c. Do not exceed pipe stress limits allowed by ASME B31.9 for building services piping.

2. Install MSS SP-58, Type 39 protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.

a. Option: Thermal hanger-shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.

3. Install MSS SP-58, Type 40 protective shields on cold piping with vapor barrier. Shields shall span an arc of 180 degrees.

a. Option: Thermal hanger-shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.

4. Shield Dimensions for Pipe: Not less than the following:

a. NPS 1/4 to NPS 3-1/2: 12 inches long and 0.048 inch thick.
b. NPS 4: 12 inches long and 0.06 inch thick.
c. NPS 5 and NPS 6: 18 inches long and 0.06 inch thick.
d. NPS 8 to NPS 14: 24 inches long and 0.075 inch thick.
e. NPS 16 to NPS 24: 24 inches long and 0.105 inch thick.

5. Pipes NPS 8 and Larger: Include wood or reinforced calcium-silicate-insulation inserts of length at least as long as protective shield.
6. Thermal Hanger Shields: Install with insulation of same thickness as piping insulation.

3.3 ADJUSTING

A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.

B. Trim excess length of continuous-thread hanger and support rods to 1-1/2 inches.

3.4 PAINTING

A. Touchup: Clean field welds and abraded, shop-painted areas. Paint exposed areas immediately after erecting hangers and supports. Use same materials as those used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.

1. Apply paint by brush or spray to provide a minimum dry film thickness of 2.0 mils.

B. Touchup: Cleaning and touchup painting of field welds, bolted connections, and abraded, shop-painted areas on miscellaneous metal are specified in Section 099123 "Interior Painting."

C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas, and apply galvanizing-repair paint to comply with ASTM A780/A780M.

3.5 HANGER AND SUPPORT SCHEDULE

A. Specific hanger and support requirements are in Sections specifying piping systems and equipment.

B. Comply with MSS SP-58 for pipe-hanger selections and applications that are not specified in piping system Sections.

C. Use hangers and supports with galvanized metallic coatings for piping and equipment that will not have field-applied finishes.

D. Use carbon-steel pipe hangers and supports and attachments for general service applications.

E. Use stainless-steel pipe hangers and metal framing systems and stainless-steel attachments for hostile environment applications.

F. Use padded hangers for piping that is subject to scratching.

G. Use thermal hanger-shield inserts for insulated piping and tubing.

H. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of noninsulated or insulated, stationary pipes NPS 1/2 to NPS 30.
2. Yoke-Type Pipe Clamps (MSS Type 2): For suspension of up to 1050 deg F pipes NPS 4 to NPS 24, requiring up to 4 inches of insulation.
3. Carbon- or Alloy-Steel, Double-Bolt Pipe Clamps (MSS Type 3): For suspension of pipes NPS 3/4 to NPS 36, requiring clamp flexibility and up to 4 inches of insulation.
4. Steel Pipe Clamps (MSS Type 4): For suspension of cold and hot pipes NPS 1/2 to NPS 24 if little or no insulation is required.
5. Pipe Hangers (MSS Type 5): For suspension of pipes NPS 1/2 to NPS 4, to allow off-center closure for hanger installation before pipe erection.
6. Adjustable, Swivel Split- or Solid-Ring Hangers (MSS Type 6): For suspension of noninsulated, stationary pipes NPS 3/4 to NPS 8.
7. Adjustable, Steel Band Hangers (MSS Type 7): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8.
8. Adjustable Band Hangers (MSS Type 9): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8.
9. Adjustable, Swivel-Ring Band Hangers (MSS Type 10): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8.
10. Split Pipe Ring with or without Turnbuckle Hangers (MSS Type 11): For suspension of noninsulated, stationary pipes NPS 3/8 to NPS 8.
11. Extension Hinged or Two-Bolt Split Pipe Clamps (MSS Type 12): For suspension of noninsulated, stationary pipes NPS 3/8 to NPS 3.
12. U-Bolts (MSS Type 24): For support of heavy pipes NPS 1/2 to NPS 30.

13. Clips (MSS Type 26): For support of insulated pipes not subject to expansion or contraction.
14. Pipe Saddle Supports (MSS Type 36): For support of pipes NPS 4 to NPS 36, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate.
15. Pipe Stanchion Saddles (MSS Type 37): For support of pipes NPS 4 to NPS 36, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate, and with U-bolt to retain pipe.
16. Adjustable Pipe Saddle Supports (MSS Type 38): For stanchion-type support for pipes NPS 2-1/2 to NPS 36 if vertical adjustment is required, with steel-pipe base stanchion support and cast-iron floor flange.
17. Single-Pipe Rolls (MSS Type 41): For suspension of pipes NPS 1 to NPS 30, from two rods if longitudinal movement caused by expansion and contraction occurs.
18. Adjustable Roller Hangers (MSS Type 43): For suspension of pipes NPS 2-1/2 to NPS 24, from single rod if horizontal movement caused by expansion and contraction occurs.
19. Complete Pipe Rolls (MSS Type 44): For support of pipes NPS 2 to NPS 42 if longitudinal movement caused by expansion and contraction occurs but vertical adjustment is unnecessary.
20. Pipe Roll and Plate Units (MSS Type 45): For support of pipes NPS 2 to NPS 24 if small horizontal movement caused by expansion and contraction occurs and vertical adjustment is unnecessary.
21. Adjustable Pipe Roll and Base Units (MSS Type 46): For support of pipes NPS 2 to NPS 30 if vertical and lateral adjustment during installation, in addition to expansion and contraction, is required.

I. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers NPS 3/4 to NPS 24.
2. Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers NPS 3/4 to NPS 24 if longer ends are required for riser clamps.

J. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Steel Turnbuckles (MSS Type 13): For adjustment of up to 6 inches for heavy loads.
2. Steel Clevises (MSS Type 14): For 120 to 450 deg F piping installations.
3. Swivel Turnbuckles (MSS Type 15): For use with MSS Type 11 split pipe rings.
4. Malleable-Iron Sockets (MSS Type 16): For attaching hanger rods to various types of building attachments.
5. Steel Weldless Eye Nuts (MSS Type 17): For 120 to 450 deg F piping installations.

K. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Steel or Malleable-Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.
2. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joist construction, to attach to top flange of structural shape.

3. Side-Beam or Channel Clamps (MSS Type 20): For attaching to bottom flange of beams, channels, or angles.
4. Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.
5. Welded Beam Attachments (MSS Type 22): For attaching to bottom of beams if loads are considerable and rod sizes are large.
6. C-Clamps (MSS Type 23): For structural shapes.
7. Top-Beam Clamps (MSS Type 25): For top of beams if hanger rod is required tangent to flange edge.
8. Side-Beam Clamps (MSS Type 27): For bottom of steel I-beams.
9. Steel-Beam Clamps with Eye Nuts (MSS Type 28): For attaching to bottom of steel I-beams for heavy loads.
10. Linked-Steel Clamps with Eye Nuts (MSS Type 29): For attaching to bottom of steel I-beams for heavy loads, with link extensions.
11. Malleable-Beam Clamps with Extension Pieces (MSS Type 30): For attaching to structural steel.
12. Welded-Steel Brackets: For support of pipes from below or for suspending from above by using clip and rod. Use one of the following for indicated loads:

    a. Light (MSS Type 31): 750 lb.
    b. Medium (MSS Type 32): 1500 lb.
    c. Heavy (MSS Type 33): 3000 lb.

13. Side-Beam Brackets (MSS Type 34): For sides of steel or wooden beams.
14. Plate Lugs (MSS Type 57): For attaching to steel beams if flexibility at beam is required.
15. Horizontal Travelers (MSS Type 58): For supporting piping systems subject to linear horizontal movement where headroom is limited.

L. Saddles and Shields: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Steel-Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.
2. Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.
3. Thermal Hanger-Shield Inserts: For supporting insulated pipe.

M. Comply with MSS SP-58 for trapeze pipe-hanger selections and applications that are not specified in piping system Sections.

N. Comply with MFMA-103 for metal framing system selections and applications that are not specified in piping system Sections.

O. Use mechanical-expansion anchors or adhesive anchors instead of building attachments where required in concrete construction.

SECTION 220553 - IDENTIFICATION FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Equipment labels.
2. Pipe labels.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Equipment Label Schedule: Include a listing of all equipment to be labeled with the proposed content for each label.

PART 2 - PRODUCTS

2.1 EQUIPMENT LABELS

A. Plastic Labels for Equipment:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

a. Brady Corporation.
b. Brimar Industries, Inc.
c. Carlton Industries, LP.
d. Champion America.
e. Craftmark Pipe Markers.

2. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/16 inch thick, and having predrilled holes for attachment hardware.
3. Letter Color: White.
4. Background Color: Black.
5. Maximum Temperature: Able to withstand temperatures up to 160 deg F.

6. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
7. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-quarters the size of principal lettering.
8. Fasteners: Stainless-steel rivets or self-tapping screws.
9. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

B. Label Content: Include equipment's Drawing designation or unique equipment number.

2.2 PIPE LABELS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

1. Brady Corporation.
2. Brimar Industries, Inc.
3. Carlton Industries, LP.
4. Champion America.
5. Craftmark Pipe Markers.

B. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction according to ASME A13.1.

C. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to cover full circumference of pipe and to attach to pipe without fasteners or adhesive.

D. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.

E. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings; also include pipe size and an arrow indicating flow direction.

1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions or as separate unit on each pipe label to indicate flow direction.

PART 3 - EXECUTION

3.1 PREPARATION

A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

3.2 GENERAL INSTALLATION REQUIREMENTS

A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.

B. Coordinate installation of identifying devices with locations of access panels and doors.

C. Install identifying devices before installing acoustical ceilings and similar concealment.

3.3 EQUIPMENT LABEL INSTALLATION

A. Install or permanently fasten labels on each major item of mechanical equipment.

B. Locate equipment labels where accessible and visible.

3.4 PIPE LABEL INSTALLATION

A. Pipe Label Locations: Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:

1. Near each valve and control device.
2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.
3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
4. At access doors, manholes, and similar access points that permit view of concealed piping.
5. Near major equipment items and other points of origination and termination.
6. Spaced at maximum intervals of 50 feet along each run. Reduce intervals to 25 feet in areas of congested piping and equipment.
7. On piping above removable acoustical ceilings. Omit intermediately spaced labels.

B. Directional Flow Arrows: Arrows shall be used to indicate direction of flow in pipes, including pipes where flow is allowed in both directions.

C. Pipe Label Color Schedule:

1. Domestic Water Piping:

   a. Background: Safety green.
   b. Letter Colors: White.

2. Sanitary Waste and Storm Drainage Piping:

   a. Background Color: Safety black.
   b. Letter Color: Black.

3. Protected Water Piping:

   a. Background: Safety green.

SECTION 221316 - SANITARY WASTE AND VENT PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Hub-and-spigot, cast-iron soil pipe and fittings.
2. Hubless, cast-iron soil pipe and fittings.
3. Galvanized-steel pipe and fittings.
4. Specialty pipe fittings.

B. Related Requirements:

1. Section 221429 "Sump Pumps" for effluent and sewage pumps.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For hubless, single-stack drainage system. Include plans, elevations, sections, and details.

1.4 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

1.5 FIELD CONDITIONS

A. Interruption of Existing Sanitary Waste Service: Do not interrupt service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary service according to requirements indicated:

1. Notify Engineer no fewer than two days in advance of proposed interruption of sanitary waste service.
2. Do not proceed with interruption of sanitary waste service without Engineer's written permission.

© 2026 CDM Smith
All Rights Reserved

1.6 WARRANTY

A. Listed manufacturers to provide labeling and warranty of their respective products.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Components and installation shall be capable of withstanding the following minimum working pressure unless otherwise indicated:

1. Soil, Waste, and Vent Piping: 10-foot head of water.
2. Waste, Force-Main Piping: 50 psig.

2.2 PIPING MATERIALS

A. Piping materials shall bear label, stamp, or other markings of specified testing agency.

B. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.

2.3 HUB-AND-SPIGOT, CAST-IRON SOIL PIPE AND FITTINGS

A. Pipe and Fittings: ASTM A74, Service class(es).

B. Gaskets: ASTM C564, rubber.

C. Caulking Materials: ASTM B29, pure lead and oakum or hemp fiber.

2.4 HUBLESS, CAST-IRON SOIL PIPE AND FITTINGS

A. Pipe and Fittings: ASTM A888 or CISPI 301.

B. Single-Stack Aerator Fittings: ASME B16.45, hubless, cast-iron aerator and deaerator drainage fittings.

C. Cast-Iron, Hubless-Piping Couplings:

1. Standard: ASTM C1277.
2. Description: Two-piece ASTM A48/A48M, cast-iron housing; stainless-steel bolts and nuts; and ASTM C564, rubber sleeve with integral, center pipe stop.

2.5 GALVANIZED-STEEL PIPE AND FITTINGS

A. Galvanized-Steel Pipe: ASTM A53/A53M, Type E, Standard Weight class. Include square-cut-grooved or threaded ends matching joining method.

B. Steel Pipe Pressure Fittings:

1. Galvanized-Steel Pipe Nipples: ASTM A733, made of ASTM A53/A53M or ASTM A106/A106M, Schedule 40, seamless steel pipe. Include ends matching joining method.
2. Malleable-Iron Unions: ASME B16.39; Class 150; hexagonal-stock body with ball-and-socket, metal-to-metal, bronze seating surface; and female threaded ends.
3. Galvanized-Gray-Iron, Threaded Fittings: ASME B16.4, Class 125, standard pattern.

C. Grooved-Joint, Galvanized-Steel-Pipe Appurtenances:

1. Galvanized, Grooved-End Fittings for Galvanized-Steel Piping: ASTM A536 ductile-iron castings, ASTM A47/A47M malleable-iron castings, ASTM A234/A234M forged steel fittings, or ASTM A106/A106M steel pipes with dimensions matching ASTM A53/A53M steel pipe, and complying with AWWA C606 for grooved ends.
2. Grooved Mechanical Couplings for Galvanized-Steel Piping: ASTM F1476, Type I. Include ferrous housing sections with continuous curved keys; EPDM-rubber gasket suitable for hot and cold water; and bolts and nuts.

2.6 SPECIALTY PIPE FITTINGS

A. Transition Couplings:

1. Fitting-Type Transition Couplings: Manufactured piping coupling or specified piping system fitting.
2. Unshielded, Nonpressure Transition Couplings:

a. Standard: ASTM C1173.
b. Description: Elastomeric, sleeve-type, reducing or transition pattern. Include shear ring and corrosion-resistant-metal tension band and tightening mechanism on each end.
c. End Connections: Same size as and compatible with pipes to be joined.
d. Sleeve Materials:

1) For Cast-Iron Soil Pipes: ASTM C564, rubber.
2) For Plastic Pipes: ASTM F477, elastomeric seal or ASTM D5926, PVC.
3) For Dissimilar Pipes: ASTM D5926, PVC or other material compatible with pipe materials being joined.

3. Shielded, Nonpressure Transition Couplings:

a. Standard: ASTM C1460.
b. Description: Elastomeric or rubber sleeve with full-length, corrosion-resistant outer shield and corrosion-resistant-metal tension band and tightening mechanism on each end.
c. End Connections: Same size as and compatible with pipes to be joined.

4. Pressure Transition Couplings:

a. Standard: AWWA C219.

b. Description: Metal, sleeve-type same size as, with pressure rating at least equal to, and ends compatible with, pipes to be joined.
c. Center-Sleeve Material: Stainless steel.
d. Gasket Material: Natural or synthetic rubber.
e. Metal Component Finish: Corrosion-resistant coating or material.

B. Dielectric Fittings:

1. Dielectric Unions:

a. Description:

1) Standard: ASSE 1079.
2) Pressure Rating: 125 psig minimum at 180 degrees F.
3) End Connections: Solder-joint copper alloy and threaded ferrous.

2. Dielectric Flanges:

a. Description:

1) Standard: ASSE 1079.
2) Factory-fabricated, bolted, companion-flange assembly.
3) Pressure Rating: 125 psig minimum at 180 degrees F.
4) End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.

PART 3 - EXECUTION

3.1 PIPING INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems.

1. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations.
2. Install piping as indicated unless deviations to layout are approved on coordination drawings.

B. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.

C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

E. Install piping to permit valve servicing.

F. Install piping at indicated slopes.

G. Install piping free of sags and bends.

H. Install fittings for changes in direction and branch connections.

I. Install piping to allow application of insulation.

J. Make changes in direction for soil and waste drainage and vent piping using appropriate branches, bends, and long-sweep bends.

1. Sanitary tees and short-sweep 1/4 bends may be used on vertical stacks if change in direction of flow is from horizontal to vertical.
2. Use long-turn, double Y-branch and 1/8-bend fittings if two fixtures are installed back to back or side by side with common drain pipe.

    a. Straight tees, elbows, and crosses may be used on vent lines.

3. Do not change direction of flow more than 90 degrees.
4. Use proper size of standard increasers and reducers if pipes of different sizes are connected.

    a. Reducing size of waste piping in direction of flow is prohibited.

K. Install soil and waste and vent piping at the following minimum slopes unless otherwise indicated:

1. Building Sanitary Waste: 2 percent downward in direction of flow for piping NPS 3 and smaller; 1 percent downward in direction of flow for piping NPS 4 and larger.
2. Horizontal Sanitary Waste Piping: 2 percent downward in direction of flow.
3. Vent Piping: 1 percent down toward vertical fixture vent or toward vent stack.

L. Install cast-iron soil piping according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."

1. Install encasement on underground piping according to ASTM A674 or AWWA C105/A 21.5.

M. Install steel piping according to applicable plumbing code.

N. Install force mains at elevations indicated.

O. Plumbing Specialties:

1. Install cleanouts at grade and extend to where building sanitary drains connect to building sanitary sewers in sanitary waste gravity-flow piping.

    a. Install cleanout fitting with closure plug inside the building in sanitary drainage force-main piping.
    b. Comply with requirements for cleanouts specified in Section 221319 "Sanitary Waste Piping Specialties."

P. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.

© 2026 CDM Smith
All Rights Reserved

3.2 JOINT CONSTRUCTION

A. Join hub-and-spigot, cast-iron soil piping with gasket joints according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for compression joints.

B. Join hubless, cast-iron soil piping according to CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-piping coupling joints.

C. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1.

1. Cut threads full and clean using sharp dies.
2. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

    a. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
    b. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.
    c. Do not use pipe sections that have cracked or open welds.

D. Grooved Joints: Cut groove ends of pipe according to AWWA C606. Lubricate and install gasket over ends of pipes or pipe and fitting. Install coupling housing sections, over gasket, with keys seated in piping grooves. Install and tighten housing bolts.

E. Flanged Joints: Align bolt holes. Select appropriate gasket material, size, type, and thickness. Install gasket concentrically positioned. Use suitable lubricants on bolt threads. Torque bolts in cross pattern.

3.3 CONNECTIONS

A. Connect soil and waste piping to exterior sanitary sewerage piping. Use transition fitting to join dissimilar piping materials.

B. Connect waste and vent piping to the following:

1. Plumbing Fixtures: Connect waste piping in sizes indicated, but not smaller than required by plumbing code.
2. Plumbing Fixtures and Equipment: Connect atmospheric vent piping in sizes indicated, but not smaller than required by authorities having jurisdiction.
3. Plumbing Specialties: Connect waste and vent piping in sizes indicated, but not smaller than required by plumbing code.
4. Install test tees (wall cleanouts) in conductors near floor and floor cleanouts with cover flush with floor.
5. Equipment: Connect waste piping as indicated.

    a. Provide shutoff valve if indicated and union for each connection.
    b. Use flanges instead of unions for connections NPS 2-1/2 and larger.

C. Connect force-main piping to the following:

1. Sanitary Sewer: To exterior force main.
2. Sewage Pump: To sewage pump discharge.

D. Where installing piping adjacent to equipment, allow space for service and maintenance of equipment.

E. Make connections according to the following unless otherwise indicated:

1. Install unions, in piping NPS 2 and smaller, adjacent to each valve and at final connection to each piece of equipment.
2. Install flanges, in piping NPS 2-1/2 and larger, adjacent to flanged valves and at final connection to each piece of equipment.

3.4 IDENTIFICATION

A. Identify exposed sanitary waste and vent piping.

B. Comply with requirements for identification specified in Section 220553 "Identification for Plumbing Piping and Equipment."

3.5 FIELD QUALITY CONTROL

A. During installation, notify authorities having jurisdiction at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction.

1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in and before setting fixtures.
2. Final Inspection: Arrange for final inspection by authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.

B. Reinspection: If authorities having jurisdiction find that piping will not pass test or inspection, make required corrections and arrange for reinspection.

C. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.

D. Test sanitary waste and vent piping according to procedures of authorities having jurisdiction or, in absence of published procedures, as follows:

1. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired.

    a. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.

2. Leave uncovered and unconcealed new, altered, extended, or replaced waste and vent piping until it has been tested and approved.

    a. Expose work that was covered or concealed before it was tested.

3. Roughing-in Plumbing Test Procedure: Test waste and vent piping except outside leaders on completion of roughing-in.

    a. Close openings in piping system and fill with water to point of overflow, but not less than 10-foot head of water.
    b. From 15 minutes before inspection starts to completion of inspection, water level must not drop.
    c. Inspect joints for leaks.

4. Finished Plumbing Test Procedure: After plumbing fixtures have been set and traps filled with water, test connections and prove they are gastight and watertight.

    a. Plug vent-stack openings on roof and building drains where they leave building. Introduce air into piping system equal to pressure of 1-inch wg.
    b. Use U-tube or manometer inserted in trap of water closet to measure this pressure.
    c. Air pressure must remain constant without introducing additional air throughout period of inspection.
    d. Inspect plumbing fixture connections for gas and water leaks.

5. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
6. Prepare reports for tests and required corrective action.

E. Test force-main piping according to procedures of authorities having jurisdiction or, in absence of published procedures, as follows:

1. Leave uncovered and unconcealed new, altered, extended, or replaced force-main piping until it has been tested and approved.

    a. Expose work that was covered or concealed before it was tested.

2. Cap and subject piping to static-water pressure of 50 psig above operating pressure, without exceeding pressure rating of piping system materials.

    a. Isolate test source and allow to stand for four hours.
    b. Leaks and loss in test pressure constitute defects that must be repaired.

3. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
4. Prepare reports for tests and required corrective action.

3.6 CLEANING AND PROTECTION

A. Clean interior of piping. Remove dirt and debris as work progresses.

B. Protect sanitary waste and vent piping during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.

C. Place plugs in ends of uncompleted piping at end of day and when work stops.

D. Repair damage to adjacent materials caused by waste and vent piping installation.

© 2026 CDM Smith
All Rights Reserved

3.7 PIPING SCHEDULE

A. Flanges and unions may be used on aboveground pressure piping unless otherwise indicated.

B. Aboveground, soil and waste piping all sizes shall be any of the following:

1. Service class, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
2. Hubless, cast-iron soil pipe and fittings and hubless, single-stack aerator fittings; heavy-duty hubless-piping couplings; and coupled joints.

C. Aboveground, vent piping all sizes shall be any of the following:

1. Service class, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
2. Hubless, cast-iron soil pipe and fittings; heavy-duty hubless-piping couplings; and coupled joints.

D. Aboveground sanitary-sewage force mains NPS 1-1/2 and NPS 2 shall be the following:

1. Galvanized-steel pipe, pressure fittings, and threaded joints.

E. Aboveground sanitary-sewage force mains NPS 2-1/2 to NPS 6 shall be any of the following:

1. Galvanized-steel pipe, pressure fittings, and threaded joints.
2. Grooved-end, galvanized-steel pipe; grooved-joint, galvanized-steel-pipe appurtenances; and grooved joints.

SECTION 221429 - SUMP PUMPS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Submersible sump pumps.
2. Sump-pump basins and basin covers.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

B. Shop Drawings:

1. Include plans, elevations, sections, and attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
4. Include diagrams for power, signal, and control wiring.

1.4 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For pumps and controls, to include in operation and maintenance manuals.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Retain shipping flange protective covers and protective coatings during storage.

B. Protect bearings and couplings against damage.

C. Comply with manufacturer's written instructions for handling.

© 2026 CDM Smith
All Rights Reserved

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. UL Compliance: Comply with UL 778 for motor-operated water pumps.

2.2 SUBMERSIBLE SUMP PUMPS

A. Basis-of-Design Product: Subject to compliance with requirements, provide Weil Series 2500, Model 2519 or comparable product by one of the following:

1. Wilo
2. Xylem
3. Or Equal

B. Configuration: Duplex submersible pumps on guide rail removal system.

C. Hydraulic Performance (Each Pump):

1. Capacity: 300 GPM.
2. Total Dynamic Head: 40 feet.
3. Speed: 1750 RPM.
4. Discharge: 4-inch.

D. Construction:

1. Cast iron casing.
2. Cast iron multi-vane semi-open impeller, dynamically balanced.
3. Series 300 stainless steel shaft with keyed impeller connection.
4. Permanently lubricated double seal ball bearings (sleeve bearings not acceptable).
5. O-ring sealed mating surfaces.
6. Weil 2613-4 removal system for each pump.
7. Weil 4-inch subbase.

E. Motor:

1. 10 HP.
2. 480 Volt, 3 Phase, 60 Hz.
3. 1750 RPM.
4. Class F insulation.
5. Watertight cast iron housing with extended cooling fins.
6. 50-foot power cable per pump.

2.3 LEVEL CONTROL SYSTEM

A. Level Transmitter with 50-foot cable.

B. Two backup fail-safe mechanical suspended float switches with 50-foot cables.

C. Control Panel: Duplex NEMA 4 Control Panel with color touchscreen.

2.4 BASIN AND COVER

A. Existing 60” x 60” x 12'-0” deep concrete pit.

B. 66” x 66” square steel gas-tight cover with all necessary openings.

2.5 MOTORS

A. Motors for submersible pumps shall be hermetically sealed.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine roughing-in for plumbing piping to verify actual locations of storm drainage piping connections before sump pump installation.

3.2 INSTALLATION

A. Pump Installation Standards: Comply with HI 1.4 for installation of sump pumps.

3.3 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to equipment, allow space for service and maintenance.

3.4 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to test, inspect, and adjust components, assemblies, and equipment installations, including connections.

B. Perform the following tests and inspections:

1. Perform each visual and mechanical inspection.
2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. Pumps and controls will be considered defective if they do not pass tests and inspections.

D. Prepare test and inspection reports.

3.5 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.

3.6 ADJUSTING

A. Adjust pumps to function smoothly and lubricate as recommended by manufacturer.

B. Adjust control set points.

3.7 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain controls and pumps.

END OF SECTION 221429

SECTION 230517 - SLEEVES AND SLEEVE SEALS FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Sleeves.
2. Sleeve-seal systems.
3. Grout.

B. Related Requirements:

1. Section 078413 "Penetration Firestopping" for penetration firestopping installed in fire-resistance-rated walls, horizontal assemblies, and smoke barriers, with and without penetrating items.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1.4 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

PART 2 - PRODUCTS

2.1 SLEEVES

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

1. Advance Products & Systems, Inc.
2. CALPICO, Inc.
3. GPT; an EnPro Industries company.

B. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, anti-corrosion coated or zinc coated, with plain ends and integral welded waterstop collar.

2.2 SLEEVE-SEAL SYSTEMS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Advance Products & Systems, Inc.
2. CALPICO, Inc.
3. GPT; an EnPro Industries company.
4. Metraflex Company (The).
5. Proco Products, Inc.
6. Or equal.

B. Description:

1. Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve.
2. Designed to form a hydrostatic seal of 20-psig.
3. Sealing Elements: EPDM-rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size.
4. Pressure Plates: Stainless steel, Type 316.
5. Connecting Bolts and Nuts: Stainless steel, Type 316, of length required to secure pressure plates to sealing elements.

2.3 GROUT

A. Description: Nonshrink, recommended for interior and exterior sealing openings in nonfire-rated walls or floors.

B. Standard: ASTM C1107/C1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.

C. Design Mix: 5000-psi, 28-day compressive strength.

D. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 SLEEVE INSTALLATION

A. Install sleeves for piping passing through penetrations in floors, partitions, roofs, and walls.

B. For sleeves that will have sleeve-seal system installed, select sleeves of size large enough to provide 1-inch annular clear space between piping and concrete slabs and walls.

1. Sleeves are not required for core-drilled holes.

C. Install sleeves in concrete floors, concrete roof slabs, and concrete walls as new slabs and walls are constructed.

1. Permanent sleeves are not required for holes in slabs formed by molded-PE or -PP sleeves.
2. Cut sleeves to length for mounting flush with both surfaces.
    a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches above finished floor level.
3. Using grout, seal space outside of sleeves in slabs and walls without sleeve-seal system.

D. Install sleeves for pipes passing through interior partitions.

1. Cut sleeves to length for mounting flush with both surfaces.
2. Install sleeves that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation.
3. Seal annular space between sleeve and piping or piping insulation; use sealants appropriate for size, depth, and location of joint.

E. Fire-Resistance-Rated Penetrations, Horizontal Assembly Penetrations, and Smoke-Barrier Penetrations: Maintain indicated fire or smoke rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with fire- and smoke-stop materials. Comply with requirements for firestopping and fill materials specified in Section 078413 "Penetration Firestopping."

3.2 SLEEVE-SEAL-SYSTEM INSTALLATION

A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at service piping entries into building.

B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Position piping in center of sleeve. Center piping in penetration, assemble sleeve-seal-system components, and install in annular space between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

3.3 FIELD QUALITY CONTROL

A. Perform the following tests and inspections:

1. Leak Test: After allowing for a full cure, test sleeves and sleeve seals for leaks. Repair leaks and retest until no leaks exist.

B. Sleeves and sleeve seals will be considered defective if they do not pass tests and inspections.

3.4 SLEEVE AND SLEEVE-SEAL SCHEDULE

A. Use sleeves and sleeve seals for the following piping-penetration applications:

1. Exterior Concrete Walls Above Grade:

a. Piping Smaller Than NPS 6 Steel pipe sleeves.
b. Piping NPS 6 and Larger: Steel pipe sleeves.

2. Exterior Concrete Walls Below Grade:

a. Piping Smaller Than NPS 6 Steel pipe sleeves with sleeve-seal system.

1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.

b. Piping NPS 6 and Larger: Steel pipe sleeves with sleeve-seal system.

1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.

3. Concrete Slabs-on-Grade:

a. Piping Smaller Than NPS 6 Steel pipe sleeves with sleeve-seal system.

1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.

b. Piping NPS 6 and Larger: Steel pipe sleeves with sleeve-seal system.

1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.

4. Concrete Slabs Above Grade:

a. Piping Smaller Than NPS 6: Steel pipe sleeves.
b. Piping NPS 6 and Larger: Steel pipe sleeves.

5. Interior Partitions:

a. Piping Smaller Than NPS 24: Steel pipe sleeves.

SECTION 230519 - METERS AND GAGES FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Liquid-in-glass thermometers.
2. Thermowells.
3. Dial-type pressure gages.
4. Gage attachments.
5. Test plugs.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings:

1. Include diagrams for power, signal, and control wiring.

1.4 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For meters and gages to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 LIQUID-IN-GLASS THERMOMETERS

A. Metal-Case, Industrial-Style, Liquid-in-Glass Thermometers:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

a. Miljoco Corporation.
b. Trerice, H. O. Co.

c. Weiss Instruments, Inc.
d. Weksler Glass Thermometer Corp.
e. Or equal.

2. Standard: ASME B40.200.
3. Case: Cast aluminum; 9-inch nominal size unless otherwise indicated.
4. Case Form: Adjustable angle unless otherwise indicated.
5. Tube: Glass with magnifying lens and blue or red organic liquid.
6. Tube Background: Nonreflective aluminum with permanently etched scale markings graduated in deg F.
7. Window: Glass or plastic.
8. Stem: Aluminum and of length to suit installation.

a. Design for Thermowell Installation: Bare stem.

9. Connector: 1-1/4 inches, with ASME B1.1 screw threads.
10. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

2.2 THERMOWELLS

A. Thermowells:

1. Standard: ASME B40.200.
2. Description: Pressure-tight, socket-type fitting made for insertion in piping tee fitting.
3. Material for Use with Copper Tubing: CNR or CUNI.
4. Material for Use with Steel Piping: CRES.
5. Type: Stepped shank unless straight or tapered shank is indicated.
6. External Threads: NPS 1/2, NPS 3/4, or NPS 1, ASME B1.20.1 pipe threads.
7. Internal Threads: 1/2, 3/4, and 1 inch, with ASME B1.1 screw threads.
8. Bore: Diameter required to match thermometer bulb or stem.
9. Insertion Length: Length required to match thermometer bulb or stem.
10. Lagging Extension: Include on thermowells for insulated piping and tubing.
11. Bushings: For converting size of thermowell's internal screw thread to size of thermometer connection.

B. Heat-Transfer Medium: Mixture of graphite and glycerin.

2.3 DIAL-TYPE PRESSURE GAGES

A. Direct-Mounted, Metal-Case, Dial-Type Pressure Gages:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

a. Ametek U.S. Gauge.
b. Miljoco Corporation.
c. Trerice, H. O. Co.

d. Weiss Instruments, Inc.
e. Weksler Glass Thermometer Corp.
f. Or equal.

2. Standard: ASME B40.100.
3. Case: Sealed type(s); cast aluminum or drawn steel; 4-1/2-inch nominal diameter.
4. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
5. Pressure Connection: Brass, with NPS 1/4, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
6. Movement: Mechanical, with link to pressure element and connection to pointer.
7. Dial: Nonreflective aluminum with permanently etched scale markings graduated in psi.
8. Pointer: Dark-colored metal.
9. Window: Glass.
10. Ring: Stainless steel.
11. Accuracy: Grade A, plus or minus 1 percent of middle half of scale range.

2.4 GAGE ATTACHMENTS

A. Snubbers: ASME B40.100, brass; with NPS 1/4, ASME B1.20.1 pipe threads and porous-metal-type surge-dampening device. Include extension for use on insulated piping.

B. Siphons: Loop-shaped section of stainless-steel pipe with NPS 1/4 pipe threads.

C. Valves: Brass ball, with NPS 1/4, ASME B1.20.1 pipe threads.

2.5 TEST PLUGS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

1. Miljoco Corporation.
2. Peterson Equipment Company.
3. Trerice, H. O. Co.
4. Weiss Instruments, Inc.
5. Weksler Glass Thermometer Corp.
6. Or equal.

B. Description: Test-station fitting made for insertion in piping tee fitting.

C. Body: Brass or stainless steel with core inserts and gasketed and threaded cap. Include extended stem on units to be installed in insulated piping.

D. Thread Size: NPS 1/4, ASME B1.20.1 pipe thread.

E. Minimum Pressure and Temperature Rating: 500 psig at 200 deg F.

F. Core Inserts: Chlorosulfonated polyethylene synthetic and EPDM self-sealing rubber.

© 2026 CDM Smith
All Rights Reserved

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install thermowells with socket extending to center of pipe and in vertical position in piping tees.

B. Install thermowells of sizes required to match thermometer connectors. Include bushings if required to match sizes.

C. Install thermowells with extension on insulated piping.

D. Fill thermowells with heat-transfer medium.

E. Install direct-mounted thermometers in thermowells and adjust vertical and tilted positions.

F. Install remote-mounted thermometer bulbs in thermowells and install cases on panels; connect cases with tubing and support tubing to prevent kinks. Use minimum tubing length.

G. Install duct-thermometer mounting brackets in walls of ducts. Attach to duct with screws.

H. Install direct-mounted pressure gages in piping tees with pressure gage located on pipe at the most readable position.

I. Install remote-mounted pressure gages on panel.

J. Install valve and snubber in piping for each pressure gage for fluids (except steam).

K. Install valve and syphon fitting in piping for each pressure gage for steam.

L. Install test plugs in piping tees.

M. Install connection fittings in accessible locations for attachment to portable indicators.

N. Install thermometers in the following locations:

1. Inlet and outlet of each hydronic coil in air-handling units.
2. Two inlets and two outlets of each hydronic heat exchanger.

O. Install pressure gages in the following locations:

1. Discharge of each pressure-reducing valve.
2. Suction and discharge of each pump.

3.2 CONNECTIONS

A. Install meters and gages adjacent to machines and equipment to allow space for service and maintenance of meters, gages, machines, and equipment.

© 2026 CDM Smith
All Rights Reserved

3.3 ADJUSTING

A. After installation, calibrate meters according to manufacturer's written instructions.

B. Adjust faces of meters and gages to proper angle for best visibility.

3.4 THERMOMETER SCHEDULE

A. Thermometers at inlet and outlet of each hydronic coil in air-handling units and built-up central systems shall be the following:

1. Industrial-style, liquid-in-glass type.

B. Thermometer stems shall be of length to match thermowell insertion length.

3.5 THERMOMETER SCALE-RANGE SCHEDULE

A. Scale Range for Chilled-Water Piping: 0 to 100 deg F.

B. Scale Range for Heating, Hot-Water Piping: 0 to 250 deg F.

C. Scale Range for Steam and Steam-Condensate Piping: 0 to 250 deg F.

3.6 PRESSURE-GAGE SCHEDULE

A. Pressure gages at suction and discharge of each pump shall be the following:

1. Sealed, direct-mounted, metal case.

3.7 PRESSURE-GAGE SCALE-RANGE SCHEDULE

A. Scale Range for Chilled-Water Piping: 0 to 100 psi.

B. Scale Range for Heating, Hot-Water Piping: 0 to 100 psi.

C. Scale Range for Steam Piping: 0 to 160 psi.

SECTION 230523.12 - BALL VALVES FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Bronze ball valves.

1.3 DEFINITIONS

A. CWP: Cold working pressure.

B. SWP: Steam working pressure.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of valve.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Prepare valves for shipping as follows:

1. Protect internal parts against rust and corrosion.
2. Protect threads, flange faces, and weld ends.
3. Set ball valves open to minimize exposure of functional surfaces.

B. Use the following precautions during storage:

1. Maintain valve end protection.
2. Store valves indoors and maintain at higher-than-ambient-dew-point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.

C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use operating handles or stems as lifting or rigging points.

© 2026 CDM Smith
All Rights Reserved

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR VALVES

A. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.

B. ASME Compliance:

1. ASME B1.20.1 for threads for threaded-end valves.
2. ASME B16.1 for flanges on iron valves.
3. ASME B16.5 for flanges on steel valves.
4. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
5. ASME B16.18 for solder-joint connections.
6. ASME B31.1 for power piping valves.
7. ASME B31.9 for building services piping valves.

C. Bronze valves shall be made with dezincification-resistant materials. Bronze valves made with copper alloy (brass) containing more than 15 percent zinc are not permitted.

D. Refer to HVAC valve schedule articles for applications of valves.

E. Valve Pressure-Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.

F. Valve Sizes: Same as upstream piping unless otherwise indicated.

G. Valve Actuator Types: Handlever

H. Valves in Insulated Piping:

1. Include 2-inch stem extensions.
2. Extended operating handle of nonthermal-conductive material, and protective sleeves that allow operation of valves without breaking the vapor seals or disturbing insulation.
3. Memory stops that are fully adjustable after insulation is applied.

I. Valve Bypass and Drain Connections: MSS SP-45.

2.2 BRONZE BALL VALVES

A. Bronze Ball Valves, Two-Piece with Full Port and Stainless-Steel Trim:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

a. Apollo Flow Controls; Conbraco Industries, Inc.
b. Milwaukee Valve Company.
c. NIBCO INC.
d. Watts.

e. Or equal.

2. Description:

a. Standard: MSS SP-110.
b. SWP Rating: 150 psig.
c. CWP Rating: 600 psig.
d. Body Design: Two piece.
e. Body Material: Bronze.
f. Ends: Threaded.
g. Seats: PTFE.
h. Stem: Stainless steel.
i. Ball: Stainless steel, vented.
j. Port: Full.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.

B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.

C. Examine threads on valve and mating pipe for form and cleanliness.

D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.

E. Do not attempt to repair defective valves; replace with new valves.

3.2 VALVE INSTALLATION

A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.

B. Locate valves for easy access and provide separate support where necessary.

C. Install valves in horizontal piping with stem at or above center of pipe.

D. Install valves in position to allow full stem movement.

3.3 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS

A. If valves with specified SWP classes or CWP ratings are unavailable, the same types of valves with higher SWP classes or CWP ratings may be substituted.

B. Select valves with the following end connections:

1. For Copper Tubing, NPS 2 and Smaller: Threaded ends except where solder-joint valve-end option is indicated in valve schedules below.
2. For Copper Tubing, NPS 2-1/2 to NPS 4: Flanged ends except where threaded valve-end option is indicated in valve schedules below.
3. For Copper Tubing, NPS 5 and Larger: Flanged ends.
4. For Steel Piping, NPS 2 and Smaller: Threaded ends.
5. For Steel Piping, NPS 2-1/2 to NPS 4: Flanged ends except where threaded valve-end option is indicated in valve schedules below.
6. For Steel Piping, NPS 5 and Larger: Flanged ends.

3.4 CHILLED-WATER VALVE SCHEDULE

A. Pipe NPS 2 and Smaller: bronze ball valves, two piece, with stainless-steel trim, and full port.

1. Valves may be provided with solder-joint ends instead of threaded ends.

3.5 HEATING-WATER VALVE SCHEDULE

A. Pipe NPS 2 and Smaller: bronze ball valves, two piece, with stainless-steel trim, and full port.

1. Valves may be provided with solder-joint ends instead of threaded ends.

3.6 LOW-PRESSURE STEAM VALVE SCHEDULE (15 PSIG OR LESS)

A. Pipe NPS 2 and Smaller: bronze ball valves, two piece, with stainless-steel trim, and full port.

1. Valves may be provided with solder-joint ends instead of threaded ends.

3.7 STEAM-CONDENSATE VALVE SCHEDULE

A. Pipe NPS 2 and Smaller: bronze ball valves, two piece, with stainless-steel trim, and full port.

1. Valves may be provided with solder-joint ends instead of threaded ends.

SECTION 230523.13 - BUTTERFLY VALVES FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Iron, single-flange butterfly valves.
2. Iron, grooved-end butterfly valves.
3. High-performance butterfly valves.
4. Chainwheels.

1.3 DEFINITIONS

A. CWP: Cold working pressure.

B. EPDM: Ethylene propylene copolymer rubber.

C. NBR: Acrylonitrile-butadiene, Buna-N, or nitrile rubber.

D. SWP: Steam working pressure.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of valve.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Prepare valves for shipping as follows:

1. Protect internal parts against rust and corrosion.
2. Protect threads, flange faces, grooves, and weld ends.
3. Set butterfly valves closed or slightly open.

B. Use the following precautions during storage:

1. Maintain valve end protection.
2. Store valves indoors and maintain at higher-than-ambient-dew-point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.

C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR VALVES

A. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.

B. ASME Compliance:

1. ASME B16.1 for flanges on iron valves.
2. ASME B16.5 for pipe flanges and flanged fittings, NPS 1/2 through NPS 24.
3. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
4. ASME B31.1 for power piping valves.
5. ASME B31.9 for building services piping valves.

C. AWWA Compliance: Comply with AWWA C606 for grooved-end connections.

D. Valve Pressure-Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.

E. Valve Sizes: Same as upstream piping unless otherwise indicated.

F. Valve Actuator Types:

1. Gear Actuator: For valves NPS 8 and larger.
2. Handlever: For valves NPS 6 and smaller.
3. Chainwheel: Device for attachment to gear, stem, or other actuator of size and with chain for mounting height, according to "Valve Installation" Article.

G. Valves in Insulated Piping: With 2-inch stem extensions with extended necks.

2.2 IRON, SINGLE-FLANGE BUTTERFLY VALVES

A. Iron, Single-Flange Butterfly Valves with Stainless-Steel Disc:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

a. Apollo Flow Controls; Conbraco Industries, Inc.
b. Jenkins Valves; Crane Energy Flow Solutions.
c. Mueller Steam Specialty; A WATTS Brand.
d. NIBCO INC.
e. WATTS.
f. Or equal.

2. Description:

a. Standard: MSS SP-67, Type I.
b. CWP Rating: 150 psig.
c. Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
d. Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
e. Seat: EPDM.
f. Stem: One- or two-piece stainless steel.
g. Disc: Stainless steel.

2.3 DUCTILE-IRON, GROOVED-END BUTTERFLY VALVES

A. Iron, Grooved-End Butterfly Valves, 175 CWP:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

a. Grinnell G-Fire by Johnson Controls Company.
b. Tyco by Johnson Controls Company.
c. Victaulic Company.
d. Or equal.

2. Description:

a. Standard: MSS SP-67, Type I.
b. CWP Rating: 175 psig.
c. Body Material: Coated, ductile iron.
d. Stem: Two-piece stainless steel.
e. Disc: Coated, ductile iron.
f. Seal: EPDM.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.

B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.

C. Examine mating flange faces for damage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.

D. Do not attempt to repair defective valves; replace with new valves.

3.2 VALVE INSTALLATION

A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.

B. Locate valves for easy access and provide separate support where necessary.

C. Install valves in horizontal piping with stem at or above center of pipe.

D. Install valves in position to allow full stem movement.

3.3 ADJUSTING

A. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

3.4 CHILLED-WATER VALVE SCHEDULE

A. Pipe NPS 2-1/2 and Larger:

1. Iron, Single-Flange Butterfly Valves, NPS 2-1/2 to NPS 12: Stainless-steel disc, 200 CWP, and EPDM seat.
2. Iron, Grooved-End Butterfly Valves, NPS 2-1/2 to NPS 12: 175 CWP.

3.5 HEATING-WATER VALVE SCHEDULE

A. Pipe NPS 2-1/2 and Larger:

1. Iron, Single-Flange Butterfly Valves, NPS 2-1/2 to NPS 12: Stainless-steel disc, 200 CWP, and EPDM seat.
2. Iron, Grooved-End Butterfly Valves, NPS 2-1/2 to NPS 12: 175 CWP.

SECTION 230529 - HANGERS AND SUPPORTS FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Metal pipe hangers and supports.
2. Metal framing systems.
3. Thermal-hanger shield inserts.
4. Fastener systems.
5. Pipe stands.
6. Delegated Design.

B. Related Requirements:

1. Section 230548.13 "Vibration Controls for HVAC" for vibration isolation devices.
2. Section 233113 "Metal Ducts" for duct hangers and supports.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1.4 DELEGATED DESIGN SUBMITTALS

A. Shop Drawings: Signed and sealed by a qualified professional engineer. Show fabrication and installation details and include calculations for the following; include Product Data for components:

1. Metal framing systems.
2. Pipe stands.
3. Equipment supports.

B. Qualifications Statement: Submit qualifications for licensed professional.

1.5 INFORMATIONAL SUBMITTALS

A. Welding certificates.

© 2026 CDM Smith
All Rights Reserved

1.6 QUALITY ASSURANCE

A. Delegated Design Engineer: Licensed professional engineer experienced in design of specified Work and licensed in the jurisdiction of the project location.

B. Structural-Steel Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

C. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code, Section IX.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design trapeze pipe hangers, metal framing systems, pipe stands, and equipment supports for loads in excess of 200 lb.

B. Structural Performance: Hangers and supports for HVAC piping and equipment shall withstand the effects of gravity loads and stresses within limits and under conditions indicated according to ASCE/SEI 7.

1. Design supports for multiple pipes, including pipe stands, capable of supporting combined weight of supported systems, system contents, and test water.
2. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.
3. Design seismic-restraint hangers and supports for piping and equipment and obtain approval from authorities having jurisdiction.

2.2 METAL PIPE HANGERS AND SUPPORTS

A. Carbon-Steel Pipe Hangers and Supports:

1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
2. Galvanized Metallic Coatings: Pregalvanized, hot-dip galvanized, or electro-galvanized.
3. Nonmetallic Coatings: Plastic coated, or epoxy powder-coated.
4. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
5. Hanger Rods: Continuous-thread rod, nuts, and washer made of stainless steel.

B. Stainless-Steel Pipe Hangers and Supports:

1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
2. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
3. Hanger Rods: Continuous-thread rod, nuts, and washer made of stainless steel.

C. Copper Pipe and Tube Hangers:

1. Description: MSS SP-58, Types 1 through 58, copper-plated steel, factory-fabricated components.
2. Hanger Rods: Continuous-thread rod, nuts, and washer made of stainless steel.

D. Description: MSS SP-58, Type 59, shop- or field-fabricated pipe-support assembly made from structural carbon-steel shapes with MSS SP-58 carbon-steel hanger rods, nuts, saddles, and U-bolts.

2.3 METAL FRAMING SYSTEMS

A. MFMA Manufacturer Metal Framing Systems for indoor general service applications.:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

   a. Thomas & Betts Corporation; A Member of the ABB Group.
   b. Atkore International (Unistrut).
   c. Eaton (B-line).

2. Description: Shop- or field-fabricated, pipe-support assembly made of steel channels, accessories, fittings, and other components for supporting multiple parallel pipes.
3. Standard: Comply with MFMA-4 factory-fabricated components for field assembly.
4. Channels: Continuous slotted carbon-steel channel with inturned lips.
5. Channel Width: Selected for applicable load criteria.
6. Channel Nuts: Formed or stamped nuts or other devices designed to fit into channel slot and, when tightened, prevent slipping along channel.
7. Hanger Rods: Continuous-thread rod, nuts, and washer made of carbon steel.
8. Metallic Coating: Pregalvanized G90.

B. MFMA Manufacturer Metal Framing Systems for Outdoor Environment Applications:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

   a. B-line, an Eaton business.
   b. Thomas & Betts Corporation; A Member of the ABB Group.
   c. Unistrut; Part of Atkore International.

2. Description: Shop- or field-fabricated, pipe-support assembly made of steel channels, accessories, fittings, and other components for supporting multiple parallel pipes.
3. Standard: Comply with MFMA-4 factory-fabricated components for field assembly.
4. Channels: Continuous slotted stainless-steel, Type 316 channel with inturned lips.
5. Channel Width: Selected for applicable load criteria.
6. Channel Nuts: Formed or stamped nuts or other devices designed to fit into channel slot and, when tightened, prevent slipping along channel.
7. Hanger Rods: Continuous-thread rod, nuts, and washer made of stainless steel.
8. Metallic Coating: No coating.

© 2026 CDM Smith
All Rights Reserved

2.4 THERMAL-HANGER SHIELD INSERTS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

1. Buckaroos, Inc.
2. Pipe Shields Inc.
3. Value Engineered Products, Inc.

B. Insulation-Insert Material for Cold Piping: ASTM C 552, Type II cellular glass with 100-psi or ASTM C 591, Type VI, Grade 1 polyisocyanurate with 125-psi minimum compressive strength and vapor barrier.

C. Insulation-Insert Material for Hot Piping: ASTM C 552, Type II cellular glass with 100-psi or ASTM C 591, Type VI, Grade 1 polyisocyanurate with 125-psi minimum compressive strength.

D. For Trapeze or Clamped Systems: Insert and shield shall cover entire circumference of pipe.

E. For Clevis or Band Hangers: Insert and shield shall cover lower 180 degrees of pipe.

F. Insert Length: Extend 2 inches beyond sheet metal shield for piping operating below ambient air temperature.

2.5 FASTENER SYSTEMS

A. Mechanical-Expansion Anchors

1. Fastening to Concrete Substrate: Zinc plated carbon steel wedge type anchors, complete with zinc plated nuts and washers, unless otherwise noted.
2. Submerged or Weather Exposed Substrates: ASTM A276 Type 316 stainless steel wedge type anchors, complete with Type 316 stainless steel nuts and washers, unless otherwise noted.
3. Meet ICC ES AC01 or ICC ES AC193.
4. Length: When length or anchor embedment is not indicated, provide length sufficient to place the wedge and expansion cone portion of the anchor at least 1 inch behind concrete reinforcing steel.
5. Basis-of-Design:

    a. Anchorage designs indicated are based on Hilti, Kwik-Bolt TZ, unless otherwise noted.
    b. Acceptable Anchors: Hilti Kwik-Bolt TZ; Simpson Strong-Tie Strong Bolt 2 Wedge Anchor; DeWalt Power-Stud+ SD1; DeWalt Power-Stud+ SD6 for stainless steel; or equal.

B. Adhesive Anchoring System

1. Fastening to Concrete Substrate: Manufactured system consisting of post installed threaded rods, nuts, washers, other anchoring hardware, and chemical dispenser for installation in hammer drilled holes.

a. Anchors: Meet ICC ES AC308.
b. Injection Adhesive: Two-component epoxy system consisting of a hardener and a resin, furnished in pre-measured side-by-side cartridges which keep both components separate.
c. Adhesive Cartridge: Side-by-side design to accept a static mixing nozzle which thoroughly blends both components and allows injection directly into a drilled hole.
d. Anchor: Type 316 stainless steel as indicated consisting of an all-thread anchor rod with nut and washer, of matching material to anchor rod.

1) Basis-of-Design:

a) Anchorage designs indicated are based on Hilti HIT- RE 500 V3, unless otherwise noted.
b) Acceptable Manufacturers: Hilti HIT- RE 500 V3; Simpson Strong Tie SET-3G; ITW Ramset Red Head Epcon G5+; or equal.

e. Reinforcing Bar Dowels: Reinforcing bar, per Section 033000.

1) Basis-of-Design:

a) Anchorage designs indicated are based on Hilti HIT- RE 500 V3, unless otherwise noted.
b) Acceptable Manufacturers: Hilti HIT- RE 500 V3; Simpson Strong Tie SET-3G; ITW Ramset Red Head Epcon G5; or equal.

2. Fastening to Hollow Concrete Block: Three-part threaded rod, screen tube, and chemical dispenser anchoring system.

a. Anchors: Meet ICC ES AC58.
b. Adhesive Cartridges: Contain pre-measured amounts of resin and hardener which are mixed and deposited in a screen tube by a dispenser.
c. Anchor: Type 316 stainless steel as indicated consisting of an all-thread anchor rod with nut and washer, of matching material to anchor rod.
d. Reinforcing Bar Dowel: Reinforcing bar, per Section 033000.
e. Basis-of-Design:

1) Anchorage designs indicated are based on Hilti HIT HY-70 System, unless otherwise noted; or equal.

2.6 PIPE STANDS

A. General Requirements for Pipe Stands: Shop- or field-fabricated assemblies made of manufactured corrosion-resistant components to support roof-mounted piping.

B. Compact Pipe Stand:

1. Description: Single base unit with integral-rod roller, pipe clamps, or V-shaped cradle to support pipe, for roof installation without membrane penetration.
2. Base: Single, vulcanized rubber, molded polypropylene, or polycarbonate.
3. Hardware: Galvanized steel or polycarbonate.
4. Accessories: Protection pads.

C. Low-Profile, Single Base, Single-Pipe Stand:

1. Description: Single base with vertical and horizontal members, and pipe support, for roof installation without membrane protection.
2. Base: Single, vulcanized rubber, molded polypropylene, or polycarbonate.
3. Vertical Members: Two, stainless-steel, continuous-thread 1/2-inch rods.
4. Horizontal Member: Adjustable horizontal, stainless-steel pipe support channels.
5. Pipe Supports: RollerStrut clamps Clevis hanger Swivel hanger.
6. Hardware: Stainlesssteel.
7. Accessories: Protection pads.
8. Height: 12 inches above roof.

D. High-Profile, Single Base, Single-Pipe Stand:

1. Description: Single base, vertical and horizontal members, and pipe support, for roof installation without membrane penetration.
2. Base: Single vulcanized rubber or molded polypropylene.
3. Vertical Members: Two, stainless-steel, continuous-thread 1/2-inch rods.
4. Horizontal Member: One, adjustable height, galvanized- or stainless-steel pipe support slotted channel or plate.
5. Pipe Supports: Roller, Clevis hanger, or Swivel hanger.
6. Hardware: Stainless steel.
7. Accessories: Protection pads, 1/2-inch continuous-thread stainless-steel rod.
8. Height: 36 inches above roof.

E. High-Profile, Multiple-Pipe Stand:

1. Description: Assembly of bases, vertical and horizontal members, and pipe supports, for roof installation without membrane penetration.
2. Bases: Two or more; vulcanized rubber.
3. Vertical Members: Two or more, stainless-steel channels.
4. Horizontal Members: One or more, adjustable height, stainless-steel pipe support.
5. Pipe Supports: Strut clamps.
6. Hardware: Stainlesssteel.
7. Height: 36 inches above roof.

F. Curb-Mounted-Type Pipe Stands: Shop- or field-fabricated pipe supports made from structural-steel shapes, continuous-thread rods, and rollers, for mounting on permanent stationary roof curb.

All Rights Reserved

2.7 MATERIALS

A. Aluminum: ASTM B 221.

B. Carbon Steel: ASTM A 1011/A 1011M.

C. Structural Steel: ASTM A 36/A 36M, carbon-steel plates, shapes, and bars; galvanized.

D. Stainless Steel: ASTM A 240/A 240M.

E. Grout: ASTM C 1107/C 1107M, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout; suitable for interior and exterior applications.

1. Properties: Nonstaining, noncorrosive, and nongaseous.
2. Design Mix: 5000-psi, 28-day compressive strength.

PART 3 - EXECUTION

3.1 APPLICATION

A. Comply with requirements in Section 078413 "Penetration Firestopping" for firestopping materials and installation for penetrations through fire-rated walls, ceilings, and assemblies.

B. Strength of Support Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination shall be weight of supported components plus 200 lb.

3.2 HANGER AND SUPPORT INSTALLATION

A. Metal Pipe-Hanger Installation: Comply with MSS SP-58. Install hangers, supports, clamps, and attachments as required to properly support piping from the building structure.

B. Metal Trapeze Pipe-Hanger Installation: Comply with MSS SP-58. Arrange for grouping of parallel runs of horizontal piping, and support together on field-fabricated trapeze pipe hangers.

1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size or install intermediate supports for smaller diameter pipes as specified for individual pipe hangers.
2. Field fabricate from ASTM A 36/A 36M, carbon-steel shapes selected for loads being supported. Weld steel according to AWS D1.1/D1.1M.

C. Fiberglass Pipe-Hanger Installation: Comply with applicable portions of MSS SP-58. Install hangers and attachments as required to properly support piping from building structure.

D. Metal Framing System Installation: Arrange for grouping of parallel runs of piping, and support together on field-assembled strut systems.

E. Thermal-Hanger Shield Installation: Install in pipe hanger or shield for insulated piping.

F. Fastener System Installation:

1. Install powder-actuated fasteners for use in lightweight concrete or concrete slabs less than 4 inches thick in concrete after concrete is placed and completely cured. Use operators that are licensed by powder-actuated tool manufacturer. Install fasteners according to powder-actuated tool manufacturer's operating manual.
2. Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.

G. Pipe Stand Installation:

1. Pipe Stand Types except Curb-Mounted Type: Assemble components and mount on smooth roof surface. Do not penetrate roof membrane.
2. Curb-Mounted-Type Pipe Stands: Assemble components or fabricate pipe stand and mount on permanent, stationary roof curb. See Section 077200 "Roof Accessories" for curbs.

H. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.

I. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.

J. Install lateral bracing with pipe hangers and supports to prevent swaying.

K. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.

L. Load Distribution: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.

M. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and to not exceed maximum pipe deflections allowed by ASME B31.9 for building services piping.

N. Insulated Piping:

1. Attach clamps and spacers to piping.

   a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.
   b. Piping Operating below Ambient Air Temperature: Use thermal-hanger shield insert with clamp sized to match OD of insert.
   c. Do not exceed pipe stress limits allowed by ASME B31.9 for building services piping.

2. Install MSS SP-58, Type 39, protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.

a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.

3. Install MSS SP-58, Type 40, protective shields on cold piping with vapor barrier. Shields shall span an arc of 180 degrees.

a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.

4. Shield Dimensions for Pipe: Not less than the following:

a. NPS 1/4 to NPS 3-1/2: 12 inches long and 0.048 inch thick.
b. NPS 4: 12 inches long and 0.06 inch thick.
c. NPS 5 and NPS 6: 18 inches long and 0.06 inch thick.
d. NPS 8 to NPS 14: 24 inches long and 0.075 inch thick.
e. NPS 16 to NPS 24: 24 inches long and 0.105 inch thick.

5. Pipes NPS 8 and Larger: Include wood or reinforced calcium-silicate-insulation inserts of length at least as long as protective shield.
6. Thermal-Hanger Shields: Install with insulation same thickness as piping insulation.

3.3 METAL FABRICATIONS

A. Cut, drill, and fit miscellaneous metal fabrications for equipment supports.

B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.

C. Field Welding: Comply with AWS D1.1/D1.1M procedures for shielded, metal arc welding; appearance and quality of welds; and methods used in correcting welding work; and with the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. Finish welds at exposed connections so no roughness shows after finishing and so contours of welded surfaces match adjacent contours.

3.4 ADJUSTING

A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.

B. Trim excess length of continuous-thread hanger and support rods to 1-1/2 inches.

© 2026 CDM Smith
All Rights Reserved

3.5 PAINTING

A. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.

1. Apply paint by brush or spray to provide a minimum dry film thickness of 2.0 mils.

B. Touchup: Comply with requirements in Section 099123 "Interior Painting" for cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal.

C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780/A 780M.

3.6 HANGER AND SUPPORT SCHEDULE

A. Specific hanger and support requirements are in Sections specifying piping systems and equipment.

B. Comply with MSS SP-58 for pipe-hanger selections and applications that are not specified in piping system Sections.

C. Use hangers and supports with galvanized metallic coatings for piping and equipment that will not have field-applied finish.

D. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.

E. Use carbon-steel pipe hangers and supports metal trapeze pipe hangers and metal framing systems and attachments for general service applications.

F. Use stainless-steel pipe hangers and stainless-steel or corrosion-resistant attachments for hostile environment and outdoor applications.

G. Use copper-plated pipe hangers and copper attachments for copper piping and tubing.

H. Use padded hangers for piping that is subject to scratching.

I. Use thermal-hanger shield inserts for insulated piping and tubing.

J. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of noninsulated or insulated, stationary pipes NPS 1/2 to NPS 30.
2. Yoke-Type Pipe Clamps (MSS Type 2): For suspension of up to 1050 deg F, pipes NPS 4 to NPS 24, requiring up to 4 inches of insulation.
3. Carbon- or Alloy-Steel, Double-Bolt Pipe Clamps (MSS Type 3): For suspension of pipes NPS 3/4 to NPS 36, requiring clamp flexibility and up to 4 inches of insulation.

4. Steel Pipe Clamps (MSS Type 4): For suspension of cold and hot pipes NPS 1/2 to NPS 24 if little or no insulation is required.
5. Pipe Hangers (MSS Type 5): For suspension of pipes NPS 1/2 to NPS 4, to allow off-center closure for hanger installation before pipe erection.
6. Adjustable, Swivel Split- or Solid-Ring Hangers (MSS Type 6): For suspension of noninsulated, stationary pipes NPS 3/4 to NPS 8.
7. Adjustable, Steel Band Hangers (MSS Type 7): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8.
8. Adjustable Band Hangers (MSS Type 9): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8.
9. Adjustable, Swivel-Ring Band Hangers (MSS Type 10): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8.
10. Split Pipe Ring with or without Turnbuckle Hangers (MSS Type 11): For suspension of noninsulated, stationary pipes NPS 3/8 to NPS 8.
11. Extension Hinged or Two-Bolt Split Pipe Clamps (MSS Type 12): For suspension of noninsulated, stationary pipes NPS 3/8 to NPS 3.
12. U-Bolts (MSS Type 24): For support of heavy pipes NPS 1/2 to NPS 30.
13. Clips (MSS Type 26): For support of insulated pipes not subject to expansion or contraction.
14. Pipe Saddle Supports (MSS Type 36): For support of pipes NPS 4 to NPS 36, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate.
15. Pipe Stanchion Saddles (MSS Type 37): For support of pipes NPS 4 to NPS 36, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate, and with U-bolt to retain pipe.
16. Adjustable Pipe Saddle Supports (MSS Type 38): For stanchion-type support for pipes NPS 2-1/2 to NPS 36 if vertical adjustment is required, with steel-pipe base stanchion support and cast-iron floor flange.
17. Single-Pipe Rolls (MSS Type 41): For suspension of pipes NPS 1 to NPS 30, from two rods if longitudinal movement caused by expansion and contraction might occur.
18. Adjustable Roller Hangers (MSS Type 43): For suspension of pipes NPS 2-1/2 to NPS 24, from single rod if horizontal movement caused by expansion and contraction might occur.
19. Complete Pipe Rolls (MSS Type 44): For support of pipes NPS 2 to NPS 42 if longitudinal movement caused by expansion and contraction might occur but vertical adjustment is unnecessary.
20. Pipe Roll and Plate Units (MSS Type 45): For support of pipes NPS 2 to NPS 24 if small horizontal movement caused by expansion and contraction might occur and vertical adjustment is unnecessary.
21. Adjustable Pipe Roll and Base Units (MSS Type 46): For support of pipes NPS 2 to NPS 30 if vertical and lateral adjustment during installation might be required in addition to expansion and contraction.

K. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers NPS 3/4 to NPS 24.
2. Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers NPS 3/4 to NPS 24 if longer ends are required for riser clamps.

L. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Steel Turnbuckles (MSS Type 13): For adjustment up to 6 inches for heavy loads.
2. Steel Clevises (MSS Type 14): For 120 to 450 deg F piping installations.
3. Swivel Turnbuckles (MSS Type 15): For use with MSS Type 11, split pipe rings.
4. Malleable-Iron Sockets (MSS Type 16): For attaching hanger rods to various types of building attachments.
5. Steel Weldless Eye Nuts (MSS Type 17): For 120 to 450 deg F piping installations.

M. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.
2. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joist construction, to attach to top flange of structural shape.
3. Side-Beam or Channel Clamps (MSS Type 20): For attaching to bottom flange of beams, channels, or angles.
4. Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.
5. Welded Beam Attachments (MSS Type 22): For attaching to bottom of beams if loads are considerable and rod sizes are large.
6. C-Clamps (MSS Type 23): For structural shapes.
7. Top-Beam Clamps (MSS Type 25): For top of beams if hanger rod is required tangent to flange edge.
8. Side-Beam Clamps (MSS Type 27): For bottom of steel I-beams.
9. Steel-Beam Clamps with Eye Nuts (MSS Type 28): For attaching to bottom of steel I-beams for heavy loads.
10. Linked-Steel Clamps with Eye Nuts (MSS Type 29): For attaching to bottom of steel I-beams for heavy loads, with link extensions.
11. Malleable-Beam Clamps with Extension Pieces (MSS Type 30): For attaching to structural steel.
12. Welded-Steel Brackets: For support of pipes from below or for suspending from above by using clip and rod. Use one of the following for indicated loads:

    a. Light (MSS Type 31): 750 lb.
    b. Medium (MSS Type 32): 1500 lb.
    c. Heavy (MSS Type 33): 3000 lb.

13. Side-Beam Brackets (MSS Type 34): For sides of steel or wooden beams.
14. Plate Lugs (MSS Type 57): For attaching to steel beams if flexibility at beam is required.
15. Horizontal Travelers (MSS Type 58): For supporting piping systems subject to linear horizontal movement where headroom is limited.

N. Saddles and Shields: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Steel-Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.
2. Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.

3. Thermal-Hanger Shield Inserts: For supporting insulated pipe.

O. Spring Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Restraint-Control Devices (MSS Type 47): Where indicated to control piping movement.
2. Spring Cushions (MSS Type 48): For light loads if vertical movement does not exceed 1-1/4 inches.
3. Spring-Cushion Roll Hangers (MSS Type 49): For equipping Type 41, roll hanger with springs.
4. Spring Sway Braces (MSS Type 50): To retard sway, shock, vibration, or thermal expansion in piping systems.
5. Variable-Spring Hangers (MSS Type 51): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from hanger.
6. Variable-Spring Base Supports (MSS Type 52): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from base support.
7. Variable-Spring Trapeze Hangers (MSS Type 53): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from trapeze support.
8. Constant Supports: For critical piping stress and if necessary to avoid transfer of stress from one support to another support, critical terminal, or connected equipment. Include auxiliary stops for erection, hydrostatic test, and load-adjustment capability. These supports include the following types:

    a. Horizontal (MSS Type 54): Mounted horizontally.
    b. Vertical (MSS Type 55): Mounted vertically.
    c. Trapeze (MSS Type 56): Two vertical-type supports and one trapeze member.

P. Comply with MSS SP-58 for trapeze pipe-hanger selections and applications that are not specified in piping system Sections.

Q. Comply with MFMA-103 for metal framing system selections and applications that are not specified in piping system Sections.

R. Use mechanical-expansion anchors or adhesive anchors instead of building attachments where required in concrete construction.

SECTION 230548.13 - VIBRATION CONTROLS FOR HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Elastomeric isolation pads.
2. Elastomeric isolation mounts.
3. Restrained elastomeric isolation mounts.
4. Open-spring isolators.
5. Housed-spring isolators.
6. Restrained-spring isolators.
7. Housed-restrained-spring isolators.
8. Elastomeric hangers.
9. Spring hangers.
10. Vibration isolation equipment bases.
11. Delegated design.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include rated load, rated deflection, and overload capacity for each vibration isolation device.
2. Illustrate and indicate style, material, strength, fastening provision, and finish for each type and size of vibration isolation device type required.

B. Shop Drawings:

1. Detail fabrication and assembly of equipment bases. Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
2. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.

1.4 DELEGATED-DESIGN SUBMITTAL

A. For each vibration isolation device:

1. Include design calculations for selecting vibration isolators and for designing vibration isolation bases.

B. Qualifications Statement: Submit qualifications for licensed professional.

1.5 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Show coordination of vibration isolation device installation for HVAC piping and equipment with other systems and equipment in the vicinity, including other supports and restraints, if any.

B. Qualification Data: For testing agency.

C. Welding certificates.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For restrained-air-spring mounts to include in operation and maintenance manuals.

1.7 QUALITY ASSURANCE

A. Delegated Design Engineer: Licensed professional engineer experienced in design of specified Work and licensed in the jurisdiction of the project location.

B. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design vibration isolators and vibration isolation bases.

2.2 ELASTOMERIC ISOLATION PADS

A. Elastomeric Isolation Pads: Type 1.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

a. California Dynamics Corporation.
b. Kinetics Noise Control, Inc.
c. Mason Industries, Inc.

2. Fabrication: Single or multiple layers of sufficient durometer stiffness for uniform loading over pad area.
3. Size: Factory or field cut to match requirements of supported equipment.
4. Pad Material: Oil and water resistant with elastomeric properties.
5. Surface Pattern: Ribbed or Waffle pattern.

2.3 ELASTOMERIC ISOLATION MOUNTS

A. Double-Deflection, Elastomeric Isolation Mounts: Type 2.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

   a. California Dynamics Corporation.
   b. Kinetics Noise Control, Inc.
   c. Mason Industries, Inc.

2. Mounting Plates:

   a. Top Plate: Encapsulated steel load transfer top plates, factory drilled and threaded.
   b. Baseplate: Encapsulated steel bottom plates with holes provided for anchoring to support structure.

3. Elastomeric Material: Molded, oil-resistant rubber, neoprene, or other elastomeric material.

2.4 OPEN-SPRING ISOLATORS

A. Freestanding, Laterally Stable, Open-Spring Isolators: Type 2.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

   a. California Dynamics Corporation.
   b. Kinetics Noise Control, Inc.
   c. Mason Industries, Inc.

2. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
3. Minimum Additional Travel: 50 percent of the required deflection at rated load.
4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
6. Baseplates: Factory-drilled steel plate for bolting to structure with an elastomeric isolator pad attached to the underside. Baseplates shall limit floor load to 500 psig.
7. Top Plate and Adjustment Bolt: Threaded top plate with adjustment bolt and cap screw to fasten and level equipment.

© 2026 CDM Smith
All Rights Reserved

2.5 HOUSED-SPRING ISOLATORS

A. Freestanding, Laterally Stable, Open-Spring Isolators in Two-Part Telescoping Housing: Type 2.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

    a. California Dynamics Corporation.
    b. Kinetics Noise Control, Inc.
    c. Mason Industries, Inc.

2. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
3. Minimum Additional Travel: 50 percent of the required deflection at rated load.
4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
6. Two-Part Telescoping Housing: A steel top and bottom frame separated by an elastomeric material and enclosing the spring isolators.

    a. Drilled base housing for bolting to structure with an elastomeric isolator pad attached to the underside. Bases shall limit floor load to 500 psig.
    b. Top housing with attachment and leveling bolt.

2.6 RESTRAINED-SPRING ISOLATORS

A. Freestanding, Laterally Stable, Open-Spring Isolators with Vertical-Limit Stop Restraint: Type 4.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. California Dynamics Corporation.
    b. Kinetics Noise Control, Inc.
    c. Mason Industries, Inc.

2. Housing: Steel housing with vertical-limit stops to prevent spring extension due to weight being removed.

    a. Base with holes for bolting to structure with an elastomeric isolator pad attached to the underside. Bases shall limit floor load to 500 psig.
    b. Top plate with threaded mounting holes.
    c. Internal leveling bolt that acts as blocking during installation.

3. Restraint: Limit stop as required for equipment and authorities having jurisdiction.
4. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
5. Minimum Additional Travel: 50 percent of the required deflection at rated load.

6. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
7. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.

2.7 HOUSED-RESTRAINED-SPRING ISOLATORS

A. Freestanding, Steel, Open-Spring Isolators with Vertical-Limit Stop Restraint in Two-Part Telescoping Housing: Type 4.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

    a. California Dynamics Corporation.
    b. Kinetics Noise Control, Inc.
    c. Mason Industries, Inc.

2. Two-Part Telescoping Housing: A steel top and bottom frame separated by an elastomeric material and enclosing the spring isolators. Housings are equipped with adjustable snubbers to limit vertical movement.

    a. Drilled base housing for bolting to structure with an elastomeric isolator pad attached to the underside. Bases shall limit floor load to 500 psig.
    b. Threaded top housing with adjustment bolt and cap screw to fasten and level equipment.

3. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
4. Minimum Additional Travel: 50 percent of the required deflection at rated load.
5. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
6. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.

2.8 ELASTOMERIC HANGERS

A. Elastomeric Mount in a Steel Frame with Upper and Lower Steel Hanger Rods: Type 2.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

    a. California Dynamics Corporation.
    b. Kinetics Noise Control, Inc.
    c. Mason Industries, Inc.

2. Frame: Steel, fabricated with a connection for an upper threaded hanger rod and an opening on the underside to allow for a maximum of 30 degrees of angular lower hanger-rod misalignment without binding or reducing isolation efficiency.

3. Dampening Element: Molded, oil-resistant rubber, neoprene, or other elastomeric material with a projecting bushing for the underside opening preventing steel to steel contact.

2.9 SPRING HANGERS

A. Combination Coil-Spring and Elastomeric-Insert Hanger with Spring and Insert in Compression: Type 3.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

    a. California Dynamics Corporation.
    b. Kinetics Noise Control, Inc.
    c. Mason Industries, Inc.

2. Frame: Steel, fabricated for connection to threaded hanger rods and to allow for a maximum of 30 degrees of angular hanger-rod misalignment without binding or reducing isolation efficiency.
3. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
4. Minimum Additional Travel: 50 percent of the required deflection at rated load.
5. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
6. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
7. Elastomeric Element: Molded, oil-resistant rubber or neoprene. Steel-washer-reinforced cup to support spring and bushing projecting through bottom of frame.
8. Adjustable Vertical Stop: Steel washer with neoprene washer "up-stop" on lower threaded rod.
9. Self-centering hanger rod cap to ensure concentricity between hanger rod and support spring coil.

2.10 VIBRATION ISOLATION EQUIPMENT BASES

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

1. California Dynamics Corporation.
2. Kinetics Noise Control, Inc.
3. Mason Industries, Inc.

B. Steel Rails: Factory-fabricated, welded, structural-steel rails.

1. Design Requirements: Lowest possible mounting height with not less than 1-inch clearance above the floor. Include equipment anchor bolts and auxiliary motor slide rails.

    a. Include supports for suction and discharge elbows for pumps.

2. Structural Steel: Steel shapes, plates, and bars complying with ASTM A36/A36M. Rails shall have shape to accommodate supported equipment.
3. Support Brackets: Factory-welded steel brackets on frame for outrigger isolation mountings and to provide for anchor bolts and equipment support.

C. Steel Bases: Factory-fabricated, welded, structural-steel bases and rails.

1. Design Requirements: Lowest possible mounting height with not less than 1-inch clearance above the floor. Include equipment anchor bolts and auxiliary motor slide bases or rails.

a. Include supports for suction and discharge elbows for pumps.

2. Structural Steel: Steel shapes, plates, and bars complying with ASTM A36/A36M. Bases shall have shape to accommodate supported equipment.
3. Support Brackets: Factory-welded steel brackets on frame for outrigger isolation mountings and to provide for anchor bolts and equipment support.

D. Concrete Inertia Base: Factory-fabricated or field-fabricated, welded, structural-steel bases and rails ready for placement of cast-in-place concrete.

1. Design Requirements: Lowest possible mounting height with not less than 1-inch clearance above the floor. Include equipment anchor bolts and auxiliary motor slide bases or rails.

a. Include supports for suction and discharge elbows for pumps.

2. Structural Steel: Steel shapes, plates, and bars complying with ASTM A36/A36M. Bases shall have shape to accommodate supported equipment.
3. Support Brackets: Factory-welded steel brackets on frame for outrigger isolation mountings and to provide for anchor bolts and equipment support.
4. Fabrication: Fabricate steel templates to hold equipment anchor-bolt sleeves and anchors in place during placement of concrete. Obtain anchor-bolt templates from supported equipment manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and equipment to receive vibration isolation control devices for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine roughing-in of reinforcement and cast-in-place anchors to verify actual locations before installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 VIBRATION CONTROL DEVICE INSTALLATION

A. Coordinate the location of embedded connection hardware with supported equipment attachment and mounting points and with requirements for concrete reinforcement and formwork specified in Section 033000 "Cast-in-Place Concrete."

B. Installation of vibration isolators must not cause any change of position of equipment, piping, or ductwork resulting in stresses or misalignment.

3.3 VIBRATION ISOLATION EQUIPMENT BASES INSTALLATION

A. Coordinate the location of embedded connection hardware with supported equipment attachment and mounting points and with requirements for concrete reinforcement and formwork specified in Section 033000 "Cast-in-Place Concrete."

SECTION 230553 - IDENTIFICATION FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Equipment labels.
2. Warning signs and labels.
3. Pipe labels.
4. Warning tags.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Equipment Label Schedule: Include a listing of all equipment to be labeled with the proposed content for each label.

PART 2 - PRODUCTS

2.1 EQUIPMENT LABELS

A. Plastic Labels for Equipment:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

a. Brady Corporation.
b. Brimar Industries, Inc.
c. Carlton Industries, LP.
d. Champion America.
e. Craftmark Pipe Markers.

2. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/16 inch thick, and having predrilled holes for attachment hardware.
3. Letter Color: White.
4. Background Color: Black.

5. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
6. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
7. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-quarters the size of principal lettering.
8. Fasteners: Stainless-steel rivets or self-tapping screws.
9. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

B. Label Content: Include equipment's Drawing designation or unique equipment number.

C. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch bond paper. Tabulate equipment identification number, and identify Drawing numbers where equipment is indicated (plans, details, and schedules) and the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

2.2 WARNING SIGNS AND LABELS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

1. Brady Corporation.
2. Brimar Industries, Inc.
3. Carlton Industries, LP.
4. Champion America.
5. Craftmark Pipe Markers.

B. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/16 inch thick, and having predrilled holes for attachment hardware.

C. Letter Color: Black.

D. Background Color: White and orange.

E. Maximum Temperature: Able to withstand temperatures up to 160 deg F.

F. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.

G. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-quarters the size of principal lettering.

H. Fasteners: Stainless-steel rivets or self-tapping screws.

I. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

J. Label Content: Include caution and warning information plus emergency notification instructions.

2.3 PIPE LABELS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

1. Brady Corporation.
2. Brimar Industries, Inc.
3. Carlton Industries, LP.
4. Champion America.
5. Craftmark Pipe Markers.

B. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction according to ASME A13.1.

C. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to cover full circumference of pipe and to attach to pipe without fasteners or adhesive.

D. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.

E. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings; also include pipe size and an arrow indicating flow direction.

1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions or as separate unit on each pipe label to indicate flow direction.

2.4 WARNING TAGS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

1. Brady Corporation.
2. Brimar Industries, Inc.
3. Carlton Industries, LP.
4. Champion America.
5. Craftmark Pipe Markers.

B. Description: Preprinted or partially preprinted accident-prevention tags of plasticized card stock with matte finish suitable for writing.

1. Size: Approximately 4 by 7 inches.
2. Fasteners: Brass grommet and wire.
3. Nomenclature: Large-size primary caption such as "DANGER," "CAUTION," or "DO NOT OPERATE."
4. Color: Safety-yellow background with black lettering.

PART 3 - EXECUTION

3.1 PREPARATION

A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

3.2 GENERAL INSTALLATION REQUIREMENTS

A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.

B. Coordinate installation of identifying devices with locations of access panels and doors.

C. Install identifying devices before installing acoustical ceilings and similar concealment.

3.3 EQUIPMENT LABEL INSTALLATION

A. Install or permanently fasten labels on each major item of mechanical equipment.

B. Locate equipment labels where accessible and visible.

3.4 PIPE LABEL INSTALLATION

A. Piping Color Coding: Painting of piping is specified in Section 099123 "Interior Painting."

B. Pipe Label Locations: Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:

1. Near each valve and control device.
2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.
3. Near penetrations and on both sides of through walls, floors, ceilings, and inaccessible enclosures.
4. At access doors, manholes, and similar access points that permit view of concealed piping.
5. Near major equipment items and other points of origination and termination.
6. Spaced at maximum intervals of 50 feet along each run. Reduce intervals to 25 feet in areas of congested piping and equipment.
7. On piping above removable acoustical ceilings. Omit intermediately spaced labels.

C. Directional Flow Arrows: Arrows shall be used to indicate direction of flow in pipes, including pipes where flow is allowed in both directions.

D. Pipe Label Color Schedule:

1. Chilled-Water Piping: White letters on a safety-green background.
2. Heating Water Piping: White letters on a safety-green background.
3. Low-Pressure Steam Piping: White letters on a safety-purple background.
4. Steam Condensate Piping: White letters on a safety-purple background.

3.5 WARNING-TAG INSTALLATION

A. Write required message on, and attach warning tags to, equipment and other items where required.

SECTION 230593 - TESTING, ADJUSTING, AND BALANCING FOR HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Balancing Air Systems:

    a. Constant-volume air systems.

2. Balancing Hydronic Piping Systems:

    a. Constant-flow hydronic systems.
    b. Variable-flow hydronic systems.

3. Balancing steam systems.
4. Testing, Adjusting, and Balancing Equipment:

    a. Heat exchangers.
    b. Motors.
    c. Heat-transfer coils.

5. Testing, adjusting, and balancing existing systems and equipment.
6. Control system verification.

1.3 DEFINITIONS

A. AABC: Associated Air Balance Council.

B. BAS: Building automation systems.

C. NEBB: National Environmental Balancing Bureau.

D. TAB: Testing, adjusting, and balancing.

E. TABB: Testing, Adjusting, and Balancing Bureau.

F. TAB Specialist: An independent entity meeting qualifications to perform TAB work.

G. TDH: Total dynamic head.

© 2026 CDM Smith
All Rights Reserved

1.4 PREINSTALLATION MEETINGS

A. TAB Conference: Conduct a TAB conference at Project site after approval of the TAB strategies and procedures plan to develop a mutual understanding of the details. Provide a minimum of 14 days' advance notice of scheduled meeting time and location.

1. Minimum Agenda Items:

a. The Contract Documents examination report.
b. The TAB plan.
c. Needs for coordination and cooperation of trades and subcontractors.
d. Proposed procedures for documentation and communication flow.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: Within 30 days of Contractor's Notice to Proceed, submit documentation that the TAB specialist and this Project's TAB team members meet the qualifications specified in "Quality Assurance" Article.

B. Contract Documents Examination Report: Within 30 days of Contractor's Notice to Proceed, submit the Contract Documents review report as specified in Part 3.

C. Strategies and Procedures Plan: Within 30 days of Contractor's Notice to Proceed, submit TAB strategies and step-by-step procedures as specified in "Preparation" Article.

D. System Readiness Checklists: Within 30 days of Contractor's Notice to Proceed, submit system readiness checklists as specified in "Preparation" Article.

E. Examination Report: Submit a summary report of the examination review required in "Examination" Article.

F. Certified TAB reports.

G. Sample report forms.

H. Instrument calibration reports, to include the following:

1. Instrument type and make.
2. Serial number.
3. Application.
4. Dates of use.
5. Dates of calibration.

1.6 QUALITY ASSURANCE

A. TAB Specialists Qualifications: Certified by NEBB or AABC.

1. TAB Field Supervisor: Employee of the TAB specialist and certified by NEBB or AABC.

2. TAB Technician: Employee of the TAB specialist and certified by NEBB or AABC as a TAB technician.

B. Instrumentation Type, Quantity, Accuracy, and Calibration: Comply with requirements in ASHRAE 111, Section 4, "Instrumentation."

1.7 FIELD CONDITIONS

A. Partial Owner Occupancy: Owner may occupy completed areas of building before Substantial Completion. Cooperate with Owner during TAB operations to minimize conflicts with Owner's operations.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine the Contract Documents to become familiar with Project requirements and to discover conditions in systems designs that may preclude proper TAB of systems and equipment.

B. Examine installed systems for balancing devices, such as test ports, gage cocks, thermometer wells, flow-control devices, balancing valves and fittings, and manual volume dampers. Verify that locations of these balancing devices are applicable for intended purpose and are accessible.

C. Examine the approved submittals for HVAC systems and equipment.

D. Examine design data including HVAC system descriptions, statements of design assumptions for environmental conditions and systems output, and statements of philosophies and assumptions about HVAC system and equipment controls.

E. Examine equipment performance data including fan and pump curves.

1. Relate performance data to Project conditions and requirements, including system effects that can create undesired or unpredicted conditions that cause reduced capacities in all or part of a system.
2. Calculate system-effect factors to reduce performance ratings of HVAC equipment when installed under conditions different from the conditions used to rate equipment performance. To calculate system effects for air systems, use tables and charts found in AMCA 201, "Fans and Systems," or in SMACNA's "HVAC Systems - Duct Design." Compare results with the design data and installed conditions.

F. Examine system and equipment installations and verify that field quality-control testing, cleaning, and adjusting specified in individual Sections have been performed.

G. Examine test reports specified in individual system and equipment Sections.

H. Examine HVAC equipment and verify that bearings are greased, belts are aligned and tight, filters are clean, and equipment with functioning controls is ready for operation.

I. Examine terminal units, such as variable-air-volume boxes, and verify that they are accessible, and their controls are connected and functioning.

J. Examine strainers. Verify that startup screens have been replaced by permanent screens with indicated perforations.

K. Examine control valves for proper installation for their intended function of throttling, diverting, or mixing fluid flows.

L. Examine heat-transfer coils for correct piping connections and for clean and straight fins.

M. Examine system pumps to ensure absence of entrained air in the suction piping.

N. Examine operating safety interlocks and controls on HVAC equipment.

O. Report deficiencies discovered before and during performance of TAB procedures. Observe and record system reactions to changes in conditions. Record default set points if different from indicated values.

3.2 PREPARATION

A. Prepare a TAB plan that includes the following:

1. Equipment and systems to be tested.
2. Strategies and step-by-step procedures for balancing the systems.
3. Instrumentation to be used.
4. Sample forms with specific identification for all equipment.

B. Perform system-readiness checks of HVAC systems and equipment to verify system readiness for TAB work. Include, at a minimum, the following:

1. Airside:

a. Verify that leakage and pressure tests on air distribution systems have been satisfactorily completed.
b. Duct systems are complete with terminals installed.
c. Volume, smoke, and fire dampers are open and functional.
d. Clean filters are installed.
e. Fans are operating, free of vibration, and rotating in correct direction.
f. Variable-frequency controllers' startup is complete, and safeties are verified.
g. Automatic temperature-control systems are operational.
h. Ceilings are installed.
i. Windows and doors are installed.
j. Suitable access to balancing devices and equipment is provided.

2. Hydronics:

a. Verify leakage and pressure tests on water distribution systems have been satisfactorily completed.
b. Piping is complete with terminals installed.
c. Water treatment is complete.
d. Systems are flushed, filled, and air purged.
e. Strainers are pulled and cleaned.
f. Control valves are functioning per the sequence of operation.
g. Shutoff and balance valves have been verified to be 100 percent open.
h. Pumps are started, and proper rotation is verified.
i. Pump gage connections are installed directly at pump inlet and outlet flanges or in discharge and suction pipe prior to valves or strainers.
j. Variable-frequency controllers' startup is complete, and safeties are verified.
k. Suitable access to balancing devices and equipment is provided.

3.3 GENERAL PROCEDURES FOR TESTING AND BALANCING

A. Perform testing and balancing procedures on each system according to the procedures contained in AABC's "National Standards for Total System Balance" or NEBB's "Procedural Standards for Testing, Adjusting, and Balancing of Environmental Systems" and in this Section.

B. Cut insulation, ducts, pipes, and equipment cabinets for installation of test probes to the minimum extent necessary for TAB procedures.

1. After testing and balancing, patch probe holes in ducts with same material and thickness as used to construct ducts.
2. Install and join new insulation that matches removed materials. Restore insulation, coverings, vapor barrier, and finish according to Section 230713 "Duct Insulation," Section 230716 "HVAC Equipment Insulation," and Section 230719 "HVAC Piping Insulation."

C. Mark equipment and balancing devices, including damper-control positions, valve position indicators, fan-speed-control levers, and similar controls and devices, with paint or other suitable, permanent identification material to show final settings.

D. Take and report testing and balancing measurements in inch-pound (IP) units.

3.4 GENERAL PROCEDURES FOR BALANCING AIR SYSTEMS

A. Prepare test reports for both fans and outlets. Obtain manufacturer's outlet factors and recommended testing procedures. Cross-check the summation of required outlet volumes with required fan volumes.

B. Prepare schematic diagrams of systems' "as-built" duct layouts.

C. Determine the best locations in main and branch ducts for accurate duct-airflow measurements.

D. Check airflow patterns from the outdoor-air louvers and dampers and the return- and exhaust-air dampers through the supply-fan discharge and mixing dampers.

E. Locate start-stop and disconnect switches, electrical interlocks, and motor starters.

F. Verify that motor starters are equipped with properly sized thermal protection.

G. Check dampers for proper position to achieve desired airflow path.

H. Check for airflow blockages.

I. Check condensate drains for proper connections and functioning.

J. Check for proper sealing of air-handling-unit components.

K. Verify that air duct system is sealed as specified in Section 233113 "Metal Ducts."

3.5 PROCEDURES FOR CONSTANT-VOLUME AIR SYSTEMS

A. Adjust fans to deliver total indicated airflows within the maximum allowable fan speed listed by fan manufacturer.

1. Measure total airflow.

    a. Set outside-air, return-air, and relief-air dampers for proper position that simulates minimum outdoor-air conditions.
    b. Where duct conditions allow, measure airflow by Pitot-tube traverse. If necessary, perform multiple Pitot-tube traverses to obtain total airflow.
    c. Where duct conditions are not suitable for Pitot-tube traverse measurements, a coil traverse may be acceptable.
    d. If a reliable Pitot-tube traverse or coil traverse is not possible, measure airflow at terminals and calculate the total airflow.

2. Measure fan static pressures as follows:

    a. Measure static pressure directly at the fan outlet or through the flexible connection.
    b. Measure static pressure directly at the fan inlet or through the flexible connection.
    c. Measure static pressure across each component that makes up the air-handling system.
    d. Report artificial loading of filters at the time static pressures are measured.

3. Review Record Documents to determine variations in design static pressures versus actual static pressures. Calculate actual system-effect factors. Recommend adjustments to accommodate actual conditions.
4. Obtain approval from Engineer for adjustment of fan speed higher or lower than indicated speed. Comply with requirements in HVAC Sections for air-handling units for adjustment of fans, belts, and pulley sizes to achieve indicated air-handling-unit performance.
5. Do not make fan-speed adjustments that result in motor overload. Consult equipment manufacturers about fan-speed safety factors. Modulate dampers and measure fan-motor amperage to ensure that no overload occurs. Measure amperage in full-cooling, full-heating, economizer, and any other operating mode to determine the maximum required brake horsepower.

B. Adjust volume dampers for main duct, submain ducts, and major branch ducts to indicated airflows.

1. Measure airflow of submain and branch ducts.
2. Adjust submain and branch duct volume dampers for specified airflow.
3. Re-measure each submain and branch duct after all have been adjusted.

C. Adjust air inlets and outlets for each space to indicated airflows.

1. Set airflow patterns of adjustable outlets for proper distribution without drafts.
2. Measure inlets and outlets airflow.
3. Adjust each inlet and outlet for specified airflow.
4. Re-measure each inlet and outlet after they have been adjusted.

D. Verify final system conditions.

1. Re-measure and confirm that minimum outdoor, return, and relief airflows are within design. Readjust to design if necessary.
2. Re-measure and confirm that total airflow is within design.
3. Re-measure all final fan operating data, rpms, volts, amps, and static profile.
4. Mark all final settings.
5. Test system in economizer mode. Verify proper operation and adjust if necessary.
6. Measure and record all operating data.
7. Record final fan-performance data.

3.6 GENERAL PROCEDURES FOR HYDRONIC SYSTEMS

A. Prepare test reports for pumps, coils, and heat exchangers. Obtain approved submittals and manufacturer-recommended testing procedures. Crosscheck the summation of required coil and heat exchanger flow rates with pump design flow rate.

B. Prepare schematic diagrams of systems' "as-built" piping layouts.

C. In addition to requirements in "Preparation" Article, prepare hydronic systems for testing and balancing as follows:

1. Check liquid level in expansion tank.
2. Check highest vent for adequate pressure.
3. Check flow-control valves for proper position.
4. Locate start-stop and disconnect switches, electrical interlocks, and motor starters.
5. Verify that motor starters are equipped with properly sized thermal protection.
6. Check that air has been purged from the system.

3.7 PROCEDURES FOR CONSTANT-FLOW HYDRONIC SYSTEMS

A. Adjust pumps to deliver total design gpm.

1. Measure total water flow.

a. Position valves for full flow through coils.

b. Measure flow by main flow meter, if installed.
c. If main flow meter is not installed, determine flow by pump TDH or exchanger pressure drop.

2. Measure pump TDH as follows:

a. Measure discharge pressure directly at the pump outlet flange or in discharge pipe prior to any valves.
b. Measure inlet pressure directly at the pump inlet flange or in suction pipe prior to any valves or strainers.
c. Convert pressure to head and correct for differences in gage heights.
d. Verify pump impeller size by measuring the TDH with the discharge valve closed. Note the point on manufacturer's pump curve at zero flow and verify that the pump has the intended impeller size.
e. With valves open, read pump TDH. Adjust pump discharge valve until design water flow is achieved.

3. Monitor motor performance during procedures and do not operate motor in an overloaded condition.

B. Adjust flow-measuring devices installed in mains and branches to design water flows.

1. Measure flow in main and branch pipes.
2. Adjust main and branch balance valves for design flow.
3. Re-measure each main and branch after all have been adjusted.

C. Adjust flow-measuring devices installed at terminals for each space to design water flows.

1. Measure flow at terminals.
2. Adjust each terminal to design flow.
3. Re-measure each terminal after it is adjusted.
4. Position control valves to bypass the coil and adjust the bypass valve to maintain design flow.
5. Perform temperature tests after flows have been balanced.

D. For systems with pressure-independent valves at terminals:

1. Measure differential pressure and verify that it is within manufacturer's specified range.
2. Perform temperature tests after flows have been verified.

E. For systems without pressure-independent valves or flow-measuring devices at terminals:

1. Measure and balance coils by either coil pressure drop or temperature method.
2. If balanced by coil pressure drop, perform temperature tests after flows have been verified.

F. Verify final system conditions as follows:

1. Re-measure and confirm that total water flow is within design.
2. Re-measure final pumps' operating data, TDH, volts, amps, and static profile.
3. Mark final settings.

G. Verify that memory stops have been set.

3.8 PROCEDURES FOR VARIABLE-FLOW HYDRONIC SYSTEMS

A. Balance systems with automatic two- and three-way control valves by setting systems at maximum flow through heat-exchange terminals, and proceed as specified above for hydronic systems.

B. Adjust the variable-flow hydronic system as follows:

1. Verify that the differential-pressure sensor is located as indicated.
2. Determine whether there is diversity in the system.

C. For systems with no diversity:

1. Adjust pumps to deliver total design gpm.

a. Measure total water flow.

1) Position valves for full flow through coils.
2) Measure flow by main flow meter, if installed.
3) If main flow meter is not installed, determine flow by pump TDH or exchanger pressure drop.

b. Measure pump TDH as follows:

1) Measure discharge pressure directly at the pump outlet flange or in discharge pipe prior to any valves.
2) Measure inlet pressure directly at the pump inlet flange or in suction pipe prior to any valves or strainers.
3) Convert pressure to head and correct for differences in gage heights.
4) Verify pump impeller size by measuring the TDH with the discharge valve closed. Note the point on manufacturer's pump curve at zero flow and verify that the pump has the intended impeller size.
5) With valves open, read pump TDH. Adjust pump discharge valve until design water flow is achieved.

c. Monitor motor performance during procedures and do not operate motor in an overloaded condition.

2. Adjust flow-measuring devices installed in mains and branches to design water flows.

a. Measure flow in main and branch pipes.
b. Adjust main and branch balance valves for design flow.
c. Re-measure each main and branch after all have been adjusted.

3. Adjust flow-measuring devices installed at terminals for each space to design water flows.

a. Measure flow at terminals.
b. Adjust each terminal to design flow.

c. Re-measure each terminal after it is adjusted.
d. Position control valves to bypass the coil and adjust the bypass valve to maintain design flow.
e. Perform temperature tests after flows have been balanced.

4. For systems with pressure-independent valves at terminals:

a. Measure differential pressure and verify that it is within manufacturer's specified range.
b. Perform temperature tests after flows have been verified.

5. For systems without pressure-independent valves or flow-measuring devices at terminals:

a. Measure and balance coils by either coil pressure drop or temperature method.
b. If balanced by coil pressure drop, perform temperature tests after flows have been verified.

6. Prior to verifying final system conditions, determine the system differential-pressure set point.
7. If the pump discharge valve was used to set total system flow with variable-frequency controller at 60 Hz, at completion open discharge valve 100 percent and allow variable-frequency controller to control system differential-pressure set point. Record pump data under both conditions.
8. Mark final settings and verify that all memory stops have been set.
9. Verify final system conditions as follows:

a. Re-measure and confirm that total water flow is within design.
b. Re-measure final pumps' operating data, TDH, volts, amps, and static profile.
c. Mark final settings.

10. Verify that memory stops have been set.

3.9 PROCEDURES FOR STEAM SYSTEMS

A. Measure and record upstream and downstream pressure of each piece of equipment.

B. Measure and record upstream and downstream steam pressure of pressure-reducing valves.

C. Check settings and operation of automatic temperature-control valves, self-contained control valves, and pressure-reducing valves. Record final settings.

D. Check settings and operation of each safety valve. Record settings.

E. Verify the operation of each steam trap.

3.10 PROCEDURES FOR HEAT EXCHANGERS

A. Adjust water flow to within specified tolerances.

B. Measure inlet and outlet water temperatures.

C. Measure inlet steam pressure.

D. Check settings and operation of safety and relief valves. Record settings.

3.11 PROCEDURES FOR MOTORS

A. Motors 1/2 HP and Larger: Test at final balanced conditions and record the following data:

1. Manufacturer's name, model number, and serial number.
2. Motor horsepower rating.
3. Motor rpm.
4. Phase and hertz.
5. Nameplate and measured voltage, each phase.
6. Nameplate and measured amperage, each phase.
7. Starter size and thermal-protection-element rating.
8. Service factor and frame size.

B. Motors Driven by Variable-Frequency Controllers: Test manual bypass of controller to prove proper operation.

3.12 PROCEDURES FOR HEAT-TRANSFER COILS

A. Measure, adjust, and record the following data for each water coil:

1. Entering- and leaving-water temperature.
2. Water flow rate.
3. Water pressure drop for major (more than 20 gpm) equipment coils, excluding unitary equipment such as reheat coils, unit heaters, and fan-coil units.
4. Dry-bulb temperature of entering and leaving air.
5. Wet-bulb temperature of entering and leaving air for cooling coils.
6. Airflow.

B. Measure, adjust, and record the following data for each electric heating coil:

1. Nameplate data.
2. Airflow.
3. Entering- and leaving-air temperature at full load.
4. Voltage and amperage input of each phase at full load.
5. Calculated kilowatt at full load.
6. Fuse or circuit-breaker rating for overload protection.

C. Measure, adjust, and record the following data for each steam coil:

1. Dry-bulb temperature of entering and leaving air.
2. Airflow.
3. Inlet steam pressure.

D. Measure, adjust, and record the following data for each refrigerant coil:

1. Dry-bulb temperature of entering and leaving air.

2. Wet-bulb temperature of entering and leaving air.
3. Airflow.

3.13 DUCT LEAKAGE TESTS

A. Witness the duct pressure testing performed by Installer.

B. Verify that proper test methods are used and that leakage rates are within specified tolerances.

C. Report deficiencies observed.

3.14 CONTROLS VERIFICATION

A. In conjunction with system balancing, perform the following:

1. Verify temperature control system is operating within the design limitations.
2. Confirm that the sequences of operation are in compliance with Contract Documents.
3. Verify that controllers are calibrated and function as intended.
4. Verify that controller set points are as indicated.
5. Verify the operation of lockout or interlock systems.
6. Verify the operation of valve and damper actuators.
7. Verify that controlled devices are properly installed and connected to correct controller.
8. Verify that controlled devices travel freely and are in position indicated by controller: open, closed, or modulating.
9. Verify location and installation of sensors to ensure that they sense only intended temperature, humidity, or pressure.

B. Reporting: Include a summary of verifications performed, remaining deficiencies, and variations from indicated conditions.

3.15 PROCEDURES FOR TESTING, ADJUSTING, AND BALANCING EXISTING SYSTEMS

A. Perform a preconstruction inspection of existing equipment that is to remain and be reused.

1. Measure and record the operating speed, airflow, and static pressure of each fan.
2. Measure motor voltage and amperage. Compare the values to motor nameplate information.
3. Check the condition of filters.
4. Check the condition of coils.
5. Check the operation of the drain pan and condensate-drain trap.
6. Check bearings and other lubricated parts for proper lubrication.
7. Report on the operating condition of the equipment and the results of the measurements taken. Report deficiencies.

B. Before performing testing and balancing of existing systems, inspect existing equipment that is to remain and be reused to verify that existing equipment has been cleaned and refurbished. Verify the following:

1. New filters are installed.

2. Coils are clean, and fins combed.
3. Drain pans are clean.
4. Fans are clean.
5. Bearings and other parts are properly lubricated.
6. Deficiencies noted in the preconstruction report are corrected.

C. Perform testing and balancing of existing systems to the extent that existing systems are affected by the renovation work.

1. Compare the indicated airflow of the renovated work to the measured fan airflows and determine the new fan speed and the face velocity of filters and coils.
2. Verify that the indicated airflows of the renovated work result in filter and coil face velocities and fan speeds that are within the acceptable limits defined by equipment manufacturer.
3. If calculations increase or decrease the airflow rates and water flow rates by more than 5 percent, make equipment adjustments to achieve the calculated rates. If increase or decrease is 5 percent or less, equipment adjustments are not required.
4. Balance each air outlet.

3.16 TOLERANCES

A. Set HVAC system's airflow rates and water flow rates within the following tolerances:

1. Supply, Return, and Exhaust Fans and Equipment with Fans: Plus or minus 10 percent.
2. Air Outlets and Inlets: Plus or minus 10 percent.
3. Heating-Water Flow Rate: Plus or minus 10 percent.
4. Cooling-Water Flow Rate: Plus or minus 10 percent.

B. Maintaining pressure relationships as designed shall have priority over the tolerances specified above.

3.17 PROGRESS REPORTING

A. Initial Construction-Phase Report: Based on examination of the Contract Documents as specified in "Examination" Article, prepare a report on the adequacy of design for systems balancing devices. Recommend changes and additions to systems balancing devices to facilitate proper performance measuring and balancing. Recommend changes and additions to HVAC systems and general construction to allow access for performance measuring and balancing devices.

3.18 FINAL REPORT

A. General: Prepare a certified written report; tabulate and divide the report into separate sections for tested systems and balanced systems.

1. Include a certification sheet at the front of the report's binder, signed and sealed by the certified testing and balancing engineer.
2. Include a list of instruments used for procedures, along with proof of calibration.

3. Certify validity and accuracy of field data.

B. Final Report Contents: In addition to certified field-report data, include the following:

1. Pump curves.
2. Fan curves.
3. Manufacturers' test data.
4. Field test reports prepared by system and equipment installers.
5. Other information relative to equipment performance; do not include Shop Drawings and Product Data.

C. General Report Data: In addition to form titles and entries, include the following data:

1. Title page.
2. Name and address of the TAB specialist.
3. Project name.
4. Project location.
5. Engineer's name and address.
6. Contractor's name and address.
7. Report date.
8. Signature of TAB supervisor who certifies the report.
9. Table of Contents with the total number of pages defined for each section of the report. Number each page in the report.
10. Summary of contents including the following:

    a. Indicated versus final performance.
    b. Notable characteristics of systems.
    c. Description of system operation sequence if it varies from the Contract Documents.

11. Nomenclature sheets for each item of equipment.
12. Data for terminal units, including manufacturer's name, type, size, and fittings.
13. Notes to explain why certain final data in the body of reports vary from indicated values.
14. Test conditions for fans and pump performance forms including the following:

    a. Settings for outdoor-, return-, and exhaust-air dampers.
    b. Conditions of filters.
    c. Cooling coil, wet- and dry-bulb conditions.
    d. Face and bypass damper settings at coils.
    e. Fan drive settings including settings and percentage of maximum pitch diameter.
    f. Inlet vane settings for variable-air-volume systems.
    g. Settings for supply-air, static-pressure controller.
    h. Other system operating conditions that affect performance.

D. System Diagrams: Include schematic layouts of air and hydronic distribution systems. Present each system with single-line diagram and include the following:

1. Quantities of outdoor, supply, return, and exhaust airflows.
2. Water and steam flow rates.
3. Duct, outlet, and inlet sizes.
4. Pipe and valve sizes and locations.

5. Terminal units.
6. Balancing stations.
7. Position of balancing devices.

E. Air-Handling-Unit Test Reports: For air-handling units with coils, include the following:

1. Unit Data:

a. Unit identification.
b. Location.
c. Make and type.
d. Model number and unit size.
e. Manufacturer's serial number.
f. Unit arrangement and class.
g. Discharge arrangement.
h. Sheave make, size in inches, and bore.
i. Center-to-center dimensions of sheave and amount of adjustments in inches.
j. Number, make, and size of belts.
k. Number, type, and size of filters.

2. Motor Data:

a. Motor make, and frame type and size.
b. Horsepower and rpm.
c. Volts, phase, and hertz.
d. Full-load amperage and service factor.
e. Sheave make, size in inches, and bore.
f. Center-to-center dimensions of sheave and amount of adjustments in inches.

3. Test Data (Indicated and Actual Values):

a. Total airflow rate in cfm.
b. Total system static pressure in inches wg.
c. Fan rpm.
d. Discharge static pressure in inches wg.
e. Filter static-pressure differential in inches wg.
f. Preheat-coil static-pressure differential in inches wg.
g. Cooling-coil static-pressure differential in inches wg.
h. Heating-coil static-pressure differential in inches wg.
i. Outdoor airflow in cfm.
j. Return airflow in cfm.
k. Outdoor-air damper position.
l. Return-air damper position.
m. Vortex damper position.

F. Apparatus-Coil Test Reports:

1. Coil Data:

a. System identification.
b. Location.

c. Coil type.
d. Number of rows.
e. Fin spacing in fins per inch o.c.
f. Make and model number.
g. Face area in sq. ft..
h. Tube size in NPS.
i. Tube and fin materials.
j. Circuiting arrangement.

2. Test Data (Indicated and Actual Values):

a. Airflow rate in cfm.
b. Average face velocity in fpm.
c. Air pressure drop in inches wg.
d. Outdoor-air, wet- and dry-bulb temperatures in deg F.
e. Return-air, wet- and dry-bulb temperatures in deg F.
f. Entering-air, wet- and dry-bulb temperatures in deg F.
g. Leaving-air, wet- and dry-bulb temperatures in deg F.
h. Water flow rate in gpm.
i. Water pressure differential in feet of head or psig.
j. Entering-water temperature in deg F.
k. Leaving-water temperature in deg F.
l. Refrigerant expansion valve and refrigerant types.
m. Refrigerant suction pressure in psig.
n. Refrigerant suction temperature in deg F.
o. Inlet steam pressure in psig.

G. Fan Test Reports: For supply, return, and exhaust fans, include the following:

1. Fan Data:

a. System identification.
b. Location.
c. Make and type.
d. Model number and size.
e. Manufacturer's serial number.
f. Arrangement and class.
g. Sheave make, size in inches, and bore.
h. Center-to-center dimensions of sheave and amount of adjustments in inches.

2. Motor Data:

a. Motor make, and frame type and size.
b. Horsepower and rpm.
c. Volts, phase, and hertz.
d. Full-load amperage and service factor.
e. Sheave make, size in inches, and bore.
f. Center-to-center dimensions of sheave, and amount of adjustments in inches.
g. Number, make, and size of belts.

3. Test Data (Indicated and Actual Values):

a. Total airflow rate in cfm.
b. Total system static pressure in inches wg.
c. Fan rpm.
d. Discharge static pressure in inches wg.
e. Suction static pressure in inches wg.

H. Round, Flat-Oval, and Rectangular Duct Traverse Reports: Include a diagram with a grid representing the duct cross-section and record the following:

1. Report Data:

a. System and air-handling-unit number.
b. Location and zone.
c. Traverse air temperature in deg F.
d. Duct static pressure in inches wg.
e. Duct size in inches.
f. Duct area in sq. ft..
g. Indicated airflow rate in cfm.
h. Indicated velocity in fpm.
i. Actual airflow rate in cfm.
j. Actual average velocity in fpm.
k. Barometric pressure in psig.

I. Air-Terminal-Device Reports:

1. Unit Data:

a. System and air-handling unit identification.
b. Location and zone.
c. Apparatus used for test.
d. Area served.
e. Make.
f. Number from system diagram.
g. Type and model number.
h. Size.
i. Effective area in sq. ft..

2. Test Data (Indicated and Actual Values):

a. Airflow rate in cfm.
b. Air velocity in fpm.
c. Preliminary airflow rate as needed in cfm.
d. Preliminary velocity as needed in fpm.
e. Final airflow rate in cfm.
f. Final velocity in fpm.
g. Space temperature in deg F.

J. System-Coil Reports: For reheat coils and water coils of terminal units, include the following:

1. Unit Data:

a. System and air-handling-unit identification.
b. Location and zone.
c. Room or riser served.
d. Coil make and size.
e. Flowmeter type.

2. Test Data (Indicated and Actual Values):

a. Airflow rate in cfm.
b. Entering-water temperature in deg F.
c. Leaving-water temperature in deg F.
d. Water pressure drop in feet of head or psig.
e. Entering-air temperature in deg F.
f. Leaving-air temperature in deg F.

K. Pump Test Reports: Calculate impeller size by plotting the shutoff head on pump curves and include the following:

1. Unit Data:

a. Unit identification.
b. Location.
c. Service.
d. Make and size.
e. Model number and serial number.
f. Water flow rate in gpm.
g. Water pressure differential in feet of head or psig.
h. Required net positive suction head in feet of head or psig.
i. Pump rpm.
j. Impeller diameter in inches.
k. Motor make and frame size.
l. Motor horsepower and rpm.
m. Voltage at each connection.
n. Amperage for each phase.
o. Full-load amperage and service factor.
p. Seal type.

2. Test Data (Indicated and Actual Values):

a. Static head in feet of head or psig.
b. Pump shutoff pressure in feet of head or psig.
c. Actual impeller size in inches.
d. Full-open flow rate in gpm.
e. Full-open pressure in feet of head or psig.
f. Final discharge pressure in feet of head or psig.
g. Final suction pressure in feet of head or psig.
h. Final total pressure in feet of head or psig.
i. Final water flow rate in gpm.
j. Voltage at each connection.
k. Amperage for each phase.

3.19 VERIFICATION OF TAB REPORT

A. Engineer shall randomly select measurements, documented in the final report, to be rechecked. Rechecking shall be limited to either 10 percent of the total measurements recorded or the extent of measurements that can be accomplished in a normal 8-hour business day.

B. If rechecks yield measurements that differ from the measurements documented in the final report by more than the tolerances allowed, the measurements shall be noted as "FAILED."

C. If the number of "FAILED" measurements is greater than 10 percent of the total measurements checked during the final inspection, the testing and balancing shall be considered incomplete and shall be rejected.

D. If TAB work fails, proceed as follows:

1. TAB specialists shall recheck all measurements and make adjustments. Revise the final report and balancing device settings to include all changes; resubmit the final report and request a second final inspection.
2. If the second final inspection also fails, Owner may contract the services of another TAB specialist to complete TAB work according to the Contract Documents and deduct the cost of the services from the original TAB specialist's final payment.

E. Prepare test and inspection reports.

3.20 ADDITIONAL TESTS

A. Within 90 days of completing TAB, perform additional TAB to verify that balanced conditions are being maintained throughout and to correct unusual conditions.

B. Seasonal Periods: If initial TAB procedures were not performed during near-peak summer and winter conditions, perform additional TAB during near-peak summer and winter conditions.

SECTION 230713 - DUCT INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes insulating the following duct services:

1. Indoor, exposed supply and outdoor air.
2. Indoor, exposed exhaust between isolation damper and penetration of building exterior.
3. Outdoor, exposed supply and return.

B. Related Sections:

1. Section 230716 "HVAC Equipment Insulation."
2. Section 230719 "HVAC Piping Insulation."
3. Section 233113 "Metal Ducts" for duct liners.

1.3 COORDINATION

A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."

B. Coordinate clearance requirements with duct Installer for duct insulation application.

C. Before preparing ductwork Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.

1.4 SCHEDULING

A. Schedule insulation application after pressure testing systems. Insulation application may begin on segments that have satisfactory test results.

B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

© 2026 CDM Smith
All Rights Reserved

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory- and field-applied if any).

B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
2. Detail insulation application at elbows, fittings, dampers, specialties and flanges for each type of insulation.
3. Detail application of field-applied jackets.
4. Detail application at linkages of control devices.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified Installer.

B. Material Test Reports: From a qualified testing agency acceptable to authorities having jurisdiction indicating, interpreting, and certifying test results for compliance of insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.

C. Field quality-control reports.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.

B. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products according to ASTM E84, by a testing agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.

1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

© 2026 CDM Smith
All Rights Reserved

PART 2 - PRODUCTS

2.1 INSULATION MATERIALS

A. Comply with requirements in "Duct Insulation Schedule, General," "Indoor Duct and Plenum Insulation Schedule," and "Aboveground, Outdoor Duct and Plenum Insulation Schedule" articles for where insulating materials shall be applied.

B. Products shall not contain asbestos, lead, mercury, or mercury compounds.

C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C871.

D. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.

E. Flexible Elastomeric Insulation: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C534, Type II for sheet materials.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

    a. Aeroflex USA.
    b. Armacell LLC.
    c. K-Flex USA.

F. Mineral-Fiber Board Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C612, Type IA or Type IB. For duct and plenum applications, provide insulation with factory-applied ASJ. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

    a. Johns Manville; a Berkshire Hathaway company.
    b. Knauf Insulation.
    c. Owens Corning.

2.2 LOUVER BLANK-OFF PANELS

A. Insulated, Blank-Off Panels: Laminated panels consisting of an insulating core surfaced on back and front with metal sheets and attached to back of louver.

1. Thickness: 2 inches.
2. Metal Facing Sheets: Aluminum sheet, not less than 0.032-inch nominal thickness.
3. Insulating Core: Rigid, glass-fiber-board insulation or extruded-polystyrene foam.
4. Edge Treatment: Trim perimeter edges of blank-off panels with louver manufacturer's standard channel frames, with corners mitered and with same finish as panels.

5. Seal perimeter joints between panel faces and louver frames with gaskets or sealant.
6. Panel Finish: Same type of finish applied to louvers, but black color.
7. Attach blank-off panels with clips.

2.3 ADHESIVES

A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.

B. Flexible Elastomeric and Polyolefin Adhesive: Comply with MIL-A-24179A, Type II, Class I.

C. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

a. Childers Brand; H. B. Fuller Construction Products.
b. Eagle Bridges - Marathon Industries.
c. Foster Brand; H. B. Fuller Construction Products.
d. Mon-Eco Industries, Inc.
e. Or equal.

D. ASJ Adhesive, and FSK Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.

2.4 MASTICS AND COATINGS

A. Materials shall be compatible with insulation materials, jackets, and substrates.

B. Vapor-Retarder Mastic: Water based; suitable for indoor use on below ambient services.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

a. Childers Brand; H. B. Fuller Construction Products.
b. Foster Brand; H. B. Fuller Construction Products.
c. Knauf Insulation.
d. Vimasco Corporation.
e. Or equal.

C. Water-Vapor Permeance: Comply with ASTM C755, Section 7.2.2, Table 2, for insulation type and service conditions.

1. Service Temperature Range: Minus 20 to plus 180 deg F.
2. Comply with MIL-PRF-19565C, Type II, for permeance requirements.
3. Color: White.

D. Vapor-Retarder Mastic: Solvent based; suitable for indoor use on below ambient services.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

    a. Childers Brand; H. B. Fuller Construction Products.
    b. Eagle Bridges - Marathon Industries.
    c. Foster Brand; H. B. Fuller Construction Products.
    d. Or equal.

E. Water-Vapor Permeance: Comply with ASTM C755, Section 7.2.2, Table 2, for insulation type and service conditions.

1. Service Temperature Range: 0 to 180 deg F.
2. Color: White.

F. Vapor-Retarder Mastic: Solvent based; suitable for outdoor use on below ambient services.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

    a. Childers Brand; H. B. Fuller Construction Products.
    b. Eagle Bridges - Marathon Industries.
    c. Foster Brand; H. B. Fuller Construction Products.
    d. Or equal.

G. Water-Vapor Permeance: Comply with ASTM C755, Section 7.2.2, Table 2, for insulation type and service conditions.

1. Service Temperature Range: Minus 50 to plus 220 deg F.
2. Color: White.

H. Breather Mastic: Water based; suitable for indoor and outdoor use on above ambient services.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

    a. Childers Brand; H. B. Fuller Construction Products.
    b. Eagle Bridges - Marathon Industries.
    c. Foster Brand; H. B. Fuller Construction Products.
    d. Knauf Insulation.
    e. Mon-Eco Industries, Inc.
    f. Vimasco Corporation.
    g. Or equal.

I. Water-Vapor Permeance: ASTM E96, greater than 1.0 perm at manufacturer's recommended dry film thickness.

1. Service Temperature Range: Minus 20 to plus 180 deg F.
2. Color: White.

2.5 SEALANTS

A. FSK and Metal Jacket Flashing Sealants:

1. Materials shall be compatible with insulation materials, jackets, and substrates.
2. Fire- and water-resistant, flexible, elastomeric sealant.
3. Service Temperature Range: Minus 40 to plus 250 deg F.
4. Color: Aluminum.

B. ASJ Flashing Sealants, and Vinyl and PVC Jacket Flashing Sealants:

1. Materials shall be compatible with insulation materials, jackets, and substrates.
2. Fire- and water-resistant, flexible, elastomeric sealant.
3. Service Temperature Range: Minus 40 to plus 250 deg F.
4. Color: White.

2.6 FACTORY-APPLIED JACKETS

A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:

1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C1136, Type I.
2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C1136, Type I.

2.7 FIELD-APPLIED JACKETS

A. Field-applied jackets shall comply with ASTM C921, Type I, unless otherwise indicated.

B. Metal Jacket:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

a. ITW Insulation Systems; Illinois Tool Works, Inc.
b. RPR Products, Inc.

C. Aluminum Jacket: Comply with ASTM B209, Alloy 3003, 3005, 3105, or 5005, Temper H-14.

1. Factory cut and rolled to size.
2. Finish and thickness are indicated in field-applied jacket schedules.
3. Moisture Barrier for Outdoor Applications: 3-mil- thick, heat-bonded polyethylene and kraft paper or 2.5-mil- thick polysurlyn.

© 2026 CDM Smith
All Rights Reserved

2.8 TAPES

A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C1136.

1. Width: 3 inches.
2. Thickness: 11.5 mils.
3. Adhesion: 90 ounces force/inch in width.
4. Elongation: 2 percent.
5. Tensile Strength: 40 lbf/inch in width.
6. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.

B. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.

1. Width: 2 inches.
2. Thickness: 3.7 mils.
3. Adhesion: 100 ounces force/inch in width.
4. Elongation: 5 percent.
5. Tensile Strength: 34 lbf/inch in width.

2.9 SECUREMENTS

A. Insulation Pins and Hangers:

1. Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.106-inch- diameter shank, length to suit depth of insulation indicated.
2. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.106-inch- diameter shank, length to suit depth of insulation indicated with integral 1-1/2-inch galvanized carbon-steel washer.
3. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- thick, aluminum sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.

    a. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in exposed locations.

4. Nonmetal Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch-thick nylon sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.

2.10 CORNER ANGLES

A. PVC Corner Angles: 30 mils thick, minimum 1 by 1 inch, PVC according to ASTM D1784, Class 16354-C. White or color-coded to match adjacent surface.

© 2026 CDM Smith
All Rights Reserved

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.

1. Verify that systems to be insulated have been tested and are free of defects.
2. Verify that surfaces to be insulated are clean and dry.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

3.3 GENERAL INSTALLATION REQUIREMENTS

A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of ducts and fittings.

B. Install insulation materials, vapor barriers or retarders, jackets, and thicknesses required for each item of duct system as specified in insulation system schedules.

C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.

D. Install insulation with longitudinal seams at top and bottom of horizontal runs.

E. Install multiple layers of insulation with longitudinal and end seams staggered.

F. Keep insulation materials dry during application and finishing.

G. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.

H. Install insulation with least number of joints practical.

I. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.

1. Install insulation continuously through hangers and around anchor attachments.
2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.

3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.

J. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.

K. Install insulation with factory-applied jackets as follows:

1. Draw jacket tight and smooth.
2. Cover circumferential joints with 3-inch- wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches o.c.
3. Overlap jacket longitudinal seams at least 1-1/2 inches. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 2 inches o.c.

    a. For below ambient services, apply vapor-barrier mastic over staples.

4. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.
5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to duct flanges and fittings.

L. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.

M. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.

N. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.

3.4 PENETRATIONS

A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.

1. Seal penetrations with flashing sealant.
2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches below top of roof flashing.
4. Seal jacket to roof flashing with flashing sealant.

B. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.

1. Seal penetrations with flashing sealant.
2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches.
4. Seal jacket to wall flashing with flashing sealant.

C. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.

D. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Terminate insulation at fire damper sleeves for fire-rated wall and partition penetrations. Externally insulate damper sleeves to match adjacent insulation and overlap duct insulation at least 2 inches.

1. Comply with requirements in Section 078413 "Penetration Firestopping."

E. Insulation Installation at Floor Penetrations:

1. Duct: For penetrations through fire-rated assemblies, terminate insulation at fire damper sleeves and externally insulate damper sleeve beyond floor to match adjacent duct insulation. Overlap damper sleeve and duct insulation at least 2 inches.
2. Seal penetrations through fire-rated assemblies. Comply with requirements in Section 078413 "Penetration Firestopping."

3.5 INSTALLATION OF MINERAL-FIBER INSULATION

A. Board Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.

1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of duct and plenum surfaces.
2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.
3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:

    a. On duct sides with dimensions 18 inches and smaller, place pins along longitudinal centerline of duct. Space 3 inches maximum from insulation end joints, and 16 inches o.c.
    b. On duct sides with dimensions larger than 18 inches, space pins 16 inches o.c. each way, and 3 inches maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
    c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
    d. Do not overcompress insulation during installation.
    e. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.

4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches from one edge and one end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch outward-clinching staples, 1 inch o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.

    a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
    b. Install vapor stops for ductwork and plenums operating below 50 deg F at 18-foot intervals. Vapor stops shall consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to two times the insulation thickness, but not less than 3 inches.

5. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Groove and score insulation to fit as closely as possible to outside and inside radius of elbows. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
6. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch- wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches o.c.

3.6 FIELD-APPLIED JACKET INSTALLATION

A. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.

1. Draw jacket smooth and tight to surface with 2-inch overlap at seams and joints.
2. Embed glass cloth between two 0.062-inch- thick coats of lagging adhesive.
3. Completely encapsulate insulation with coating, leaving no exposed insulation.

B. Where FSK jackets are indicated, install as follows:

1. Draw jacket material smooth and tight.
2. Install lap or joint strips with same material as jacket.
3. Secure jacket to insulation with manufacturer's recommended adhesive.
4. Install jacket with 1-1/2-inch laps at longitudinal seams and 3-inch- wide joint strips at end joints.
5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.

C. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints; for horizontal applications, install with longitudinal seams along top and bottom of tanks and vessels. Seal with manufacturer's recommended adhesive.

1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.

D. Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches o.c. and at end joints.

3.7 FINISHES

A. Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."

1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.

a. Finish Coat Material: Interior, flat, latex-emulsion size.

B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.

C. Color: Final color as selected by Engineer. Vary first and second coats to allow visual inspection of the completed Work.

D. Do not field paint aluminum or stainless-steel jackets.

3.8 FIELD QUALITY CONTROL

A. Testing Agency: Engagea qualified testing agency to perform tests and inspections.

B. Perform tests and inspections.

C. Tests and Inspections:

1. Inspect ductwork, randomly selected by Engineer, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to one location(s) for each duct system defined in the "Duct Insulation Schedule, General" Article.

D. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements.

3.9 DUCT INSULATION SCHEDULE, GENERAL

A. Plenums and Ducts Requiring Insulation:

1. Indoor, concealed supply and outdoor air.
2. Indoor, exposed supply and outdoor air.
3. Indoor, concealed return located in unconditioned space.
4. Indoor, exposed return located in unconditioned space.
5. Indoor, concealed, Type I, commercial, kitchen hood exhaust.

6. Indoor, exposed, Type I, commercial, kitchen hood exhaust.
7. Indoor, concealed oven and warewash exhaust.
8. Indoor, exposed oven and warewash exhaust.
9. Indoor, concealed exhaust between isolation damper and penetration of building exterior.
10. Indoor, exposed exhaust between isolation damper and penetration of building exterior.
11. Outdoor, concealed supply and return.
12. Outdoor, exposed supply and return.

B. Items Not Insulated:

1. Fibrous-glass ducts.
2. Metal ducts with duct liner of sufficient thickness to comply with energy code and ASHRAE/IESNA 90.1.
3. Factory-insulated flexible ducts.
4. Factory-insulated plenums and casings.
5. Flexible connectors.
6. Vibration-control devices.
7. Factory-insulated access panels and doors.
8. Exposed ductwork located in the area it serves.
9. Return air ductwork located in return air ceiling spaces above the area it serves, except where the return ductwork is installed in ceiling spaces with a roof above.

3.10 INDOOR DUCT AND PLENUM INSULATION SCHEDULE

A. Exposed, rectangular, supply-air duct insulation shall be the following:

1. Mineral-Fiber Board: 2 inches thick and 3-lb/cu. ft. nominal density.

3.11 ABOVEGROUND, OUTDOOR DUCT AND PLENUM INSULATION SCHEDULE

A. Insulation materials and thicknesses are identified below. If more than one material is listed for a duct system, selection from materials listed is Contractor's option.

B. Exposed, rectangular, supply-air duct insulation shall be the following:

1. Mineral-Fiber Board: 2 inches thick and 3-lb/cu. ft. nominal density.

C. Exposed, rectangular, return-air duct insulation shall be the following:

1. Mineral-Fiber Board: 2 inches thick and 3-lb/cu. ft. nominal density.

3.12 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE

A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.

B. Ducts and Plenums, Exposed, up to 48 Inches in Diameter or with Flat Surfaces up to 72 Inches:

1. Aluminum, Smooth: 0.020 inch thick.

SECTION 230719 - HVAC PIPING INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes insulation for HVAC piping systems.

B. Related Sections:

1. Section 230713 "Duct Insulation" for duct insulation.
2. Section 230716 "HVAC Equipment Insulation" for equipment insulation.

1.3 COORDINATION

A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."

B. Coordinate clearance requirements with piping Installer for piping insulation application. Before preparing piping Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.

C. Coordinate installation and testing of heat tracing.

1.4 SCHEDULING

A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.

B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory and field applied if any).

B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
2. Detail attachment and covering of heat tracing inside insulation.
3. Detail insulation application at pipe expansion joints for each type of insulation.
4. Detail insulation application at elbows, fittings, flanges, valves, and specialties for each type of insulation.
5. Detail removable insulation at piping specialties.
6. Detail application of field-applied jackets.
7. Detail application at linkages of control devices.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified Installer.

B. Material Test Reports: From a qualified testing agency acceptable to authorities having jurisdiction indicating, interpreting, and certifying test results for compliance of insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.

C. Field quality-control reports.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.

B. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products in accordance with ASTM E84, by a testing agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.

1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

© 2026 CDM Smith
All Rights Reserved

PART 2 - PRODUCTS

2.1 INSULATION MATERIALS

A. Comply with requirements in "Piping Insulation Schedule, General," "Indoor Piping Insulation Schedule," "Outdoor, Aboveground Piping Insulation Schedule," and "Outdoor, Underground Piping Insulation Schedule" articles for where insulating materials shall be applied.

B. Products shall not contain asbestos, lead, mercury, or mercury compounds.

C. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.

D. Mineral-Fiber, Preformed Pipe: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C547.

A. Mineral-Fiber, Preformed Pipe: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C547.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

a. Johns Manville; a Berkshire Hathaway company.
b. Knauf Insulation.
c. Owens Corning.
d. Or equal.

2. Preformed Pipe Insulation: Type I, Grade A with factory-applied ASJ-SSL.
3. 850 deg F.
4. Factory fabricate shapes in accordance with ASTM C450 and ASTM C585.
5. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

2.2 INSULATING CEMENTS

A. Mineral-Fiber Insulating Cement: Comply with ASTM C195.

B. Mineral-Fiber, Hydraulic-Setting Insulating and Finishing Cement: Comply with ASTM C449.

2.3 ADHESIVES

A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.

B. Flexible Elastomeric and Polyolefin Adhesive: Solvent-based adhesive.

1. Flame-spread index shall be 25 or less and smoke-developed index shall be 50 or less as tested in accordance with ASTM E84.
2. Wet Flash Point: Below 0 deg F.

3. Service Temperature Range: 40 to 200 deg F.
4. Color: Black.

C. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.

D. ASJ Adhesive and FSK and PVDC Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A, for bonding insulation jacket lap seams and joints.

E. PVC Jacket Adhesive: Compatible with PVC jacket.

2.4 MASTICS AND COATINGS

A. Materials shall be compatible with insulation materials, jackets, and substrates.

B. Vapor-Retarder Mastic, Solvent Based, Indoor Use: Suitable for indoor use on below-ambient services.

1. Water-Vapor Permeance: Comply with ASTM E96/E96M or ASTM F1249.
2. Service Temperature Range: 0 to 180 deg F.
3. Color: White.

C. Vapor-Retarder Mastic, Solvent Based, Outdoor Use: Suitable for outdoor use on below-ambient services.

1. Water-Vapor Permeance: Comply with ASTM E96/E96M or ASTM F1249.
2. Service Temperature Range: Minus 50 to plus 220 deg F.
3. Color: White.

D. Breather Mastic: Water based; suitable for indoor and outdoor use on above-ambient services.

1. Water-Vapor Permeance: ASTM E96/E96M, greater than 1.0 perm at manufacturer's recommended dry film thickness.
2. Service Temperature Range: 0 to plus 180 deg F.
3. Color: White.

2.5 SEALANTS

A. Materials shall be as recommended by the insulation manufacturer and shall be compatible with insulation materials, jackets, and substrates.

B. Joint Sealants:

1. Permanently flexible, elastomeric sealant.

a. Service Temperature Range: Minus 150 to plus 250 deg F.
b. Color: White or gray.

C. ASJ Flashing Sealants and PVDC, and PVC Jacket Flashing Sealants:

1. Fire- and water-resistant, flexible, elastomeric sealant.

2. Service Temperature Range: Minus 40 to plus 250 deg F.
3. Color: White.

D. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:

1. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C1136, Type I.

2.6 FIELD-APPLIED JACKETS

A. Field-applied jackets shall comply with ASTM C1136, Type I, unless otherwise indicated.

B. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.

1. Adhesive: As recommended by jacket material manufacturer.
2. Color: White.
3. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.

a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, mechanical joints, and P-trap and supply covers for lavatories.

2.7 TAPES

A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C1136.

1. Width: 3 inches.
2. Thickness: 11.5 mils.
3. Adhesion: 90 ounces force/inch in width.
4. Elongation: 2 percent.
5. Tensile Strength: 40 lbf/inch in width.
6. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.

B. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive; suitable for indoor and outdoor applications.

1. Width: 2 inches.
2. Thickness: 6 mils.
3. Adhesion: 64 ounces force/inch in width.
4. Elongation: 500 percent.
5. Tensile Strength: 18 lbf/inch in width.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.

1. Verify that systems to be insulated have been tested and are free of defects.
2. Verify that surfaces to be insulated are clean and dry.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

B. Clean and prepare surfaces to be insulated. Before insulating, apply a corrosion coating to insulated surfaces as follows:

1. Stainless Steel: Coat 300 series stainless steel with an epoxy primer 5 mils thick and an epoxy finish 5 mils thick if operating in a temperature range between 140 and 300 deg F. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
2. Carbon Steel: Coat carbon steel operating at a service temperature of between 32 and 300 deg F with an epoxy coating. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.

C. Coordinate insulation installation with the tradesman installing heat tracing. Comply with requirements for heat tracing that apply to insulation.

D. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless steel surfaces, use demineralized water.

3.3 GENERAL INSTALLATION REQUIREMENTS

A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of piping including fittings, valves, and specialties.

B. Install insulation materials, forms, vapor barriers or retarders, jackets, and of thicknesses required for each item of pipe system as specified in insulation system schedules.

C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.

D. Install insulation with longitudinal seams at top and bottom of horizontal runs.

E. Install multiple layers of insulation with longitudinal and end seams staggered.

F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.

G. Keep insulation materials dry during storage, application, and finishing. Replace insulation materials that get wet.

H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.

I. Install insulation with least number of joints practical.

J. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.

1. Install insulation continuously through hangers and around anchor attachments.
2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends attached to structure with vapor-barrier mastic.
3. Install insert materials and insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.

K. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.

L. Install insulation with factory-applied jackets as follows:

1. Draw jacket tight and smooth.
2. Cover circumferential joints with 3-inch- wide strips, of same material as insulation jacket. Secure strips with adhesive and outward-clinching staples along both edges of strip, spaced 4 inches o.c.
3. Overlap jacket longitudinal seams at least 1-1/2 inches. Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward-clinching staples along edge at 2 inches o.c.

    a. For below-ambient services, apply vapor-barrier mastic over staples.

4. Cover joints and seams with tape, in accordance with insulation material manufacturer's written instructions, to maintain vapor seal.
5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to pipe flanges and fittings.

M. Cut insulation in a manner to avoid compressing insulation more than 25 percent of its nominal thickness.

N. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.

O. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inchesbeyond damaged areas. Adhere, staple, and seal patches in similar fashion to butt joints.

P. For above-ambient services, do not install insulation to the following:

1. Vibration-control devices.
2. Testing agency labels and stamps.
3. Nameplates and data plates.

3.4 PENETRATIONS

A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.

1. Seal penetrations with flashing sealant.
2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches below top of roof flashing.
4. Seal jacket to roof flashing with flashing sealant.

B. Insulation Installation at Underground Exterior Wall Penetrations: Terminate insulation flush with sleeve seal. Seal terminations with flashing sealant.

C. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.

1. Seal penetrations with flashing sealant.
2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches.
4. Seal jacket to wall flashing with flashing sealant.

D. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.

E. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions.

1. Comply with requirements in Section 078413 "Penetration Firestopping" for firestopping and fire-resistive joint sealers.

F. Insulation Installation at Floor Penetrations:

1. Pipe: Install insulation continuously through floor penetrations.
2. Seal penetrations through fire-rated assemblies. Comply with requirements in Section 078413 "Penetration Firestopping."

3.5 GENERAL PIPE INSULATION INSTALLATION

A. Requirements in this article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.

B. Insulation Installation on Fittings, Valves, Strainers, Flanges, Mechanical Couplings, and Unions:

1. Install insulation over fittings, valves, strainers, flanges, mechanical couplings, unions, and other specialties with continuous thermal and vapor-retarder integrity unless otherwise indicated.
2. Insulate pipe elbows using preformed fitting insulation made from same material and density as that of adjacent pipe insulation. Each piece shall be butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.
3. Insulate tee fittings with preformed fitting insulation of same material and thickness as that used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
4. Insulate valves using preformed fitting insulation of same material, density, and thickness as that used for adjacent pipe. Overlap adjoining pipe insulation by not less than 2 times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.
5. Insulate strainers using preformed fitting insulation of same material, density, and thickness as that used for adjacent pipe. Overlap adjoining pipe insulation by not less than 2 times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below-ambient services, provide a design that maintains vapor barrier.
6. Insulate flanges, mechanical couplings, and unions using a section of oversized preformed pipe insulation to fit. Overlap adjoining pipe insulation by not less than 2 times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Stencil or label the outside insulation jacket of each union with the word “union” matching size and color of pipe labels.
7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below-ambient services and a breather mastic for above-ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.
8. For services not specified to receive a field-applied jacket, except for flexible elastomeric and polyolefin, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing, using PVC tape.

C. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.

D. Install removable insulation covers. Installation shall conform to the following:

1. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as that of adjoining pipe insulation.
2. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union at least 2 times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless steel or aluminum bands. Select band material compatible with insulation and jacket.
3. Construct removable valve insulation covers in same manner as for flanges, except divide the two-part section on the vertical center line of valve body.
4. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least 2 inches over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.
5. Unless a PVC jacket is indicated in field-applied jacket schedules, finish exposed surfaces with a metal jacket.

3.6 INSTALLATION OF MINERAL-FIBER INSULATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of preformed pipe insulation to pipe with wire or bands, and tighten bands without deforming insulation materials.
2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with factory-applied jackets on above-ambient surfaces, secure laps with outward-clinched staples at 6 inches o.c.
4. For insulation with factory-applied jackets on below-ambient surfaces, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive, as recommended by insulation material manufacturer, and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with mineral-fiber blanket insulation.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as that of straight segments of pipe insulation when available.
2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed sections of same material as that of straight segments of pipe insulation when available.
2. When preformed sections are not available, install mitered sections of pipe insulation to valve body.
3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
4. Install insulation to flanges as specified for flange insulation application.

3.7 FIELD-APPLIED JACKET INSTALLATION

A. Where PVC jackets are indicated and for horizontal applications, install with 1-inch overlap at longitudinal seams and end joints. Seal with manufacturer's recommended adhesive.

1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.

3.8 FINISHES

A. Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."

1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.

a. Finish Coat Material: Interior, flat, latex-emulsion size.

B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.

C. Color: Final color as selected by Engineer. Vary first and second coats to allow visual inspection of the completed Work.

D. Do not field paint aluminum or stainless steel jackets.

3.9 FIELD QUALITY CONTROL

A. Owner will engage a qualified testing agency to perform tests and inspections.

B. Engage a qualified testing agency to perform tests and inspections.

C. Manufacturer’s Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

D. Perform tests and inspections.

E. Tests and Inspections: Inspect pipe, fittings, strainers, and valves, randomly selected by Engineer, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to three locations of straight pipe, three locations of threaded fittings, three locations of welded fittings, two locations of threaded strainers, two locations of welded strainers, three locations of threaded valves, and three locations of flanged valves for each pipe service defined in the "Piping Insulation Schedule, General" Article.

F. All insulation applications will be considered defective if they do not pass tests and inspections.

G. Prepare test and inspection reports.

3.10 PIPING INSULATION SCHEDULE, GENERAL

A. Insulation conductivity and thickness per pipe size shall comply with schedules in this Section or with requirements of authorities having jurisdiction, whichever is more stringent.

B. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor's option.

C. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following:

1. Underground piping.
2. Chrome-plated pipes and fittings unless there is a potential for personnel injury.

3.11 INDOOR PIPING INSULATION SCHEDULE

A. Chilled Water and Brine, Above 40 Deg F:

1. NPS 12 and Smaller: Insulation shall be the following:

a. Mineral-Fiber, Preformed Pipe Insulation, Type I: 2 inches thick.

B. Heating-Hot-Water Supply and Return, 200 Deg F and Below:

1. NPS 12 and Smaller: Insulation shall be the following:

a. Mineral-Fiber, Preformed Pipe, Type I: 2 inches thick.

C. Steam and Steam Condensate, Vents, Drains, and Safety Relief Vents 350 Deg F and Below:

1. NPS 3/4 and Smaller: Insulation shall be the following:

a. Mineral-Fiber, Preformed Pipe Insulation, Type I: 2 inches thick.

2. NPS 1 and Larger: Insulation shall be the following:

a. Mineral-Fiber, Preformed Pipe Insulation, Type I: 3 inches thick.

3.12 OUTDOOR, ABOVEGROUND PIPING INSULATION SCHEDULE

A. Heating-Hot-Water Supply and Return, 200 Deg F and Below:

1. All Pipe Sizes: Insulation shall be the following:

a. Mineral-Fiber, Preformed Pipe Insulation, Type I: 2 inches thick.

3.13 INDOOR, FIELD-APPLIED JACKET SCHEDULE

A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.

3.14 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE

A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.

B. Piping, Exposed:

1. PVC: 20 mils thick.

SECTION 230923 - DIRECT DIGITAL CONTROL (DDC) SYSTEM FOR HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. DDC system for monitoring and controlling of HVAC systems.

B. Related Requirements:

1. Communications Cabling:

a. Section 260523 "Control-Voltage Electrical Power Cables" for balanced twisted pair communications cable.
b. Section 271513 "Communications Copper Horizontal Cabling" for balanced twisted pair communications cable.
c. Section 271523 "Communications Optical Fiber Horizontal Cabling" for optical fiber communications cable.

2. Raceways:

a. Section 260533 "Raceways and Boxes for Electrical Systems" for raceways for low-voltage control cable.
b. Section 270528 "Pathways for Communications Systems" for raceways for balanced twisted pair cabling and optical fiber cable.

3. Section 260553 "Identification for Electrical Systems" for identification requirements for electrical components.
4. Section 270553 "Identification for Communications Systems" for identification requirements for communications components.

1.3 DEFINITIONS

A. Algorithm: A logical procedure for solving a recurrent mathematical problem. A prescribed set of well-defined rules or processes for solving a problem in a finite number of steps.

B. Analog: A continuously varying signal value, such as current, flow, pressure, or temperature.

C. BACnet Specific Definitions:

1. BACnet: Building Automation Control Network Protocol, ASHRAE 135. A communications protocol allowing devices to communicate data over and services over a network.
2. BACnet Interoperability Building Blocks (BIBBs): BIBB defines a small portion of BACnet functionality that is needed to perform a particular task. BIBBs are combined to build the BACnet functional requirements for a device.
3. BACnet/IP: Defines and allows using a reserved UDP socket to transmit BACnet messages over IP networks. A BACnet/IP network is a collection of one or more IP subnetworks that share the same BACnet network number.
4. BACnet Testing Laboratories (BTL): Organization responsible for testing products for compliance with ASHRAE 135, operated under direction of BACnet International.
5. PICS (Protocol Implementation Conformance Statement): Written document that identifies the particular options specified by BACnet that are implemented in a device.

D. Binary: Two-state signal where a high signal level represents ON" or "OPEN" condition and a low signal level represents "OFF" or "CLOSED" condition. "Digital" is sometimes used interchangeably with "Binary" to indicate a two-state signal.

E. Controller: Generic term for any standalone, microprocessor-based, digital controller residing on a network, used for local or global control. Three types of controllers are indicated: Network Controller, Programmable Application Controller, and Application-Specific Controller.

F. Control System Integrator: An entity that assists in expansion of existing enterprise system and support of additional operator interfaces to I/O being added to existing enterprise system.

G. COV: Changes of value.

H. DDC System Provider: Authorized representative of, and trained by, DDC system manufacturer and responsible for execution of DDC system Work indicated.

I. Distributed Control: Processing of system data is decentralized and control decisions are made at subsystem level. System operational programs and information are provided to remote subsystems and status is reported back. On loss of communication, subsystems shall be capable of operating in a standalone mode using the last best available data.

J. DOCSIS: Data-Over Cable Service Interface Specifications.

K. Gateway: Bidirectional protocol translator that connects control systems that use different communication protocols.

L. HLC: Heavy load conditions.

M. I/O: System through which information is received and transmitted. I/O refers to analog input (AI), binary input (BI), analog output (AO) and binary output (BO). Analog signals are continuous and represent control influences such as flow, level, moisture, pressure, and temperature. Binary signals convert electronic signals to digital pulses (values) and generally represent two-position operating and alarm status. "Digital," (DI and (DO), is sometimes used interchangeably with "Binary," (BI) and (BO), respectively.

N. I/P: Current to pneumatic.

O. LAN: Local area network.

P. LNS: LonWorks Network Services.

Q. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.

R. Mobile Device: A data-enabled phone or tablet computer capable of connecting to a cellular data network and running a native control application or accessing a web interface.

S. Modbus TCP/IP: An open protocol for exchange of process data.

T. MS/TP: Master-slave/token-passing, IEE 8802-3. Datalink protocol LAN option that uses twisted-pair wire for low-speed communication.

U. MTBF: Mean time between failures.

V. Network Controller: Digital controller, which supports a family of programmable application controllers and application-specific controllers, that communicates on peer-to-peer network for transmission of global data.

W. Network Repeater: Device that receives data packet from one network and rebroadcasts it to another network. No routing information is added to protocol.

X. Peer to Peer: Networking architecture that treats all network stations as equal partners.

Y. POT: Portable operator's terminal.

Z. PUE: Performance usage effectiveness.

AA. RAM: Random access memory.

BB. RF: Radio frequency.

CC. Router: Device connecting two or more networks at network layer.

DD. Server: Computer used to maintain system configuration, historical and programming database.

EE. TCP/IP: Transport control protocol/Internet protocol.

FF. UPS: Uninterruptible power supply.

GG. USB: Universal Serial Bus.

HH. User Datagram Protocol (UDP): This protocol assumes that the IP is used as the underlying protocol.

II. VAV: Variable air volume.

JJ. WLED: White light emitting diode.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.5 ACTION SUBMITTALS

A. Multiple Submissions:

1. If multiple submissions are required to execute work within schedule, first submit a coordinated schedule clearly defining intent of multiple submissions. Include a proposed date of each submission with a detailed description of submittal content to be included in each submission.
2. Clearly identify each submittal requirement indicated and in which submission the information will be provided.
3. Include an updated schedule in each subsequent submission with changes highlighted to easily track the changes made to previous submitted schedule.

B. Product Data: For each type of product include the following:

1. Construction details, material descriptions, dimensions of individual components and profiles, and finishes.
2. Operating characteristics, electrical characteristics, and furnished accessories indicating process operating range, accuracy over range, control signal over range, default control signal with loss of power, calibration data specific to each unique application, electrical power requirements, and limitations of ambient operating environment, including temperature and humidity.
3. Product description with complete technical data, performance curves, and product specification sheets.
4. Installation, operation and maintenance instructions including factors effecting performance.
5. Bill of materials of indicating quantity, manufacturer, and extended model number for each unique product.

    a. Workstations.
    b. Gateways.
    c. Protocol analyzers.
    d. DDC controllers.
    e. Enclosures.
    f. Electrical power devices.
    g. UPS units.
    h. Accessories.
    i. Instruments.
    j. Control dampers and actuators.
    k. Control valves and actuators.

6. When manufacturer's product datasheets apply to a product series rather than a specific product model, clearly indicate and highlight only applicable information.
7. Each submitted piece of product literature shall clearly cross reference specification and drawings that submittal is to cover.

C. Software Submittal:

1. Cross-referenced listing of software to be loaded on each operator workstation, server, gateway, and DDC controller.
2. Description and technical data of all software provided, and cross-referenced to products in which software will be installed.
3. Operating system software, operator interface and programming software, color graphic software, DDC controller software, maintenance management software, and third-party software.
4. Include a flow diagram and an outline of each subroutine that indicates each program variable name and units of measure.
5. Listing and description of each engineering equation used with reference source.
6. Listing and description of each constant used in engineering equations and a reference source to prove origin of each constant.
7. Description of operator interface to alphanumeric and graphic programming.
8. Description of each network communication protocol.
9. Description of system database, including all data included in database, database capacity and limitations to expand database.
10. Description of each application program and device drivers to be generated, including specific information on data acquisition and control strategies showing their relationship to system timing, speed, processing burden and system throughout.
11. Controlled Systems: Instrumentation list with element name, type of device, manufacturer, model number, and product data. Include written description of sequence of operation including schematic diagram.

D. Shop Drawings:

1. General Requirements:

    a. Include cover drawing with Project name, location, Owner, Engineer, Contractor and issue date with each Shop Drawings submission.
    b. Include a drawing index sheet listing each drawing number and title that matches information in each title block.
    c. Drawings Size: 11”x17”.

2. Include plans, elevations, sections, and mounting details where applicable.
3. Include details of product assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
4. Detail means of vibration isolation and show attachments to rotating equipment.
5. Plan Drawings indicating the following:

    a. Screened backgrounds of walls, structural grid lines, HVAC equipment, ductwork and piping.
    b. Room names and numbers with coordinated placement to avoid interference with control products indicated.
    c. Each desktop workstation, server, gateway, router, DDC controller, control panel instrument connecting to DDC controller, and damper and valve connecting to DDC controller, if included in Project.
    d. Exact placement of products in rooms, ducts, and piping to reflect proposed installed condition.

e. Network communication cable and raceway routing.
f. Proposed routing of wiring, cabling, conduit, and tubing, coordinated with building services for review before installation.

6. Schematic drawings for each controlled HVAC system indicating the following:

a. I/O points labeled with point names shown. Indicate instrument range, normal operating set points, and alarm set points. Indicate fail position of each damper and valve, if included in Project.
b. I/O listed in table format showing point name, type of device, manufacturer, model number, and cross-reference to product data sheet number.
c. A graphic showing location of control I/O in proper relationship to HVAC system.
d. Wiring diagram with each I/O point having a unique identification and indicating labels for all wiring terminals.
e. Unique identification of each I/O that shall be consistently used between different drawings showing same point.
f. Elementary wiring diagrams of controls for HVAC equipment motor circuits including interlocks, switches, relays and interface to DDC controllers.
g. Narrative sequence of operation.
h. Graphic sequence of operation, showing all inputs and output logical blocks.

7. Control panel drawings indicating the following:

a. Panel dimensions, materials, size, and location of field cable, raceways, and tubing connections.
b. Interior subpanel layout, drawn to scale and showing all internal components, cabling and wiring raceways, nameplates and allocated spare space.
c. Front, rear, and side elevations and nameplate legend.
d. Unique drawing for each panel.

8. DDC system network riser diagram indicating the following:

a. Each device connected to network with unique identification for each.
b. Interconnection of each different network in DDC system.
c. For each network, indicate communication protocol, speed and physical means of interconnecting network devices, such as copper cable type, or optical fiber cable type. Indicate raceway type and size for each.
d. Each network port for connection of an operator workstation or other type of operator interface with unique identification for each.

9. DDC system electrical power riser diagram indicating the following:

a. Each point of connection to field power with requirements (volts/phase//hertz/amperes/connection type) listed for each.
b. Each control power supply including, as applicable, transformers, power-line conditioners, transient voltage suppression and high filter noise units, DC power supplies, and UPS units with unique identification for each.
c. Each product requiring power with requirements (volts/phase//hertz/amperes/connection type) listed for each.
d. Power wiring type and size, race type, and size for each.

10. Monitoring and control signal diagrams indicating the following:

    a. Control signal cable and wiring between controllers and I/O.
    b. Point-to-point schematic wiring diagrams for each product.
    c. Control signal tubing to sensors, switches and transmitters.
    d. Process signal tubing to sensors, switches and transmitters.

11. Color graphics indicating the following:

    a. Itemized list of color graphic displays to be provided.
    b. For each display screen to be provided, a true color copy showing layout of pictures, graphics and data displayed.
    c. Intended operator access between related hierarchical display screens.

E. System Description:

1. Full description of DDC system architecture, network configuration, operator interfaces and peripherals, servers, controller types and applications, gateways, routers and other network devices, and power supplies.
2. Complete listing and description of each report, log and trend for format and timing and events which initiate generation.
3. System and product operation under each potential failure condition including, but not limited to, the following:

    a. Loss of power.
    b. Loss of network communication signal.
    c. Loss of controller signals to inputs and outpoints.
    d. Operator workstation failure.
    e. Server failure.
    f. Gateway failure.
    g. Network failure
    h. Controller failure.
    i. Instrument failure.
    j. Control damper and valve actuator failure.

4. Complete bibliography of documentation and media to be delivered to Owner.
5. Description of testing plans and procedures.
6. Description of Owner training.

1.6 DELEGATED-DESIGN SUBMITTAL

A. For DDC system products and installation indicated as being delegated.

1. Supporting documentation showing DDC system design complies with performance requirements indicated, including calculations and other documentation necessary to prove compliance.
2. Schedule and design calculations for control dampers and actuators.

    a. Flow at Project design and minimum flow conditions.
    b. Face velocity at Project design and minimum airflow conditions.

c. Pressure drop across damper at Project design and minimum airflow conditions.
d. AMCA 500-D damper installation arrangement used to calculate and schedule pressure drop, as applicable to installation.
e. Maximum close-off pressure.
f. Leakage airflow at maximum system pressure differential (fan close-off pressure).
g. Torque required at worst case condition for sizing actuator.
h. Actuator selection indicating torque provided.
i. Actuator signal to control damper (on, close or modulate).
j. Actuator position on loss of power.
k. Actuator position on loss of control signal.

3. Schedule and design calculations for control valves and actuators.

a. Flow at Project design and minimum flow conditions.
b. Pressure-differential drop across valve at Project design flow condition.
c. Maximum system pressure-differential drop (pump close-off pressure) across valve at Project minimum flow condition.
d. Design and minimum control valve coefficient with corresponding valve position.
e. Maximum close-off pressure.
f. Leakage flow at maximum system pressure differential.
g. Torque required at worst case condition for sizing actuator.
h. Actuator selection indicating torque provided.
i. Actuator signal to control damper (on, close or modulate).
j. Actuator position on loss of power.
k. Actuator position on loss of control signal.

4. Schedule and design calculations for selecting flow instruments.

a. Instrument flow range.
b. Project design and minimum flow conditions with corresponding accuracy, control signal to transmitter and output signal for remote control.
c. Extreme points of extended flow range with corresponding accuracy, control signal to transmitter and output signal for remote control.
d. Pressure-differential loss across instrument at Project design flow conditions.
e. Where flow sensors are mated with pressure transmitters, provide information for each instrument separately and as an operating pair.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification Data:

1. Systems Provider Qualification Data:

a. Resume of project manager assigned to Project.
b. Resumes of application engineering staff assigned to Project.
c. Resumes of installation and programming technicians assigned to Project.
d. Resumes of service technicians assigned to Project.
e. Brief description of past project including physical address, floor area, number of floors, building system cooling and heating capacity and building's primary function.

f. Description of past project DDC system, noting similarities to Project scope and complexity indicated.
g. Names of staff assigned to past project that will also be assigned to execute work of this Project.
h. Owner contact information for past project including name, phone number, and e-mail address.
i. Contractor contact information for past project including name, phone number, and e-mail address.
j. Engineer contact information for past project including name, phone number, and e-mail address.

2. Manufacturer's qualification data.
3. Testing agency's qualifications data.

B. Welding certificates.

C. Product Certificates:

1. Data Communications Protocol Certificates: Certifying that each proposed DDC system component complies with ASHRAE 135.

D. Source quality-control reports.

E. Field quality-control reports.

F. Sample Warranty: For manufacturer's warranty.

1.8 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For DDC system to include in emergency, operation and maintenance manuals.

1. Include the following:

a. Project Record Drawings of as-built versions of submittal Shop Drawings provided in electronic PDF format.
b. Testing and commissioning reports and checklists of completed final versions of reports, checklists, and trend logs.
c. As-built versions of submittal Product Data.
d. Names, addresses, e-mail addresses and 24-hour telephone numbers of Installer and service representatives for DDC system and products.
e. Operator's manual with procedures for operating control systems including logging on and off, handling alarms, producing point reports, trending data, overriding computer control and changing set points and variables.
f. Programming manuals with description of programming language and syntax, of statements for algorithms and calculations used, of point database creation and modification, of program creation and modification, and of editor use.
g. Engineering, installation, and maintenance manuals that explain how to:

1) Design and install new points, panels, and other hardware.

2) Perform preventive maintenance and calibration.
3) Debug hardware problems.
4) Repair or replace hardware.

h. Documentation of all programs created using custom programming language including set points, tuning parameters, and object database.
i. Backup copy of graphic files, programs, and database on electronic media such as DVDs.
j. List of recommended spare parts with part numbers and suppliers.
k. Complete original-issue documentation, installation, and maintenance information for furnished third-party hardware including computer equipment and sensors.
l. Complete original-issue copies of furnished software, including operating systems, custom programming language, operator workstation software, and graphics software.
m. Licenses, guarantees, and warranty documents.
n. Recommended preventive maintenance procedures for system components, including schedule of tasks such as inspection, cleaning, and calibration; time between tasks; and task descriptions.
o. Owner training materials.

1.9 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials and parts that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

B. Furnish quantity indicated of matching product(s) in Project inventory for each unique size and type of following:

1. Programmable Application Controller: One.
2. Transformer: One.
3. DC Power Supply: One.

1.10 QUALITY ASSURANCE

A. DDC System Manufacturer Qualifications:

1. Nationally recognized manufacturer of DDC systems and products.
2. DDC systems with similar requirements to those indicated for a continuous period of five years within time of bid.
3. DDC systems and products that have been successfully tested and in use on at least three past projects.
4. Having complete published catalog literature, installation, operation and maintenance manuals for all products intended for use.
5. Having full-time in-house employees for the following:

a. Product research and development.
b. Product and application engineering.
c. Product manufacturing, testing and quality control.

d. Technical support for DDC system installation training, commissioning and troubleshooting of installations.
e. Owner operator training.

B. DDC System Provider Qualifications:

1. Authorized representative of, and trained by, DDC system manufacturer.
2. In-place facility located within 30 miles of Project.
3. Demonstrate experience with installation of DDC system products being installed for period within three consecutive years before time of bid.
4. Demonstrate experience on five projects of similar complexity, scope and value.
5. Each person assigned to Project shall have demonstrated past experience.
6. Staffing resources of competent and experienced full-time employees that are assigned to execute work according to schedule.
7. Service and maintenance staff assigned to support Project during warranty period.
8. Product parts inventory to support on-going DDC system operation for a period of not less than 5 years after Substantial Completion.
9. DDC system manufacturer's backing to take over execution of Work if necessary to comply with requirements indicated. Include Project-specific written letter, signed by manufacturer's corporate officer, if requested.

C. Testing Agency Qualifications: Member company of NETA.

1. Testing Agency's Field Supervisor: Certified by NETA to supervise on-site testing.

D. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
3. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."
4. AWS D1.4/D1.4M, "Structural Welding Code - Reinforcing Steel."

E. Pipe and Pressure-Vessel Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

1.11 WARRANTY

A. Manufacturer's Warranty: Manufacturer and Installer agree to repair or replace products that fail in materials or workmanship within specified warranty period.

1. Failures shall be adjusted, repaired, or replaced at no additional cost or reduction in service to Owner.
2. Include updates or upgrades to software and firmware if necessary to resolve deficiencies.

a. Install updates only after receiving Owner's written authorization.

3. Warranty service shall occur during normal business hours and commence within 24 hours of Owner's warranty service request.

PART 2 - PRODUCTS

2.1 DDC SYSTEM MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

1. Automated Logic Corporation.
2. Honeywell International Inc.
3. Johnson Controls, Inc.
4. Schneider Electric USA, Inc.
5. Trane.

2.2 DDC SYSTEM DESCRIPTION

A. Microprocessor-based monitoring and control including analog/digital conversion and program logic. A control loop or subsystem in which digital and analog information is received and processed by a microprocessor, and digital control signals are generated based on control algorithms and transmitted to field devices to achieve a set of predefined conditions.

1. DDC system shall consist of a high-speed, peer-to-peer network of distributed DDC controllers, operator interfaces, and software.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 WEB ACCESS

A. DDC system shall be Web based.

1. Web-Based Access to DDC System:

a. DDC system software shall be based on server thin-client architecture, designed around open standards of Web technology. DDC system server shall be accessed using a Web browser over DDC system network, using Owner's LAN, and remotely over Internet through Owner's LAN.
b. Intent of thin-client architecture is to provide operators complete access to DDC system via a Web browser. No special software other than a Web browser shall be required to access graphics, point displays, and trends; to configure trends, points, and controllers; and to edit programming.
c. Web access shall be password protected.

2.4 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional to design DDC system to satisfy requirements indicated.

1. System Performance Objectives:

a. DDC system shall manage HVAC systems.
b. DDC system control shall operate HVAC systems to achieve optimum operating costs while using least possible energy and maintaining specified performance.
c. DDC system shall respond to power failures, HVAC equipment failures, and adverse and emergency conditions encountered through connected I/O points.
d. DDC system shall operate while unattended by an operator and through operator interaction.
e. DDC system shall record trends and transaction of events and produce report information such as performance, energy, occupancies, and equipment operation.

B. Surface-Burning Characteristics: Products installed in ducts, equipment, and return-air paths shall comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: 25 or less.
2. Smoke-Developed Index: 50 or less.

C. Network Bandwidth: Design each network of DDC system to include at least 30 percent available spare bandwidth with DDC system operating under normal and heavy load conditions indicated. Calculate bandwidth usage, and apply a safety factor to ensure that requirement is satisfied when subjected to testing under worst case conditions.

D. DDC Data Access:

1. When logged into the system, operator shall be able to also interact with any DDC controller connected to DDC system as required for functional operation of DDC system.
2. System(s) shall be used for application configuration; for archiving, reporting and trending of data; for operator transaction archiving and reporting; for network information management; for alarm annunciation; and for operator interface tasks and controls application management.

E. Environmental Conditions for Controllers, Gateways, and Routers:

1. Products shall operate without performance degradation under ambient environmental temperature, pressure and humidity conditions encountered for installed location.

a. If product alone cannot comply with requirement, install product in a protective enclosure that is isolated and protected from conditions impacting performance. Enclosure shall be internally insulated, electrically heated, cooled and ventilated as required by product and application.

2. Products shall be protected with enclosures satisfying the following minimum requirements unless more stringent requirements are indicated. Products not available with integral enclosures complying with requirements indicated shall be housed in protective secondary enclosures. Installed location shall dictate the following NEMA 250 enclosure requirements:

a. Outdoors: Type 4X.
b. Indoors, Mezzanine Level: Type 1.
c. Indoors, Ground Floor: Type 1.
d. Indoors below Ground Floor: Type 4X.

F. Environmental Conditions for Instruments and Actuators:

1. Instruments and actuators shall operate without performance degradation under the ambient environmental temperature, pressure, humidity, and vibration conditions specified and encountered for installed location.

a. If instruments and actuators alone cannot comply with requirement, install instruments and actuators in protective enclosures that are isolated and protected from conditions impacting performance. Enclosure shall be internally insulated, electrically heated and ventilated as required by instrument and application.

2. Instruments, actuators and accessories shall be protected with enclosures satisfying the following minimum requirements unless more stringent requirements are indicated. Instruments and actuators not available with integral enclosures complying with requirements indicated shall be housed in protective secondary enclosures. Installed location shall dictate the following NEMA 250 enclosure requirements:

a. Outdoors: Type 4X.
b. Indoors, Mezzanine Level: Type 1.
c. Indoors, Ground Floor: Type 1.
d. Indoors below Ground Floor: Type 4X.

2.5 SYSTEM ARCHITECTURE

A. System architecture shall consist of no more than two or three levels of LANs.

1. Level one LAN shall connect network controllers and operator workstations.
2. Level one or Level two LAN shall connect programmable application controllers to other programmable application controllers, and to network controllers.
3. Level two or Level three LAN shall connect application-specific controllers to programmable application controllers and network controllers.
4. Level two or Level three LAN shall connect application-specific controllers to application-specific controllers.

B. DDC system shall consist of dedicated and separated LANs that are not shared with other building systems and tenant data and communication networks.

C. System architecture shall perform modifications without having to remove and replace existing network equipment.

D. Number of LANs and associated communication shall be transparent to operator. All I/O points residing on any LAN shall be capable of global sharing between all system LANs.

E. System design shall eliminate dependence on any single device for system alarm reporting and control execution. Each controller shall operate independently by performing its' own control, alarm management and historical data collection.

© 2026 CDM Smith
All Rights Reserved

2.6 DDC SYSTEM OPERATOR INTERFACES

A. Operator Means of System Access: Operator shall be able to access entire DDC system through any of multiple means, including, but not limited to, the following:

1. Desktop and portable workstation with hardwired connection through LAN port.
2. Remote connection through web access.

B. Access to system, regardless of operator means used, shall be transparent to operator.

C. Network Ports: For hardwired connection of desktop or portable workstation. Network port shall be easily accessible, properly protected, clearly labeled.

D. Portable Workstations:

1. Connect to DDC system Level one LAN through a communications port directly on LAN or through a communications port on a DDC controller.
2. Able to communicate with any device located on any DDC system LAN.
3. Portable workstation shall be able to communicate with any device connected to any system LAN regardless of point of physical connection to system.
4. Monitor, program, schedule, adjust set points, and report capabilities of I/O connected anywhere in system.
5. Have dynamic graphic displays that are identical to desktop workstations.

E. Critical Alarm Reporting:

1. Operator-selected critical alarms shall be sent by DDC system to notify operator of critical alarms that require immediate attention.
2. DDC system shall send alarm notification to multiple recipients that are assigned for each alarm.
3. DDC system shall notify recipients by any or all means, including e-mail, text message and prerecorded phone message to mobile and landline phone numbers.

F. Simultaneous Operator Use: Capable of accommodating up to 10 simultaneous operators that are accessing DDC system through any one of operator interfaces indicated.

2.7 NETWORKS

A. Acceptable networks for connecting workstations, mobile devices, and network controllers include the following:

1. ATA 878.1, ARCNET.
2. IP.
3. IEEE 8802-3, Ethernet.

B. Acceptable networks for connecting programmable application controllers include the following:

1. ATA 878.1, ARCNET.
2. IP.

3. IEEE 8802-3, Ethernet.

C. Acceptable networks for connecting application-specific controllers include the following:

1. ATA 878.1, ARCNET.
2. EIA-485A.
3. IP.
4. IEEE 8802-3, Ethernet.

2.8 NETWORK COMMUNICATION PROTOCOL

A. Network communication protocol(s) used throughout entire DDC system shall be open to Owner and available to other companies for use in making future modifications to DDC system.

B. ASHRAE 135 Protocol:

1. ASHRAE 135 communication protocol shall be sole and native protocol used throughout entire DDC system.
2. DDC system shall not require use of gateways except to integrate HVAC equipment and other building systems and equipment, not required to use ASHRAE 135 communication protocol.
3. If used, gateways shall connect to DDC system using ASHRAE 135 communication protocol and Project object properties and read/write services indicated by interoperability schedule.
4. Operator workstations, controllers and other network devices shall be tested and listed by BACnet Testing Laboratories.

C. Industry Standard Protocols:

1. DDC system shall use any one or a combination of the following industry standard protocols for network communication while complying with other DDC system requirements indicated:

a. ASHRAE 135.
b. CEA-709.1-C.
c. Modbus Application Protocol Specification V1.1b.

2. Operator workstations and network controllers shall communicate through ASHRAE 135 protocol.
3. Portions of DDC system networks using ASHRAE 135 communication protocol shall be an open implementation of network devices complying with ASHRAE 135. Network devices shall be tested and listed by BACnet Testing Laboratories.
4. Gateways shall be used to connect networks and network devices using different protocols.

2.9 PORTABLE WORKSTATIONS

A. Description: A self-contained computer designed to allow for normal use in different locations and conditions.

2.10 SYSTEM SOFTWARE

A. System Software Minimum Requirements:

1. Real-time multitasking and multiuser 32- or 64-bit operating system that allows concurrent multiple operator workstations operating and concurrent execution of multiple real-time programs and custom program development.
2. Operating system shall be capable of operating DOS and Microsoft Windows applications.
3. Database management software shall manage all data on an integrated and non-redundant basis. Additions and deletions to database shall be without detriment to existing data. Include cross linkages so no data required by a program can be deleted by an operator until that data have been deleted from respective programs.
4. Network communications software shall manage and control multiple network communications to provide exchange of global information and execution of global programs.
5. Operator interface software shall include day-to-day operator transaction processing, alarm and report handling, operator privilege level and data segregation control, custom programming, and online data modification capability.
6. Scheduling software shall schedule centrally based time and event, temporary, and exception day programs.

B. Operator Interface Software:

1. Minimize operator training through use of English language prorating and English language point identification.
2. Minimize use of a typewriter-style keyboard through use of a pointing device similar to a mouse.
3. Operator sign-off shall be a manual operation or, if no keyboard or mouse activity takes place, an automatic sign-off.
4. Automatic sign-off period shall be programmable from one to 60 minutes in one-minute increments on a per operator basis.
5. Operator sign-on and sign-off activity shall be recorded and sent to printer.
6. Security Access:

    a. Operator access to DDC system shall be under password control.
    b. An alphanumeric password shall be field assignable to each operator.
    c. Operators shall be able to access DDC system by entry of proper password.
    d. Operator password shall be same regardless of which computer or other interface means is used.
    e. Additions or changes made to passwords shall be updated automatically.
    f. Each operator shall be assigned an access level to restrict access to data and functions the operator is cable of performing.
    g. Software shall have at least five access levels.
    h. Each menu item shall be assigned an access level so that a one-for-one correspondence between operator assigned access level(s) and menu item access level(s) is required to gain access to menu item.
    i. Display menu items to operator with those capable of access highlighted. Menu and operator access level assignments shall be online programmable and under password control.

7. Data Segregation:

    a. Include data segregation for control of specific data routed to a workstation, to an operator or to a specific output device, such as a printer.
    b. Include at least 32 segregation groups.
    c. Segregation groups shall be selectable such as "fire points," "fire points on second floor," "space temperature points," "HVAC points," and so on.
    d. Points shall be assignable to multiple segregation groups. Display and output of data to printer or monitor shall occur where there is a match of operator or peripheral segregation group assignment and point segregations.
    e. Alarms shall be displayed and printed at each peripheral to which segregation allows, but only those operators assigned to peripheral and having proper authorization level will be allowed to acknowledge alarms.
    f. Operators and peripherals shall be assignable to multiple segregation groups and all assignments are to be online programmable and under password control.

8. Operators shall be able to perform commands including, but not limited to, the following:

    a. Start or stop selected equipment.
    b. Adjust set points.
    c. Add, modify, and delete time programming.
    d. Enable and disable process execution.
    e. Lock and unlock alarm reporting for each point.
    f. Enable and disable totalization for each point.
    g. Enable and disable trending for each point.
    h. Override control loop set points.
    i. Enter temporary override schedules.
    j. Define holiday schedules.
    k. Change time and date.
    l. Enter and modify analog alarm limits.
    m. Enter and modify analog warning limits.
    n. View limits.
    o. Enable and disable demand limiting.
    p. Enable and disable duty cycle.
    q. Display logic programming for each control sequence.

9. Reporting:

    a. Generated automatically and manually.
    b. Sent to displays, printers and disk files.
    c. Types of Reporting:

        1) General listing of points.
        2) List points currently in alarm.
        3) List of off-line points.
        4) List points currently in override status.
        5) List of disabled points.
        6) List points currently locked out.
        7) List of items defined in a "Follow-Up" file.
        8) List weekly schedules.
        9) List holiday programming.

10) List of limits and deadbands.

10. Summaries: For specific points, for a logical point group, for an operator selected group(s), or for entire system without restriction due to hardware configuration.

C. Graphic Interface Software:

1. Include a full interactive graphical selection means of accessing and displaying system data to operator. Include at least five levels with the penetration path operator assignable (for example, site, building, floor, air-handling unit, and supply temperature loop). Native language descriptors assigned to menu items are to be operator defined and modifiable under password control.
2. Include a hierarchical-linked dynamic graphic operator interface for accessing and displaying system data and commanding and modifying equipment operation. Interface shall use a pointing device with pull-down or penetrating menus, color and animation to facilitate operator understanding of system.
3. Include at least 10 levels of graphic penetration with the hierarchy operator assignable.
4. Descriptors for graphics, points, alarms and such shall be modified through operator's workstation under password control.
5. Graphic displays shall be online user definable and modifiable using the hardware and software provided.
6. Data to be displayed within a graphic shall be assignable regardless of physical hardware address, communication or point type.
7. Graphics are to be online programmable and under password control.
8. Points may be assignable to multiple graphics where necessary to facilitate operator understanding of system operation.
9. Graphics shall also contain software points.
10. Penetration within a graphic hierarchy shall display each graphic name as graphics are selected to facilitate operator understanding.
11. Back-trace feature shall permit operator to move upward in the hierarchy using a pointing device. Back trace shall show all previous penetration levels. Include operator with option of showing each graphic full screen size with back trace as horizontal header or by showing a "stack" of graphics, each with a back trace.
12. Display operator accessed data on the monitor.
13. Operator shall select further penetration using pointing device to click on a site, building, floor, area, equipment, and so on. Defined and linked graphic below that selection shall then be displayed.
14. Include operator with means to directly access graphics without going through penetration path.
15. Dynamic data shall be assignable to graphics.
16. Display points (physical and software) with dynamic data provided by DDC system with appropriate text descriptors, status or value, and engineering unit.
17. Use color, rotation, or other highly visible means, to denote status and alarm states. Color shall be variable for each class of points, as chosen by operator.
18. Points shall be dynamic with operator adjustable update rates on a per point basis from one second to over a minute.
19. For operators with appropriate privilege, points shall be commanded directly from display using pointing device.

    a. For an analog command point such as set point, current conditions and limits shall be displayed and operator can position new set point using pointing device.

b. For a digital command point such as valve position, valve shall show its current state such as open or closed and operator could select alternative position using pointing device.
c. Keyboard equivalent shall be available for those operators with that preference.

20. Operator shall be able to split or resize viewing screen into quadrants to show one graphic on one quadrant of screen and other graphics or spreadsheet, bar chart, word processing, curve plot and other information on other quadrants on screen. This feature shall allow real-time monitoring of one part of system while displaying other parts of system or data to better facilitate overall system operation.
21. Help Features:

a. On-line context-sensitive help utility to facilitate operator training and understanding.
b. Bridge to further explanation of selected keywords. Document shall contain text and graphics to clarify system operation.

1) If help feature does not have ability to bridge on keywords for more information, a complete set of user manuals shall be provided in an indexed word-processing program, which shall run concurrently with operating system software.

c. Available for Every Menu Item:

1) Index items for each system menu item.

22. Graphic generation software shall allow operator to add, modify, or delete system graphic displays.

a. Include libraries of symbols depicting HVAC symbols such as fans, coils, filters, dampers, valves pumps, and electrical symbols similar to those indicated.
b. Graphic development package shall use a pointing device in conjunction with a drawing program to allow operator to perform the following:

1) Define background screens.
2) Define connecting lines and curves.
3) Locate, orient and size descriptive text.
4) Define and display colors for all elements.
5) Establish correlation between symbols or text and associated system points or other displays.

D. Project-Specific Graphics: Graphics documentation including, but not limited to, the following:

1. Site plan showing each building, and additional site elements, which are being controlled or monitored by DDC system.
2. Plan for each building floor, including interstitial floors, and each roof level of each building, showing the following:

a. Room layouts with room identification and name.
b. Locations and identification of all monitored and controlled HVAC equipment and other equipment being monitored and controlled by DDC system.

c. Location and identification of each hardware point being controlled or monitored by DDC system.

3. Control schematic for each of following, including a graphic system schematic representation, similar to that indicated on Drawings, with point identification, set point and dynamic value indication, sequence of operation.
4. Graphic display for each piece of equipment connected to DDC system through a data communications link. Include dynamic indication of all points associated with equipment.

E. Customizing Software:

1. Software to modify and tailor DDC system to specific and unique requirements of equipment installed, to programs implemented and to staffing and operational practices planned.
2. Online modification of DDC system configuration, program parameters, and database using menu selection and keyboard entry of data into preformatted display templates.
3. As a minimum, include the following modification capability:

a. Operator assignment shall include designation of operator passwords, access levels, point segregation and auto sign-off.
b. Peripheral assignment capability shall include assignment of segregation groups and operators to consoles and printers, designation of backup workstations and printers, designation of workstation header points and enabling and disabling of print-out of operator changes.
c. System configuration and diagnostic capability shall include communications and peripheral port assignments, DDC controller assignments to network, DDC controller enable and disable, assignment of command trace to points and application programs and initiation of diagnostics.
d. System text addition and change capability shall include English or native language descriptors for points, segregation groups and access levels and action messages for alarms, run time and trouble condition.
e. Time and schedule change capability shall include time and date set, time and occupancy schedules, exception and holiday schedules and daylight savings time schedules.
f. Point related change capability shall include the following:

1) System and point enable and disable.
2) Run-time enable and disable.
3) Assignment of points to segregation groups, calibration tables, lockout, and run time and to a fixed I/O value.
4) Assignment of alarm and warning limits.

g. Application program change capability shall include the following:

1) Enable and disable of software programs.
2) Programming changes.
3) Assignment of comfort limits, global points, time and event initiators, time and event schedules and enable and disable time and event programs.

4. Software shall allow operator to add points, or groups of points, to DDC system and to link them to energy optimization and management programs. Additions and

modifications shall be online programmable using operator workstation, downloaded to other network devices and entered into their databases. After verification of point additions and associated program operation, database shall be uploaded and recorded on hard drive and disk for archived record.

5. Include high-level language programming software capability for implementation of custom DDC programs. Software shall include a compiler, linker, and up- and down-load capability.
6. Include a library of DDC algorithms, intrinsic control operators, arithmetic, logic and relational operators for implementation of control sequences. Also include, as a minimum, the following:

    a. Proportional control (P).
    b. Proportional plus integral (PI).
    c. Proportional plus integral plus derivative (PID).
    d. Adaptive and intelligent self-learning control.

        1) Algorithm shall monitor loop response to output corrections and adjust loop response characteristics according to time constant changes imposed.
        2) Algorithm shall operate in a continuous self-learning manner and shall retain in memory a stored record of system dynamics so that on system shut down and restart, learning process starts from where it left off.

7. Fully implemented intrinsic control operators including sequence, reversing, ratio, time delay, time of day, highest select AO, lowest select AO, analog controlled digital output, analog control AO, and digitally controlled AO.
8. Logic operators such as "And," "Or," "Not," and others that are part of a standard set available with a high-level language.
9. Arithmetic operators such as "Add," "Subtract," "Multiply," "Divide," and others that are part of a standard set available with a high-level language.
10. Relational operators such as "Equal To," "Not Equal To," "Less Than," "Greater Than," and others that are part of a standard set available with a high-level language.

F. Alarm Handling Software:

1. Include alarm handling software to report all alarm conditions monitored and transmitted through DDC controllers, gateways and other network devices.
2. Include first in, first out handling of alarms according to alarm priority ranking, with most critical alarms first, and with buffer storage in case of simultaneous and multiple alarms.
3. Alarm handling shall be active at all times to ensure that alarms are processed even if an operator is not currently signed on to DDC system.
4. Alarms display shall include the following:

    a. Indication of alarm condition such as "Abnormal Off," "Hi Alarm," and "Low Alarm."
    b. "Analog Value" or "Status" group and point identification with native language point descriptor such as "Space Temperature, Building 110, 2nd Floor, Room 212."
    c. Discrete per point alarm action message, such as "Call Maintenance Dept. Ext-5561."

d. Include extended message capability to allow assignment and printing of extended action messages. Capability shall be operator programmable and assignable on a per point basis.

5. Alarms shall be directed to appropriate operator workstations, printers, and individual operators by privilege level and segregation assignments.
6. Send e-mail alarm messages to designated operators.
7. Send e-mail, page, text and voice messages to designated operators for critical alarms.
8. Alarms shall be categorized and processed by class.

a. Class 1:

1) Associated with fire, security and other extremely critical equipment monitoring functions; have alarm, trouble, return to normal, and acknowledge conditions printed and displayed.
2) Unacknowledged alarms to be placed in unacknowledged alarm buffer.
3) All conditions shall cause an audible sound and shall require individual acknowledgment to silence audible sound.

b. Class 2:

1) Critical, but not life-safety related, and processed same as Class 1 alarms, except do not require individual acknowledgment.
2) Acknowledgement may be through a multiple alarm acknowledgment.

c. Class 3:

1) General alarms; printed, displayed and placed in unacknowledged alarm buffer queues.
2) Each new alarm received shall cause an audible sound. Audible sound shall be silenced by "acknowledging" alarm or by pressing a "silence" key.
3) Acknowledgement of queued alarms shall be either on an individual basis or through a multiple alarm acknowledgement.
4) Alarms returning to normal condition shall be printed and not cause an audible sound or require acknowledgment.

d. Class 4:

1) Routine maintenance or other types of warning alarms.
2) Alarms to be printed only, with no display, no audible sound and no acknowledgment required.

9. Include an unacknowledged alarm indicator on display to alert operator that there are unacknowledged alarms in system. Operator shall be able to acknowledge alarms on an individual basis or through a multiple alarm acknowledge key, depending on alarm class.
10. To ensure that no alarm records are lost, it shall be possible to assign a backup printer to accept alarms in case of failure of primary printer.

G. Reports and Logs:

1. Include reporting software package that allows operator to select, modify, or create reports using DDC system I/O point data available.
2. Each report shall be definable as to data content, format, interval and date.
3. Report data shall be sampled and stored on DDC controller, within storage limits of DDC controller, and then uploaded to archive on workstation for historical reporting.
4. Operator shall be able to obtain real-time logs of all I/O points by type or status, such as alarm, point lockout, or normal.
5. Reports and logs shall be stored on workstation hard drives in a format that is readily accessible by other standard software applications, including spreadsheets and word processing.
6. Reports and logs shall be readily printed and set to be printed either on operator command or at a specific time each day.

H. Standard Reports: Standard DDC system reports shall be provided and operator shall be able to customize reports later.

1. All I/O: With current status and values.
2. Alarm: All current alarms, except those in alarm lockout.
3. Disabled I/O: All I/O points that are disabled.
4. Alarm Lockout I/O: All I/O points in alarm lockout, whether manual or automatic.
5. Alarm Lockout I/O in Alarm: All I/O in alarm lockout that are currently in alarm.
6. Logs:

    a. Alarm history.
    b. System messages.
    c. System events.
    d. Trends.

I. Custom Reports: Operator shall be able to easily define any system data into a daily, weekly, monthly, or annual report. Reports shall be time and date stamped and shall contain a report title.

J. Custom Trends: Operator shall be able to define a custom trend log for any I/O point in DDC system.

1. Each trend shall include interval, start time, and stop time.
2. Data shall be sampled and stored on DDC controller, within storage limits of DDC controller, and then uploaded to archive on workstation hard drives.
3. Data shall be retrievable for use in spreadsheets and standard database programs.

K. Programming Software:

1. Include programming software to execute sequences of operation indicated.
2. Include programming routines in simple and easy to follow logic with detailed text comments describing what the logic does and how it corresponds to sequence of operation.
3. Programming software shall be any of the following:

    a. Graphic Based: Programming shall use a library of function blocks made from preprogrammed code designed for DDC control systems.

1) Function blocks shall be assembled with interconnection lines that represent to control sequence in a flowchart.
2) Programming tools shall be viewable in real time to show present values and logical results of each function block.

b. Menu Based: Programming shall be done by entering parameters, definitions, conditions, requirements and constraints.
c. Line by Line and Text Based: Programming shall declare variable types such as local, global, real, integer, and so on, at the beginning of the program. Use descriptive comments frequently to describe programming code.

4. Include means for detecting programming errors and testing software control strategies with a simulation tool before implementing in actual control. Simulation tool may be inherent with programming software or as a separate product.

L. Database Management Software:

1. Where a separate SQL database is used for information storage, DDC system shall include database management software that separates database monitoring and managing functions by supporting multiple separate windows.
2. Database secure access shall be accomplished using standard SQL authentication including ability to access data for use outside of DDC system applications.
3. Database management function shall include summarized information on trend, alarm, event, and audit for the following database management actions:

a. Backup.
b. Purge.
c. Restore.

4. Database management software shall support the following:

a. Statistics: Display database server information and trend, alarm, event, and audit information on database.
b. Maintenance: Include method of purging records from trend, alarm, event and audit databases by supporting separate screens for creating a backup before purging, selecting database, and allowing for retention of a selected number of day's data.
c. Backup: Include means to create a database backup file and select a storage location.
d. Restore: Include a restricted means of restoring a database by requiring operator to have proper security level.

5. Database management software shall include information of current database activity, including the following:

a. Ready.
b. Purging record from a database.
c. Action failed.
d. Refreshing statistics.
e. Restoring database.
f. Shrinking a database.

g. Backing up a database.
h. Resetting Internet information services.
i. Starting network device manager.
j. Shutting down the network device manager.
k. Action successful.

6. Database management software monitoring functions shall continuously read database information once operator has logged on.
7. Include operator notification through on-screen pop-up display and e-mail message when database value has exceeded a warning or alarm limit.
8. Monitoring settings window shall have the following sections:

a. Allow operator to set and review scan intervals and start times.
b. E-mail: Allow operator to create and review e-mail and phone text messages to be delivered when a warning or an alarm is generated.
c. Warning: Allow operator to define warning limit parameters, set reminder frequency and link e-mail message.
d. Alarm: Allow operator to define alarm limit parameters, set reminder frequency and link e-mail message.
e. Database Login: Protect system from unauthorized database manipulation by creating a read access and a write access for each of trend, alarm, event and audit databases as well as operator proper security access to restore a database.

9. Monitoring settings taskbar shall include the following informational icons:

a. Normal: Indicates by color and size, or other easily identifiable means that all databases are within their limits.
b. Warning: Indicates by color and size, or other easily identifiable means that one or more databases have exceeded their warning limit.
c. Alarm: Indicates by color and size, or other easily identifiable means that one or more databases have exceeded their alarm limit.

2.11 OFFICE APPLICATION SOFTWARE

A. Include current version of office application software at time of Substantial Completion.

B. Office application software package shall include multiple separate applications and use a common platform for all applications, similar to Microsoft's "Office Professional."

1. Database.
2. E-mail.
3. Presentation.
4. Publisher.
5. Spreadsheet.
6. Word processing.

2.12 ASHRAE 135 GATEWAYS

A. Include BACnet communication ports, whenever available as an equipment OEM standard option, for integration via a single communication cable. BACnet-controlled plant equipment includes, but is not limited to, boilers, chillers, and variable-speed drives.

B. Include gateways to connect BACnet to legacy systems, existing non-BACnet devices, and existing non-BACnet DDC-controlled equipment, only when specifically requested and approved by Owner.

C. Include with each gateway an interoperability schedule showing each point or event on legacy side that BACnet "client" will read, and each parameter that BACnet network will write to. Describe this interoperability of BACnet services, or BIBBs, defined in ASHRAE 135, Annex K.

D. Gateway Minimum Requirements:

1. Read and view all readable object properties on non-BACnet network to BACnet network and vice versa where applicable.
2. Write to all writeable object properties on non-BACnet network from BACnet network and vice versa where applicable.
3. Include single-pass (only one protocol to BACnet without intermediary protocols) translation from non-BACnet protocol to BACnet and vice versa.
4. Comply with requirements of Data Sharing Read Property, Data Sharing Write Property, Device Management Dynamic Device Binding-B, and Device Management Communication Control BIBBs according to ASHRAE 135.
5. Hardware, software, software licenses, and configuration tools for operator-to-gateway communications.
6. Backup programming and parameters on CD media and the ability to modify, download, backup, and restore gateway configuration.

2.13 ASHRAE 135 PROTOCOL ANALYZER

A. Analyzer and required cables and fittings for connection to ASHRAE 135 network.

B. Analyzer shall include the following minimum capabilities:

1. Capture and store to a file data traffic on all network levels.
2. Measure bandwidth usage.
3. Filtering options with ability to ignore select traffic.

2.14 DDC CONTROLLERS

A. DDC system shall consist of a combination of network controllers, programmable application controllers and application-specific controllers to satisfy performance requirements indicated.

B. DDC controllers shall perform monitoring, control, energy optimization and other requirements indicated.

C. DDC controllers shall use a multitasking, multiuser, real-time digital control microprocessor with a distributed network database and intelligence.

D. Each DDC controller shall be capable of full and complete operation as a completely independent unit and as a part of a DDC system wide distributed network.

E. Environment Requirements:

1. Controller hardware shall be suitable for the anticipated ambient conditions.
2. Controllers located in conditioned space shall be rated for operation at 32 to 120 degrees F.
3. Controllers located outdoors shall be rated for operation at 40 to 150 degrees F.

F. Power and Noise Immunity:

1. Controller shall operate at 90 to 110 percent of nominal voltage rating and shall perform an orderly shutdown below 80 percent of nominal voltage.
2. Operation shall be protected against electrical noise of 5 to 120 Hz and from keyed radios with up to 5 W of power located within 36 inches of enclosure.

G. DDC Controller Spare Processing Capacity:

1. Include spare processing memory for each controller. RAM, PROM, or EEPROM will implement requirements indicated with the following spare memory:

a. Network Controllers: 50 percent.
b. Programmable Application Controllers: Not less than 60 percent.
c. Application-Specific Controllers: Not less than 70 percent.

2. Memory shall support DDC controller's operating system and database and shall include the following:

a. Monitoring and control.
b. Energy management, operation and optimization applications.
c. Alarm management.
d. Historical trend data of all connected I/O points.
e. Maintenance applications.
f. Operator interfaces.
g. Monitoring of manual overrides.

H. DDC Controller Spare I/O Point Capacity: Include spare I/O point capacity for each controller as follows:

1. Programmable Application Controllers:

a. 20Insert number percent of each AI, AO, BI, and BO point connected to controller.

I. Maintenance and Support: Include the following features to facilitate maintenance and support:

1. Mount microprocessor components on circuit cards for ease of removal and replacement.
2. Means to quickly and easily disconnect controller from network.

3. Means to quickly and easily access connect to field test equipment.
4. Visual indication that controller electric power is on, of communication fault or trouble, and that controller is receiving and sending signals to network.

J. Input and Output Point Interface:

1. Hardwired input and output points shall connect to network, programmable application and application-specific controllers.
2. Input and output points shall be protected so shorting of point to itself, to another point, or to ground will not damage controller.
3. Input and output points shall be protected from voltage up to 24 V of any duration so that contact will not damage controller.
4. AIs:

   a. AIs shall include monitoring of low-voltage (zero- to 10-V dc), current (4 to 20 mA) and resistance signals from thermistor and RTD sensors.
   b. AIs shall be compatible with, and field configurable to, sensor and transmitters installed.
   c. Controller AIs shall perform analog-to-digital (A-to-D) conversion with a minimum resolution of 8 bits or better to comply with accuracy requirements indicated.
   d. Signal conditioning including transient rejection shall be provided for each AI.
   e. Capable of being individually calibrated for zero and span.
   f. Incorporate common-mode noise rejection of at least 50 dB from zero to 100 Hz for differential inputs, and normal-mode noise rejection of at least 20 dB at 60 Hz from a source impedance of 10000 ohms.

5. AOs:

   a. Controller AOs shall perform analog-to-digital (A-to-D) conversion with a minimum resolution of 8 bits or better to comply with accuracy requirements indicated.
   b. Output signals shall have a range of 4 to 20 mA dc or zero- to 10-V dc as required to include proper control of output device.
   c. Capable of being individually calibrated for zero and span.
   d. AOs shall not exhibit a drift of greater than 0.4 percent of range per year.

6. BIs:

   a. Controller BIs shall accept contact closures and shall ignore transients of less than 5-ms duration.
   b. Isolation and protection against an applied steady-state voltage of up to 180-V ac peak.
   c. BIs shall include a wetting current of at least 12 mA to be compatible with commonly available control devices and shall be protected against effects of contact bounce and noise.
   d. BIs shall sense "dry contact" closure without external power (other than that provided by the controller) being applied.
   e. Pulse accumulation input points shall comply with all requirements of BIs and accept up to 10 pulses per second for pulse accumulation. Buffer shall be provided

to totalize pulses. Pulse accumulator shall accept rates of at least 20 pulses per second. The totalized value shall be reset to zero on operator's command.

7. BOs:

a. Controller BOs shall include relay contact closures or triac outputs for momentary and maintained operation of output devices.

1) Relay contact closures shall have a minimum duration of 0.1 second. Relays shall include at least 180 V of isolation. Electromagnetic interference suppression shall be provided on all output lines to limit transients to non-damaging levels. Minimum contact rating shall be 1 A at 24-V ac.
2) Triac outputs shall include at least 180 V of isolation. Minimum contact rating shall be 1 A at 24-V ac.

b. BOs shall include for two-state operation or a pulsed low-voltage signal for pulse-width modulation control.
c. BOs shall be selectable for either normally open or normally closed operation.

2.15 NETWORK CONTROLLERS

A. General Network Controller Requirements:

1. Include adequate number of controllers to achieve performance indicated.
2. System shall consist of one or more independent, standalone, microprocessor-based network controllers to manage global strategies indicated.
3. Controller shall have enough memory to support its operating system, database, and programming requirements.
4. Data shall be shared between networked controllers and other network devices.
5. Operating system of controller shall manage input and output communication signals to allow distributed controllers to share real and virtual object information and allow for central monitoring and alarms.
6. Controllers that perform scheduling shall have a real-time clock.
7. Controller shall continually check status of its processor and memory circuits. If an abnormal operation is detected, controller shall assume a predetermined failure mode and generate an alarm notification.
8. Controllers shall be fully programmable.

B. Communication:

1. Network controllers shall communicate with other devices on DDC system Level one network.
2. Network controller also shall perform routing if connected to a network of programmable application and application-specific controllers.

C. Operator Interface:

1. Controller shall be equipped with a service communications port for connection to a portable operator's workstation.
2. Local Keypad and Display:

a. Equip controller with local keypad and digital display for interrogating and editing data.
b. Use of keypad and display shall require security password.

D. Serviceability:

1. Controller shall be equipped with diagnostic LEDs or other form of local visual indication of power, communication, and processor.
2. Wiring and cable connections shall be made to field-removable, modular terminal strips or to a termination card connected by a ribbon cable.
3. Controller shall maintain BIOS and programming information in event of a power loss for at least 72 hours.

2.16 PROGRAMMABLE APPLICATION CONTROLLERS

A. General Programmable Application Controller Requirements:

1. Include adequate number of controllers to achieve performance indicated.
2. Controller shall have enough memory to support its operating system, database, and programming requirements.
3. Data shall be shared between networked controllers and other network devices.
4. Operating system of controller shall manage input and output communication signals to allow distributed controllers to share real and virtual object information and allow for central monitoring and alarms.
5. Controllers that perform scheduling shall have a real-time clock.
6. Controller shall continually check status of its processor and memory circuits. If an abnormal operation is detected, controller shall assume a predetermined failure mode and generate an alarm notification.
7. Controllers shall be fully programmable.

B. Communication:

1. Programmable application controllers shall communicate with other devices on network.

C. Operator Interface:

1. Controller shall be equipped with a service communications port for connection to a portable operator's workstation.

D. Serviceability:

1. Controller shall be equipped with diagnostic LEDs or other form of local visual indication of power, communication, and processor.
2. Wiring and cable connections shall be made to field-removable, modular terminal strips or to a termination card connected by a ribbon cable.
3. Controller shall maintain BIOS and programming information in event of a power loss for at least 72 hours.

2.17 CONTROLLER SOFTWARE

A. General Controller Software Requirements:

1. Software applications shall reside and operate in controllers. Editing of applications shall occur at operator workstations.
2. I/O points shall be identified by up to 30-character point name and up to 16-character point descriptor. Same names shall be used at operator workstations.
3. Control functions shall be executed within controllers using DDC algorithms.
4. Controllers shall be configured to use stored default values to ensure fail-safe operation. Default values shall be used when there is a failure of a connected input instrument or loss of communication of a global point value.

B. Security:

1. Operator access shall be secured using individual security passwords and user names.
2. Passwords shall restrict operator to points, applications, and system functions as assigned by system manager.
3. Operator log-on and log-off attempts shall be recorded.
4. System shall protect itself from unauthorized use by automatically logging off after last keystroke. The delay time shall be operator-definable.

C. Scheduling: Include capability to schedule each point or group of points in system. Each schedule shall consist of the following:

1. Weekly Schedule:

a. Include separate schedules for each day of week.
b. Each schedule should include the capability for start, stop, optimal start, optimal stop, and night economizer.
c. Each schedule may consist of up to 10 events.
d. When a group of objects are scheduled together, include capability to adjust start and stop times for each member.

2. Exception Schedules:

a. Include ability for operator to designate any day of the year as an exception schedule.
b. Exception schedules may be defined up to a year in advance. Once an exception schedule is executed, it will be discarded and replaced by regular schedule for that day of week.

3. Holiday Schedules:

a. Include capability for operator to define up to 99 special or holiday schedules.
b. Schedules may be placed on scheduling calendar and will be repeated each year.
c. Operator shall be able to define length of each holiday period.

D. System Coordination:

1. Include standard application for proper coordination of equipment.

2. Application shall include operator with a method of grouping together equipment based on function and location.
3. Group may then be used for scheduling and other applications.

E. Binary Alarms:

1. Each binary point shall be set to alarm based on operator-specified state.
2. Include capability to automatically and manually disable alarming.

F. Analog Alarms:

1. Each analog object shall have both high and low alarm limits.
2. Alarming shall be able to be automatically and manually disabled.

G. Alarm Reporting:

1. Operator shall be able to determine action to be taken in event of an alarm.
2. Alarms shall be routed to appropriate operator workstations based on time and other conditions.
3. Alarm shall be able to start programs, print, be logged in event log, generate custom messages, and display graphics.

H. Remote Communication:

1. System shall have ability to dial out in the event of an alarm.

I. Electric Power Demand Limiting:

1. Demand-limiting program shall monitor building or other operator-defined electric power consumption from signals connected to electric power meter or from a watt transducer or current transformer.
2. Demand-limiting program shall predict probable power demand such that action can be taken to prevent exceeding demand limit. When demand prediction exceeds demand limit, action will be taken to reduce loads in a predetermined manner. When demand prediction indicates demand limit will not be exceeded, action will be taken to restore loads in a predetermined manner.
3. Demand reduction shall be accomplished by the following means:

    a. Reset air-handling unit supply temperature set points.
    b. Reset space temperature set points.
    c. De-energize equipment based on priority.

4. Demand-limiting parameters, frequency of calculations, time intervals, and other relevant variables shall be based on the means by which electric power service provider computes demand charges.
5. Include demand-limiting prediction and control for any individual meter monitored by system or for total of any combination of meters.
6. Include means operator to make the following changes online:

    a. Addition and deletion of loads controlled.
    b. Changes in demand intervals.

c. Changes in demand limit for meter(s).
d. Maximum shutoff time for equipment.
e. Minimum shutoff time for equipment.
f. Select rotational or sequential shedding and restoring.
g. Shed and restore priority.

7. Include the following information and reports, to be available on an hourly, daily, weekly, monthly and annual basis:

a. Total electric consumption.
b. Peak demand.
c. Date and time of peak demand.
d. Daily peak demand.

J. Maintenance Management: System shall monitor equipment status and generate maintenance messages based on operator-designated run-time, starts, and calendar date limits.

K. Sequencing: Include application software based on sequences of operation indicated to properly sequence chillers, boilers, and other applicable HVAC equipment.

L. Control Loops:

1. Support any of the following control loops, as applicable to control required:

a. Two-position (on/off, open/close, slow/fast) control.
b. Proportional control.
c. Proportional plus integral (PI) control.
d. Proportional plus integral plus derivative (PID) control.

1) Include PID algorithms with direct or reverse action and anti-windup.
2) Algorithm shall calculate a time-varying analog value used to position an output or stage a series of outputs.
3) Controlled variable, set point, and PID gains shall be operator-selectable.

e. Adaptive (automatic tuning).

M. Staggered Start: Application shall prevent all controlled equipment from simultaneously restarting after a power outage. Order which equipment (or groups of equipment) is started, along with the time delay between starts, shall be operator-selectable.

N. Energy Calculations:

1. Include software to allow instantaneous power or flow rates to be accumulated and converted to energy usage data.
2. Include an algorithm that calculates a sliding-window average (rolling average). Algorithm shall be flexible to allow window intervals to be operator specified (such as 15, 30, or 60 minutes).
3. Include an algorithm that calculates a fixed-window average. A digital input signal shall define start of window period (such as signal from utility meter) to synchronize fixed-window average with that used by utility.

O. Anti-Short Cycling:

1. BO points shall be protected from short cycling.
2. Feature shall allow minimum on-time and off-time to be selected.

P. On and Off Control with Differential:

1. Include an algorithm that allows a BO to be cycled based on a controlled variable and set point.
2. Algorithm shall be direct- or reverse-acting and incorporate an adjustable differential.

Q. Run-Time Totalization:

1. Include software to totalize run-times for all BI and BO points.
2. A high run-time alarm shall be assigned, if required, by operator.

2.18 ENCLOSURES

A. General Enclosure Requirements:

1. House each controller and associated control accessories in a enclosure. Enclosure shall serve as central tie-in point for control devices such as switches, transmitters, transducers, power supplies and transformers.
2. Do not house more than one controller in a single enclosure.
3. Include enclosure door with key locking mechanism. Key locks alike for all enclosures and include one pair of keys per enclosure.
4. Individual wall-mounted single-door enclosures shall not exceed 36 inches wide and 60 inches high.
5. Include wall-mounted enclosures with brackets suitable for mounting enclosures to wall or freestanding support stand as indicated.
6. Supply each enclosure with a complete set of as-built schematics, tubing, and wiring diagrams and product literature located in a pocket on inside of door.

B. Internal Arrangement:

1. Internal layout of enclosure shall group and protect pneumatic, electric, and electronic components associated with a controller, but not an integral part of controller.
2. Arrange layout to group similar products together.
3. Include a barrier between line-voltage and low-voltage electrical and electronic products.
4. Factory or shop install products, tubing, cabling and wiring complying with requirements and standards indicated.
5. Terminate field cable and wire using heavy-duty terminal blocks.
6. Include spare terminals, equal to not less than 10 percent of used terminals.
7. Include spade lugs for stranded cable and wire.
8. Install a maximum of two wires on each side of a terminal.
9. Include enclosure field power supply with a toggle-type switch located at entrance inside enclosure to disconnect power.
10. Include enclosure with a line-voltage nominal 20-A GFCI duplex receptacle for service and testing tools. Wire receptacle on hot side of enclosure disconnect switch and include with a 5-A circuit breaker.

11. Mount products within enclosure on removable internal panel(s).
12. Include products mounted in enclosures with engraved, laminated phenolic nameplates (black letters on a white background). The nameplates shall have at least 1/4-inch- high lettering.
13. Route tubing cable and wire located inside enclosure within a raceway with a continuous removable cover.
14. Label each end of cable, wire and tubing in enclosure following an approved identification system that extends from field I/O connection and all intermediate connections throughout length to controller connection.
15. Size enclosure internal panel to include at least 25 percent spare area on face of panel.

C. Environmental Requirements:

1. Evaluate temperature and humidity requirements of each product to be installed within each enclosure.
2. Calculate enclosure internal operating temperature considering heat dissipation of all products installed within enclosure and ambient effects (solar, conduction and wind) on enclosure.
3. Where required by application, include temperature-controlled electrical heat to maintain inside of enclosure above minimum operating temperature of product with most stringent requirement.
4. Where required by application, include temperature-controlled ventilation fans with filtered louver(s) to maintain inside of enclosure below maximum operating temperature of product with most stringent requirement.
5. Include temperature-controlled cooling within the enclosure for applications where ventilation fans cannot maintain inside temperature of enclosure below maximum operating temperature of product with most stringent requirement.
6. Where required by application, include humidity-controlled electric dehumidifier or cooling to maintain inside of enclosure below maximum relative humidity of product with most stringent requirement and to prevent surface condensation within enclosure.

D. Wall-Mounted, NEMA 250, Type 1:

1. Enclosure shall be NRTL listed according to UL 50 or UL 50E.
2. Construct enclosure of steel, not less than:

    a. Enclosure size less than 24 inches: 0.053 inch thick.
    b. Enclosure size 24 inches and larger: 0.067 inch thick.

3. Finish enclosure inside and out with polyester powder coating that is electrostatically applied and then baked to bond to substrate.

    a. Exterior color shall be manufacturer's standard.
    b. Interior color shall be manufacturer's standard.

4. Hinged door full size of front face of enclosure and supported using:

    a. Enclosures sizes less than 36 inches tall: Multiple butt hinges.
    b. Enclosures sizes 36 inches tall and larger: Continuous piano hinges.

5. Removable internal panel with a white polyester powder coating that is electrostatically applied and then baked to bond to substrate.

    a. Size less than 24 inches: Solid steel, 0.053 inch thick.
    b. Size 24 inches and larger: Solid steel, 0.093 inch thick.

6. Internal panel mounting hardware, grounding hardware and sealing washers.
7. Grounding stud on enclosure body.
8. Thermoplastic pocket on inside of door for record Drawings and Product Data.

E. Wall Mounted NEMA 250, Types 4 and 12:

1. Enclosure shall be NRTL listed according to UL 508A.
2. Seam and joints are continuously welded and ground smooth.
3. Where recessed enclosures are indicated, include enclosures with face flange for flush mounting.
4. Externally formed body flange around perimeter of enclosure face for continuous perimeter seamless gasket door seal.
5. Single-door enclosure sizes up to 60 inches tall by 36 inches wide.
6. Double-door enclosure sizes up to 36 inches tall by 60 inches wide.
7. Construct enclosure of steel, not less than the following:

    a. Size Less Than 24 Inches: 0.053 inch thick.
    b. Size 24 Inches and Larger: 0.067 inch thick.

8. Finish enclosure with polyester powder coating that is electrostatically applied and then baked to bond to substrate.

    a. Exterior color shall be manufacturer's standard.
    b. Interior color shall be manufacturer's standard.

9. Corner-formed door, full size of enclosure face, supported using multiple concealed hinges with easily removable hinge pins.

    a. Sizes through 24 Inches Tall: Two hinges.
    b. Sizes between 24 Inches through 48 Inches Tall: Three hinges.
    c. Sizes Larger 48 Inches Tall: Four hinges.

10. Double-door enclosures with overlapping door design to include unobstructed full-width access.

    a. Single-door enclosures 48 inches and taller, and all double-door enclosures, with three-point (top, middle and bottom) latch system.

11. Removable internal panel with a white polyester powder coating that is electrostatically applied and then baked to bond to substrate.

    a. Size Less Than 24 Inches: Solid steel, 0.053 inch thick.
    b. Size 24 Inches and Larger: Solid steel, 0.093 inch thick.

12. Internal panel mounting studs with hardware, grounding hardware, and sealing washers.

13. Grounding stud on enclosure body.
14. Thermoplastic pocket on inside of door for record Drawings and Product Data.

F. Wall-Mounted, NEMA 250, Type 4X SS:

1. Enclosure shall be NRTL listed according to UL 508A.
2. Seam and joints are continuously welded and ground smooth.
3. Externally formed body flange around perimeter of enclosure face for continuous perimeter seamless gasket door seal.
4. Construct enclosure of Type 304 stainless steel, not less than the following:

    a. Size Less Than 24 Inches: 0.053 inch thick.
    b. Size 24 Inches and Larger: 0.067 inch thick.

5. Outside body and door of enclosure with brushed No. 4 finish.
6. Corner-formed door, full size of enclosure face, supported using multiple concealed hinges with easily removable hinge pins.

    a. Sizes through 24 InchesTall: Two hinges.
    b. Sizes between 24 Inchesthrough 48 InchesTall: Three hinges.
    c. Sizes Larger 48 InchesTall: Four hinges.

7. Corner-formed door, full size of enclosure face, supported using continuous piano hinge full length of door.
8. Doors fitted with three-point (top, middle, and bottom) latch system with single, heavy-duty, liquid-tight Type 316 stainless-steel handle with integral locking mechanism.
9. Removable internal panel shall be 0.093-inch solid steel with a white polyester powder coating that is electrostatically applied and then baked to bond to substrate.
10. Internal panel mounting studs and hardware, grounding hardware, and sealing washers.
11. Install corrosion-resistant polyester vent drain in a stainless-steel sleeve at the bottom of enclosure.
12. Include enclosure with stainless-steel mounting brackets.

G. Accessories:

1. Ventilation Fans, Filtered Intake and Exhaust Grilles:

    a. Number and size of fans, filters and grilles as required by application.
    b. Compact cooling fans engineered for 50,000 hours of continuous operation without lubrication or service.
    c. Fans capable of being installed on any surface and in any position within enclosure for spot cooling or air circulation.
    d. Thermostatic control with adjustable set point from 32 to 140 degrees F.
    e. Airflow Capacity at Zero Pressure:

        1) 4-Inch Fan: 100 cfm.
        2) 6-Inch Fan: 240 cfm.
        3) 10-Inch Fan: 560 cfm.

    f. Maximum operating temperature of 158 degrees F.

g. 4-inch fan thermally protected and provided with permanently lubricated ball-bearings.
h. 6- and 10-inch fans with ball-bearing construction and split capacitor motors thermally protected to avoid premature failure.
i. Dynamically balanced impellers molded from polycarbonate material.
j. Fan furnished with power cord and polarized plug for power connection.
k. Fan brackets, finger guards and mounting hardware provided with fans to complete installation.
l. Removable Intake and Exhaust Grilles: ABS plastic ors tainless steel of size to match fan size and suitable for NEMA 250, Types 1 and 12 enclosures.
m. Filters for NEMA 250, Type 1 Enclosures: Washable foam, of a size to match intake grille.
n. Filters for NEMA 250, Type 12 Enclosures: Disposable, of a size to match intake grille.

2. Air Conditioner:

a. Electric-powered, self-contained air-conditioning unit specially designed for electrical enclosures to maintain temperature inside enclosure below ambient temperature outside enclosure.
b. Thermostatic control with adjustable set point from 60 to 120 degrees F.
c. Enclosure side or top mounting with unit capacity as required by application.
d. Designed for closed-loop cooling with continuous operation in ambient environments up to 125 degrees F.
e. HFC refrigerant.
f. Reusable and washable air filter.
g. High-performance, industrial-grade, and high-efficiency fans.
h. Furnished with power cord and polarized plug for power connection.
i. Condensate management system with base pan side drain.
j. Mounting hardware, gaskets, mounting template and instruction manual furnished with unit.
k. Outdoor units equipped with head pressure control for low ambient operation, compressor heater, coated condenser coil and thermostat.

3. Bar handle with keyed cylinder lock set.

2.19 RELAYS

A. General-Purpose Relays:

1. Relays shall be heavy duty and rated for at least 10 A at 250-V ac and 60 Hz.
2. Relays shall be either double pole double throw (DPDT) or three-pole double throw, depending on the control application.
3. Use a plug-in-style relay with an eight-pin octal plug for DPDT relays and an 11-pin octal plug for three-pole double-throw relays.
4. Construct the contacts of either silver cadmium oxide or gold.
5. Enclose the relay in a clear transparent polycarbonate dust-tight cover.
6. Relays shall have LED indication and a manual reset and push-to-test button.
7. Performance:

a. Mechanical Life: At least 10 million cycles.
b. Electrical Life: At least 100,000 cycles at rated load.
c. Pickup Time: 15 ms or less.
d. Dropout Time: 10 ms or less.
e. Pull-in Voltage: 85 percent of rated voltage.
f. Dropout Voltage: 50 percent of nominal rated voltage.
g. Power Consumption: 2 VA.
h. Ambient Operating Temperatures: Minus 40 to 115 degrees F.

8. Equip relays with coil transient suppression to limit transients to non-damaging levels.
9. Plug each relay into an industry-standard, 35-mm DIN rail socket. Plug all relays located in control panels into sockets that are mounted on a DIN rail.
10. Relay socket shall have screw terminals. Mold into the socket the coincident screw terminal numbers and associated octal pin numbers.

B. Multifunction Time-Delay Relays:

1. Relays shall be continuous duty and rated for at least 10 A at 240-V ac and 60 Hz.
2. Relays shall be DPDT relay with up to eight programmable functions to provide on/off delay, interval and recycle timing functions.
3. Use a plug-in-style relay with either an 8- or 11-pin octal plug.
4. Construct the contacts of either silver cadmium oxide or gold.
5. Enclose the relay in a dust-tight cover.
6. Include knob and dial scale for setting delay time.
7. Performance:

a. Mechanical Life: At least 10 million cycles.
b. Electrical Life: At least 100,000 cycles at rated load.
c. Timing Ranges: Multiple ranges from 0.1 seconds to 100 minutes.
d. Repeatability: Within 2 percent.
e. Recycle Time: 45 ms.
f. Minimum Pulse Width Control: 50 ms.
g. Power Consumption: 5 VA or less at 120-V ac.
h. Ambient Operating Temperatures: Minus 40 to 115 degrees F.

8. Equip relays with coil transient suppression to limit transients to non-damaging levels.
9. Plug each relay into an industry-standard, 35-mm DIN rail socket. Plug all relays located in control panels into sockets that are mounted on a DIN rail.
10. Relay socket shall have screw terminals. Mold into the socket the coincident screw terminal numbers and associated octal pin numbers.

C. Latching Relays:

1. Relays shall be continuous duty and rated for at least 10 A at 250-V ac and 60 Hz.
2. Relays shall be either DPDT or three-pole double throw, depending on the control application.
3. Use a plug-in-style relay with a multibladed plug.
4. Construct the contacts of either silver cadmium oxide or gold.
5. Enclose the relay in a clear transparent polycarbonate dust-tight cover.
6. Performance:

a. Mechanical Life: At least 10 million cycles.
b. Electrical Life: At least 100,000 cycles at rated load.
c. Pickup Time: 15 ms or less.
d. Dropout Time: 10 ms or less.
e. Pull-in Voltage: 85 percent of rated voltage.
f. Dropout Voltage: 50 percent of nominal rated voltage.
g. Power Consumption: 2 VA.
h. Ambient Operating Temperatures: Minus 40 to 115 degrees F.

7. Equip relays with coil transient suppression to limit transients to non-damaging levels.
8. Plug each relay into an industry-standard, 35-mm DIN rail socket. Plug all relays located in control panels into sockets that are mounted on a DIN rail.
9. Relay socket shall have screw terminals. Mold into the socket the coincident screw terminal numbers and associated octal pin numbers.

D. Current Sensing Relay:

1. Monitors ac current.
2. Independent adjustable controls for pickup and dropout current.
3. Energized when supply voltage is present and current is above pickup setting.
4. De-energizes when monitored current is below dropout current.
5. Dropout current is adjustable from 50 to 95 percent of pickup current.
6. Include a current transformer, if required for application.
7. House current sensing relay and current transformer in its own enclosure. Use NEMA 250, Type 12 enclosure for indoors and NEMA 250, Type 4 for outdoors.

E. Combination On-Off Status Sensor and On-Off Relay:

1. Description:

a. On-off control and status indication in a single device.
b. LED status indication of activated relay and current trigger.
c. Closed-Open-Auto override switch located on the load side of the relay.

2. Performance:

a. Ambient Temperature: Minus 30 to 140 degrees F.
b. Voltage Rating: Single-phase loads rated for 300-V ac. Three-phase loads rated for 600-V ac.

3. Status Indication:

a. Current Sensor: Integral sensing for single-phase loads up to 20 A and external solid or split sensing ring for three-phase loads up to 150 A.
b. Current Sensor Range: As required by application.
c. Current Set Point: Fixed or adjustable as required by application.
d. Current Sensor Output:

1) Solid-state, single-pole double-throw contact rated for 120-V ac and 1.0 A.

4. Relay: Single-pole double-throw, continuous-duty coil; rated for 10-million mechanical cycles.
5. Enclosure: NEMA 250, Type 1 enclosure.

2.20 ELECTRICAL POWER DEVICES

A. Transformers:

1. Transformer shall be sized for the total connected load, plus an additional 25 percent of connected load.
2. Transformer shall be at least 100 VA.
3. Transformer shall have both primary and secondary fuses.

B. Transient Voltage Suppression and High-Frequency Noise Filter Unit:

1. The maximum continuous operating voltage shall be at least 125 percent.
2. The operating frequency range shall be 47 to 63 Hz.
3. Protection modes according to NEMA LS-1.
4. The rated single-pulse surge current capacity, for each mode of protection, shall be no less than the following:

    a. Line to Neutral: 45,000 A.
    b. Neutral to Ground: 45,000 A.
    c. Line to Ground: 45,000 A.
    d. Per Phase: 90,000 A.

5. Clamping voltages shall be in compliance with test and evaluation procedures defined in NEMA LS-1. Maximum clamping voltage shall be as follows:

    a. Line to Neutral: 360 V.
    b. Line to Ground: 360 V.
    c. Neutral to Ground: 360 V.

6. Electromagnetic interference and RF interference noise rejection or attenuation values shall comply with test and evaluation procedures defined in NEMA LS-1.

    a. Line to Neutral:

        1) 100 kHz: 42 dB.
        2) 1 MHz: 25 dB.
        3) 10 MHz: 21 dB.
        4) 100 MHz: 36 dB.

    b. Line to Ground:

        1) 100 kHz: 16 dB.
        2) 1 MHz: 55 dB.
        3) 10 MHz: 81 dB.
        4) 100 MHz: 80 dB.

7. Unit shall have LED status indicator that extinguishes to indicate a failure.
8. Unit shall be listed by an NRTL as a transient voltage surge suppressor per UL 1449, and as an electromagnetic interference filter per UL 1283.
9. Unit shall not generate any appreciable magnetic field.
10. Unit shall not generate an audible noise.

C. DC Power Supply:

1. Plug-in style suitable for mating with a standard eight-pin octal socket. Include the power supply with a mating mounting socket.
2. Enclose circuitry in a housing.
3. Include both line and load regulation to ensure a stable output. To protect both the power supply and the load, power supply shall have an automatic current limiting circuit.
4. Performance:

   a. Output voltage nominally 25-V dc within 5 percent.
   b. Output current up to 100 mA.
   c. Input voltage nominally 120-V ac, 60 Hz.
   d. Load regulation within 0.5 percent from zero- to 100-mA load.
   e. Line regulation within 0.5 percent at a 100-mA load for a 10 percent line change.
   f. Stability within 0.1 percent of rated volts for 24 hours after a 20-minute warmup.

2.21 CONTROL WIRE AND CABLE

A. Wire: Single conductor control wiring above 24 V.

1. Wire size shall be at least No. 18 AWG.
2. Conductor shall be 7/24 soft annealed copper strand with 2- to 2.5-inch lay.
3. Conductor insulation shall be 600 V, Type THWN or Type THHN, and 90 degrees C according to UL 83.
4. Conductor colors shall be black (hot), white (neutral), and green (ground).
5. Furnish wire on spools.

B. Single Twisted Shielded Instrumentation Cable above 24 V:

1. Wire size shall be a minimum No. 18 AWG.
2. Conductors shall be a twisted, 7/24 soft annealed copper strand with a 2- to 2.5-inch lay.
3. Conductor insulation shall have a Type THHN/THWN or Type TFN rating.
4. Shielding shall be 100 percent type, 0.35/0.5-mil aluminum/Mylar tape, helically applied with 25 percent overlap, and aluminum side in with tinned copper drain wire.
5. Outer jacket insulation shall have a 600-V, 90-degrees C rating and shall be Type TC cable.
6. For twisted pair, conductor colors shall be black and white. For twisted triad, conductor colors shall be black, red and white.
7. Furnish wire on spools.

C. Single Twisted Shielded Instrumentation Cable 24 V and Less:

1. Wire size shall be a minimum No. 18 AWG.

2. Conductors shall be a twisted, 7/24 soft annealed copper stranding with a 2- to 2.5-inch lay.
3. Conductor insulation shall have a nominal 15-mil thickness, constructed from flame-retardant PVC.
4. Shielding shall be 100 percent type, 1.35-mil aluminum/polymer tape, helically applied with 25 percent overlap, and aluminum side in with tinned copper drain wire.
5. Outer jacket insulation shall have a 300-V, 105-degrees C rating and shall be Type PLTC cable.
6. For twisted pair, conductor colors shall be black and white. For twisted triad, conductor colors shall be black, red and white.
7. Furnish wire on spools.

D. LAN and Communication Cable: Comply with DDC system manufacturer requirements for network being installed.

1. Cable shall be balanced twisted pair.
2. Comply with the following requirements and for balanced twisted pair cable described in Section 260523 "Control-Voltage Electrical Power Cables."

a. Cable shall be plenum rated.
b. Cable shall have a unique color that is different from other cables used on Project.

2.22 RACEWAYS

A. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems" for electrical power raceways and boxes.

B. Comply with requirements in Section 270528 "Pathways for Communications Systems" for raceways for balanced twisted pair cables and optical fiber cables.

2.23 ACCESSORIES

A. Damper Blade Limit Switches:

1. Sense positive open and/or closed position of the damper blades.
2. NEMA 250, Type 13, oil-tight construction.
3. Arrange for the mounting application.
4. Additional waterproof enclosure when required by its environment.
5. Arrange to prevent "over-center" operation.

B. Instrument Enclosures:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

a. Hammond Mfg. Co. Inc.
b. Hoffman; brand of nVent Electrical plc.
c. Saginaw Control and Engineering.

2. Include instrument enclosure for secondary protection to comply with requirements indicated in "Performance Requirements" Article.
3. NRTL listed and labeled to UL 50.
4. Sized to include at least 25 percent spare area on subpanel.
5. Instrument(s) mounted within enclosure on internal subpanel(s).
6. Enclosure face with engraved, laminated phenolic nameplate for each instrument within enclosure.
7. Enclosures housing pneumatic instruments shall include main pressure gage and a branch pressure gage for each pneumatic device, installed inside.
8. Enclosures housing multiple instruments shall route tubing and wiring within enclosure in a raceway having a continuous removable cover.
9. Enclosures larger than 12 inches shall have a hinged full-size face cover.
10. Equip enclosure with lock and common key.

C. Manual Valves:

1. Needle Type:
   a. PTFE packing.
   b. Construct of brass for use with copper and polyethylene tubing and of stainless steel for use with stainless-steel tubing.
   c. Aluminum T-bar handle.
   d. Include tubing connections.

2. Ball Type:

   a. Body: Bronze ASTM B 62 or ASTM B 61.
   b. Ball: Type 316 stainless steel.
   c. Stem: Type 316 stainless steel.
   d. Seats: Reinforced PTFE.
   e. Packing Ring: Reinforced PTFE.
   f. Lever: Stainless steel with a vinyl grip.
   g. 600 WOG.
   h. Threaded end connections.

D. Wall-Mounted Portable Workstation Cabinet:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

   a. AtlasIED.
   b. Lowell Manufacturing Co.

2. Surface-mounted wall cabinet for tilt-out operation of laptop computers and large-format mobile devices.
3. Cabinet shall have a load limit of 50 lb.
4. Cabinet shall include the following:

   a. Oil-filled dampers for controlled lowering of equipment to operational position.
   b. 3RU EIA mounting rails.
   c. Removable laptop shelf.

d. Separate top compartment with mounting area, hinged rail and security lock.
e. Front ventilation slots.
f. Knockouts for conduit connections on top and bottom of cabinet.

5. Cabinet shall be constructed of steel and painted with a powder-coat epoxy.
6. Inside center of backbox shall have provision to mount a field-furnished and -installed, single gang electrical outlet box.

2.24 IDENTIFICATION

A. Control Equipment, Instruments, and Control Devices:

1. Laminated acrylic or melamine plastic sign bearing unique identification.

a. Include instruments with unique identification identified by equipment being controlled or monitored, followed by point identification.

2. Letter size shall be as follows: 0.25 inch high.
3. Legend shall consist of white lettering on black background.
4. Laminated acrylic or melamine plastic sign shall be engraved phenolic consisting of three layers of rigid laminate. Top and bottom layers are color-coded black with contrasting white center exposed by engraving through outer layer and shall be fastened with drive pins.
5. Instruments, control devices and actuators with Project-specific identification tags having unique identification numbers following requirements indicated and provided by original manufacturer do not require additional identification.

B. Raceway and Boxes:

1. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
2. Paint cover plates on junction boxes and conduit same color as the tape banding for conduits. After painting, label cover plate "HVAC Controls," using an engraved phenolic tag.

C. Equipment Warning Labels:

1. Self-adhesive label with pressure-sensitive adhesive back and peel-off protective jacket.
2. Lettering size shall be at least 14-point type with white lettering on red background.
3. Warning label shall read "CAUTION-Equipment operated under remote automatic control and may start or stop at any time without warning. Switch electric power disconnecting means to OFF position before servicing."
4. Lettering shall be enclosed in a white line border. Edge of label shall extend at least 0.25 inch beyond white border.

2.25 SOURCE QUALITY CONTROL

A. Product(s) and material(s) will be considered defective if they do not pass tests and inspections.

B. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

1. Verify compatibility with and suitability of substrates.

B. Examine roughing-in for products to verify actual locations of connections before installation.

1. Examine roughing-in for instruments installed in piping to verify actual locations of connections before installation.
2. Examine roughing-in for instruments installed in duct systems to verify actual locations of connections before installation.

C. Examine walls, floors, roofs, and ceilings for suitable conditions where product will be installed.

D. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 GENERAL INSTALLATION REQUIREMENTS

A. Install products to satisfy more stringent of all requirements indicated.

B. Install products level, plumb, parallel, and perpendicular with building construction.

C. Support products, tubing, piping wiring and raceways. Brace products to prevent lateral movement and sway or a break in attachment when subjected to a 5 pound force.

D. If codes and referenced standards are more stringent than requirements indicated, comply with requirements in codes and referenced standards.

E. Fabricate openings and install sleeves in ceilings, floors, roof, and walls required by installation of products. Before proceeding with drilling, punching, and cutting, check for concealed work to avoid damage. Patch, flash, grout, seal, and refinish openings to match adjacent condition.

F. Firestop Penetrations Made in Fire-Rated Assemblies: Comply with requirements in Section 078413 "Penetration Firestopping."

G. Seal penetrations made in acoustically rated assemblies. Comply with requirements in Section 079200 "Joint Sealants."

H. Welding Requirements:

1. Restrict welding and burning to supports and bracing.
2. No equipment shall be cut or welded without approval. Welding or cutting will not be approved if there is risk of damage to adjacent Work.
3. Welding, where approved, shall be by inert-gas electric arc process and shall be performed by qualified welders according to applicable welding codes.
4. If requested on-site, show satisfactory evidence of welder certificates indicating ability to perform welding work intended.

I. Fastening Hardware:

1. Stillson wrenches, pliers, and other tools that damage surfaces of rods, nuts, and other parts are prohibited for work of assembling and tightening fasteners.
2. Tighten bolts and nuts firmly and uniformly. Do not overstress threads by excessive force or by oversized wrenches.
3. Lubricate threads of bolts, nuts and screws with graphite and oil before assembly.

J. If product locations are not indicated, install products in locations that are accessible and that will permit service and maintenance from floor, equipment platforms, or catwalks without removal of permanently installed furniture and equipment.

K. Corrosive Environments:

1. Avoid or limit use of materials in corrosive airstreams and environments, including, but not limited to, the following:

   a. Laboratory exhaust-air streams.
   b. Process exhaust-air streams.

2. When conduit is in contact with a corrosive airstream and environment, use Type 316 stainless-steel conduit and fittings or conduit and fittings that are coated with a corrosive-resistant coating that is suitable for environment. Comply with requirements for installation of raceways and boxes specified in Section 260533 "Raceways and Boxes for Electrical Systems."
3. Where instruments are located in a corrosive airstream and are not corrosive resistant from manufacturer, field install products in NEMA 250, Type 4X enclosure constructed of Type 316L stainless steel.

3.3 CONTROLLER INSTALLATION

A. Install controllers in enclosures to comply with indicated requirements.

B. Connect controllers to field power supply.

C. Install controller with latest version of applicable software and configure to execute requirements indicated.

D. Test and adjust controllers to verify operation of connected I/O to achieve performance indicated requirements while executing sequences of operation.

E. Installation of Network Controllers:

1. Quantity and location of network controllers shall be determined by DDC system manufacturer to satisfy requirements indicated.
2. Install controllers in a protected location that is easily accessible by operators.
3. Top of controller shall be within 84 inches of finished floor.

F. Installation of Programmable Application Controllers:

1. Quantity and location of programmable application controllers shall be determined by DDC system manufacturer to satisfy requirements indicated.
2. Install controllers in a protected location that is easily accessible by operators.
3. Top of controller shall be within 84 inches of finished floor.

G. Application-Specific Controllers:

1. Quantity and location of application-specific controllers shall be determined by DDC system manufacturer to satisfy requirements indicated.
2. For controllers not mounted directly on equipment being controlled, install controllers in a protected location that is easily accessible by operators.

3.4 ENCLOSURES INSTALLATION

A. Install the following items in enclosures, to comply with indicated requirements:

1. Gateways.
2. Routers.
3. Controllers.
4. Electrical power devices.
5. UPS units.
6. Relays.
7. Accessories.
8. Instruments.
9. Actuators

B. Attach wall-mounted enclosures to wall using the following types of steel struts:

1. For NEMA 250, Type 1 Enclosures: Use corrosion-resistant-coated steel strut and hardware.
2. For NEMA 250, Type 4X Enclosures and Enclosures Located Outdoors: Use stainless-steel strut and hardware.
3. Install plastic caps on exposed cut edges of strut.

C. Align top of adjacent enclosures of like size.

3.5 ELECTRIC POWER CONNECTIONS

A. Connect electrical power to DDC system products requiring electrical power connections.

B. Design of electrical power to products not indicated with electric power is delegated to DDC system provider and installing trade. Work shall comply with NFPA 70 and other requirements indicated.

C. Comply with requirements in Section 262816 "Enclosed Switches and Circuit Breakers" for electrical power circuit breakers.

D. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for electrical power conductors and cables.

E. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems" for electrical power raceways and boxes.

3.6 IDENTIFICATION

A. Identify system components, wiring, cabling, and terminals. Comply with requirements in Section 260553 "Identification for Electrical Systems" for identification products and installation.

B. Install laminated acrylic or melamine plastic signs with unique identification on face for each of the following:

1. Gateway.
2. Router.
3. Protocol analyzer.
4. DDC controller.
5. Enclosure.
6. Electrical power device.
7. UPS unit.
8. Accessory.

C. Install unique instrument identification on face of each instrument connected to a DDC controller.

D. Install unique identification on face of each control damper and valve actuator connected to a DDC controller.

E. Warning Labels and Signs:

1. Shall be permanently attached to equipment that can be automatically started by DDC control system.
2. Shall be located in highly visible location near power service entry points.

3.7 NETWORK INSTALLATION

A. Install cable in continuous raceway.

1. Where indicated on Drawings, cable trays may be used for copper cable in lieu of conduit.

3.8 NETWORK NAMING AND NUMBERING

A. Coordinate with Owner and provide unique naming and addressing for networks and devices.

B. ASHRAE 135 Networks:

1. MAC Address:

a. Every network device shall have an assigned and documented MAC address unique to its network.
b. Ethernet Networks: Document MAC address assigned at its creation.
c. ARCNET or MS/TP networks: Assign from 00 to 64.

2. Network Numbering:

a. Assign unique numbers to each new network.
b. Provide ability for changing network number through device switches or operator interface.
c. DDC system, with all possible connected LANs, can contain up to 65,534 unique networks.

3. Device Object Identifier Property Number:

a. Assign unique device object identifier property numbers or device instances for each device network.
b. Provide for future modification of device instance number by device switches or operator interface.
c. LAN shall support up to 4,194,302 unique devices.

4. Device Object Name Property Text:

a. Device object name property field shall support 32 minimum printable characters.
b. Assign unique device "Object Name" property names with plain-English descriptive names for each device.

1) Example 1: Device object name for device controlling boiler plant at Building 1000 would be "HW System B1000."
2) Example 2: Device object name for a VAV terminal unit controller could be "VAV unit 102".

5. Object Name Property Text for Other Than Device Objects:

a. Object name property field shall support 32 minimum printable characters.
b. Assign object name properties with plain-English names descriptive of application.

1) Example 1: "Zone 1 Temperature."
2) Example 2 "Fan Start and Stop."

6. Object Identifier Property Number for Other Than Device Objects:

a. Assign object identifier property numbers according to Drawings indicated.

b. If not indicated, object identifier property numbers may be assigned at Installer's discretion but must be approved by Owner in advance, be documented and be unique for like object types within device.

3.9 CONTROL WIRE, CABLE AND RACEWAYS INSTALLATION

A. Comply with NECA 1.

B. Wire and Cable Installation:

1. Comply with installation requirements in Section 260523 "Control-Voltage Electrical Power Cables."
2. Comply with installation requirements in Section 271313 "Communications Copper Backbone Cabling."
3. Comply with installation requirements in Section 271513 "Communications Copper Horizontal Cabling."
4. Install cables with protective sheathing that is waterproof and capable of withstanding continuous temperatures of 90 degrees C with no measurable effect on physical and electrical properties of cable.

    a. Provide shielding to prevent interference and distortion from adjacent cables and equipment.

5. Terminate wiring in a junction box.

    a. Clamp cable over jacket in junction box.
    b. Individual conductors in the stripped section of the cable shall be slack between the clamping point and terminal block.

6. Terminate field wiring and cable not directly connected to instruments and control devices having integral wiring terminals using terminal blocks.
7. Install signal transmission components according to IEEE C2, REA Form 511a, NFPA 70, and as indicated.
8. Use shielded cable to transmitters.
9. Use shielded cable to temperature sensors.
10. Perform continuity and meager testing on wire and cable after installation.

C. Conduit Installation:

1. Comply with Section "260533 "Raceways and Boxes for Electrical Systems" for control-voltage conductors.
2. Comply with Section 270528 "Pathways for Communications Systems" for balanced twisted pair cabling and optical fiber installation.

3.10 FIELD QUALITY CONTROL

A. Perform the following tests and inspections:

1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Testing:

1. Perform preinstallation, in-progress, and final tests, supplemented by additional tests, as necessary.
2. Preinstallation Cable Verification: Verify integrity and serviceability for new cable lengths before installation. This assurance may be provided by using vendor verification documents, testing, or other methods. As a minimum, furnish evidence of verification for cable attenuation and bandwidth parameters.
3. In-Progress Testing: Perform standard tests for correct pair identification and termination during installation to ensure proper installation and cable placement. Perform tests in addition to those specified if there is any reason to question condition of material furnished and installed. Testing accomplished is to be documented by agency conducting tests. Submit test results for Project record.
4. Final Testing: Perform final test of installed system to demonstrate acceptability as installed. Testing shall be performed according to a test plan supplied by DDC system manufacturer. Defective Work or material shall be corrected and retested. As a minimum, final testing for cable system, including spare cable, shall verify conformance of attenuation, length, and bandwidth parameters with performance indicated.
5. Test Equipment: Use an optical fiber time domain reflectometer for testing of length and optical connectivity.
6. Test Results: Record test results and submit copy of test results for Project record.

3.11 DDC SYSTEM I/O CHECKOUT PROCEDURES

A. Check installed products before continuity tests, leak tests and calibration.

B. Check instruments for proper location and accessibility.

C. Check instruments for proper installation on direction of flow, elevation, orientation, insertion depth, or other applicable considerations that will impact performance.

D. Check instrument tubing for proper isolation, fittings, slope, dirt legs, drains, material and support.

E. For pneumatic products, verify that air supply for each product is properly installed.

F. Control Damper Checkout:

1. For pneumatic dampers, verify that pressure gages are provided in each air line to damper actuator and positioner.
2. Verify that control dampers are installed correctly for flow direction.
3. Verify that proper blade alignment, either parallel or opposed, has been provided.
4. Verify that damper frame attachment is properly secured and sealed.
5. Verify that damper actuator and linkage attachment is secure.
6. Verify that actuator wiring is complete, enclosed and connected to correct power source.

7. Verify that damper blade travel is unobstructed.

G. Control Valve Checkout:

1. For pneumatic valves, verify that pressure gages are provided in each air line to valve actuator and positioner.
2. Verify that control valves are installed correctly for flow direction.
3. Verify that valve body attachment is properly secured and sealed.
4. Verify that valve actuator and linkage attachment is secure.
5. Verify that actuator wiring is complete, enclosed and connected to correct power source.
6. Verify that valve ball, disc or plug travel is unobstructed.
7. After piping systems have been tested and put into service, but before insulating and balancing, inspect each valve for leaks. Adjust or replace packing to stop leaks. Replace the valve if leaks persist.

H. Instrument Checkout:

1. Verify that instrument is correctly installed for location, orientation, direction and operating clearances.
2. Verify that attachment is properly secured and sealed.
3. Verify that conduit connections are properly secured and sealed.
4. Verify that wiring is properly labeled with unique identification, correct type and size and is securely attached to proper terminals.
5. Inspect instrument tag against approved submittal.
6. For instruments with tubing connections, verify that tubing attachment is secure and isolation valves have been provided.
7. For flow instruments, verify that recommended upstream and downstream distances have been maintained.
8. For temperature instruments:

a. Verify sensing element type and proper material.
b. Verify length and insertion.

3.12 DDC SYSTEM I/O ADJUSTMENT, CALIBRATION AND TESTING:

A. Calibrate each instrument installed that is not factory calibrated and provided with calibration documentation.

B. Provide a written description of proposed field procedures and equipment for calibrating each type of instrument. Submit procedures before calibration and adjustment.

C. For each analog instrument, make a three-point test of calibration for both linearity and accuracy.

D. Equipment and procedures used for calibration shall comply with instrument manufacturer's written instructions.

E. Provide diagnostic and test equipment for calibration and adjustment.

F. Field instruments and equipment used to test and calibrate installed instruments shall have accuracy at least twice the instrument accuracy being calibrated. An installed instrument with an accuracy of 1 percent shall be checked by an instrument with an accuracy of 0.5 percent.

G. Calibrate each instrument according to instrument instruction manual supplied by manufacturer.

H. If after calibration indicated performance cannot be achieved, replace out-of-tolerance instruments.

I. Comply with field testing requirements and procedures indicated by ASHRAE's Guideline 11, "Field Testing of HVAC Control Components," in the absence of specific requirements, and to supplement requirements indicated.

J. Analog Signals:

1. Check analog voltage signals using a precision voltage meter at zero, 50, and 100 percent.
2. Check analog current signals using a precision current meter at zero, 50, and 100 percent.
3. Check resistance signals for temperature sensors at zero, 50, and 100 percent of operating span using a precision-resistant source.

K. Digital Signals:

1. Check digital signals using a jumper wire.
2. Check digital signals using an ohmmeter to test for contact making or breaking.

L. Control Dampers:

1. Stroke and adjust control dampers following manufacturer's recommended procedure, from 100 percent open to 100 percent closed and back to 100 percent open.
2. Stroke control dampers with pilot positioners. Adjust damper and positioner following manufacturer's recommended procedure, so damper is 100 percent closed, 50 percent closed and 100 percent open at proper air pressure.
3. Check and document open and close cycle times for applications with a cycle time less than 30 seconds.
4. For control dampers equipped with positive position indication, check feedback signal at multiple positions to confirm proper position indication.

M. Control Valves:

1. Stroke and adjust control valves following manufacturer's recommended procedure, from 100 percent open to 100 percent closed and back to 100 percent open.
2. Stroke control valves with pilot positioners. Adjust valve and positioner following manufacturer's recommended procedure, so valve is 100 percent closed, 50 percent closed and 100 percent open at proper air pressures.
3. Check and document open and close cycle times for applications with a cycle time less than 30 seconds.
4. For control valves equipped with positive position indication, check feedback signal at multiple positions to confirm proper position indication.

N. Meters: Check sensors at zero, 50, and 100 percent of Project design values.

O. Sensors: Check sensors at zero, 50, and 100 percent of Project design values.

P. Switches: Calibrate switches to make or break contact at set points indicated.

Q. Transmitters:

1. Check and calibrate transmitters at zero, 50, and 100 percent of Project design values.
2. Calibrate resistance temperature transmitters at zero, 50, and 100 percent of span using a precision-resistant source.

3.13 DDC SYSTEM CONTROLLER CHECKOUT

A. Verify power supply.

1. Verify voltage, phase and hertz.
2. Verify that protection from power surges is installed and functioning.
3. Verify that ground fault protection is installed.
4. If applicable, verify if connected to UPS unit.
5. If applicable, verify if connected to a backup power source.
6. If applicable, verify that power conditioning units, transient voltage suppression and high-frequency noise filter units are installed.

B. Verify that wire and cabling is properly secured to terminals and labeled with unique identification.

C. Verify that spare I/O capacity is provided.

3.14 DDC CONTROLLER I/O CONTROL LOOP TESTS

A. Testing:

1. Test every I/O point connected to DDC controller to verify that safety and operating control set points are as indicated and as required to operate controlled system safely and at optimum performance.
2. Test every I/O point throughout its full operating range.
3. Test every control loop to verify operation is stable and accurate.
4. Adjust control loop proportional, integral and derivative settings to achieve optimum performance while complying with performance requirements indicated. Document testing of each control loop's precision and stability via trend logs.
5. Test and adjust every control loop for proper operation according to sequence of operation.
6. Test software and hardware interlocks for proper operation. Correct deficiencies.
7. Operate each analog point at the following:

   a. Upper quarter of range.
   b. Lower quarter of range.
   c. At midpoint of range.

8. Exercise each binary point.

9. For every I/O point in DDC system, read and record each value at operator workstation, at DDC controller and at field instrument simultaneously. Value displayed at operator workstation, at DDC controller and at field instrument shall match.
10. Prepare and submit a report documenting results for each I/O point in DDC system and include in each I/O point a description of corrective measures and adjustments made to achieve desire results.

3.15 DDC SYSTEM VALIDATION TESTS

A. Perform validation tests before requesting final review of system. Before beginning testing, first submit Pretest Checklist and Test Plan.

B. After approval of Test Plan, execute all tests and procedures indicated in plan.

C. After testing is complete, submit completed test checklist.

D. Pretest Checklist: Submit the following list with items checked off once verified:

1. Detailed explanation for any items that are not completed or verified.
2. Required mechanical installation work is successfully completed and HVAC equipment is working correctly.
3. HVAC equipment motors operate below full-load amperage ratings.
4. Required DDC system components, wiring, and accessories are installed.
5. Installed DDC system architecture matches approved Drawings.
6. Control electric power circuits operate at proper voltage and are free from faults.
7. Required surge protection is installed.
8. DDC system network communications function properly, including uploading and downloading programming changes.
9. Using BACnet protocol analyzer, verify that communications are error free.
10. Each controller's programming is backed up.
11. Equipment, products, tubing, wiring cable and conduits are properly labeled.
12. All I/O points are programmed into controllers.
13. Testing, adjusting and balancing work affecting controls is complete.
14. Dampers and actuators zero and span adjustments are set properly.
15. Each control damper and actuator goes to failed position on loss of power.
16. Valves and actuators zero and span adjustments are set properly.
17. Each control valve and actuator goes to failed position on loss of power.
18. Meter, sensor and transmitter readings are accurate and calibrated.
19. Control loops are tuned for smooth and stable operation.
20. View trend data where applicable.
21. Each controller works properly in standalone mode.
22. Safety controls and devices function properly.
23. Interfaces with fire-alarm system function properly.
24. Electrical interlocks function properly.
25. Operator workstations and other interfaces are delivered, all system and database software is installed, and graphic are created.
26. Record Drawings are completed.

E. Test Plan:

1. Prepare and submit a validation test plan including test procedures for performance validation tests.
2. Test plan shall address all specified functions of DDC system and sequences of operation.
3. Explain detailed actions and expected results to demonstrate compliance with requirements indicated.
4. Explain method for simulating necessary conditions of operation used to demonstrate performance.
5. Include a test checklist to be used to check and initial that each test has been successfully completed.
6. Submit test plan documentation 10 business days before start of tests.

F. Validation Test:

1. Verify operating performance of each I/O point in DDC system.

    a. Verify analog I/O points at operating value.
    b. Make adjustments to out-of-tolerance I/O points.

        1) Identify I/O points for future reference.
        2) Simulate abnormal conditions to demonstrate proper function of safety devices.
        3) Replace instruments and controllers that cannot maintain performance indicated after adjustments.

2. Simulate conditions to demonstrate proper sequence of control.
3. Readjust settings to design values and observe ability of DDC system to establish desired conditions.
4. After 24 Hours following Initial Validation Test:

    a. Re-check I/O points that required corrections during initial test.
    b. Identify I/O points that still require additional correction and make corrections necessary to achieve desired results.

5. After 24 Hours of Second Validation Test:

    a. Re-check I/O points that required corrections during second test.
    b. Continue validation testing until I/O point is normal on two consecutive tests.

6. Completely check out, calibrate, and test all connected hardware and software to ensure that DDC system performs according to requirements indicated.
7. After validation testing is complete, prepare and submit a report indicating all I/O points that required correction and how many validation re-tests it took to pass. Identify adjustments made for each test and indicate instruments that were replaced.

G. DDC System Response Time Test:

1. Simulate HLC.

    a. Heavy load shall be an occurrence of 50 percent of total connected binary COV, one-half of which represent an "alarm" condition, and 50 percent of total

connected analog COV, one-half of which represent an "alarm" condition, that are initiated simultaneously on a one-time basis.

2. Initiate 10 successive occurrences of HLC and measure response time to typical alarms and status changes.
3. Measure with a timer having at least 0.1-second resolution and 0.01 percent accuracy.
4. Purpose of test is to demonstrate DDC system, as follows:

    a. Reaction to COV and alarm conditions during HLC.
    b. Ability to update DDC system database during HLC.

5. Passing test is contingent on the following:

    a. Alarm reporting at printer beginning no more than two seconds after the initiation (time zero) of HLC.
    b. All alarms, both binary and analog, are reported and printed; none are lost.
    c. Compliance with response times specified.

6. Prepare and submit a report documenting HLC tested and results of test including time stamp and print out of all alarms.

H. DDC System Network Bandwidth Test:

1. Test network bandwidth usage on all DDC system networks to demonstrate bandwidth usage under DDC system normal operating conditions and under simulated HLC.
2. To pass, none of DDC system networks shall use more than 70 percent of available bandwidth under normal and HLC operation.

3.16 DDC SYSTEM WIRELESS NETWORK VERIFICATION

A. DDC system Installer shall design wireless DDC system networks to comply with performance requirements indicated.

B. Installer shall verify wireless network performance through field testing and shall document results in a field test report.

C. Testing and verification of all wireless devices shall include, but not be limited to, the following:

1. Speed.
2. Online status.
3. Signal strength.

3.17 FINAL REVIEW

A. Submit written request to Engineer when DDC system is ready for final review. Written request shall state the following:

1. DDC system has been thoroughly inspected for compliance with contract documents and found to be in full compliance.

2. DDC system has been calibrated, adjusted and tested and found to comply with requirements of operational stability, accuracy, speed and other performance requirements indicated.
3. DDC system monitoring and control of HVAC systems results in operation according to sequences of operation indicated.
4. DDC system is complete and ready for final review.

B. Review by Engineer shall be made after receipt of written request. A field report shall be issued to document observations and deficiencies.

C. Take prompt action to remedy deficiencies indicated in field report and submit a second written request when all deficiencies have been corrected. Repeat process until no deficiencies are reported.

D. Should more than two reviews be required, DDC system manufacturer and Installer shall compensate entity performing review for total costs, labor and expenses, associated with third and subsequent reviews. Estimated cost of each review shall be submitted and approved by DDC system manufacturer and Installer before making the review.

E. Prepare and submit closeout submittals and begin procedures indicated in "Extended Operation Test" Article when no deficiencies are reported.

F. A part of DDC system final review shall include a demonstration to parties participating in final review.

1. Provide staff familiar with DDC system installed to demonstrate operation of DDC system during final review.
2. Provide testing equipment to demonstrate accuracy and other performance requirements of DDC system that is requested by reviewers during final review.

3.18 ADJUSTING

A. Occupancy Adjustments: When requested within 12 months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

3.19 SOFTWARE SERVICE AGREEMENT

A. Technical Support: Beginning at Substantial Completion, service agreement shall include software support for one year(s).

B. Upgrade Service: At Substantial Completion, update software to latest version. Install and program software upgrades that become available within one year(s) from date of Substantial Completion. Upgrading software shall include operating system and new or revised licenses for using software.

1. Upgrade Notice: At least 30 days to allow Owner to schedule and access system and to upgrade computer equipment if necessary.

3.20 DEMONSTRATION

A. Engage a factory-authorized service representative with complete knowledge of Project-specific system installed to train Owner's maintenance personnel to adjust, operate, and maintain DDC system.

B. Extent of Training:

1. Base extent of training on scope and complexity of DDC system indicated and training requirements indicated. Provide extent of training required to satisfy requirements indicated even if more than minimum training requirements are indicated.
2. Inform Owner of anticipated training requirements if more than minimum training requirements are indicated.
3. Minimum Training Requirements:

a. Provide not less than five days of training total.
b. Stagger training over multiple training classes to accommodate Owner's requirements. All training shall occur before end of warranty period.
c. Total days of training shall be broken into not more than two separate training classes.
d. Each training class shall be not less than one consecutive day(s).

C. Training Schedule:

1. Schedule training with Owner 20 business days before expected Substantial Completion.
2. Schedule training to provide Owner with at least 10 business days of notice in advance of training.
3. Training shall occur within normal business hours at a mutually agreed on time. Unless otherwise agreed to, training shall occur Monday through Friday, except on U.S. Federal holidays, with two morning sessions and two afternoon sessions. Each morning session and afternoon session shall be split in half with 15-minute break between sessions. Morning and afternoon sessions shall be separated by 30-minute lunch period. Training, including breaks and excluding lunch period, shall not exceed eight hours per day.
4. Provide staggered training schedule as requested by Owner.

D. Training Attendee List and Sign-in Sheet:

1. Request from Owner in advance of training a proposed attendee list with name, phone number and e-mail address.
2. Provide a preprinted sign-in sheet for each training session with proposed attendees listed and no fewer than six blank spaces to add additional attendees.
3. Preprinted sign-in sheet shall include training session number, date and time, instructor name, phone number and e-mail address, and brief description of content to be covered during session. List attendees with columns for name, phone number, e-mail address and a column for attendee signature or initials.
4. Circulate sign-in sheet at beginning of each session and solicit attendees to sign or initial in applicable location.
5. At end of each training day, send Owner an e-mail with an attachment of scanned copy (PDF) of circulated sign-in sheet for each session.

E. Training Attendee Headcount:

1. Plan in advance of training for five attendees.
2. Make allowance for Owner to add up to one attendee(s) at time of training.
3. Headcount may vary depending on training content covered in session. Attendee access may be restricted to some training content for purposes of maintaining system security.

F. Training Attendee Prior Knowledge: For guidance in planning required training and instruction, assume attendees have the following:

1. High school and technical school education and degree.
2. Basic user knowledge of computers and office applications.
3. Basic knowledge of HVAC systems.
4. Basic knowledge of DDC systems.
5. Basic knowledge of DDC system and products installed.

G. Attendee Training Manuals:

1. Provide each attendee with a color hard copy of all training materials and visual presentations.
2. Hard-copy materials shall be organized in a three-ring binder with table of contents and individual divider tabs marked for each logical grouping of subject matter. Organize material to provide space for attendees to take handwritten notes within training manuals.
3. In addition to hard-copy materials included in training manual, provide each binder with a sleeve or pocket that includes a DVD or flash drive with PDF copy of all hard-copy materials.

H. Instructor Requirements:

1. One or multiple qualified instructors, as required, to provide training.
2. Instructors shall have not less than five years of providing instructional training on not less than five past projects with similar DDC system scope and complexity to DDC system installed.

I. Organization of Training Sessions:

1. Organize training sessions into logical groupings of technical content and to reflect different levels of operators having access to system. Plan training sessions to accommodate the following three levels of operators:

   a. Daily operators.
   b. Advanced operators.
   c. System managers and administrators.

2. Plan and organize training sessions to group training content to protect DDC system security. Some attendees may be restricted to some training sessions that cover restricted content for purposes of maintaining DDC system security.

J. Training Outline:

1. Submit training outline for Owner review at least 10 business day before scheduling training.

2. Outline shall include a detailed agenda for each training day that is broken down into each of four training sessions that day, training objectives for each training session and synopses for each lesson planned.

K. On-Site Training:

1. Owner will provide conditioned classroom or workspace with ample desks or tables, chairs, power and data connectivity for instructor and each attendee.
2. Instructor shall provide training materials, projector and other audiovisual equipment used in training.
3. Provide as much of training located on-site as deemed feasible and practical by Owner.
4. On-site training shall include regular walk-through tours, as required, to observe each unique product type installed with hands-on review of operation, calibration and service requirements.
5. Operator workstation provided with DDC system shall be used in training. If operator workstation is not indicated, provide a temporary workstation to convey training content.

L. Off-Site Training:

1. Provide conditioned training rooms and workspace with ample tables desks or tables, chairs, power and data connectivity for each attendee.
2. Provide capability to remotely access to Project DDC system for use in training.
3. Provide a workstation for use by each attendee.

M. Training Content for Daily Operators:

1. Basic operation of system.
2. Understanding DDC system architecture and configuration.
3. Understanding each unique product type installed including performance and service requirements for each.
4. Understanding operation of each system and equipment controlled by DDC system including sequences of operation, each unique control algorithm and each unique optimization routine.
5. Operating operator workstations, printers and other peripherals.
6. Logging on and off system.
7. Accessing graphics, reports and alarms.
8. Adjusting and changing set points and time schedules.
9. Recognizing DDC system malfunctions.
10. Understanding content of operation and maintenance manuals including control drawings.
11. Understanding physical location and placement of DDC controllers and I/O hardware.
12. Accessing data from DDC controllers.
13. Operating portable operator workstations.
14. Review of DDC testing results to establish basic understanding of DDC system operating performance and HVAC system limitations as of Substantial Completion.
15. Running each specified report and log.
16. Displaying and demonstrating each data entry to show Project-specific customizing capability. Demonstrating parameter changes.
17. Stepping through graphics penetration tree, displaying all graphics, demonstrating dynamic updating, and direct access to graphics.
18. Executing digital and analog commands in graphic mode.

19. Demonstrating control loop precision and stability via trend logs of I/O for not less than 10 percent of I/O installed.
20. Demonstrating DDC system performance through trend logs and command tracing.
21. Demonstrating scan, update, and alarm responsiveness.
22. Demonstrating spreadsheet and curve plot software, and its integration with database.
23. Demonstrating on-line user guide, and help function and mail facility.
24. Demonstrating multitasking by showing dynamic curve plot, and graphic construction operating simultaneously via split screen.
25. Demonstrating the following for HVAC systems and equipment controlled by DDC system:

    a. Operation of HVAC equipment in normal-off, -on and failed conditions while observing individual equipment, dampers and valves for correct position under each condition.
    b. For HVAC equipment with factory-installed software, show that integration into DDC system is able to communicate with DDC controllers or gateways, as applicable.
    c. Using graphed trends, show that sequence of operation is executed in correct manner, and HVAC systems operate properly through complete sequence of operation including seasonal change, occupied and unoccupied modes, warm-up and cool-down cycles and other modes of operation indicated.
    d. Hardware interlocks and safeties function properly and DDC system performs correct sequence of operation after electrical power interruption and resumption after power is restored.
    e. Reporting of alarm conditions for each alarm, and confirm that alarms are received at assigned locations, including operator workstations.
    f. Each control loop responds to set point adjustment and stabilizes within time period indicated.
    g. Sharing of previously graphed trends of all control loops to demonstrate that each control loop is stable and set points are being maintained.

N. Training Content for Advanced Operators:

1. Making and changing workstation graphics.
2. Creating, deleting and modifying alarms including annunciation and routing.
3. Creating, deleting and modifying point trend logs including graphing and printing on an ad-hoc basis and operator-defined time intervals.
